"Most of the movement," he said, "has been from farms with few resources." Thus it did not leave behind income possibilities of consequence to divide among those remaining on the land.

[From the Cedar Rapids Gazette, Dec. 27, 1959]

AMERICAN FARMER IS UNSUNG HERO

The unsung hero, or perhaps it would be more accurate to say the unrecognized victim, of the fight against inflation since the end of World War II has been the American farmer. A vast supply of relatively cheap food has offset the steadily climbing prices of other cost-of-living items.

The average American consumer spent 26.9 percent of his disposable income for food in 1947. In 1959 it is estimated that food took only 20.8 percent of the average consumer's disposable income.

Consumers' disposable income rose from $220 billion in 1947 to nearly $335 billion in 1959. Had food expenditures risen in the same proportion, the Nation's food bill this year would have been more than $90 billion instead of the less than $70 billion it is now estimated.

The addition of $20 billion to the cost of living would have tremendously increased the pressure of inflation. Many labor wage scales are tied by contract to the cost of living, so such additional costs would have given added impetus to the inflationary spiral.

Consumers have a real bargain in food. Using the 1947–49 average as 100, the index of retail food prices has gone up from 95.9 to only 116.1, while total disposable income has risen from 97.4 in 1947 to 148.2 in 1959.

The farmer, as we said, is the victim. His share of the consumer's food dollar has declined from 51 cents in 1947 to less than 38 cents at the close of this year. Farm marketing charges have increased about 40 percent since 1947.

Inflation and rising costs in other segments of the economy have the farmer in a bind. Prices paid by farmers for commodities used in production, interest, taxes, and wages have risen from 240 percent of the 1910–14 parity base period in 1947 to nearly 300 percent in 1959.

Meanwhile prices received for farm products have declined from 276 percent of the base period in 1947 to around 230 percent as 1959 draws to an end.

The plentiful supply of a wide variety of high-quality foods is the very foundation of our vast economic growth during the postwar period. Farmers who provided that food have not shared fully in the prosperity to which they have contributed so much.

Our vast agricultural production is a main source of this country's industrial, military, political and, we trust, spiritual leadership of the free world.

This very week the central committee of the Communist Party is meeting in Moscow to figure out ways to increase agricultural production in Russia. Khrushchev and his minions recognize Russian agriculture as the weak link in the Communist regime.

Viewed from that angle, the few billions a year spent in efforts to keep American agriculture in business are far from the "scandal" that certain groups brand the farm programs.

Admittedly the programs we have now aren't working very well. The need is to develop policies that will work. This Nation can well afford to make substantial expenditures to shore up agriculture, our basic industry.

Food-for-Peace Program

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, February 4, 1960

Mr. CHURCH. Mr. President, although the Agricultural Trade Development and Assistance Act of 1954, popularly known as Public Law 480, was extended last year, there is still pending on the Senate Calendar a bill, S. 1711, which would transform it into a genuine food-for-peace program.

This measure was introduced by the Senator from Minnesota [Mr. HUMPHREY] with sponsors from both parties. As one of these sponsors, I addressed the Senate in support of the food-for-peace program last August 24. It has wide and growing support, Mr. President.

Now an eloquent new voice has been raised in support of the food-for-peace program, with the publication in the February issue of Think magazine of an article written by CHESTER BOWLES entitled "Our Farm Surplus Can Be Their Daily Bread." From his experience as our Ambassador to India, Mr. BOWLES speaks with authority of the tremendous impact this program would have in the developing countries, and of the contribution it would make to the achievement of a peaceful world.

I ask that this fine article may be printed in the Appendix of the RECORD, and I commend it to the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR FARM SURPLUS CAN BE THEIR DAILY BREAD

(By CHESTER BOWLES, U.S. Congressman, Connecticut)

It will be ironic indeed if history records that the free world died of its own fat. Yet this may happen unless we shake ourselves loose from the attitudes of mind we have developed about our so-called agricultural burden and see if for the wealth that it really is.

While much of the world is undernourished, the richness of our land, the industry of our farmers, the mechanization of our farming operations, the spectacular improvement in fertilizers, seed and pesticides and our new knowledge of the growth patterns of plants and livestock have combined to expand our agricultural productivity far beyond the hopes of our fathers. Our granaries, overflowing with wheat and feed grains, our abundant stocks of rice, milk products, fats, oils and cotton are major national assets that can and should be invested in the achievement of a better world.

Almost every country in the world is short of food and must import at great cost or allow its people to remain undernourished, a ready target for disease and disillusionment. Such conditions are a major stumbling block to political stability in the underdeveloped areas, where new governments are struggling to achieve higher standards of living.

In the meantime, the biggest single problem facing our Soviet competitors continues to be food production. Even more critical is the dilemma of the Communist regime in Peiping, which must feed 650 million people with only 1.7 acres of land for each family.

Yet here is the United States of America with its storage bins overflowing with abundance—wondering what in the world to do with it all.

Dramatic situations require dramatic actions.

Now is the time to build upon the experience gained through our postwar relief programs, the Marshall plan, the Mutual Security Act and, particularly, the Agricultural Trade Development and Assistance Act of 1954.

Five years ago, the Agricultural Trade Development and Assistance Act, known as Public Law 480, was set up to donate, barter, or sell America's agricultural surpluses through nonprofit voluntary American agencies.

By June 1959, 37 countries had bought U.S. agricultural products in exchange for their own currencies, with sales alone totaling over $5 billion. Care was taken, of course, that the farm commodities concerned came from supplies that exceeded an effective dollar demand in the United States and that the normal dollar export markets were protected.

As a result, tens of millions of people who would otherwise have gone hungry have been fed. And the foreign currencies involved have largely been turned into foreign loans for economic and social development projects. So our assistance is doing a double duty.

A typical sales agreement under this law is a complicated transaction. But basically, this is how the system works:

Suppose for example, that we should reach an agreement with the Government of Brazil to sell surplus wheat. It would cover the value and kinds of commodities to be financed, the period of time involved, safeguarding of usual markets and the assurance of use as intended, the exchange rate, and the highly important allocation of the foreign currencies among the many authorized purposes.

After the agreement is signed and the purchase authorized, banks in both countries must be designated and letters of commitment sent to the U.S. bank for reimbursement by the Commodity Credit Corporation. The foreign bank eventually pays the value of the sale by depositing local currency to the account of the U.S. Treasury rather than crediting dollars to the account of the designated U.S. bank.

Good as this program has been, it contains several basic deficiencies in law, in spirit, and in administration, most of which can be traced to the assumption that our agricultural abundance is really only a temporary surplus problem.

Almost all agricultural economists refute this narrow view. For the foreseeable future, the United States will continue to produce 6 to 10 percent more agricultural goods than can be sold through commercial chan-

nels. Long-range projections indicate that this surplus will persist for some years ahead.

At the same time, the underdeveloped nations of Asia, Africa, and Latin America cannot maintain their freedom unless they provide their people with greater opportunities and a better life. If all hopes for freedom disappear there, then the prospects for peace will grow dim throughout the entire world.

Our experience, as we have seen, established the guidelines. The underdeveloped nations have ample manpower to do the work that must be done. As their reserves of food and cotton fiber grow, they can pay the workers modest wages without driving up the prices of the basic commodities.

This means that by careful planning in partnership with these hard-pressed new nations, we can indirectly turn our surplus foods into new roads, schools, and factories—into healthier people capable of producing by their own labor new free societies that can ultimately take their rightful place among the more prosperous nations.

The sales of food and fiber which we have already made have accumulated a credit to the U.S. Treasury of some $2 billion of unused "soft currencies." Some say that this is the point at which to stop. On the contrary, it should be the beginning.

Some of these soft currencies generated by our food sales abroad should, of course, be put aside to cover the expenses of our missions in these countries. But the bulk of those currencies, paid by those who have bought the food locally, should be loaned back to pay the cost of local wages and local materials. Any good businessman would make his money work for him.

The law authorizes a number of uses for foreign currencies which, if imaginatively promoted, could turn our present program to far more productive use.

But these purposes are stated too restrictively in the current legislation, and additional limitations written into the law seriously weaken its scope. We can and should expand Public Law 480 commensurate with the tremendous opportunities actually facing us.

For instance, the need for more new schools and more teachers in all underdeveloped countries is enormous. People who are better nourished and better educated will find it much easier to summon the energy and abilities which are necessary for their own successful economic development.

Soft currencies can also be used to finance the publication of millions of good books in dozens of different languages to sell to idea-hungry Africans, Asians and Latin Americans for a few cents each.

Our agricultural abundance should, of course, continue to be given outright in cases of famine or disaster.

Admittedly, the situation is complicated by the fact that the United States is not the only free nation with high agricultural capacity. We must find a way to join hands with Canada and Australia and other food-exporting nations in using our agricultural abundance for the economic and social development of the free world.

At this early stage we probably must operate on a bilateral basis. But our long-range objective should be multilateral arrangements and the use of international agencies in achieving our common ends.

BANKS FOR FOOD

A forward step would be the storage abroad in United Food Banks of a major part of our food reserves. This idea has been developed and discussed before the United Nations and the U.S. Congress. At this session of Congress in 1960, thoughtful citizens throughout America should press for legislative action. It is morally wrong and politically stupid to allow our stored commodities to become a wasting asset.

We should undertake to store at least one half of our entire grain surpluses abroad in well protected U.S. food banks as a visible assurance against the traditional dangers of famine and disease, and as a dramatic demonstration of the willingness of the American people to see that no one starves while we have food to spare.

A look at the mechanics suggests that such a program would in fact save the American taxpayer considerable money. It now costs our Government 20 cents to store a bushel of grain for 1 year. Yet it costs only 38 cents to ship a bushel of grain to India or Iran. This means that in 2 years we can pay the full cost of each shipment and start to save money.

The total annual cost for storage, interest and handling charges on delivery of our stored grain is now $1 billion. If we shipped half of it to food banks in India, North Africa, Indonesia, the Middle East, Egypt and other countries with short or uncertain food supplies, and stored it at the expense of the recipient country in storage warehouses built by local currencies, the savings to us over the years would run into the billions.

So any way that you look at the question—from a moral, political or dollars and cents point of view—the setting up of these food banks makes sense.

We would want, of course, to make sure that they were well constructed so that the grain would be protected against spoilage and vermin. We would also need written agreements so that each government would draw on its grain reserves only in accordance with standards mutually agreed to.

Donation in case of actual failure of a harvest would, of course, have top priority. Grain from the food banks should also be available for donation or sale as a protection against soaring food prices if the recipient country encountered a critically inflationary situation due to general food shortages.

In judging world food needs we should look beyond the old colonial standards which were based on the amount of food required for a man just to go on existing, sitting under a tree, somehow getting by.

Substantially more food is required if he is to do a good day's work building a road, a school, a health clinic or an irrigation ditch. Under such circumstances the daily caloric requirement jumps from about 1,600 calories to 2,600 or 2,800.

This means that as people in the underdeveloped areas step up their programs of work and expansion which is what they are doing and must do, the daily caloric requirement for the same number of people, without consideration for the increase in population, jumps enormously.

For instance, the food needs of the new awakening India are such that her Government is trying to push her annual food grains production from 78 million tons to 110 million within the next 7 years. That is a formidable production goal, but the Indians are determined to reach it.

Let's hope that they succeed. But in the meantime, by building and stocking a network of food banks across India, we can help remove the immediate fear of hunger that undermines morale and leads to private food hoarding and speculation.

It is difficult to exaggerate the psychological impact of such action in India and other nations in similar circumstances. When we consider the schools, irrigation, and other development projects that can be financed with the local currencies paid for this food and fiber, the economic and political implications become doubly dramatic.

Most of the people of Asia, Africa, and Latin America have always led a hand-to-mouth existence. In northern India, for instance, much depends each year on the winter rains. Some years they come and some years they don't.

Two years ago I rode through the Punjab when rains happened to come in abundance. For 200 miles we drove through groups of happy villagers singing, dancing, laughing and smiling. Now they knew that their crops would be good. For the new year there was no reason to fear that their children would go hungry.

PUT FOOD TO WORK

The benefits of the long-term, commonsense, businesslike use of our abundant supplies of food and fiber which I have outlined would accrue not only to people in the developing countries. It would also benefit our own farms and, indeed, all of us who can prosper over the long haul only as living standards rise and as new world markets open.

Yet the greatest benefit of all is the contribution of such a program to the achievement of a peaceful world. If we are ever to live in such a world, we must work and plan to build it.

If we continue to allow $10 billion in food and fiber reserves to lie idle in a hungry and impoverished world, we will fail to live up to our Judaeo-Christian heritage. We will also commit a political blunder that future generations of Americans will find it difficult to understand.

Let us hope that the administration and the Congress will recognize the challenge in the next few months and boldly act to meet it.

A Bill To Provide Medical Scholarships

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. FOGARTY. Mr. Speaker, I have requested this time on the floor of the House of Representatives for the purpose of introducing legislation which will influence the number and help assure the quality of physicians for our growing population in the years ahead.

I ask the Members to ask themselves one simple question: Are you willing to entrust the health of the American people to proportionately fewer doctors of lesser competence, as compared with today? If your answer to that question is "No," as it must be, then I ask your interest and support in the bill which I place before you.

The facts that underlie this bill are hard, but not cold.

Some of our better medical schools are admitting students with a C average in their undergraduate work.

Ten years ago, 40 percent of the students accepted by medical schools had an A average in their undergraduate work; today, only 18 percent have an A average.

The number of applicants for medical school has declined by about one-third since 1950.

The present ratio of physicians to population is considered by experts to be the minimum essential for the protection of the people's health; yet the number of physicians graduated annually must be increased by 50 percent if that

ratio is to be maintained as our population reaches upward toward the 200 million mark.

The implications of such facts are perfectly obvious. We are threatened with a shortage of physicians. And we are already faced with a decline in the caliber of students entering medical schools.

It is equally obvious that no remedial action of consequence will take place unless the Federal Government acts in a positive and constructive way. With leadership and stimulus from Washington, the States and local institutions will carry their share of this grave national responsibility.

I therefore propose that the U.S. Public Health Service initiate a $10 million a year program of scholarships providing up to $2,500 per academic year to selected students in schools of medicine, osteopathy, and dentistry. The Federal funds would be matched by State funds, and State commissions would select those receiving scholarship assistance on the basis of ability and need.

I have spoken of the threatened shortage to which this bill is directed in terms of both number and quality.

Let me comment on the number question first.

The bill that I introduce today has an indirect relationship to the supply of physicians and dentists in the years ahead. By increasing the number and quality of applicants for medical and dental education, it will serve as a pressure on States and institutions to provide additional resources—either to create new schools, or to expand existing schools—so that the well qualified young men and women can study in their chosen field.

A much more direct way of increasing present enrollment—and thus the number of graduate physicians and dentists—is by the construction of new facilities. In the 1st session of the 86th Congress, I introduced legislation that would authorize matching Federal grants for the construction of facilities for medical and dental education, paralleling the existing and highly successful Public Health Service program of grants assisting in the construction of health research facilities. I regret to say that this vital legislation has not been enacted, and call upon my colleagues in the House, and especially those serving on the committee responsible for health legislation, to see that this 2d session does not come to a close without action that will stimulate the renovation and modernization of our existing medical, dental, and osteopathic schools, and—even more important in the long run—the creation of new schools.

I want my colleagues to know that I sought, but did not get, the support of the executive branch on this construction grant legislation. I shall not burden you with the details of my correspondence with the President. It followed a now-familiar pattern: the problem is recognized, somebody should do something about it, preferably not the Federal Government, but the matter is under study and may be accorded token support if the pressures are great enough. In the meantime, it would take nearly 10 years to build and graduate the first class from a new medical school, and present schools can barely keep up with their present enrollment and certainly cannot expand unless they get a kind of support they are not now getting.

I wonder if the American people a few years hence will understand if we today, knowing the facts, deliberately place their health in jeopardy by not planning and building facilities to train enough doctors to give them superior medical and dental care?

But the bill I introduce today is focused primarily on quality, not numbers.

All sorts of reasons are given why medical education and a medical career no longer attract as many qualified college students as they used to.

Some of these reasons are bound up in intangibles. There are those who would point to the increasingly materialistic point of view in our society, to the diminishing rewards in a life of service, to deterioration in the image of the physician today, to general failures of today's young people to accept responsibility to contribute something to our society instead of merely taking from it.

I cannot subscribe to these views. I have a fundamental faith in the innate strength of the American people in both an individual and a community sense. And I have a deep-rooted conviction that we can and will meet boldly the challenges that confront us as we stride into a decade that may well encompass the acid test of our democracy.

No—I believe it is factors that are far more real and immediate and practical that tend to influence some of our most promising young people against choosing to pursue careers in medicine and related fields.

One such factor is the factor of time. The average American finishes high school at age 17 or 18. If he has the interest and potential for higher education, and if he is considering medicine as a career, what does he see ahead of him? Four years of college, 4 years of medical school, a year of internship, 2 years of residency (if he wants to specialize—and most young physicians do—plus probably 2 years of military service under the doctor draft law. Thus the high-school student sees this choice of career as another 10–12 years of education before he can settle down to earning a living.

Related to the factor of time is the factor of money. The cost of a medical education to the individual and his family can be overwhelming. Those in modest circumstances, regardless of interest and capacity, will think long and hard before accepting the burden of such education. There are some scholarships and loan programs, of course. But they barely scratch the surface in terms of the need. At the end of medical school, about one-third of all graduates are at least $2,000 in debt. Some 17 percent have debts of $5,000 or more. This does not take into account the hardship and sacrifice of their families. Many married medical students—three-fifths of them marry before they graduate—owe their medical education to their wives, who must work to support the family throughout the long educational period. And even after finishing medical school the low income status continues during internship, residency training, and military service. For a great many families in the middle and low income groups, the financial prospect is too frightening to face, and the individual chooses another career in which the cost of education is less and the return on the investment more immediate.

In addition to time and money, there are other factors at work in the qualitative and numerical decline in applications for admission to medical and related schools.

One of these is quite personal: many young people want to settle down, marry, and have families while they are young. It is very hard to do this during the medical educational process unless there is a strong source of outside support.

Another factor is competing fields. As a matter of national policy, the United States has sought to give impetus to higher education in physics and other scientific fields, and significant support is available at graduate and postgraduate levels. Since similar support is not available for medical and dental students, it is understandable that many of the brightest young people choose to climb the rungs of the scientific career ladder.

Paradoxically, for those who do choose and remain in medicine, the need to make money once training is finally completed is so great that the less rewarding positions in fiscal terms—such as teaching, research, public health, and military medicine—often must be rejected, despite the individual's preference, because he simply must start to earn money and pay back his debts.

Since the health of the American people is one of our most precious national resources, it follows that we cannot let it be jeopardized by compromising on the number and quality of those who take care of the people's health.

The bill that I introduce is of course not the total answer. It is, however, a sound beginning, based on principles that assure the independence of individuals and of institutions, the integrity of States, and collaboration without control by the Federal Government.

The bill provides for scholarships of up to $2,500 per academic year to students in medicine, osteopathy, and dentistry. State commissions would select recipients on the basis of their ability and their need for assistance. The commissions would also review the students performance annually to determine their eligibility to continue to receive the funds.

One-half the cost of the scholarships would be borne by the States. In order to receive Federal funds, each State would be required to submit to the Surgeon General an acceptable plan for administering the scholarship funds.

The bill authorizes an initial appropriation of $5 million for fiscal year 1961, and $10 million for the succeeding

nine fiscal years, to be allotted proportionately among the States on the basis of their populations between the ages 20–24 inclusive. The lesser authorization for the first year is to allow the States sufficient opportunity to initiate this program.

When matched with State funds, the $10 million in Federal funds would make it possible for 8,000 medical students to receive $2,500 scholarships each year. This means that—after the program has been in operation for some time, perhaps—one-fourth of all present medical school students would be partially financed under these scholarships.

I want to emphasize that the average expenditures of medical students are in excess of $3,000 a year, so a scholarship under this legislation does not cover the full cost of the individual student.

I seek your support of this bill. There is urgent need for it. The need is apparent in the facts obtained from medical school admissions offices. And it has been clearly recognized and forthrightly stated by a group of distinguished advisers to the Surgeon General of the U.S. Public Health Service. In their report, Physicians for a Growing America, the consultant group, chaired by Mr. Frank Bane, for many years the executive director of the Council of State Governments said:

> The Federal Government should establish educational grants-in-aid for medical students on the basis of merit and need, similar in value and proportionate in number to grants now made to graduate students in other fields of specialization. These educational grants should be available to students so that they could attend a medical school any place in the United States.

What my bill does, in effect, is to fulfill that statement of a most pressing need.

In this matter, as in the matter of the construction of new facilities for medical and related education, which I mentioned at the opening of my remarks, we simply cannot wait. We must act, and act now, if we are to begin to turn the tide toward keen competition for admission to medical schools and the gradual expansion of our graduating classes.

I feel this way about it.

As a nation, we have reason to be proud of what we have done in the 1950's to strengthen and broaden our research effort in the health sciences. Sound research porjects are virtually assured of long-term support, and we are investing sizable amounts of money in the development of research manpower and research facilities for an even more intensive search for new knowledge in the years ahead. Our patterns of research support are still imperfect. No way has yet been devised to provide career opportunities in health research that are stable, adequately remunerative, and professionally rewarding. Moreover, the universities, medical schools, and other research centers are desperate for operating funds that will strengthen them as institutions and permit them to achieve greater independence and exercise greater leadership as we face the intellectual, technological, and social challenges that surely confront us. I feel sure that these problems of research support can and will be solved.

As a Federal Government, we cannot discharge our responsibilities by supporting the research functions of nonfederal institutions but ignoring their capacity to perform their educational missions. Our experience in research demonstrates that the Federal Government can actively and broadly support university activity without domination, control, and interference. The same thing is true in medical and related education. We can assist the schools in constructing new and modernizing existing facilities. And we can assist deserving and needy students by defraying part of the high cost of extended specialized education that prepares them for lives of service to the people. We can do both of these within existing policies bearing on the relationship of the Federal Government to nonfederal institutions and to individual citizens, and we can do it without raising any of the ugly specters about Federal aid to medical education that are so often used as rationalizations for inaction.

The intent of the bill that I place before you is simply to place medical and dental education on a comparable status with advanced education in the sciences. We can do nothing to ease or shorten the strenuous course of study required to equip a young man or woman for competency in the medical professions. But we can and should take positive action to ease the intolerable financial burden which these young people must now shoulder in order to perform this service to humanity.

The Chaotic State of Highway Law

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. HALPERN. Mr. Speaker, among the numerous means for increasing safe driving on the Nation's highways is that of adoption of the Uniform Vehicle Code by all States. The beneficial consequences would be many, the most important of which would be the elimination of the existing maze of confusing traffic laws encountered by a person driving from State to State. Adoption of the Uniform Code would not only enhance driving safety, but it would make it easier to deal with offenders on an interstate basis.

I have long supported these views. The New York State Joint Legislative Committee on Motor Vehicle Problems, of which I was chairman, strongly endorsed the Uniform Vehicle Code as a pattern for all States to follow. The rules of the road provisions of the code were embodied in New York law in 1957 following the joint committee's recommendations and approval by the State legislature.

Steps are now being taken in New York and other States to adopt further provisions of the code but the pace is beset with delays. The urgency of securing increased adoption of the code by the States is such that I have introduced a bill to authorize the Interstate Commerce Commission to use its best efforts in promoting this development. The situation is critical enough to demand some such leadership on the Federal level.

A concise summation of the need for greater enactment of the Uniform Vehicle Code was set forth in an excellent article in the Washington Post of January 30. I ask that this article be printed in the Appendix at the conclusion of my remarks:

THE CHAOTIC STATE OF HIGHWAY LAW

The Chevy Chase Circle, on the outskirts of the Nation's Capital, happens to lie on the border between the District of Columbia and Maryland. To the interstate motorist this accident of geography might be of only incidental interest, but for one thing; according to D.C. law, the car in a traffic circle has the right of way. But in Maryland the car entering has the right of way.

History doesn't record whether two law-abiding drivers have ever played Alphonse and Gaston there, backing up traffic from Boston to Miami. But the Chevy Chase Circle does point up the countless contradictions, confusions and absurdities of law that are at once a nuisance and a hazard to the interstate driver—which means to practically everyone who drives at all.

(EDITOR'S NOTE.—This slightly overstates the actual situation, according to District Highway Director Harold Aitken. The conflict is one, not of regulation, but of sign placement. On the District side of the circle there are stop signs on connecting streets, thus giving traffic in the circle the right of way. On the Maryland side there are no signs, and consequently traffic entering the circle from the right—namely, the connecting streets—has the right of way.)

The maritime nations of the world long ago got together on a single set of traffic laws for the high seas. But the several States of our own indissoluble Union have not been so cooperative with regard to the Nation's ever more crowded highways, with the result that what is required in one State is often illegal in another.

The conflicts are annoying in matters such as parking, traffic signs and road markings; they are downright dangerous when right-of-way is involved, or passing and turning rules, or what to do when approaching a stopped schoolbus.

And the confusion is needless.

Way back in 1926, long before the tail fin was even a designer's dream, an officially appointed committee of experts sifted the traffic laws of all the States and, taking the best from each, drew up a uniform vehicle code. This has been constantly revised and kept up to date by the National Committee on Uniform Traffic Laws and Ordinances, now an arm of the White House Conference on Highway Safety.

But State legislatures have still held out. The New York Legislature, to its credit, in 1957 enacted the rules-of-the-road section of the uniform vehicle code practically verbatim. Wisconsin and Nevada have recently done the same, and a number of other States have been adopting parts of it in a piecemeal fashion.

A recent check, however, showed the rules of the road in 10 States still (after 34 years) not even in "substantial" agreement with the code, while many others differ in varying degrees. And 14 failed to conform even "substantially" on license requirements, an equal number on accident reports and on vehicle equipment, and 34 on periodic inspection requirements.

Getting together on the rules of the road clearly has first priority. But as long as a license to drive in one State is a license to drive in all, each has a direct interest in the others' in keeping unsafe vehicles out of interstate traffic.

One of the principal obstacles to extending reciprocity on traffic offenses has been the disparity among State laws. Get the laws in line with one another, and offenders can better be dealt with on an interstate basis.

Furthermore, we should consider the possibility of coordinating our traffic laws with those of other nations, with the volume of international travel rapidly increasing and with many travelers going by car.

Of first importance, however, is for all 50 of our own motorized United States to get together. The uniform vehicle code is written; it has been amply tested; it needs only to be adopted. Which means, simply, legislative action by States.

Since the advent of the automobile an estimated 60 million Americans have been killed or injured on the roads. In 1958, deaths totaled 36,700, injuries 2,825,000. A lot of these persons would be alive and uninjured today if all drivers on the same roads had a single set of rules to drive by. And 34 years is long enough, it seems to us, to have stalled on adopting those rules.

Deficiency Payments Plan Is Under Attack by Canadian Farmers

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. MUNDT. Mr. President, all of us are so concerned about the continuing farm problems in the United States we tend to forget, at times, that other countries also face serious farm problems in this postwar world. Canada, for example, which has experimented with a wide variety of agricultural programs is now having headaches with its latest experiment.

E. W. Keickhefer, editor of the Daily Plainsman, of Huron, S. Dak., writes some interesting observations in his farm column which my colleagues may find it profitable to read. It deals with the farm problems of Canada.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEFICIENCY PAYMENTS PLAN IS UNDER ATTACK BY CANADIAN FARMERS

(By E. W. (Kieck) Kieckhefer)

Trouble is brewing in Canada over the new program to give hog raisers and egg producers deficiency payments instead of straight price supports.

Under the new system, the Canadian Government makes a limited deficiency payment to farmers if the 12-month national average price falls below a determined "fair" price.

The egg program has been in effect for several months. The hog program began just last month.

One of the Conservative government's own supporters denounced the plan in a party caucus last week and there were attacks upon it also at the meetings of the Canadian Federation of Agriculture at Toronto. Farmers claim the plan is not giving them adequate income insurance.

Grade A egg prices were down to 15 cents a dozen at Winnipeg last week and grade C eggs were down to 7 cents a dozen. Grade A hogs were selling for $18.75 and sows mostly $10 to $11.

Agriculture Minister Harkness in a speech to Commons in Ottawa said the system meant producers were guaranteed a support price for the year, to the extent that their average return fell below the guaranteed price.

The payment, he explained, was not guaranteed on each individual sale. Such payments, he said, would be "hopelessly expensive" and there would be no incentive for the farmer to get the best possible price for his products.

Harkness said that because of the Government's program marketings of hogs and eggs will be lower this year and as a result there may be some decline in the farmers' gross income. All Government efforts were designed to give the farmers a fair share of the national income, he added, but it never claimed it had completely succeeded in doing so.

Colonel Griffin Reports on the Soviet Scene

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 4, 1960

Mr. ENGLE. Mr. President, the editor and publisher of the Monterey Peninsula Herald, Mr. Allen Griffin, spent 36 days in the Soviet Union during August and September 1959, observing the Soviet Russian scene. Since he made a similar trip in 1931, his impressions of developments in this vast land over the past generation are important to a thoroughgoing understanding of the direction of world communism.

Mr. Griffin founded his newspaper in 1921 and has been its publisher ever since. At the same time, he has had a distinguished career in the public service, both as a civilian and as a soldier. He served in both world wars, as a captain in the infantry in World War I and as a colonel commanding the 13th Infantry Regiment of the 8th Infantry Division in World War, II. He has received medals too numerous to mention; but I would at least like to cite the Distinguished Service Cross, the Silver Star, the Purple Heart with Oak Leaf Cluster, and the Croix de Guerre (France). One of his many civilian public offices was that of Director of the Far East Division of the Economic Cooperation Administration held in 1950–51.

Colonel Griffin has reported to his readers in a series of articles which appeared in his paper during October and November 1959. These 20 articles were later reprinted in booklet form. I am sorry that the length of the booklet precludes my entering all of it into the Appendix of the RECORD so that my colleagues could share all the experiences, observations, thoughts, and conclusions of Colonel Griffin. I ask unanimous consent to have inserted in the Appendix the last two articles which summarize these thoughts. We would do well to heed Allen Griffin's warning contained therein never to let our guard down or underestimate our adversary.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

A FEW THOUGHTS IN SUMMARY—PART 2

However fascinating the subject is to the author, a newspaper series devoted to one area over the period of one visit must come to an end. It hasn't a captive audience; and there are doubtless not a few people who are disappointed and provoked that these articles have failed to confirm their rosy or complacent points of view.

A summary, even if partially repetitious, of certain thoughts and observations may be pertinent in the conclusion:

The capabilities of the Russian people should never be underestimated. Russian names occur again and again in the stories of American music and art, science and invention, scholarship and business enterprise. The same is true in France, and it is true in England. These have been the countries most hospitable to Russian talent, perhaps France more than any.

These people of Russian and, in some instances, Russian-Jewish derivation, have made substantial, sometimes sensational, contributions to the national civilizations in which they have found a home and could freely develop their talents and genius. I cannot help but believe that if this great and now well-awakened nation were given a reasonable degree of self-expression and self-realization, it would contribute vastly in every field of human endeavor, including those that are the tests of quality of civilization.

That, however, requires the strong, spicy breath of free air from the outside. It requires free travel, free expression, absence of fear that something one might dare to say or write or paint would bring disaster. Communism cannot stand that freedom.

Communism is always on guard, always fearful of the poison of liberty and of dangerous thoughts, always ready to clamp down savage restrictions. The machinery for prevention, intervention, and control has been perfected. The people have accepted it.

Only in the fields where the power of the state is materially and materialistically advanced is there freedom—freedom to work within all possible state assistance in such fields. And great rewards.

Russian art, literature, architecture, and philosophy might similarly "go for the moon" if the people were given freedom in those areas of civilized life. That, of course, is impossible.

For a long period the American people believed that quality and quantity of production, and efficiency of output were inherently impossible under communism. Genius in these fields, it was asserted, could flower only under free enterprise.

Perhaps after some 40 years of communism it is still too early to tell; but I am decidedly inclined to believe that communism, even though it is a horror to the human spirit and to civilized growth, has great capabilities of efficiency. It has proved it. It can undertake and accomplish gigantic developments of almost every kind (an exception might be made in agriculture) with great daring, brilliant foresight, scientific planning, accuracy

of detail, and—enterprise itself. It has done so. It is doing so.

Despite what we call lack of incentive, communism can turn out highly efficient male and female workers. I have seen them efficiently working—a great change since my visit to Russia in 1931.

I also believe that Soviet managerial capacity has been developed with extraordinary success, that managers are given great latitude in innovating improvements, and that there is every reason to believe that the Soviet state can produce vastly more for its people any time the hard core, the combat elements, of the Communist Party are willing to spoil the people just a little—and at the same time be a fierce competitor of the West.

This is a terrific ant society. Let us not minimize its power just because we prefer grasshoppers.

In dealing with these people there are things we should not forget, not even for a minute, no matter how tumultuous and sincere the welcomes.

In communism there is no honor, except the honor of undeviating, unquestioning service to communism. There is no conscience except the conscience demanded by communism. There is no real trust in anybody, not in anybody, except the sort of general trust of the people in the state and its hierarchy, which is the result of indoctrination from the cradle to the grave.

In communism the ambitious men climb more ruthlessly on the shoulders of their rivals and associates than in any area of capitalism today excepting the labor movement.

The brutality of this ambition, personified by those who were clever and ruthless enough to survive the purges, by the demotion of Malenkov when he wanted the people to have more commodities, by the rise of Khrushchev and the ruin of Zhukov, and countless other cases among the higher-ups, is repeated down the scale through the lesser echelons of the ambitious.

It is an error to believe that the drive of ambition does not continue, whatever the type of government. It is merely diverted to different fields that may require different talents. And if the field is a sort of jungle, then it seizes upon the law of the jungle to be successful and powerful there.

If there is one thing I would especially stress—and it is something one feels almost physically when visiting Russia—it is that communism depends upon combat. Its nature is combat-minded; its disposition is toward violence. It must fight, outside and inside. It must have enemies. It must provoke the worry in the public mind that the nation has enemies bent upon its destruction and upon their deprivation of all that they value. This is systematically and constantly done.

Within, it must fight, too. It must fight religion always. It must fight spies and saboteurs. It must be suspicious of the factory that fails to make its quota, of the factory worker who complains about the speedup. It must fight for more wheat, more steel, more cotton, more coal, more bricks, more cement. Banners, radio programs, television shows, lectures, exhortations—fight, fight, fight. I don't see how a people can stand it, but the Russian people do.

To carry on this fight, the Soviet Government and the Communist Party that runs the Soviet Government must falsify history, including its own history. It must falsify its reports of conditions in other countries. It must storm, rant, scream, condemn, vituperate. This is a highly developed technique. It is indispensable to Communist power at home. It has been successful. It has made mental robots out of most of the people of a great race.

THOUGHTS IN SUMMARY—PART II

Khrushchev scored a great propaganda point by constant reiteration of his claim that he is going to beat the United States economically and that Russians will have everything that Americans have "and more." For some strange reason we seem to have been awed by that claim.

Can Russia beat us economically?

Unless we ruin ourselves by sloth, gangsterism, depravity, loss of moral convictions, or labor-management relations like those exemplified by the steel strike (anarchy), the Russian people will never catch up with the material well-being of the American people, let alone with the other things that we should hold at least as dear.

Moreover, they will never catch up with the well-being of the French, the Danes and other Scandinavians, the Dutch, Belgians, Luxembourgers, West Germans. If the Italians were permitted to export their surplus population, the Communist Russians would never catch up with them, either. The conception is absurd.

In civilized living and culture, in the sharing of the amenities of life by people generally, it is impossible for the people of the Russian state to catch up with the present position of the West until at least 50 years after communism as we know it has been abolished. It isn't size and volume that do the job, as every Luxembourger knows. Why didn't we say as much to N. K. when he was here?

However, in volume of production and also in capacity to do us economic damage, the Russians can go a long way—and they will.

In tons of coal produced annually, in steel, aluminum, cement, various manufactured products (we can hasten that by giving them credits for machine tools), new railroad and new highway mileage—in these and other things they can and will outproduce us on an annual basis. That does not mean that in any foreseeable future they will have more for their people than we have for our people, excepting—area.

RELY ON PRODUCTION

The Russians require an immense production to pick their country up out of the rut of underdevelopment, to fill in the immense gaps; whereas we among the developed countries have a great deal of our material job accomplished (except in schools, parks, certain public achievements).

What we mostly expand today, apart from our requirements for war materials, is production directly for the people—hard and soft consumers' goods and the means to produce them. The Soviets could and should do a great deal of that; but they are occupied first with the task of preparing for war, any kind of war.

American audiences who heard N. K. boast "We will surpass you" (knowing as he did that our freedom of communications would make his voice ring round the world) should not merely have smiled; they should have laughed like Cossacks.

The people of Russia immensely enjoyed N. K.'s challenges made right to our smug faces (they believed him, too) and they enjoyed his reports, especially the sarcasm in them, after his visit to the United States, when he toured Siberia in the manner of a triumphant bullfighter circling the ring after a great performance.

However, what Khrushchev sees in "peaceful coexistence" and "competition" is something the ordinary Russian people don't see. There is a tremendous elasticity of production and of distribution potential in the regimented Soviet state. And the "hard core," the men who create and approve the budgets before they are ever submitted to the figurehead supreme congress control the spigots.

Among other things, peaceful coexistence is a war to destroy capitalism by undermining its markets and creating chaos in world trade. It is entirely unlike capitalist competition, however, subsidized the latter might be. The Soviets gave the warning (like the warning of Korea) 2 years ago when they dumped aluminum on the world market at a cut of 2 cents a pound. And this was aluminum sorely needed for consumers' goods for the Russian people.

Meanwhile no one is competing for the trade of the Russian people. The Soviet Government at every budget determines what the trade is going to be. It determines just how much added benefit it is willing to give to the Russian people in the coming year, just as it determines their wages and salaries. Cleverly it adds limited benefits. It can always say the people have more, and prove it. And just a little more satisfies these well-trained seals.

If it becomes desirable in an era of peaceful coexistence to dump 10 million splendid electric razors (with adaptors) on the world market, it can be done; or 15 million tons of steel, millions of tons of cement, tens of millions of board feet of lumber. Name it, and if it is one of the resources included in the vast wealth of this heartland of Eurasia, a Communist government can prepare for the event without anyone knowing about it and execute it at a timely moment in its unceasing war on capitalism.

Therefore the Communists, with their complete control of productive means and labor and vast natural resources can do us immense injury and plan to do so. I think that is what N. K. really meant when he said he would "bury" us. He said it. He meant it. The mayor of Los Angeles did right in reminding him of it, because whatever the means to be employed it is his objective in life. This is combat. He is a Communist.

And so, when we give him the horselaugh in one respect, we of the Western World had better get together with our planning, to meet this other challenge that might in time greatly reduce our well-being. It will be inexcusable if we are ever caught by surprise.

About trade with Russia—I believe we should. But I also believe that we should demand cash on the line—not one cent of credit—and that we should not sell machine tools. We should push for the sale of consumers' goods.

I definitely had the impression that the Russian people sincerely believed N.K. is trying to save the world from the danger of war and that his program is unassailable by men of good will.

Moreover, I believe that Khrushchev himself is sincere, because he is a good Communist and therefore believes that "peaceful coexistence" is a condition whereby all the advantages accrue to the Communist—by common agreement, too. In the summit conference at Yalta, his former boss got all he wanted, by common agreement. No consideration for "the other fellow" has ever warped N.K.'s good judgment, not even when "the other fellow" was a devout (but possibly disagreeing) fellow-Communist.

In the field of disarmament Khrushchev wants an agreement for the abolition of nuclear warfare in any form. That's what the big shooting-off-at-the-mouth is all about. Despite Soviet missile advantages, we still retain sufficient capability to wreak havoc upon Russia. The Soviets want the Air Force and Navy disarmed of these weapons.

While the Russians, completely secure as they are from land attack, have perfected their vast army and handsomely reequipped it, the United States on the other hand has only a token army left today, underequipped, undermanned, softened by pampering,

suffering from loss of morale. This has been our major folly. Let us pray it will not be a disaster.

No wonder the Russians want nuclear disarmament completely. They have the largest, magnificiently trained and equipped army of modern times. They have always known that war is won by the men who take and hold the ground.

I think the "spirit of Camp David" (antoher phrase invented by N.K.) is a wonderful thing.

We should have a lot of conferences, and talk and talk and talk. We, too, should learn how to make 4-, 6-, 8-hour speeches. Our filibusterers in the Senate know how. I am all for filibustering war.

In the business of giving something up, we have made many concessions, some of them tragic betrayals of whole nations, since 1944. The biggest thing we ever did was to get the Russians to keep their agreement to get out of Austria, even though Austria paid a terribly big bill for it. The only concession Russia has made is N.K.'s "concession" not to rush the illegal sequestration and ruination of Berlin.

Constantly we seem at first to be stunned and tongueties at Communist verbal affronts. It is a weak habit for us to remain in a posture of uneasy defense. We, too, have challenges to hurl, bitter truths to state; and these need not be merely recriminations. But on the other hand, we should be the first to invoke the "spirit of Camp David" when a breathing spell permits it. N. K. is an expert at "gamesmanship." If we realize that, we can have our fun too. The adversary will respect us for it.

TENSIONS

The matter of world tensions has been enormously overrated and then blow up out of all proportions by the Communists. It is folly for us to accept their definition of tensions and to react to them like puppets on strings. The entire idea of tensions has been their invention, thrown before the world and inflamed whenever the Communists have been planning new incidents and new grabs.

For our part, we should disavow tensions and publicly and repeatedly beg "our friends, the Russians," to relax and enjoy this wonderful life on earth—and take some of the pressure off of their people and their sanitariums. We should invite them to join us in smelling the flowers.

So far as concessions are concerned, that is a matter of close weighing on the scales. And let us remember that we are dealing with people utterly without the moral and fairplay standards that at least theoretically guide our lives and conduct. That is the one "freedom" that they enjoy and it makes them the most dangerous and deadly traders in world history.

It is stupid to underestimate the power of Soviet Russia. It is suicidal to be afraid of it. It will be a tragedy if we fail to take the measurements of this adversary. That will be a study without end in our time.

Foreign Exports in Trouble

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 4, 1960

Mr. BREEDING. Mr. Speaker, I would like to extend my remarks in the RECORD to include a report compiled by the House Committee on Agriculture on U.S. agricultural exports to Western Europe. This is the report of the study group that visited major countries of Western Europe last fall for the purpose of trying to determine why U.S. exports of agricultural commodities are lagging when the demand for agriculutral imports is increasing. I feel that this report is a most comprehensive analysis as to the shortcomings of our present export operations, and goes far in recommending a solution to this problem. It is my feeling that every Member of Congress should read this report and that the public, generally speaking, should be enlightened. Therefore, my reason for inserting it in the daily proceedings of the House.

The report follows:

U.S. AGRICULTURAL EXPORTS TO WESTERN EUROPE—A REPORT ON THE COMPETITIVE POSITION OF U.S. AGRICULTURAL PRODUCTS IN THE HARD CURRENCY COUNTRIES OF WESTERN EUROPE

LETTER OF TRANSMITTAL

HOUSE OF REPRESENTATIVES,
COMMITTEE ON AGRICULTURE,
Washington, D.C., January 20, 1960.

Hon. HAROLD D. COOLEY,
Chairman, Committee on Agriculture,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Attached hereto is the report of the study group which at your instruction visited the major countries of Western Europe last fall for the purpose of trying to determine, if possible, why U.S. exports of agricultural commodities to the hard currency countries of Western Europe are apparently losing some of their competitive position at a time when the demand for agricultural imports into those countries is increasing.

If the report appears to deal almost entirely with the negative aspects of our export program, this is unavoidable, since the very nature of the inquiry was to find out what is wrong with our existing programs and efforts to export agricultural commodities to these countries.

There are some affirmative aspects to this picture and I would mention specifically as an example the excellent trade development programs which are being carried on in several European countries by U.S. trade groups in cooperation with our Government; the work which is being done by the Great Plains Wheat Market Development Association and the American Farm Bureau Federation to develop our export markets; participation in trade and agricultural fairs to acquaint European importers with our products; and the excellent work which is being done by most of our agricultural attachés in their relationships with the governments to which they are accredited and with local trade groups and importers.

In presenting this report as the Member of Congress responsible for conducting this study, I want to state that the findings and conclusions of the report are not mine alone but are shared by the other two members of the study group: Dr. Walter W. Wilcox, senior agricultural specialist of the Legislative Reference Service, Library of Congress, and Mr. John J. Heimburger, general counsel of the House Agriculture Committee. Their contribution to this study was indispensable. The report presented herewith is a combined finding and recommendation based upon thorough discussion by the whole group of all the information available to it.

Sincerely yours,

CARL ALBERT,
Member of Congress.

U.S. AGRICULTURAL EXPORTS TO WESTERN EUROPE

U.S. agricultural exports declined 14 percent, or $653 million, during the calendar year, 1958. More than half this loss was in our trade with five Western European countries. Our exports to United Kingdom dropped 18 percent in 1958 as compared with 1957. Shipments to West Germany were down 30 percent, to the Netherlands 14 percent, Italy 34 percent, and Belgium down 30 percent.

During this same period, imports of agricultural commodities from the Soviet bloc increased substantially, and these five countries entered into or specifically extended more than a score of trade agreements with Soviet bloc countries contemplating the importation of additional agricultural commodities.

At the outset it should be stated that a large part of the dollar decrease in agricultural trade with the United States was the result of an unrealistic export cotton pricing policy in the crop year 1957–58, which resulted in the foreign shipment of only 2,894,000 bales of American cotton during that year compared to 5,958,000 bales the previous year. With cotton now priced more competitively, there appears to have been a moderate overall increase in our exports to Europe in the calendar year 1959.

Nevertheless, even when these factors are taken into consideration, the export situation is disturbing. The economy of Western Europe is being rapidly reestablished. Consumer incomes and purchasing power are reaching new record levels. There is a growing demand for agricultural imports and the United States is not participating to full advantage in this increased trade. The Soviet bloc, on the other hand, has declared its intention of moving into this trade area and is making substantial headway.

The chairman of the House Committee on Agriculture considered this situation to be such as to warrant the assignment of a special study group to go to Western Europe and explore the specific question: "What can the United States do to increase its agricultural exports to this area?"

NATURE OF INQUIRY

The group visited West Germany, Italy, France, Belgium, Holland, and the United Kingdom. In addition, it discussed the trade situation in detail with our agricultural attachés from Switzerland and Austria. In each of the countries visited the group discussed the agricultural trade of that country with our agricultural attaché and the Embassy staff, with representatives of the trade, including both importers and U.S. trade representatives, and with local governmental officials. The conclusions represented here are those arrived at by the group as the result of all of these discussions.

It is to be emphasized that we did not engage in original investigation, having neither the time nor the facilities for such an operation. The matters reported here are based on the opinions, observations, and statements of the best informed persons in the countries we visited. We believe that they do represent the conditions respecting our exports and that there is in possession of the Department of Agriculture ample factual detail to support the reports made to us.

It is to be emphasized, also, that this is essentially a negative report, trying to point out what is wrong with our export programs and procedures. This was our assignment. The report, therefore, makes little mention of the positive factors in our export program which we recognize do exist and to which we want to give full credit and approval. These include: some excellent trade development programs being carried on jointly by U.S. commodity groups and our Foreign Agricultural Service; serious efforts on the part of

the American Farm Bureau Federation and the Great Plains Wheat Market Development Association to develop European export markets; aggressive and intelligent export sales programs being carried out by several commodity groups—notably the U.S. poultry industry; effective promotion at trade fairs and agricultural exhibits; and, last but not least, the effective work being done by our agricultural attachés and their staffs with the governments to which they are accredited and with trade groups within those countries.

It is to be remembered, also, that when you ask the question "What is wrong with our export programs?", you will get from importers all the accumulated gripes and complaints they can think of—some of which may be genuine, and some of which may be merely tactics to obtain better terms in future business. We believe that we have properly discounted this latter factor.

EUROPE AS A MARKET FOR AGRICULTURAL EXPORTS

Europe, including the United Kingdom, is today the most important market in the world for agricultural exports. It will become an even more important market as economic growth and technological development increase purchasing power and consumer demand. The area is not self-sufficient in many agricultural commodities and in overall agricultural production. As economic growth continues, Europe will need to import increasing quantities of many agricultural commodities.

The agricultural import market in Europe today is highly competitive. It is a buyers' market. Producing areas in all parts of the world are bidding for the European market, and the United States is not maintaining a competitive position commensurate with its long-run interests. If present export policies and procedures are permitted to continue, we will not share fully in the increased agricultural exports to Europe, and we probably will lose some of the markets we now enjoy.

Several of the U.S. products such as feed grains, dressed poultry, and frozen fruits which have a good potential for increased sales are not well known to European buyers. If U.S. producers are to share fully in the future growth of the European market they must develop merchandising programs in the European countries. The merchandising programs should acquaint the end users with the capabilities of the products and should promote such changes in trade practices as will permit U.S. products to be fully competitive with similar products from other countries on a price, quality, and continuous availability basis.

Since it may take some time for private trade organizations to develop the needed merchandising programs for those products in Government stocks, the Commodity Credit Corporation might well assist the private trade in developing effective European merchandising programs.

It was the conclusion of the study group that representatives of U.S. producers or of the Commodity Credit Corporation should be available at trade fairs to promote the placing of orders if U.S. products are featured in the exhibits. U.S. producers should have aggressive merchandising representatives in Europe who, working with and through the private trade, would obtain a larger share of the expanding European market.

GOVERNMENTAL RESTRICTIONS

Virtually all countries (including the United States) have some governmental restrictions against the volume and kinds of agricultural commodities which may be imported. The existence of such restrictions in several of the countries discussed in this report has been an important factor in the volume of our agricultural trade in certain commodities. These restrictions are not discussed in this report because they are outside the scope of our inquiry which was centered on finding out what we, ourselves, can do to improve our agricultural trade position in Western Europe. It was gratifying to find that many of these restrictions, particularly those associated with the dollar shortage following World War II, have been removed or modified. Where such restrictions still discriminate unfairly against U.S. agricultural commodities, it is to be hoped and assumed that our agricultural attachés and diplomatic missions will continue their efforts to bring about their removal.

SHORTCOMINGS OF OUR PRESENT EXPORT OPERATIONS

Throughout our discussions we constantly asked the questions: "How can our present export operations be improved? Why are we losing markets to other producing countries?" Almost without exception we received these major reasons for the U.S. inability to compete effectively in the European market:

(1) Lack of quality, condition, and dependability of U.S. imports: It was shocking to us to hear almost all persons interviewed give this as their first reason for our failure to compete more effectively on the European market. The casual attitude of many of our exporters with respect to the quality, condition, and dependability of exports to Europe is destroying markets rather than building them.

(2) Lack of an effective sales force: While other nations and their exporters are maintaining active sales forces in the major markets of Europe, we found that many American commodity groups and individual commodities have no sales representatives in many European countries. Economic growth is creating import markets in Europe which American exporters are simply failing to take advantage of, by not making a sufficiently serious and aggressive effort to sell products from the United States.

(3) Price: In some instances American commodities are priced out of the European market. Where the price is determined by the amount or the effectiveness of a government subsidy, it is absurd that this subsidy should not be established at a level which will permit American products to compete effectively in the European market with the frequently subsidized commodities of other countries. The spectacular example in this respect is, of course, the failure to price our cotton competitively during the 1958–59 marketing year.

(4) Lack of flexibility in our export operations: Because of the economic recovery and the currency stability which has been achieved by the Western European countries, virtually all are now ineligible for foreign currency purchases of our farm commodities under title I of Public Law 480. If we are to compete on even terms with other countries, however, we must offer more flexibility in trading than is possible now. Other countries in the European market are offering bilateral trade agreements, barter deals, two- and three-way exchanges, extended credit, sales on consignment, and other devices to encourage trade. As far as our Government is concerned, however, American commodities delivered into the European market must now be sold on the "cash on the barrelhead" basis. Since we have determined that these countries are now able to pay dollars for their imports, our only offer is cash sales for dollars and we are doing little or nothing on a governmental basis, to make possible the kind of flexibility in trading offered by other countries.

(5) Uncertainty of U.S. policies: There is a general feeling of uncertainty regarding U.S. export policies and programs. European importers have a feeling that they cannot rely on the United States as a continuing and dependable source of agricultural commodities on predictable terms. A major part of this uncertainty must be attributed to government, but a substantial portion may be traced to the attitude of the trade itself, which has looked upon Europe as a residual for occasional surpluses rather than as a substantial market for long-term export operations.

WHEAT

All European countries produce wheat and collectively they normally produce about three-quarters of their total requirements. Most European wheat, however, is of a soft variety which requires a certain quantity of hard wheat admixture to make an acceptable flour. The wheat market in Europe, therefore, is specifically a quality market. Unfortunately, the experience of European importers leads them to believe that they can be less sure of obtaining the quality wheat they want from the United States than from almost any other producing country. The following comment is typical:

When we buy a cargo of Canadian wheat, we can be confident that the wheat we will receive will be the grade we have ordered or better and that the protein content will be up to specification. When we buy a cargo of U.S. wheat, we can never be sure what we will get but we can assume that it will be at the very bottom of the permissible grade and possibly even lower.

Too many exporters, it would appear, are international traders who are after a quick profit rather than a long-term market for American wheat. Wheat that may have rated at the top of the grade when it left the elevator in Kansas City or Buffalo may be "slugged" when it is loaded into the boat until it barely meets the lowest specifications of the grade it is represented to be. This kind of procedure would seem to raise a question about the whole departmental policy of making CCC sales through private trade. If the CCC has high-quality wheat to sell, it should be able to dispose of that wheat with assurance that it will reach the buyer without adulteration or deterioration in quality and will assist in building, instead of destroying, future markets for American wheat.

An interesting part of this problem is that our wheat exports to Europe are largely in the hands of big, international grain dealers who operate throughout the world and who would just as soon sell wheat from Canada, Australia, or Argentina, as wheat from the United States. In fact, several of our largest wheat exporters are not even U.S. companies and, for various reasons, would probably prefer at times to deal in grain from another country than from the United States. Somehow, producers and others interested in selling U.S. wheat must be more active in Europe and in tailoring U.S. wheat exports to European needs.

Although the Department of Agriculture has for several years been concerned with this problem of quality in U.S. wheat exports to Europe, too little progress has been made in its solution. If the problem cannot be solved by tighter grade requirements or more stringent export inspection, the Department should make whatever recommendations for new legislation appear to be necessary. We can build our long-term wheat markets in Europe only by giving European buyers an assurance of dependable and continuing quality and they have no such assurance under our present export methods.

COTTON

Price and the uncertainty of Government policies are apparently the No. 1 handicap to the United States maintaining its competitive position in cotton exports to Europe. In the marketing year 1958–59, American cotton was priced 5 to 7 cents above the world market. This was a result of the action of the Department of Agriculture in establishing the export subsidy. In the current marketing year, a more realistic

export subsidy has been established and U.S. cotton is more nearly competitive in European markets. Most of those to whom the group talked in Europe, however, felt that the cotton subsidy should be established on a day-to-day basis, as in the case of grains, rather than on a preannounced, established price. Since virtually every other cotton-producing country operates its export programs with some type of governmental subsidy or assistance, it is hard to understand why the United States should not adopt the policy of making its cotton competitive with all other cotton on world markets on a day-to-day basis.

Although there were fewer complaints about cotton quality than there were about the quality of wheat, such complaints were not entirely absent. It is difficult for many European buyers to understand why U.S. cotton could not be sold on the basis of Government grades and staples instead of on the basis of the exporter's private grading system. They point out that a cotton user needs to be able to depend on the grade and staple of the product he is buying, since his operations are usually set up to accommodate a certain type of cotton. Where cotton is purchased on a private grade, instead of on established U.S. grades and staples, the buyer not only may be disappointed in the quality of cotton he receives, but he finds it extremely difficult to secure a price adjustment.

To some extent our cotton export trade to Europe also suffers, as does wheat, from the domination of the market by a few large, international companies. Some of these companies not only operate as brokers and exporters in other countries but have actual proprietary interest in cotton produced in other countries and would, presumably, be more eager to sell their own cotton from some other area than cotton from the United States.

FEED GRAINS

Europe is an expanding market for feed grains. As consumer incomes increase, there is a growing demand for livestock products, which in turn requires additional feed grains. Some of this demand will be met by expanded production in Europe but there will remain, apparently, a very significant and a growing feed grain import market. Whether the United States obtains its share of this market will apparently depend on three things: (1) Market development to create demands specifically for the grains we produce, (2) the quality of the grains we send to Europe, and (3) a real sales effort on the part of U.S. feed grain producers and exporters. If the selling is left exclusively to the large international grain traders, it can be assumed that their efforts to sell feed grains produced in other areas of the world will be at least as great as their efforts to sell feed grains produced in the United States. We cannot escape the conclusion that if U.S. producers of corn, grain sorghums, and other feed grains want to take advantage of the growing market for these commodities in Europe, they must get their own salesmen into the European market areas and keep them there.

They must also see that the quality of their product is maintained. A specific example of the importance of this is to be found in the United Kingdom, where a brand new broiler industry is creating a demand for corn and other feed grains. Within the past 2 or 3 years enterprising Britishers have started in the United Kingdom a broiler production industry patterned directly after the highly efficient broiler production operations in the United States. The wide acceptance of this product is indicated by the fact that in London the traditional fish and chips shops have virtually disappeared and have been replaced by chicken huts and similar restaurants specializing in broilers.

U.S. corn is priced competitively on the world market and we have had a very favorable position on imports of corn into the United Kingdom. This position is being seriously jeopardized, however, by the poor quality and condition of some of the corn which has been shipped to this area. We were told of several shipments of corn which arrived in the United Kingdom in such condition as to be virtually unfit for any use. Apparently, perfectly good hard yellow corn of low moisture content had been mixed at the seaport with enough corn of high moisture content to bring the total down to the very bottom of tolerance for the grade. During the ocean voyage the wet corn had so deteriorated the whole shipment that it was virtually useless on arrival. This may represent a quick profit for the exporter but it is not the way to maintain and expand a market of great importance which can be ours if we will provide a quality product at a competitive price.

SOYBEANS AND GRAIN SORGHUMS

Although classified among the feed grains, soybeans, and grain sorghums require special mention. Some excellent market development work has been done on both these commodities by the Grain Sorghum Producers Association and the Soybean Council of America. In every country we were told, however, that these promotional efforts might in large part be wasted as far as American producers are concerned because there are virtually no salesmen in Europe trying to make sales of these particular commodities. The main thing that is needed, we were told repeatedly, is more salesmen spending their full time in Europe, familiar with the needs and the buying practices of European importers, and able to advise them how to use our products to the best advantage, with sales books in their pockets ready to take advantage of the promotional endeavors of the industry organizations. Perhaps an export sales cooperative, such as is maintained by tobacco producers, would be helpful in this situation.

Questions of quality have also been raised in connection with American soybeans. In the past 2 years, soybeans from Red China have moved into Europe in increasing volume. Comparing these imports with those from the United States, one Government official had this to say:

There have been difficulties with U.S. contracts for soybeans recently, both as regards the quality of the supplies (Manchurian beans are said to have up to 1 percent higher oil content than American) and also as regards the amount of adulteration or admixture. A further point is that Manchurian suppliers are very forthright about allowances for such things as excessive moisture content or reduced oil yield, whereas the American shippers take a very unyielding attitude toward claims under these headings.

DRY EDIBLE BEANS

Another commodity in which the lack of salesmen in Europe is apparently seriously hurting our competitive position is that of dry edible beans. Although the United States consistently produces an exportable surplus of dry edible beans and although Europe is a substantial market for such beans, we were informed that there is not in the whole of Europe one single salesman devoting his time exclusively to the sale of American beans into the European market.

FRUITS AND VEGETABLES

Europe is the largest consumer of citrus fruits in the world, exceeding the United States in every category except grapefruit. Because of the shipping distance involved, it is difficult for the United States to compete pricewise in the European market. It is apparent, therefore, that in these commodities emphasis must be placed on quality, condition, and reliability of supply. It is equally evident that our exporters have not been devoting enough attention to these factors. In virtually every country we visited, there were reports of American fruits arriving at their destination in poor condition. Citrus fruits arriving with as much as 36 percent rot in the shipment were reported, for example.

With respect to fruits and vegetables, an authoritative publication sums the situation up in the following words:

Not only have foreign (other than United States) competitive supplies been increasing and improving in quality, but foreign exporters have been directing more attention to marketing problems. They have increasingly offered advertising, scheduled selling on a consignment basis, panel arrangements, or other devices to gain or maintain a foothold in foreign markets. With even larger supplies promised in the future, the competitive race for a share of the world market in horticultural products is very great indeed.

The U.S. industry will be forced to meet these competitive problems by increasing efforts toward maintaining high standards of quality and condition for products exported to oversea markets. Prior to the war, U.S. products often were unusual in maintaining consistent standards, but in recent years the quality of some competing products has improved relatively more than that of U.S. items.

PROCESSED FOODS

Europe is just beginning to experience the same kind of revolution in the retailing and the home handling of food that has taken place in the United States in the past generation. Supermarkets and self-service stores are just beginning to appear in Europe and their acceptance and development there will probably be comparable to that in the United States. Many homes are experiencing the advantages of mechanical refrigeration, including freezing compartments, for the first time. As these developments take place there will be a growing shift on the part of consumers to prepacked and processed foods. In the opinion of those most familiar with the subject, there will be a substantial market for American processed foods but the extent of this market will depend almost entirely on the quality and dependability of these food products.

Our market will not be improved, for example, by instances of unreliability such as one reported to us. A German importer contracted for a very substantial order of canned green beans from a U.S. processor and had the entire shipment sold to his customers. When the shipment arrived, however, there were only two-thirds as many cases as he had ordered so that he had the unenviable (and unprofitable) job of canceling one-third of the sales he had made.

American processed foods have had a high reputation in Europe for quality and dependability. Since most of them must sell in the retail market at higher prices than local products, it is essential that their reputation of premium quality be maintained if they are to keep their place in this rapidly expanding market.

RECOMMENDATIONS

1. Quality and condition of exports: That the Department of Agriculture undertake an immediate study to reevaluate its progress to date and to determine what more can be done to improve the quality, conditions, and reliability of U.S. exports of agricultural commodities to the European area. It should consider stricter grade standards, more rigid export inspection, the requirement that commodities exported under Government subsidy be exported on Government grade only, and better procedure than now exists for the filing of complaints by foreign importers and for price adjustments on the basis of such complaints when justified. We believe the Department has available to it now ample data on which to base its studies and that it should promptly take such action as can be taken administratively and recommend to Congress any additional action requiring new legislation.

2. Price: pricing of those commodities which are exported under Government sub-

sidy should be done in such a manner that the commodities are fully competitive on the European market with similar commodities from other areas. More care should also be exercised that the quality of the commodities exported is the same quality on which the exporter receives his subsidy.

3. Government sales force: The various laws relating to the disposal of surplus agricultural commodities require that sales shall be made insofar as practicable through the established channels of private trade. The Department of Agriculture has interpreted these provisions to require that all sales shall be made in this manner. There has been established in the Department of Agriculture and Office of General Sales Manager to assist in disposing of these surplus commodities but because of the policy of making all sales through private trade, the office has been relatively inactive.

The lack of private salesmen for certain American commodities in the European area has been commented on in this report. In order to fill this gap and at the same time not violate the legislative provisions regarding sales through private trade channels, it is recommended that the Department of Agriculture consider setting up a sales system somewhat along the following lines:

(1) Establish at strategic locations in Europe representatives of the Office of the General Sales Manager to work directly with importers and the trade to develop possible sales of those commodities which are in surplus.

(2) Establish teletype or other means of rapid communication between each salesman and the sales manager's office.

(3) Notify the U.S. private trade in each commodity of the arrangement being set up and establish a list of exporters who indicate their willingness to pay for collect telegrams informing them of sales opportunities.

(4) When the European representative of the Sales Manager's Office finds a possible sale for a surplus agricultural commodity, he could transmit this immediately to Washington where it could be sent out simultaneously to all of those in the trade who had indicated their interest and willingness to pay for such telegrams.

(5) Specific sales offers could then be made directly by the American exporter to the potential buyer in the foreign country.

This proposal was outlined to several of our agricultural attachés in Europe and opinion was divided as to whether or not it would be helpful and workable in their particular countries in moving our agricultural commodities. At least, we feel it merits the most careful consideration by the Department of Agriculture.

4. Flexibility in sales terms.—Since the close of World War II, our agricultural exports to Europe have been stimulated by various Government programs, including shipments under the Marshall plan and the Mutual Security Act, sales for local currency under title I of Public Law 480, and barters strategic and other materials. The countries of Western Europe have achieved an economic and monetary stability where they are no longer considered generally eligible for sales under title I of Public Law 480. At the same time, most of them have been ruled ineligible for Government-sponsored barter contracts with respect to most of our surplus commodities. The result is that, except for such terms or trading agreements as private exporters may enter into with private importers in the other country, our export sales to Europe are virtually on a cash dollar basis. As has been pointed out, in this highly competitive market where other producing countries are offering bilateral exchanges, barter, sales on consignment, and other trade concessions, this cash on delivery policy can be a serious handicap to the maintenance of our competitive position in this market. It is recommended that the Department of Agriculture and the Department of State give serious study to this problem with a view to inaugurating or reestablishing governmental programs which will permit American exporters to compete on a more nearly equal basis with exporters from other countries.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Fiscal and Monetary Policies in the Changing Economy

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "Fiscal and Monetary Policies in the Changing Economy," delivered by the junior Senator from Virginia [Mr. ROBERTSON] at the midyear meeting of the National Association of Mutual Savings Banks, at the Commodore Hotel, in New York City, on December 8, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FISCAL AND MONETARY POLICIES IN A CHANGING ECONOMY

(Address by Senator A. WILLIS ROBERTSON, of Virginia, to the midyear meeting of the National Association of Mutual Savings Banks, Commodore Hotel, New York, N.Y., December 8, 1959)

It is a pleasure to meet today with the representatives of the mutual savings banks of the country which have been doing such a fine job of promoting thrift in the areas they serve.

It is also a pleasure again to see your able executive vice president, Grover Ensley, and your counsel, Bill McKenna. I have enjoyed working with both of them while I have been a Member of the Senate. Grover, incidentally, is a part-time constituent of mine, for when you allow him a vacation, he retires to a beautiful spot which he owns on the Shenandoah River in Virginia. Bill, of course, was for a long time counsel of the Senate Committee on Banking and Currency, of which I now have the honor of being chairman.

I was interested in learning from them more about the institutions which you represent and the important function they perform in the Nation's economy, even though your banks are located in only 17 of the 50 States. I was glad to find that your deposits are continuing to grow rapidly, just about doubling each decade. That is a record of which you can be proud, particularly when it is considered that it was the small savings of many individuals which accounted for your present $35 billion of deposits, and your $1½ billion of home mortgages recorded in 1 year.

Although my State of Virginit has no mutual savings banks, I was interested to learn that at the end of the third quarter of 1957 your institutions had invested over $277 million in Virginia home mortgages. Those investments have benefited both the borrowers and the lenders, for I am sure you have found Virginia mortgages to be good risks.

As chairman of the Senate committee which has jurisdiction over housing matters, I am appreciative of the stabilizing influence you exercise on a rather unstable industry—homebuilding—by your large investments all over the country in FHA and VA mortgages.

My subject is a broad one, and, of course, I could not do it justice in the time which is allotted to me. I can merely sketch some of my views on proper fiscal and monetary policies in a changing economy.

One of the significant changes in our economy is that which is implicit in our population growth. It has been predicted that our population will increase by 25 to 30 million during the next decade, and optimistic estimates are that employment will rise by 12 or 13 million, in the same period, an increase of 20 percent. To provide a proper economic climate for these changes will require intelligence and statesmanship of the highest order.

Our economy is a dynamic one because it is relatively free. The freedom which our private enterprise system provides, whereby economic decisions are made by millions of persons throughout the country, gives us a vitality which is the envy of the world. At the same time, this freedom carries with it the obligation of self-restraint, calling for sacrifice in many directions.

With respect to our international responsibilities, the changes which have occurred over the last 2 years have been striking. Although the United States has had a virtually continuous deficit in its external payments since 1949, the deficits in 1958 and 1959 have been over two and one-half times as large as those of the first 8 years of this period. In 1958, as a result of transactions with the United States, foreigners acquired $3.4 billion in gold and liquid dollar assets. Of this amount, $2.3 billion was in the form of gold. So far this year, transfers of gold and dollars have been at an annual rate of around $4 billion. However, the gold portion of these transfers has been markedly smaller than in 1958.

This change in economic conditions requires corresponding changes in our policy. Shortly after World War II, it became clear that our allies had suffered such appalling losses that they could not get back on their feet without an aid program from the United States—and this in spite of the great agencies created by the Bretton Woods Agreements—the International Monetary Fund, and the World Bank. Therefore, in the spring of 1947, at Natural Bridge, Va., I made a speech advocating aid for our World War allies, sending a copy of that speech to the Secretary of State. The following June, Gen. George Marshall developed that theme in his now famous Harvard speech and the United States embarked upon an aid program to close the dollar gap. A bipartisan majority of the Congress wrote the program into law. It was carried out with some mistakes and considerable waste, but, fortunately, with success. Now that the recipients of that rehabilitation program are back on their feet, with strong and vigorous productive capacities, appropriations for foreign aid should be materially reduced.

The deficit in our external payments, while not alarming, demands attention. The fact that most of the European nations are now in sound financial condition is itself cause for gratification rather than for alarm. But this is a change in the economy of the free world which we can disregard only at our peril. The continuation of large deficits in our budget could lead to a lessening of confidence in the dollar as a reserve currency by those foreign governments and individuals who currently hold $16 billion in short-term dollar claims. I rate the preservation of a stable dollar as second only in importance to the preservation of peace.

In my judgment, several major steps should be taken to end the current unfavorable balance of payments.

First, we must make sure that other NATO nations bear their full share of the necessary aid to underdeveloped countries and their full share of the costs of defending the free world. We have taken some steps in this direction—we have increased the proportion of development aid which goes through international organizations, such as the World Bank and the International Finance Corporation, where other countries put up two-thirds of the capital, and by reducing the direct foreign aid programs, where we put up all of the funds. This change is possible because the European nations and Japan are now in a position to bear a larger share of the costs of these programs.

Another essential ingredient in the adjustment of our balance of payments situation is to raise our exports sufficiently, relative to imports, to cover more adequately than heretofore Government payments of $5 billion to $6 billion a year for grants, loans, and military expenditures abroad, and private capital outflows in excess of $2 billion a year.

It is important especially to our farmers that we correct our unfavorable balance of payments by increasing our exports rather than by reducing our imports.

As a member for 10 years of the House Ways and Means Committee, it was my privilege to participate in the initial efforts to substitute, for the trade-throttling Hawley-Smoot Tariff Act, the program of mutually beneficial reciprocal foreign trade which is associated with the name of Cordell Hull. My interest has continued ever since, and the program has been successful over the years although it has been modified to meet changes in conditions. With the change in our balance of trade, the continuation of that program will require the best efforts of all of us who believe that trade wars lead to shooting wars and who also believe in putting the general welfare first.

Minority pressure groups today, armed with the change in our balance of payments situation which I have heretofore described, will argue that we must resort to protectionist devices. I disagree, but if we are to continue our mutually beneficial trade programs, nations with whom we negotiated agreements must be required to live up to them, hardship cases must be recognized, and we must exercise more discipline and greater restraint in our domestic monetary and fiscal policies.

A large part of the world is again in competition with us for foreign markets. The European common market is becoming a trading market comparable to our own and a new outer market is being organized. At the same time the Soviet bloc has warned us through Khrushchev, who recently said: "We declare war upon you—in the peaceful field of trade."

Our international trade position is directly related to our domestic economy. Our ability to win the trade war, which Khrushchev has declared, and to hold our share of

the world's trade, will depend upon our producing goods and services which can successfully meet foreign competition. This, in turn, depends upon confidence in the dollar abroad and control of inflation at home.

As indicated, our domestic economy is a changing one, and the policies applicable to it must accommodate to those changes.

In the fall and winter of 1957 and the spring of 1958, we were suffering from a recession, with substantial numbers of unemployed and a substantial decline in our industrial production, gross national product, and national income. But from the middle of 1958 to the middle of 1959 all of these measures of our national wealth rose rapidly, and by June 1959 had exceeded the previous peaks. The wholesale and retail price indexes continued their inexorable rise during all of this period, as they had through virtually the entire postwar period. And if the prices of farm products and foods had not fallen since the spring of 1958 by over 10 percent the increases in the overall wholesale and consumer price indexes would have been much more significant.

The longest steel work stoppage on record interrupted the recovery that started in the spring of 1958. Through last September, its effect was confined for the most part to the industries involved in the strike. However, as the strike continued into October, its secondary effects were much more widespread, and by early November the total number out of work because of the direct and indirect effects of the strike approached 1 million.

With output in steel and related industries sharply curtailed, industrial production in October was nearly 5 percent below the prestrike peak in June. In November, with steel production up sharply, it is expected that the total index will show some rise, despite curtailments in steel-consuming industries.

Gross national product declined $6 billion, or over 1 percent, in the third quarter of 1959 due principally to a shift from building up to liquidation of steel stocks. Total business inventories declined at an annual rate of $1 billion during the quarter, in contrast with a $10 billion increase in the second quarter.

Despite these developments, income and consumer spending held up well. Between June and October, personal income declined less than 1 percent. Most other types of income were stable or above that period.

The national economy is beginning to recover from the contraction caused by the steel strike. Following reactivation of the major steel plants on November 7, production climbed rapidly and was scheduled at nearly 80 percent of capacity for the week of November 15. Workers in related industries, such as foundries and coal mines, are being recalled to their jobs. Workers in other steel-consuming industries will not be recalled insubstantial numbers for some time yet, because of the time required to refill the pipelines in the steel-fabricating process.

In spite of the aberration caused by the steel strike, our principal long-term economic problem both within this country and with respect to our international balance of payments is the control of inflation. It seems quite likely that, in the long run, the net effect of the steel strike will be additional pressures on the wage-price spiral.

The most important single element in this struggle against inflation is the balancing of the Federal budget. Last year, fiscal 1959, ended with a record setting peacetime budget deficit of $12½ billion. This year, fiscal 1960, an anticipated balance has, by the steel strike, been turned into a probable deficit of $500 million. For the next fiscal year, incidentally an election year, we hear of new and expanded programs which would add billions of expenditures. Many of the proposed new programs, and many of the proposed increases in existing programs, will be supported by large segments of the country, and many of them will have considerable inherent merit. But in spite of this strong support and their possible merit, these programs must be weighed in the scales of monetary and fiscal policy. They must not be approved unless we are prepared to pay for them by taxation, and then only if it can be demonstrated that the resources involved can be better utilized in those programs than in the private uses to which the resources would be put were they not preempted by taxation. As a member of the Senate Appropriations Committee I shall fight for a balanced budget for fiscal 1961 but my present feeling is that it will be an uphill fight.

The monumental task of managing our existing debt will remain with us. The Treasury, faced with the problem of refinancing about $75 billion a year, must have greater flexibility with respect to interest rates and maturities in order that more of this debt may be placed on longer terms with less pressure upon the money market.

We must continue to support the Federal Reserve System in its policy of monetary restraint. No group should be more aware than yours of the fact that monetary policy must be flexible and that the creation of new money or bank check money should be with relation to the necessary money work to be done. We must resist the efforts of those who would convert our central bank into an arm of the Treasury, affording a market for a huge debt, regardless of other demands for money, and regardless of the price, or interest, which the market will pay for that debt.

"Nations," said a popular political leader 27 years ago, "have been wrecked on the rocks of a loose fiscal policy." Revolution and dictatorship are the end products of uncontrolled inflation. In my opinion any discussion of fiscal policies becomes meaningless unless it includes the perpetuity of our personal freedom. Therefore, I hope you will not think that I am talking partisan politics when I say that the preservation of States rights is as important to the North and the rest of the Nation as it is to the South—the keystone of the arch of constitutional liberty.

Marched About 60 Miles in March-of-Dimes Project

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose articles from the Daily Reflector under the title "Marched About 60 Miles in March-of-Dimes Project."

Eighteen men who participated in this marching event so that little children could walk are to be congratulated for the great effort they made and the contribution they are making to one of the Nation's most outstanding and worthy causes.

The articles follow:

[From the Greenville (N.C.) Daily Reflector, Jan. 15, 1960]

MARCHED ABOUT 60 MILES IN MARCH-OF-DIMES PROJECT

East Carolina College Air Force ROTC officials believed this morning the local school's precision drill team "set a record for ROTC drills teams" in their 12½-hour marching stint that ended close to midnight last night and raised some $520 for the current March of Dimes campaign.

The 18-man team began its "marchathon" yesterday morning on Third Street in front of the Pitt County Courthouse at 11:30 after announcing it would continue to go through its paces as long as contributions to the annual charity campaign came in at the rate of 10 cents per second.

After 3 hours of precision drilling, the money count revealed the rate of contribution was less than $50 per hour, but the cadets insisted upon continuing the gruelling pace that amounted to an estimated 60 miles for the 12-plus hours.

Under the direction of T. Sgt. Thomas E. Winstead, of Wilson, the drill team continued its round-the-clock march in spite of official suggestions that it come to a halt.

Each member of the team contributed $1 to the campaign, comprising the largest cash donation of the afternoon. A pair of $50 contributions boosted the morale of the marching students about 9 o'clock following a 4-hour drought, Sergeant Winstead told the Daily Reflector.

The students, accustomed to marching some 10 hours per week, were allowed 5-minute breaks upon completion of each hour's drilling. During these brief rest periods, cadets sat on the Third Street curbing and rubbed blistered and aching feet.

At the members' requests, the short rest periods were discontinued toward the end of the 12-hour hike because "our feet hurt worse when we stop."

Sergeant Winstead voiced disappointment at the rate of contribution. "We certainly expected better results," he said. Other ECC ROTC officials believed contributions might still be on the way. The air science office on the campus will remain available for contributions to be phoned in (PL 2-6101, extension 258).

According to the air science office this morning, the local drill team got to bed around 1:30 this morning only to rise again at 4:30 to travel to Langley Field, Va., for an orientation visit to that U.S. airbase. Drill team members were accompanied by other AFROTC cadets at ECC.

Sergeant Winstead was "very proud of the entire cadets corps at the college—very proud of them." He emphasized, it was "not their idea to stop, I'm making them quit."

The same members that began the marathon hike were still marching at the end. Only four were forced to leave the ranks because severe foot blisters prevented further marching.

DIDN'T WANT TO GIVE UP
(By Henry Howard)

Yesterday, about 1.4 million steps pounded Third Street in front of the courthouse here. Probably more steps in 1 day than it had ever seen.

Sixteen East Carolina College Air Force ROTC cadets and their leader comprised a sharpstepping drill team that vowed to march continuously as long as contributions to the March of Dimes fundraising campaigns rolled in.

The initial plan was to march as long as donations to the tune of 10 cents per second piled up. The march began. Contributions very slow.

At the end of 3 hours of constant drilling, tabulations showed the men had marched about 2½ hours on credit. Still the cadets marched.

Spectators gathered in small numbers off and on throughout the afternoon as a microphone picked up the sound of the heavy boots rhythmically pounding the street.

At one point, the team drilled for something like 4 hours without a single donation, a sergeant said. Then morale was boosted by a pair of extra nice gifts. The marching continued.

Cadets gratefully rested and hungrily consumed provided refreshments during the 5-minute breaks allowed after each hour of constant drilling. They sat along the curbing during the afternoon and rubbed tired and sore feet.

Doggedly, they continued the long grind. Around 6 o'clock, they paused a quarter-hour for a quick meal of sandwiches. The march continued.

At 9 o'clock, the sergeant reported he'd suggested the "marchathon" come to a halt. The boys wouldn't hear of it. They were operating in the red but were determined not to give up. At that point, they'd traveled some 45 miles.

The "Angel Flight," a group of ECC coeds, stayed with the drill team and kept coffee hot as the night grew colder. Still the cadets marched.

As the end of the 12th hour approached, the sergeant prepared to call a halt to the drilling. He stressed, "It's not their idea to stop, I'm making them do it."

During the last few hours of the marathon march, the cadets decided against the hourly 5-minute rests. Our feet hurt worse when we stop," one of them explained.

As 11:30 p.m. arrived the drill team came to a halt. All but four of the original team were still standing. Those four marched faithful until blistered feet prohibited another step.

The sergeant believed the boys set a record.

Harry S. Truman's Love of Home and Family, by Rev. Baxton Bryant

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, February 8, 1960

Mr. YARBOROUGH. Mr. President, recently all Texans were very proud and pleased to have former President Harry Truman as a visitor in our State. He had several speaking engagements, all of which were extremely well attended, and all of which received warm response from Texans.

On Sunday, October 18, 1959, President Truman was lay speaker at a special layman's day service at the Elmwood Methodist Church in Dallas. In writing the program for that service, the church's minister, Rev. Baxton Bryant, wrote a tribute to President Truman which every American should read. While all Americans know of President Truman's political success and governmental achievements, few pause to reflect the sound character and solid family basis upon which his successes rest.

I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD the tribute published in the Elmwood, Dallas, Tex., Methodist Church program for October 18, 1959, under the title "Welcome, Mr. President."

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

WELCOME, MR. PRESIDENT

History in person comes to Elmwood Methodist Church today. We would be honored to have any President or ex-President of the United States to visit our church, but it would be impossible to find one who has contributed so much to the making of a better world than Harry Truman. History has already been kind to Mr. Truman, but it is our faith that an evaluation removed from partisan prejudices and personal emotions will record him a place alongside America's greatest Presidents. I count it a great personal joy to share my pulpit with this great man and here are some of the reasons.

U.N. mainstay: The lack of Harry Truman's signature could have kept the U.N. from coming into being, and with it gave to the world, a forum where the nations of the world could sit down and talk instead of fight. While the U.N. was still in its infancy, he made it a force to be reckoned with by sending American troops to defend a free Korea.

A new America: Our world changed from a selfish, isolationist nation hiding behind an outdated Monroe doctrine to a caring, sharing concern for people who love freedom around the world, under the Truman doctrine. A free, independent Turkey and Greece stand as grateful, first witnesses to this new America of world responsibility.

Feeds a starving enemy: While many of us were still filled with hate toward our enemy, it was our President that led the way in showing Christian forgiveness and compassion. It was his program that fed the starving children of our enemies, helped them rebuild their homes, factories, and cities. As a result, some of our strongest allies today were enemies yesterday. This is christianity at work on an international basis.

Friend of underdog: Our distinguished guest has always been for the underdog, regardless of race, color, or creed. He dared to challenge America to truly be "a land of the free." He accepted literally the first two words of the Lord's Prayer, "Our Father," and preached a stronger sermon on brotherhood than most of our prejudices could accept. Someday, when race tensions will be no more, and every man will stand with equal dignity and pride in his own race, this great man will have helped an unwilling nation reach its greatest height, a nation where a man will not be judged by the color of his skin, but by what he is, and what he has to offer in service to God and humanity.

Love of home and family: Since Mr. Truman became world renowed, we have been privileged to get a glimpse of four living generations of his family. They are four generations filled with character and family devotion. Grandmother Truman won the hearts of a sorrowing nation with her humble statement on the death of President Roosevelt, and her son's elevation to the highest office in the land, "I cannot really be glad my son is President because I am sorry that President Roosevelt is dead. If he had been voted in, I would be out waving a flag, but it does not seem right to be very happy or wave any flags now. Harry will get along. I knew Harry would be all right after I heard him give his speech this morning. I heard every word of it but Mary, my daughter, is going to read it to me. Everyone who heard him talk this morning will know he is sincere and will do what is best."

Every mother would be happy to have a son treat her as Harry Truman treated his mother. Divorce courts and marriage counseling bureaus would disappear if all marriages were like the Trumans. Every daughter would adore a daddy who had the spunk to speak up for her, even if he was President of the United States. It would be a great joy for fathers if all daughters had the beauty of character that Margaret Truman Daniel possesses. Mrs. Bess Wallace Truman graced the White House and the world with her humble Christian virtues. Margaret has now presented her parents with two lovely grandchildren, and grandparents would do well to follow the former President in his lively, loving, sensible attitude toward his grandchildren. Living in a glass house for all to see, not one word of gossip ever touched this entire family relationship.

He was human: He never once denied being human. Since there was only one perfect being, he, like the rest of us, has ofttimes been human. That is why we are in church today, seeking strength greater than our own, to help us be more than we are. On this layman's day in our land, we are privileged to have one who has been about the Master's business in the community of nations. Mr. President, we welcome you to our pulpit.

One Hundred and Seventy-fifth Anniversary of the Adoption of the Constitution of the United States

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the Council of the City of Philadelphia:

RESOLUTION 23

Resolution memorializing the President of the United States, the Congress, the Governor and the Legislature of the Commonwealth of Pennsylvania, to take cognizance that the 175th anniversary of the adoption of the Constitution of the United States will be celebrated in Philadelphia in 1962, and to appoint committees at their respective levels to join with the city of Philadelphia in appropriately planning for this auspicious event

Whereas the Constitution of the United States has become known throughout the world as a document of transcending importance, setting forth the basis of this Government and defining the rights, privileges and duties that have made American citizenship one of the most prized possessions of all time; and

Whereas this document, consisting originally of a preamble and seven articles, was drafted in Philadelphia and approved unanimously by George Washington and the delegates of the various States in convention assembled in this city on September 17, 1787; and

Whereas the Constitution, with its amendments and interpretations, has become not only the supreme law of the land, but a document of fundamental human rights worthy to be emulated by peoples everywhere, and stands as a monument to the legitimate aspirations of mankind; and

Whereas preparations by the city of Philadelphia are now underway for the observ-

ance of the 175th anniversary of the adoption of the Constitution in this city in 1962; therefore

Resolved, by the Council of the City of Philadelphia, That we hereby memorialize the President of the United States, the Congress, the Governor, and the Legislature of the Commonwealth of Pennsylvania, to take due cognizance that the 175th anniversary of the adoption of the Constitution of the United States will be celebrated in Philadelphia in 1962, by appointing committees to join with the city of Philadelphia in planning the appropriate observance of this auspicious anniversary.

Resolved, That certified copies of this resolution be forwarded to the President of the United States, the Members of Congress, the Governor of Pennsylvania, and the members of the Pennsylvania State Legislature.

U.S. Foreign Aid Programs

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a recent radio broadcast, program No. 269, by Wayne Poucher, radio minister for Life Lines, a patriotic religious-education movement.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN AID

As Joseph Stalin moved toward power in the Soviet Union, he wrote a book entitled "Marxism and the National Colonial Question."

In this book Stalin said: "It is essential that the advanced countries should render aid, real and prolonged, to the backward nationalities in their cultural and economic development. Otherwise, it will be impossible to bring about the peaceful coexistence of the various nations and peoples within a single economic system that is so essential for the final triumph of socialism."

It is amazing that in its foreign aid program the United States is following Stalin's advice to the letter.

From the very beginning Stalin, Khrushchev, and the other dictators in the Kremlin have been determined that the United States and its form of capitalism pay for its own death and burial. The mistaken would have us believe that America's only hope for survival in the cold war is the continuance of this backbreaking and economy-ruining foreign aid program. In reality, the facts prove directly the opposite.

Thoughtful men have returned from trips to Europe confounded by the growing lack of confidence throughout the world in the American dollar. Our foreign aid dollars have built industries and the economies of the nations receiving them to the point where they are now driving us from the world market. We are not only pricing ourselves out of business but are also financing foreign governments and their nationalized industries to compete further with us.

The American dollar is no longer the powerful weapon it once was. The situation is brought sharply home to the American tourist who visits Canada. When he lays down $1 for exchange in Canadian money, he gets back not 100 cents but from 93 to 95 cents. Yet the mistaken continue to say the United States is well able to hand out our natural resources and national fortune for every cause, no matter how minor, no matter how remote.

Foreign aid, which has built the nationalized industries of our allies, has brought about the flight of gold from this country and with it the inflationary spiral which threatens everything in our land. With inflation and near-confiscatory income taxes, a man who made $5,000 in 1939 would now have to earn $13,500 to live as well as he did just before the war. The American wage earner cannot longer maintain his standard of productivity and living and at the same time pay for the great giveaway to foreign countries.

The longer a man does not have to work for his keep, the less likely he is ever to get back to his lathe. The longer foreign aid is continued, the longer will people expect the handouts to keep coming.

There is another ironic twist to the whole foreign aid business which the mistaken blur and distort. The United States has shelled out many billions of dollars in foreign aid funds to nations—friendly, unfriendly, and on the fence—to help them get their financial houses in order. Yet, for the United States to give out those billions, the Government was forced to borrow the money to make it possible for other nations to balance their budgets. If it were not so serious, it would be almost laughable.

The multiplied billions of dollars are gone. But where is the good will we were to reap from handing them over?

More than a 100 years ago Karl Marx, the father of communism, predicted that the capitalistic countries could be forced to spend themselves into bankruptcy and ruin. But force does not seem to be necessary when it comes to the disastrous foreign aid programs of the United States. Without the use of force year after year the money is voted away.

The mistaken will keep right on screaming that foreign aid is our duty because we have so much. But the facts prove the opposite. If we are to save ourselves, we must get our own house in order—for who among the nations we have helped can be counted on to come to our rescue when we call for a lifeline?

J. B. Hardy, 50 Years Owner and Editor of the Thomaston (Ga.) Times

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLYNT. Mr. Speaker, recently Mr. J. B. Hardy, editor of the Thomaston (Ga.) Times, celebrated his 50th anniversary as owner and editor of that newspaper. Mr. Hardy is an outstanding civic leader and has devoted many years of service to the community in which he lives.

In the February 4, 1960, issue of the Thomaston Times there appeared a front page editorial, entitled "Times' Editor Hardy Completes 50 Years On Job." This editorial was written by Mr. Leon Smith. Mr. Smith's article points out in detail Mr. Hardy's record and accomplishments.

The front page editorial, which appeared February 4, 1960, follows:

TIMES' EDITOR HARDY COMPLETES 50 YEARS ON JOB

(By Leon Smith)

On February 1, 1910, a young newspaperman came into Thomaston and took over as the owner and editor of the Thomaston Times "on a temporary basis" and 50 years later finds that the temporary arrangement is one of the longest on record.

J. B. Hardy celebrated his 50th anniversary Monday as editor of the Thomaston Times and the mechanical and editorial staff gathered around the press Thursday morning to surprise the boss with a 50-candle anniversary cake as he received the first paper off the press.

And we can predict, as this is written in advance, that the same man who handed him the first paper off the press 50 years ago will be handing him the first one off today. That man is Walter H. Jenkins, the mechanical superintendent of the newspaper plant who was on the job when Mr. Hardy arrived in Thomaston 50 years ago.

Editor Hardy came to Thomaston 50 years ago from Barnesville to take over the Times which had finally gone into bankruptcy after a succession of editors. "It looked like a good business deal that I could hold on to for a little while and then let go at a profit," he recalled in a casual conversation the other day. "But I found Thomaston to be a good business town and it has continued to be good," he added.

So Thomaston became home to Mr. Hardy who was reared on a farm near Monticello. "I've chopped cotton and picked cotton but my daddy would have to get me out from under the dinner table to get me back into the field," he has recalled of his childhood days. After finishing high school at Monticello, he went to Gainesville to work with his brother on the Gainesville News. Later he moved to Barnesville to work with another brother on the Barnesville News-Gazette and it was there he heard about the newspaper being for sale in Thomaston.

The Times and its predecessors date back to 1869 so its plain to see that Editor Hardy has guided the Thomaston newspaper for more than half its existence.

And as editor of the Times he has been responsible for much of the progress made in this community. The late R. E. Chatfield always credited Mr. Hardy's persistent editorials about wood buildings around the square with moving him to erect the two-story store and office building which is known as the Chatfield building and is occupied by City Drug Co. and other businesses and offices today.

The Upson County courthouse was the most modern structure that Mr. Hardy found when he came to Thomaston and the present-day structure was 2 years old when he arrived here. The population of Thomaston was about 1,500 and the original unit of Thomaston mills was only a few years old. The Waymanville cotton mill was still in production and Upson County was a leading agricultural county. Thomaston was also, about that time, the second largest mule trading center in Georgia.

Progress has rolled on in the 50 years since 1910 and much of it came at the editorial insistence of the man who now looks back on a half century as editor. Wooden sidewalks was all that seperated one from the mud 50 years ago and Mr. Hardy has seen the paving of practically all of Thomaston's streets and miles of sidewalks.

During 50 years in the editor's chair, Mr. Hardy has guided his readers in many political campaigns and attests to the fact that local politics has always been clean. Although he always has felt that politics and business, particularly the newspaper business, don't mix, he was persuaded to run one time for state representative and his defeat only strengthened his belief.

Editor Hardy practiced what he preached about progress. Although he found the newspaper plant modern upon arrival here (it had a mechanical typesetting machine even at that time), he continued to upgrade it through the years. The Times was one of the first weeklies in Georgia to buy an Intertype machine and now boasts three Linotypes in addition to much other modern equipment.

The editor back in the early days didn't restrict his efforts to polished editorials, advertising, and coverage of the news events of the community. On occasions he has single-handedly got out the Times.

It was the Times that first mentioned a modern hospital for Thomaston and Upson County and Mr. Hardy, again willing to do more than give suggestions about progress, became chairman of the hospital authority that secured the funds and constructed the million-dollar Upson County Hospital. And, incidentally, he still serves as chairman of the hospital authority.

Looking back on 50 years in Thomaston, Editor Hardy believes that the one person who made the most contributions to the community in his half century here was the late R. E. Hightower whose guiding genuis led Thomaston Mills on a half-century of progress by which the entire community benefited. "But Mr. Hightower was more interested in the mills. He made many other worthwhile contributions to the community," Mr. Hardy has been heard to say.

A venture in which Mr. Hightower and Editor Hardy were a part of was construction of Hotel Upson by a stock company.

The Times, through the guidance of its editor, has always provided a spark of encouragement for better schools and better education. Again, the editor was not content to suggest and sit idly by for others to do the work. He served on the Thomaston Board of Education and was at one time chairman of that body.

Always willing to further religion through the columns of the Times, Editor Hardy also has been a leading figure in the progress of the First Baptist Church. He served for many years as Sunday school superintendent, an active deacon, and was chairman of the building committee which constructed the main unit of the existing church.

In recent years, Mr. Hardy was the first to recognize the fact that Thomaston was about to lose its place on the map if bypassed by U.S. Highway 19. He alerted the community to this fact and the editorial columns of the Times became a main instrument in securing the million-dollar project now under construction. In other community and civic endeavors he has devoted years of service to the Thomaston Kiwanis Club of which he is a charter member. And this group rose to its feet Tuesday to give him a standing ovation in recognition of 50 years as editor of the Times. With a balanced view toward work-health-education-religion-recreation, Mr. Hardy has made his contribution to each, serving the latter with years as an officer of the Thomaston Country Club.

Realizing that a newspaper can be a strong voice of influence only if it is a properly conducted business, Mr. Hardy has guided it through 50 years of financial responsibility—the last 20-odd years with the assistance of his partner, S. J. Carswell. Although many of his predecessors failed financially and Thomaston came many times dangerously near being without a newspaper, it has never faltered in the 50 years he has been at the helm. "I immediately found 50 years ago that Thomaston was a good business town and it has continued to be so," he commented.

Together with his publishing partner, Editor Hardy has provided Thomaston with a Tuesday newspaper since 1945 and was instrumental in organizing the Thomaston Broadcasting Co. which he now serves as president. Mr. Hardy is also president of the Thomaston Federal Savings & Loan Association—a financial institution dedicated to two principles which he has always advocated editorially—homeownership and thrift.

A half century of service to his community behind him, Editor Hardy still maintains a keen interest in the progress of Thomaston and Upson County and his advice and experience is still being shared with the readers.

Nixon as President—Statesman or Politician

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, February 8, 1960

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech given by Mr. Harold Clancey, managing editor of the Boston Traveler, at the Ford Hall Forum in Boston last October.

These remarks are part of a debate with Mr. James Wechsler, editor of the New York Post, on the question, "NIXON as President—Statesman or Politician."

Mr. Clancey is not only an able journalist but also a serious student of government and politics, and therefore his statement on the question is mighty well put. It is an extremely articulate refutation of some of the myths which have been created about the Vice President's political career.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

The words "statesman" and "politician" are perfectly clear to me. A statesman is a good guy. A politician is a not-so-good guy. Now, I dote on goodness, in others, and oppose sin, in others, so I necessarily always vote for statesmen. Thus, you see, by inescapably logic, a statesman is one for whom I vote—such as RICHARD M. NIXON.

Well, that settles tonight's question. Seriously, I wish it did. The program links my name with the word "conservative." Exactly what that means is not clear. But that won't stop a lot of people from being against it. Ford Hall Forum audiences usually are receptive to those who call themselves "liberals." I am opposed by Mr. Wechsler (James Wechsler, editor, New York Post), who calls himself a liberal, and who is a professional persuader infinitely more experienced and resourceful than I.

To preserve tidiness, the issues are narrowed by a formal question: "NIXON as President—statesman or politician" That rules out any bickering over New England versus Manhattan clam chowder. Everything else is fair game.

So, in that setting, I am here to justify Mr. NIXON'S entire life. I must prove him a statesman—not by comparison with other human beings—but by measuring him against abstract standards of perfection: perfect integrity, perfect wisdom, perfect truth. To what extent is he short of total goodness? NIXON—compared with God. They have given me an entire 30 minutes in which to do this.

Are there any questions?

OVERALL RECORD

Mr. NIXON is a Republican. If that doesn't lose you, there's still some hope. But his overall record is repugnant to extremists. It is the record of one who prefers the middle-of-the-road to the ditches on either side.

He has been deeply interested in international affairs since he served on the Herter Committee in his first term. He is widely traveled and personally acquainted with most of the world's statesmen. He has always been for liberal foreign aid. He supported the United Nations and he defended the Voice of America when it was under attack in this country. These things distress the isolationists.

On the other hand, he does not view the UN as a supra state to which we should surrender our sovereignty. He prefers temporary foreign alliances to permanent partnerships. These views annoy those who would trade our independence for a vote on a committee. He battled Mr. Truman's Far East policy, which irritated some on the far left, and supported Mr. Truman's controversial aid to Greece and the decision to send troops into Korea, which angered the right wingers.

Nationally, he would strive for a balanced budget, which horrifies the A.D.A., but thinks it should be balanced in 4-year cycles, which maddens those McKinley Republicans to whom it is an annual obsession. He has favored reforms to eliminate labor racketeers and restrain labor bosses and to give more rights and powers to rank and file union members.

That antagonizes one extreme group. He fought to extend social security to the 12 million workers not previously covered and to increase unemployment benefits.

That antagonized the opposite group. He favored reduced excess profits taxes to provide business incentive and foster depreciation rates to encourage expansion of plants and equipment and provide additional jobs. His purpose is to produce a climate conducive to volume production—risking lower prices to attract more sales—and thus steadily improving the standard of living.

WHAT THE RECORD REFLECTS

This record reflects a philosophy—a faith that our system can achieve the wide distribution and resultant prosperity which is the theoretical justification of socialism. That, with social conscience for the infirm and the unfortunate, and equal opportunity for the able, we can achieve the classless society which is the illusory promise of communism. And that we can do these things without sacrificing our individuality and our freedoms to all-powerful big brother government—to the state central—which is the price demanded by both communism and socialism.

THREE-WAY EXPERIENCE

To this political creed NIXON brings vast experience in government, diplomacy, and politics. Becoming Vice President has been, historically, somewhat like falling down an elevator shaft: A flurry of excitement when you first step in, then—oblivion. NIXON is the first to be an assistant President. He has attended all meetings of the Security Council and the Cabinet and presided over them in the President's absence. He has been the chief liaison of the administration with the Senate and House. As President of the Senate he has been praised by LYNDON JOHNSON for his fairness to the Democrats in his rulings and special appointments.

It is a safe statement that no man in our history has had such opportunity to learn the job of being President. Not even his bitterest enemy denies that he has worked hard at it.

Now Mr. NIXON is opposed by several groups for various reasons. I have talked with many helpful and intelligent persons

whose political philosophies differ from his. I have neither the arrogance nor the inclination to insist they must be wrong. In such matters, we can only believe. History must judge.

But he is also opposed by an almost incredible collection of political beatniks. For instance, there are the compulsive reformers and social experimenters of the New Deal whose little hands are idle right now. There are the Democratic professionals: they can't forget that 20-year banquet and they think of NIXON as the waiter who presented the check and began to turn out the lights.

And he is the favorite wax doll of a group of cruel and arrogant pinstickers, a certain mutual-admiration society of writers and journalists sometimes referred to in the trade as "the Cult." They parlayed their considerable talents to positions of eminence by logrolling, promoting, and publicizing each other doggedly. When one spoke or wrote the others cried in disciplined chorus: "That's great!" or "That's profound!" or "That's art!" And so they arose, in everascending spirals of reciprocal advertising, furiously backslapping one another to prominence. As with all propagandists, they came in time to believe in their own snake-oil—their own legend of infallibility.

HISS CASE CHALLENGE

In the Alger Hiss case NIXON challenged the snap-judgment of this intellectual mafia. He compounded that heresy by being right—to their public humiliation. They have been dedicated to his destruction ever since.

Finally, there is a group that seems to hate him for no reason at all—except, I suppose, that they have to hate somebody. Arguing with these people is like trying to sell plowshares to the Hatfields and the McCoys. They just like what they're doing. Yet, it is also a sort of game—nightmarish, but, once you have learned the rules, weirdly fascinating.

They'll say to you: "NIXON? Why, he's a reactionary. He's a hypocrite." This is pronounced with complete assurance in a where-have-you-been tone of voice. Out will come a copy of one of Mr. Wechsler's editorials to show NIXON is a tool of the special interests. Out comes an issue of the New Republic and it says, right there, that NIXON entered politics as the handpicked candidate of a group of California bankers and oil millionaires. (And the phony wasn't even a Republican.) "There," you'll be told, "for heavens sake, son get with it."

Well, he's right—that the charges have been printed. And you still hear them repeated. But assume you do some research yourself. You will find NIXON was picked from among several interviewed by a committee of 100 Republicans. They had advertised in 26 newspapers looking for a new candidate. They had lost five consecutive elections to Democrats and they were tired of it—which shows how vicious those Republicans can be. There were some wealthy men in the group, possibly as wealthy as F. D. R. or Stevenson or Harriman. But the majority were in the middle-income and even low-income bracket.

INVESTIGATIONS

The New York Times and the Saturday Evening Post, intrigued by the sinister generalizations applied to the group, investigated the members and described the committee as a representative cross-section of California Republicans. Every day of NIXON'S life has been turned over with smutty fingers, trying to find something, anything, that would blacken him and that would stick. They have cross-examined his teachers, schoolmates, shipmates, friends, neighbors, and casual business acquaintances. They have culled every speech, every bit of writing, even—so help me—papers he wrote for schoolboy debates. They have twisted, distorted, taken out of context, invented, fabricated and lied—but they haven't been able to prove a single act of wrongdoing, a single compromising transaction or a single specially favored millionaire.

As to the nonsense about NIXON'S party affiliation—the carefully planted myth that he became a Republican just to seize the opportunity to run in 1946—it is a plain and simple lie. He was a registered Republican as early as 1938 and even voted as a Republican by absentee ballot during the war.

So, back you go to demand more convincing evidence. Do you know what he'll say? He'll say: "Oh—so you're one of those." At which point he may give you a narrow and knowing look and walk off and leave you. And that, believe me, is not a bad thing at all. Or he may say: "Well—I see you've missed the whole point. NIXON is a reactionary at heart, but he doesn't vote like a reactionary. Therefore, he's a hyprocrite. Think, son."

Now, keep the etiquette in mind: You must not counter by complaining that the facts he gave you earlier were inaccurate. In this game, that's a foul. You're penalized half the field of argument and you may become, at the player's option, a NIXON-trained seal. That costs even more points than being one of those. Therefore, when they show you the newspaper story about his fat legal fees, don't mention the fact that he has refused to accept any law business since election to his first public office.

FACT AND THE FANTASTIC

When they show you the column about those fantastic fees he gets for speaking, be still. Don't remark that it is a documented fact that every cent he earns in this fashion goes directly to Catholic, Protestant, and Jewish charities.

When they show you the exposé of all his expensive furnishings selected by his high-priced interior decorator. Just swallow. Chances are you never saw the retraction anyway—it was lost amid the noise of the next blast of untruths. And people forget. The particulars fade in a world too busy with today's headlines and today's concerns. All that remains is a hazy recollection of unpleasantries.

The psychology is to create, in time, the feeling: "I don't like NIXON. I don't exactly know why. I just don't." That is the epitaph of the politically punch-drunk brain after it has been washed and put on the shelf with all the judgment pressed out of it.

Back in 1952, corruption in government was a major issue. There was a scandal a day about the RFC, the Revenue Bureau, the 5-percenters, disposal of surplus. The Nation was talking about such things as Harry Vaughan, deep freezes and natural pastel mink coats. NIXON was demanding an end to the mess in Washington. Somebody had to do something to divert attention—and somebody did: Mr. Wechsler, a member of the have-gun-will-travel wing of the ADA, went to work on a story which was dull and uninteresting as written by NEA columnist Peter Edson. Many ignored Edson's story. Some papers ran it inside. No one was excited.

Then, more than 24 hours after Edson's complete and accurate story had been mailed to his hundreds of client newspapers, the New York Post revealed NIXON slush fund. The headline read:: "Secret Rich Men's Trust Fund Keeps NIXON in Style Far Beyond His Salary." The story exposed a "millionaires" club devoted exclusively to the financial comfort of Senator Richard Nixon. Every statement I have quoted was, of course, later proved a complete, barefaced lie. But, this was really playing the game. It was the biggest ground gainer pulled that year by the team's stab-in-the-backfield.

DEPENDS ON WHOSE FUND

There was panic. California investigated. The GOP called in Price-Waterhouse accounting firm and more than a score of top attorneys. Some, thinking nervously of November, urged Eisenhower to drop NIXON without waiting for the evidence. Pro-Stevenson advisers said Eisenhower should do it for his own good—Macy helping Gimbels. For the 10,000th time Stassen offered himself as vice president. Warren reportedly was willin'. And, oh, what a chorus from the journalistic assassins. There they stood, the turtlenecked sweaters and blackjacks out of sight, rolling their eyes heavenward in shock of the infamy of man.

Mr. Stevenson was silent, nervous, perhaps, but silent. Later, it came out that he had had two funds as governor of Illinois. One was explained. The other—allegedly consisting of some $100,000 raised from persons doing business with the State while he was in office—has never been denied or explained. I do not seek here to imply by snide innuendo that Mr. Stevenson misused any money or became the tool of his contributors. My purpose is to note again the hypocritical double standard. Funds immediately ceased to be important after the Stevenson revelation. It is a foul to mention it.

So the line of attack switched: NIXON'S telecast had "been arranged by an advertising agency." Of course, every radio or television program by any candidate is arranged by an advertising agency which contracts for the time. The whole thing had been "carefully rehearsed." Actually, NIXON did no rehearsal. He arrived 15 minutes before the show began. Asked whether he would sit or stand he said he didn't know. He was in the middle of a sentence when it ended.

His remark that his wife had only a "good Republican cloth coat" was objectionable on two grounds: First, it was disconcertingly true. Second, it recalled memories of the mink coats of the Truman administration—and that's a foul. And he mentioned his only present—a dog named Checkers. When FDR made his speech about his dog—Fala—that was statesmanship. When NIXON mentioned his—why it was undignified.

NO LACK OF LIES

Well, it never stops: A story revealed how NIXON had vacationed in Havana, losing heavily at roulette, the bill paid by those millionaires (who should have been going broke about that time). It was a complete lie. They hadn't paid. He hadn't been on vacation. He had not been to Havana.

There was the story revealing that he and his wife had taken a pauper's oath in California shortly before making a downpayment on a house. The State of California began an immediate investigation since the implication was criminal—that they had committed perjury and defrauded their creditors. This was another vicious libel: the Richard Nixon who had signed the oath was a different and unrelated person. The retraction was buried on the end of a column published on a Saturday when circulation is smallest.

Then a column told of the existence of a letter that could ruin NIXON'S career. It was a letter from an oil millionaire indicating NIXON was on his payroll. Later, it was proved a transparent and amateurish forgery. What is the reaction of the professional NIXON-hater when his evidence is proved fraudulent? He'll say: "So it wasn't true that NIXON was a liar and a thief and a fake and a defrauder and a perjurer and a man who sold his high office for money—but how can you defend a smear artist like NIXON?"

FACTS ON TRUMAN

You've heard the indignant assertion that NIXON called Harry Truman a traitor. Ask

your informant: "When?" It is a fiction contrived by political propaganda. However, for the record: NIXON never said it.

I do not say that NIXON has always spoken with the precision and the exactitude of fine shading necessary in a mathematical formula. In politics, nobody can; nobody ever has. The language of politics is traditionally and inevitably the language of hyperbole, of oversimplification, of the catch-phrase and the slogan.

Everybody knows it was not, literally, "Hoover's depression." The Republican Party was no more the "Party of economic royalists" than the Democratic Party was the "Party of treason." (The latter, incidentally, was said by McCarthy, not by NIXON.)

But the Democrats hung the albatross of the depression around the neck of the GOP and tied Teapot Dome to its tail. It didn't matter that most of the elephant's heart was pure. The GOP, while in power, had appointed to high positions men who proved corrupt. And, while in power, the Republicans had been inexcusably blind and soft toward financial manipulators and crap-shooters who sabotaged our economy. With the power went the responsibility. And how they howled for the Republican scalp.

WHAT THEY IGNORED

Mr. Wechsler was just a boy howler in that age. The age is gone. The boy remains. Now he howls in anguish instead of rage because NIXON insists the Democratic Party be blamed for corrupt appointees and softness toward the subversion which occurred while it was in power. Who is to demand a different standard for donkeys than for elephants—except, of course, a donkey? No, NIXON didn't call Mr. Truman a traitor. But Mr. Truman called Mr. NIXON a liar and an anti-Catholic, anti-Semitic S.O.B. The hypocrites snickered, applauded, and said: "Give 'em hell, Harry." As to the "lie," it was later proved NIXON was correct and Mr. Truman's memory faulty.

A prince of the Catholic Church and the Anti-Defamation League of B'nai B'rith vigorously and emphatically cleared NIXON of the charge of bigotry.

And if we now must regard as unbecoming the mention in a speech of any dog, other than Fala, I submit NIXON's use of checkers has more dignity than Mr. Truman's S.O.B.

Now, finally—is Mr. NIXON a politician? Of course he is. An astute and experienced politician. Yet tonight we use the words disjunctively—statesman or politician? That implies that a statesman must not be a politician, that he must exercise his statesmanship in a political vacuum. That is like separating love and marriage. Even those who find it attractive find it impractical.

And it isn't history. Take Abraham Lincoln: He was a Republican, but he has been dead a long time. That means he meets even the Democratic National Committee's definition of a good Republican. If he had not been a very resourceful politician he would have been split like a rail by his political opponents. Perhaps, then John Wilkes Booth might have died decently of boredom and senility during a benefit recitation at the Lambs Club.

JUNGLE OF PRACTICAL POLITICS

But other bits of history—somewhat more important—would also have been radically and terribly different. FDR is regularly—the disenchanted might say ritualistically—extolled as a statesman by many. Indeed, in the several temples of the A.D.A. across the land his is the Book of Genesis. Yet he had to guide his program through the jungle of practical politics. No one can contend he made it through the bush on soul-power alone. Any President must be a politician to win his party's support. He must be a politician to get elected. He must be a politician to implement his program. He must, in the long haul, be a better politician than his foes if he is to survive, much less succeed.

A President, to be a statesman, must first be a politician. One of the failures of democracy is that we never know how often we lose the service of men who would rather be right than be President—men with the right idea, but without the political talent or instinct for its practical achievement. And democracy also fails when the presidency is debased by the slick salesman of the empty package, the man with no idea except politics—the man who would rather be President than be right.

Yet, we survive such failures.

We survive because there comes along, more often than the cynics suspect or the angry partisans admit, a man who can be both right and President: a man whose idea is right for the time and who is a sufficiently capable politician to achieve it. This is the miracle that makes democracy work. RICHARD M. NIXON, is, I submit, such a man.

Justification for the Tax-Exemption Provisions Applying to Cooperatives

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a letter, statement, and survey from Mr. George J. Burger, vice president of the National Federation of Independent Business, 740 Washington Building, Washington, D.C., concerning the justification for the tax-exemption provisions applying to cooperatives.

Mr. Burger's letter as well as his statement before the Ways and Means Committee of the House of Representatives, with supporting data, follows:

NATIONAL FEDERATION OF
INDEPENDENT BUSINESS,
Burlingame, Calif., February 4, 1960.

Hon. EDWIN B. DOOLEY,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN: In view of the increasing inroads of discount houses, co-oprs, etc., in our overall economy, of course, it goes without saying that this is making it harder and harder for efficient independent business to exist.

The co-op action, earlier in our Nation's economy was probably long overdue, but apparently the privilege is being abused by tax concessions.

The opinion of the increasing membership of the federation in your congressional district is embodied in the repeated polls on the subject matter. Your office has received these ballots.

Therefore, I would deem it a necessity that the attached statement appear in the Appendix of the RECORD.

Thanking you for your cooperation, and with highest regards,

Sincerely yours,

GEORGE J. BURGER,
Vice President.

TAXATION OF COOPERATIVES

(Statement of George J. Burger, vice president, National Federation of Independent Business, 740 Washington Building, Washington, D.C., before Ways and Means Committee, House of Representatives)

I am George J. Burger, vice president in charge of legislative activities, National Federation of Independent Business, 740-742 Washington Building, Washington, D.C.

We are a national organization composed exclusively of small, independent business and professional people. We have the largest directly supporting membership of any business organization in our country. We have membership representation in Federation chapters in almost all of the Nation's congressional districts, including Alaska and Hawaii.

Our members directly determine our stands on legislation, through their majority votes in polls we take among them in our publication, the Mandate. We take such polls about once each month. In each poll we state the issue, and offer the strongest factual arguments on both sides of the question, ourselves remaining neutral, and permitting members to make up their own minds. Our members receive their Mandates through the mails, read them, and then vote and sign their ballots in the privacy of their homes and offices. We do not see or touch these ballots at any point. Members channel them to their Congressmen through their district chairmen, who are local federation members they select to head up each chapter. At the same time that chairmen forward the signed ballots to Congressmen, they report the overall results to us. The sum of tabulations received from chairmen in our more than 2,500 chapters across the country determines our stand.

I might say that the personal signatures on each ballot, the fact that all ballots are voted privately, is authentication of opinions sent to Congressmen. And I might add further, that verification of our polls can be found in the files of chairmen reports we maintain at our headquarters at Burlingame, Calif. We are the only organization of our kind in the country.

As to the business at hand, I am here today to tell you how our members feel about the tax status of one of their principal forms of competition * * * our country's cooperatives. My credentials are the following five polls we have taken among our members on this subject during the past 4 years. Note, please, that I am taking great care to show each poll in its entirety, so far as is physically possible. I am not doing this to clutter the record, but rather to be as fair as possible with both you and our members.

As to these polls:

In May of 1956 we polled our members as follows:

[The Mandate, Bulletin No. 221]

"Are you for or against Treasury Department plans being considered to tax cooperatives on money they allocate for patronage refunds but which they do not actually pay out to members?"

Argument for: "Co-ops are not required to pay taxes on that part of their income set aside for dividends. They are not required to distribute these dividends as they declare them. The co-op member on the other hand is required to pay tax on dividends allocated but not paid. But he doesn't always do so. This permits the co-ops themselves to allocate money for dividend payments, then use the money tax-free for financing. But private business must pay full taxes on all earnings. This gives co-ops a great advantage over private businessmen."

Argument against: "This is just another potshot on co-ops. Cooperative members are required by law to pay taxes on money

allocated to them, whether or not they receive the cash. Thus Government is assured tax income on these, the same way it's assured tax on corporate dividends. But more, such a ruling could be pointless. Nothing could stop co-ops from paying dividends in cash, or stop members from returning this money to them after tax. Business must remember its tax breaks: greater ability to build rainy day reserves, tax cuts."

The following Mandate we reported the result of this poll:

Following is the national summary of votes cast on issues carried in "The Mandate" No. 221. This summary has been forwarded to Members of Congress, to members of the permanent Senate Small Business Committee, to members of the House Small Business Committee, to other interested congressional committees, members of administrative Government and Government agencies.

[In percent]

	For	Against	No vote
1. Limit foreign aid to military assistance only	61	31	8
2. Treasury plans to tax co-ops on dividends allocated but not paid to members	91	6	3
3. H.R. 9398. Repeal labor union antitrust exemptions	90	8	2
4. S. 3516. Antitrust fines for business executives who promote monopoly damage	76	16	8
5. H.R. 10613. 10 percent across-the-board income tax cut	66	29	5

In November of 1956, we polled our members again, as follows:

[The Mandate, Bulletin No. 225]

"Are you for or against action by Congress to compel cooperatives to pay full Federal corporation taxes on all their profits?"

Argument for: "Fully taxed corporations, many of them small firms, suffer injurious, unfair competition from cooperatives. Reason is found in the co-ops' preferred tax standing. Corporations must pay a corporate income tax on all profits; then stockholders must pay a personal income tax on dividends received. But the co-op must pay a corporate income tax on only those profits left after dividends are distributed, and even then may issue certificates to members, and keep the cash itself for tax-free operating capital. No wonder the tremendous growth of cooperatives these past years. All the more reason for Congress to move swiftly to correct the situation. Incidentally, corrective action by Congress could net Government at least $500 million more taxes."

Argument against: "This is an unfair proposal and has but one aim: complete destruction of co-ops. By and large co-ops now pay taxes on the same basis as partnerships, which despite their corporate form of organization is what they really are. In a partnership owners pay a tax once on their share of profits. In a co-op members are the partner-owners and must pay a personal income tax on their share of the profits, represented in patronage refunds. But since the co-ops are incorporated they are required to pay a corporate tax on all profits not distributed to members, and this they do. To make them pay a corporate tax on all profits before refunds would be as unfair as to make partners pay a corporate tax on profits before taking their cuts out of the business."

The following Mandate we reported the result of this poll:

Following is the national summary of votes cast on issues carried in "The Mandate" No. 225. This summary has been forwarded to Members of Congress, to Members of the permanent Senate Small Business Committee, to Members of the House Small Business Committee, to other interested Congressional Committees, members of Administrative Government and Government agencies.

[In percent]

	For	Against	No vote
1. Congress make tax cuts first business in 1957 session	78	17	5
2. Congress compel cooperatives to pay full taxes on earnings	92	6	2
3. Congress compel large firms planning to merge to tell antitrust agencies in advance	75	20	5
4. Congress further strengthen our tariff laws	65	24	11
5. Congress reduce social security and withholding reports business must make to Government	81	15	4

In September of 1957, we again polled our members, as follows:

[The Mandate, Bulletin No. 233]

H.R. 501. Tax co-op organizations: "compel cooperatives to pay Federal income tax on all their earnings, including so-called patronage refunds" (Representative MASON, of Illinois).

Argument for: "Fully taxed corporations, many of them small firms, suffer injurious, unfair competition from cooperatives. Reason is found in the co-op's preferred tax standing. Corporations mus pay a corporate income tax on all profits; then stockholders must pay a personal income tax on dividends received. But the co-op must pay a corporate income tax on only those profits after dividends are distributed, and even then they may issue certificates to members, and keep the cash itself for tax-free operating capital. No wonder the tremendous growth by co-ops these past years."

Argument against: "This is an unfair proposal and has but one aim: complete destruction of co-ops. By and large co-ops now pay taxes on the same basis as partnerships, which despite their corporate form of organization, is really what they are, in a partnership owners pay a tax on their share of the profits, represented in patronage refunds. But since the co-ops are incorporated they are required to pay a corporate tax on all profits not distributed to members, which they do. To make them pay a corporate tax on all profits before refunds would be as unfair as to make partners pay a corporate tax on profits."

The results of this poll were reported, as follows, in the next mandate:

Here's the national summary of votes on issues in Mandate 233. This has been sent to all Congressmen and Senators, all congressional committees and all agencies and individuals in the executive branch of our Government for their information.

[In percent]

	For	Against	No vote
1. H.R. 2815. Ceiling on imports	63	27	10
2. Business damage suits against labor unions	95	3	2
3. H.R. 501. Tax cooperatives	90	7	3
4. H. Res. 413. For a permanent House Small Business Committee	88	7	5
5. H.R. 9307. Restrict picketing	94	4	2

In October of 1958, we polled our members as follows:

[The Mandate, Bulletin No. 243]

Tax Cooperatives: "Are you for or against action by Congress to compel cooperatives to pay Federal income tax on all their earnings before they deduct anything for patronage refunds?"

Argument for: "Thirty percent of the first $25,000 of your corporate income (or 20 percent or more if you're not incorporated) * * * that's the bite that Uncle Sam takes out of your business income. But he doesn't take a thin dime in taxes from any cooperative that goes through the motions of paying patronage refunds to its customers, but keeps the actual cash involved. Estimates are that this dodge permits co-ops to retain upwards of several hundred million dollars yearly in tax-free money for expansion and modernization. This gives them a tremendous unfair advantage over you * * * and this bill would correct the situation."

Argument against: "Co-ops are taxed differently from other business because they are different. They're not in business to make a profit for themselves. Their customers, who are their owners, are the profit-takers when they receive patronage refunds. They are required to pay a tax on these refunds (their profits), when they receive them. And they do pay these taxes. Moreover, all this talk about tax equality. There are tax differences between corporations, partnerships, individual proprietorships * * * because these business form are different. Why differences for them, and not for co-ops?"

The results of this poll are found in the following Mandate:

Here's the national summary of votes on issues in Mandate 243. This has been sent to all Congressmen and Senators, all congressional committees, and all agencies and individuals in the executive branch of our Government, for their information.

[In percent]

	For	Against	No vote
1. Break up union monopolies	96	3	1
2. Higher taxes on gasoline	29	67	4
3. Tax cooperatives	88	9	3
4. Bigger depreciation on used machinery and equipment	80	14	6
5. Make House Small Business Committee permanent in Congress	93	4	3

In April of 1959, we again polled our members:

[The Mandate, Bulletin No. 247]

H.R. 199. Tax cooperatives: "This bill would require cooperatives to pay taxes on all their earnings, just like all other corporations" (Representative MASON, of Illinois.

Argument for H.R. 199: "30 cents out of every gross profit dollar is the size of the bite Uncle Sam takes out of your earnings if you're a small corporation. Twenty cents is the bite he takes if you're a really small unincorporated operator. But not so with your cooperative competitors. The law lets them distribute their earnings (in the form of paper I O U's), but keep the money tax-free for business expansions and other competitive purposes. Co-op patrons are supposed to pay a tax on these paper remittances, but don't do so until they get the money. You can bet this gives co-ops a big jump on you. The bill would correct this."

Argument against H.R. 199: "Co-ops are taxed differently from other firms because they are different. They're not aiming to make a profit for themselves. Their customers, who are their owners, are the profit-takers when they receive patronage funds. They are required to pay a tax on these refunds (their profits) when they receive them. And they do pay these taxes. Moreover, this talk about tax equality is a phony. There are tax differences between corporations, partnerships, individual proprietorships because these business forms are different. Why should they be different, but not co-ops?"

The results of this poll, reported in the following Mandate:

Here's the national summary of votes on issues in Mandate 247. This has been sent

to all Congressmen and Senators, all congressional committees, and all agencies and individuals in the executive branch of our Government, for their information.

[In percent]

	For	Against	No vote
1. H.R. 3141. Repeal the 10-percent telephone excise tax	72	24	4
2. S. 442, H.R. 2325. Require advance notice on mergers	74	19	7
3. H.R. 199. Tax cooperatives	93	5	2
4. H.R. 718. Close loopholes in surplus property sale laws	91	5	4
5. H.R. 1823. Provide broader local control of labor disputes	85	9	6

In December of 1959, we again polled our members:

[The Mandate, Bulletin No. 253]

H.R. 7875. Taxing of co-op income: "Require co-ops (a) to pay patronage refunds in cash or by interest bearing notes to members each year, and (b) to pay taxes like all other businesses on all remaining earnings (Representative Simpson of Pennsylvania)."

Co-ops can declare refunds, but withhold payment from members. They can keep the cash tax-free and give members simple IOUSs. Members pay no tax on those I O U's until they get the cash.

Argument for H.R. 7875: "According to law, co-ops are supposed, each year, either to make cash refunds to their members or give them certificates representing promised cash refunds. In either case, co-op members are supposed to pay taxes currently on these. But the courts have held it illegal for the Government to require payment of taxes on certificates representing payment promised in the future. This leaves the door wide open for co-ops to withhold cash payment of refunds, issue tax-free common IOUs instead, and hold their earnings, entirely tax free, for expansion."

Argument against H.R. 7875: "Just another effort to pester cooperatives. If Congress thinks the courts have usurped its legislative powers in providing that co-op members do not have to pay taxes currently on the ordinary certificates received in place of cash refunds, then let Congress take the ball into its own hands and pass a law overturning the court decision. One thing that people overlook is that even though taxes may not be paid currently, sooner or later they are paid, because sooner or later co-op members receive the cash dividends."

The results of that poll showed:

	Percent
For	89
Against	7
No vote	4

Note, if you will, the fact that in each of the foregoing polls approximately 9 out of every 10 Federation members who signed and sent their ballots to their Congressmen favored proposals to tighten up the taxing of cooperatives. Note this almost unanimous expression, as contrasted with the sharply divided opinions on many of the other issues presented for their vote.

Of course, it is impossible for us to discuss with you the reasoning used by these members in each of their votes.

But we can tell you that many of our members are in situations where they are required to compete with cooperatives. A short list of some of the items handled by cooperatives should give you some idea of the scope of this competition: tires, oil and petroleum products, feed, fertilizer, clothing, food, farm-building materials, furniture, homebuilding materials, farm machinery, electrical appliances.

To give you some idea of how our members see this competition, and the part that the cooperative tax status plays in it, we quote from two of the many letters received from our members:

The first, a tire dealer, wrote to us in February of 1958:

"I would like to call your attention to a condition that is becoming more prevalent in the area, causing increasing loss of sales to all local tire dealers. It seems that the G.L.F., a so-called farmer's cooperative, has sold a considerable amount of tires under their brand name of Unico. During the past winter season their sales of snow tires far surpassed all previous records—and they have been so encouraged by the results that I understand they are now prepared to conduct an even more vigorous campaign to corner more of the market.

"Their very favorable tax position enables them to sell new tires for less than the cost of a quality retread, and because of this price feature all the associated dealers I have in the outlying areas have been unable to sell any tires except in the case of an emergency.

"I am not too familiar with the structure of a cooperative but I do not think they are supposed to run newspaper ads repeatedly to the general public, especially with banner headlines claiming 'Buy As the Farmer Does and Save On Taxes' etc. They are no longer restricting sales of their products to so-called members."

The second, a Southern businessman, wrote to us in September of 1959:

"While at home, indisposed for the day from my office, I thought I would write you a personal letter.

"Several months ago I wrote to my Senator with reference to my deep concern on the tremendous gains cooperatives are making. They pay no taxes, this is a serious situation.

"Just because I am writing you sir, in long hand, please don't discount my contents, for it is written to you earnestly and with concern.

"My Senator graciously answered my letter, telling me that this item was being worked on.

"Let me give you an example. The Farm Bureau Coop is located a stone throw from my place of business. I am an independent businessman. Own a small corporation.

"I strictly sell supplies to mushroom growers. Farm Bureau Co-op—an organization formed to sell farmers decided to handle and sell mushroom supplies and my business declined 30 percent. In fact, I had to release my key man, I paid him $112.75 per week.

"Do you know who hired him? My neighbor, Farm Bureau Co-op:

"Fortunately, I have some other legitimate income for last year with Farm Bureau selling at ridiculous prices, caused much of my business to go to them. I cannot compete with these kind of organizations—why does and do our lawmakers permit this to persist?

"Don't you realize what this does to the small businessman? Just like the writer? I either have to lose money or get out of business—and it will probably be the latter for Farm Bureau pays no taxes.

"Tell me, I have asked my legal counsel but they seem not to know—the Farm Bureau Co-op's—were they not originated to sell only the farmer? This I am in accord with, the farmer deserves a break. But, sir, tell me, can they expand their business by within law and sell to another facet, the mushroom growers, who are not farmers? There should be some way to stop this evil to the standard American business practice. Are they represented by lobbies? If so, why so strong to overpower our lawmakers.

"This situation is a serious one and I trust something can be done. It seems unjust in truly our great country that we permit such practices to go on and every lawmaker with 'God given sense' knows co-operatives are not fair competition to the the independent businessman. Reason—because they are not taxed and can sell anything for a small margin above cost."

And we can tell you that our members know these things about the tax status of co-operatives:

1. That generally, co-operatives are not required to pay any Federal income tax on that part of their yearly earnings which they distribute to their members and patrons in the form of refunds * * * but that co-operatives can satisfy this requirement by merely issuing certificates to their members, promising to pay at a later date, and then withhold the cash covered by these certificates, entirely tax free.

2. That while patrons and members of co-operatives are supposed to pay a Federal personal income tax on all refunds they receive, the courts have ruled that they need not pay such tax on certificates until such time as they get the cash these papers represent.

3. That this situation theoretically makes it possible for cooperatives to arrange things so that no one has to pay any Federal income tax on any part of their yearly earnings * * * and that this gives them an opportunity to build up entirely tax-free funds of capital.

Frankly, I do not know the extent to which cooperatives are making use of this tax avoidance procedure. I have seen figures which put it up in the tens to hundreds of millions of dollars. But I do think it is obvious that to the extent they are making use of it, they are gaining a definite competitive financing advantage over their fully taxpaying business competitors, which advantage is more important than ever during this time of tight money and high interest, this time which is bearing so heavily on independent businessmen.

Believe me, during this period when direct and indirect taxes are constantly rising, at Federal, State, and local levels, it gives me no pleasure to come before you and ask that you do something that will add to the burdens being carried by any of our people. However, I do believe that this cooperative tax situation involves a basic, harmful inequity * * * and on behalf of our members, and in line with their majority opinion in the signed mandate votes which they have sent to their Congressmen, I do earnestly ask that you take action to require that cooperatives be required to pay up their Federal income taxes each year, just like all other businesses with whom they compete. My position is, and the position of the people I represent is, that every form of business enterprise in competition with other business enterprises should all receive the same treatment and be on an equal basis before all laws—taxes or otherwise.

We do not ask more, because we have no aim to injure or destroy cooperatives. In truth, all we are asking is that they be required to stand on their own two feet taxwise in their competition with others. In simple justice, we cannot ask less.

Milwaukee Wins Title as Safest Big U.S. City

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 8, 1960

Mr. WILEY. Mr. President, we recognize that the task of promoting ever-greater safety on the Nation's highways is one of the great problems facing the country domestically. Today there are

about 70 million automobiles on U.S. highways.

While this great stream of traffic is of tremendous value for commercial and pleasure travelers, it is also regrettably a real hazard to human life. Annually, nearly 40,000 people are killed in automobile accidents. In addition, the value of property is approximately $1.8 billion. All costs, including medical, wages lost, insurance and property damage, are estimated to be about $5.4 billion.

Throughout the country constructive efforts have been made at the local, State, and National levels to promote highway safety. Unfortunately, these efforts have not yet had the desirable results, despite all the safeguards—including building better, safer highways, and putting more safety devices on automobiles. The major responsibility, however, still rests upon the driver behind the steering wheel.

In view of the catastrophic toll of lost lives, as well as property damage, still occurring on our roadways, it is always gratifying to find examples of communities making progress toward greater safety. Recently, for example, the National Safety Council revealed that Milwaukee, Wis., in 1959, established the best safety record of any city in the United States of more than 350,000 population.

This fine community, and the individual citizens responsible, deserve commendation for their constructive record to reduce the hazards on their highways and streets; their efforts, I believe, are worthy of emulation elsewhere. At this time, unanimous consent to have an article from the Milwaukee Journal entitled "Milwaukee Wins Title as Safest Big U.S. City"—forwarded to me by Mr. B. L. Corbett, managing director of the Milwaukee Safety Commission—printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILWAUKEE WINS TITLE AS SAFEST BIG U.S. CITY—FIGURES SHOW ONLY 1.5 DEATHS FOR EACH 10,000 AUTOS; STATE TOLL ALSO DIPS

Milwaukee in 1959 had the best traffic safety record of any city in the United States with more than 350,000 population, the National Safety Council revealed Friday.

Ratings were on the basis of deaths per 10,000 registered vehicles. Milwaukee was first in its population class (500,000 to 750,000) with a low of 1.5. Seattle, with 1.9, and Buffalo, with 2.2 were runners-up in Milwaukee's population group.

Milwaukee's 1.5 ranking was bettered only by cities with fewer than 350,000 population. Comparable big city ratings:

More than 1 million—Detroit, 2.8; Los Angeles, 2.9; Chicago, 3.

750,000 to 1 million—St. Louis, 2.7; Washington, 2.7; San Francisco, 2.9.

350,000 to 500,000—Denver, 1.9; Portland, Oreg., 2.1; San Antonio, 2.3.

Wichita, Kans., topped the 200,000-350,000 group with a 0.7 rating. Leading cities in smaller population groups had 0 ratings.

Although there were 800 more traffic deaths in 1959 than there were in 1958, the council reported that the mileage death rate (number of deaths per 100 million vehicle miles) was at a record low of 5.4. The 1959 death toll of 37,800 was 900 below the 1957 figure and almost 2,000 fewer than in 1956.

Highway travel reached an alltime high of 695 billion miles last year, the council said. In addition to those killed in traffic mishaps, 1,400,000 persons suffered disabling injuries, and the cost of accidents was estimated at $5,800 million.

Wisconsin was one of 17 States that had fewer traffic accidents in 1959 than it had in 1958. For the entire year, 140 cities maintained perfect traffic records. The largest was Evanston, Ill. (76,200).

Chronically Distressed Labor Markets Suffering From Substantial Labor Surpluses for Long Periods

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following fact sheet compiled by the Area Employment Expansion Committee with offices at 99 University Place, New York City, which points up the need for passage by the Congress in this session of the Area Redevelopment Act, which passed the Senate during the last session and is now pending before the House Rules Committee:

FACT SHEET NO. 37A—CHRONICALLY DISTRESSED LABOR MARKETS SUFFERING FROM SUBSTANTIAL LABOR SURPLUSES FOR LONG PERIODS

The principal characteristics of the unemployment in the chronically distressed communities is that the substantial labor surplus continues to fester for long periods of time. Recovery is not quick. On the contrary it stays for long periods. Even where the labor market later is graduated out of the distressed condition, it now takes long periods of time for the improvement to occur. More often than not the advance takes place because of the outmigration of people and the reinvigoration of some of the existing enterprises. But where these alternatives are not easily available, the recovery is slow in coming. It now takes a decade or two of the most aggressive action and then may not be successful. The community may have failed to redevelop itself properly.

Evidence of the length of the time of the substantial surplus is provided by the following table which enumerates the time of the start of the most recent period of continuous substantial labor surplus.

Date of start of last period of substantial surplus	Total	Distressed labor markets		Number with prior period of substantial labor surplus
		Major	Smaller	
1951	1	1	0	0
1952	18	6	12	0
1953	8	1	17	0
1954	10	1	9	1
1955	11	0	11	1
1956	17	1	16	5
1957	75	15	60	30
1958 (October or before)	26	7	19	8
Total	166	32	144	45

Significant is the fact that some labor markets with more recent starting dates for their chronic distress had suffered prior periods of substantial labor surpluses. The revival was short lived and these communities fell back again into the category of chronically distressed.

Farmers' Week Address by Hon. Philip A. Hart, of Michigan

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. GRUENING. Mr. President, last Thursday evening, at the Michigan State University, the distinguished junior Senator from Michigan [Mr. HART] delivered a speech in connection with the celebration of Farmers' Week. While he himself had to remain here to vote on the school aid bill, his remarks were delivered via film. His penetrating statements on the farm program should be preserved in yet another and I therefore ask unanimous consent that they be printed in full in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR PHILIP A. HART, DEMOCRAT OF MICHIGAN, AT THE ANNUAL FARM MANAGEMENT BANQUET HELD DURING FARMERS WEEK, MICHIGAN STATE UNIVERSITY, THURSDAY EVENING, FEBRUARY 4, 1960

Farmers Week is one of the rich traditions of our great State. It has served well, not only the good farmers of Michigan but our whole economic community. Again we meet here on the Michigan State University campus, the most appropriate setting for this conference in all of Michigan. No longer is MSU thought of as preeminent in the agricultural education field alone. Its contribution in all the disciplines long has been acknowledged. But tonight I want to report that which is no surprise—the quality of its agricultural faculty is conceded by everyone with whom I have had contact in Washington. First hand I can testify to the willingness of that agricultural faculty to help me. I take this opportunity publicly to thank them for their help and patience with this agriculture student.

Some 16 months ago, during the campaign for the U.S. Senate, I came to MSU and delivered a speech on agricultural policy. As the radio soap operas put it, time passed. I was elected to the Senate—just a year ago. Within days of the opening of the Senate, the freshmen were assigned to their committees. For the first time in 35 years, Michigan had a Senator on the Committee on Agriculture and Forestry—it was HART. And I was afraid to look at that speech I had made. I hope all future officeholders profit from my experience, and when they campaign beyond their fields of experience, they had better realize that suddenly they may have to answer the question, just as I did: "Well, what are you going to do about the farm program now?"

Dean Cowden and his staff of able professors know a lot about freshmen. They know they take awhile to settle down and do their studying. So, as in all institutions of higher learning, where there is great tolerance but ever-present hope for their potential, ways are devised to make freshmen study. It's

called semester exams, and the cramming that is done for these exams is one of the great techniques of the American educational system.

There is a similar problem and a similar method in the Congress. Cramming comes on the day before the committee opens hearings on a basic farm bill. The examination occurs when the roll is called. It is a yes or no vote. Just like some yes or no college exams, some of the questions are so involved they seem to require more than just yes or no answers. Incidentally, when that roll is called in the Senate Agriculture Committee, it is a great advantage to come from a State with a diversity of agricultural and forestry interests such as we have in Michigan. I don't have to answer the roll for cotton, rice, tobacco, wheat, dairy, citrus fruits, or corn and hogs. Every man on the committee, I am sure, seeks what is best for the whole country, but if your State's chief economy is one basic crop, you can expect to find that crop's best interest looking mighty like the whole country's best interest.

Perhaps my baptism of fire came on the wheat bill last year. I discovered that not only did thousands of Michigan's farmers grow wheat, but that there were different kinds of wheat. The kind we grow in Michigan is in high demand and is not in the great storage bins as the surplus which is the Nation's worry. One of our great troubles is the failure of the press, slick and daily, to make this fact clear in their call to arms against the wheat glut.

A fellow named Mr. Yankus also kept my life interesting. But even though the bills we sent to the House and to the President would have made Mr. Yankus' life easier had he stayed with us in the United States, and would have protected our 15-acre wheat farmers in Michigan, the administration and the President worked hard against both the bills—the one that would have cut 20 percent in exchange for an 80 percent price support, and finally the 25 percent cut in exchange for 90 percent parity supports.

Well, we are back working on the wheat this week—the opening hearing was on Wednesday—and all I can say is that I will do my best for soft white winter Michigan wheat, as well as for a program that will bring some order to a situation seriously out of balance. Here again, because Michigan is a State with diversified farming, I do not feel the same kind of duty which one would feel if he represented one of the great wheat areas.

Fortunately, I am not a candidate this year for any office. I do not come to you with a farm program. But there will be plenty of those who will do just that this year, and tonight I want to discuss some of the criteria—the tests—by which we might evaluate the 1960 farm programs proposed by the avowed and the unavowed candidates, not to mention by the major farm organizations of our Nation. What are the questions we should ask about any farm program?

Eight separate questions or measurements have occurred to me as I have done my cramming on my assignment, and I mention them not in any necessary priority or order:

First, will the farm program enable farmers to share in the proceeds of their own increased productivity, as well as the increased national prosperity which the future should hold for all our people?

In recent years farmers have not gained from their increased productivity. On the contrary, their income has been reduced. Michigan's farmers are no exception. To the extent that legislation will be a factor in this participation in productivity, the difficulty and limitations have been illustrated in the contrast between the work I have done on the Senate Antitrust and Monopoly Subcommittee and my work on the Agriculture Committee.

When Congress is concerned with the nature of automobile financing or pricing, it is a simple matter to have the officials of the three or four firms that produce over 90 percent of the Nation's automobiles appear before the committee. Contrast this with the impossibility of hearing from the over 2 million farmers who produce 90 percent of our feed and fiber.

When the demand for automobiles or steel was not particularly good during the 1958 recession, the assembly lines were slowed or stopped, and the steel mills went on short shifts. As everyone knows, the farmer cannot do this. All those with farms here tonight could not significantly affect the food or fiber by substantially cutting their production—not even all the farmers in Michigan could achieve a meaningful measure of reduced national production if they should cut farm production in half next year.

The individual farmer, regardless of the level of price, cannot significantly affect overall output; on the contrary every pressure upon him is to utilize his production resources to the fullest. This would seem to say that a national farm program that does not recognize the need to influence orderly changes in overall farm production and work to do just that, is inadequate.

A second measure to ask: Does the farm program make a contribution to our foreign policy; does it advance the cause of world peace and the growth of less developed nations? Does it at least avoid conflict with or harmful effects upon the United States relations with other nations? This general topic may seem far away, but specific actions involving these issues confront us every day. Will the revision and extension of the Sugar Act—a program from which we might learn much in dealing with basic commodities—will this extension help or aggravate our relations with Cuba? Will our overseas sales of wheat affect the economy of our neighbors in Canada? Clearly yes. Then how do we reconcile conflicting claims? These are not insignificant questions; but even more basic is the fact that tonight over two-thirds of the people of the world will go to bed hungry. The population of the world is twice that of a hundred years ago; the population explosion indicates that it may well double againin just 40 years. Who here tonight is blind to the enormous impact, in terms of world stability, of this contrast of hunger among many and abundance in the hands of a few? Certainly, any farm program must be measured against the fact of the total world population—peoples far beyond our 50 States.

Thirdly, does the program contribute to the wisest use of the Nation's total human and natural resources and to our maximum growth? Committing too much of our resources to agriculture—or to any segment of our economy—would mean a shortage of resources for other needs, such as schools, roads, forests, recreation areas, hospitals, etc. True not all of our resources are transferable. But many are, including people, and the very best National and State programs are needed effectively to meet the demands on our resources.

The fourth is one which, when stated, is obvious: Does the farm program provide an adequate food supply for the American consumer, both now and in the future when needs will be greater and capabilities more uncertain. This seems so obvious I suspect it sometimes is completely overlooked.

There are those who look at the surpluses of today and scoff at the idea that there is any need for conservation and reclamation programs. In my book, nothing could be more dangerous or more shortsighted. Population estimates for the United States in 50 years indicate we must produce sufficient food and fiber for 370 million persons here at home—more than twice our population today.

But not only will our agricultural production have to meet the demands of our increased population; the USDA, in studies just completed for the Senate Select Committee on National Water Resources, indicates that some 80 million acres of our best cropland will have disappeared by that time, mostly as a result of the expansion of our cities and other factors well known to you. The Department has also projected the addition of only 25 million acres through reclamation and related practices in that same period. Research in new techniques, increased irrigation in areas where irrigation has been only an experiment, and vastly expanded conservation practices and programs are needed to meet the demands of tomorrow. It is foolhardy to use the existence of surplus production now as an argument for throttling and restricting our conservation and research programs for future decades.

The fifth question: Will the proposed farm programs reward the farmers for their work and managerial skills on a scale comparable to those of other persons in the economy? It is on this point that so much of the debate revolves when programs come before the Senate Agriculture Committee—particularly those concerned with our basic price-supported commodities.

The question constantly before the Senate Agriculture Committee, when it considers the role of government in supporting or controlling the production of a basic commodity, is: What will happen to the farmer's receipts and to his income? It is the answer to this question which most effectively establishes the limits and the extent of approaches to be considered.

There has been much debate about pulling Government out of agriculture, or "freeing agriculture"; the idea being that we should "free" agriculture from Government intervention. In terms of this fifth measurement, is this "freeing agriculture" a realistic alternative? Last year, frankly, I was not sure. As the public pressures and mail mounted—generated by magazine stories of payments to corporate farms of hundreds of thousands of dollars—and as budget costs continued to mount, I often felt that this was the only direction in which to move. At least one of the results of this concern was our vote putting a ceiling of $50,000 on support payments. No more millionaires by way of USDA checks.

But the answer as to what the economic results would be if we really "freed" agriculture—removing controls and support—was not clear in my mind. I thing it was not clear to some of the old hands, either. For this reason I welcomed the initiative taken by Senator ELLENDER, chairman of the Senate Agriculture Committee, in requesting that agriculture economists of the USDA, in cooperation with economists from our leading colleges of agriculture, undertake a study based on the following suppositions, necessarily present in any "freeing agriculture" move:

"What would be the probable market supplies and prices of farm products and the probable aggregate farm output and level of farm prices for the period 1960–65, assuming all production controls except those on tobacco were removed and assuming price supports were maintained at levels which would permit an orderly reduction, over a 7–10 year period, of the current excessive stocks of storeable farm products."

In plain language, what would happen to farm prices and farm income with virtually free production and marketing of agricultural commodities?

The study and report are now available—received by the committee just 2 weeks ago. Here are some of the results—and remember,

this is not from those who want to prove or disprove a program, but from the experts who made the analysis without trying to prove or disprove, support or undermine, specific programs or proposals. The highlights are these, and I am assured thay are on the conservative side:

Net farm income would drop to $7 billion by 1965, a drop of 46 percent from 1958; average commodity prices would be 90 cents for a bushel of wheat; 80 cents for a bushel of corn; $15 per 100 pounds of beef cattle; $11.20 per 100 pounds for hogs; $3.60 per 100 pounds for milk at wholesale; 29 cents for a dozen eggs; 15 cents a pound for broilers.

And even more startling is the fact that the overall drop in net farm income would be occurring while the overall income of individuals is estimated to increase 22 percent by the year 1965.

Yes, a right, proper, and very key question to ask concerning any farm program is: What happens to the income of the farmers? I believe the answer to this question puts very definite limits on the acceptance of some of the proposed programs. We now have the conclusions of our best agricultural economists; we now see the extreme economic effect on farmers' income from an absence of some type of controls or support.

As we look for new methods of production control, I, for one, will be sympathetic to suggestions to abandon acreage controls and move toward systems based on specific units of production. Hopefully, we can return many of the decisions on these controls to the farmers themselves.

In our Nation we have always supported a system of agriculture consistent with our ideas of individual private ownership. Family farms have been an important and continuing part of our Nation's life. Thus, the sixth point I would make is that a farm program must result in a system of agriculture providing to the fullest extent possible freedom of individual management and ownership, and supporting family-sized units in the traditions of our Nation. These historic concepts today are being challenged, are said to be outmoded, and will continually be attacked from many quarters. The price that would be paid for abandoning these principles would be very high indeed. To have a meaningful program must it not be geared in two directions—the commercial farm and the low income farmer? Needs and aspirations of one differ from the other. Our farm programs should reflect these differences. The distinctions between programs designed to help rural low-income families, through rural development programs, the family-type commercial farm, and the corporate-owned commercial farm are often blurred. We need a vastly expanded rural development effort along the lines of the area redevelopment bill which passed the Senate last year and is now in the House. The family-type commercial farm must be provided with adequate credit, managerial and technical resources.

My seventh question in measuring: Is the cost of the program, both to the Treasury and directly to the consumer, reasonable, and will it be distributed fairly? American consumers are willing to pay for their groceries and farm products if they are assured the farmer is sharing equitably and fairly in the abundance of our Nation's wealth. Certainly this question of what is fair, how much is equitable, is a reasonable area for political debate. The programs you will hear discussed in the months ahead will place much emphasis on what is proper, and how these costs will be reduced. Perhaps the most disturbing facts brought to light recently on this point are the evidences of excessive storage costs disclosed by the Agriculture Subcommittee under the chairmanship of Senator SYMINGTON, investigating the CCC. We can all profit from the careful and responsible work that he has undertaken.

Last question: Does the proposed program contribute to the permanent solution of the problem or is it a temporary palliative which will make more difficult a long-run solution?

For any one farm program fully to meet all of these criteria, I am confident would be impossible. Our Government works because we have built into our system the means by which each of us may express his thoughts and viewpoints as to which of these eight points are of the greatest necessity and demand the most immediate attention. This is the true political process. I do not pretend to have the answers, but I believe the process can and will work if we all continue to study and probe for the answers.

Slogans, catch-words, and slick phrases, are not going to be the building blocks for a satisfactory farm program. Tonight, I can assure you only of my intention to measure the programs which come before me, acting for you in the U.S. Senate, by these standards; to ask these questions of each new proposal. And I promise to continue my own education with the able support and advice of the staff of this College of Agriculture, which has never yet failed to further the farm education of your freshman Senator.

Thank you for this opportunity to be with you tonight.

Concern Over Cuba

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. REECE of Tennessee. Mr. Speaker, the visit to Cuba by Soviet Deputy Premier Mikoyan is further concrete proof of the deadly serious Russian wooing of our neighboring American republics. Combining this fact with the intensifying anti-U.S. campaign of the Castro regime, we face a situation fraught with danger to the security of this hemisphere. I have long been concerned with Communist influence south of our border, and now feel justified in my early warnings against an unqualified embracing of Fidel Castro. While the Cuban Premier seems to have turned his back irrevocably on this country, we can only hope that more stable elements may somehow reverse the Cuban drift toward communism.

I am reminded of my rather extensive exchange of views on Castro and U.S. hemispheric policy, with the distinguished gentleman from Oregon [Mr. PORTER]. I trust that the more recent turn of events in Cuba have dissuaded him from some of his prior viewpoints, particularly regarding Castro. We wonder what is the gentleman's present reaction to the Red-lining, dictatorial Castro, whose cause he so ardently espoused and championed. Of late, we have not heard much from the gentleman as to his present attitude toward Latin American policy. I don't know whether it is due to lack of pride in his efforts on behalf of Castro, or whether the explanation lies in the gentleman's preoccupation with the Far East.

During the recess Time magazine carried an article on our irrepressible colleague's tour of the Western Pacific. My friend's talent for stirring controversy did not seem to have failed him on this sojourn. He injected himself with characteristic vigor into the myriad of delicate problems facing American policymakers in this critical area of the world. Time reports on the results of the gentleman's latest venture in personal diplomacy. I have asked that this Time article of November 30, 1959, be printed in the RECORD.

The article follows:

THE CONGRESS

THE SCRUTABLE OCCIDENTAL

There will always be a whooping crane, Deo volente. And there will probably always be a whooping Congressman. This migratory species is recognized by its raucous cry and by its frequent fumbling, bumbling, free-loading flights to exotic lands, where it lays eggs of oddest shapes. A splended example of this rara avis is CHARLES ORLANDO PORTER, 40, Democratic Congressman from Oregon's Fourth District, who returned last week from a factfinding flight through the islands along the Asian littoral, a flight that created more embarrassment and consternation than a plague of gooney birds.

Oregon-born (Klamath Falls) Harvardman (1941) CHARLIE PORTER, a World War II Air Corps ground officer, settled down quietly on the lowly House Post Office and Civil Service Committee after his election in 1956. But like others of the species, he soon discovered that international affairs could bring him fame of a sort and big headlines back home. The discovery came when he commendably tried to find out what had happened to one of his constituents, Pilot Gerald Lester Murphy. Murphy disappeared and was reported murdered after telling how he piloted a plane that carried Basque Scholar Jesús de Galíndez to an appointment with death in the Dominican Republic (Time, Apr. 2, 1956, et seq.).

Murphy was never found, but CHARLIE PORTER found his role. After declaring war on Dominican Dictator Rafael Trujillo, he next turned his attention to seething Cuba. When Fidel Castro invited a group of U.S. Congressmen to Havana on an expenses-paid inspection tour, only PORTER and Harlem's ADAM CLAYTON POWELL, another have-tux Congressman, accepted. But Castro turned out to be a disappointment ("I've urged him from the first to shave his beard," says PORTER), and PORTER thereupon looked around for new worlds to explore.

Battle of Formosa: The Orient seemed promising. PORTER, an outspoken advocate of recognition of Red China, decided to go to Red Peking. When the State Department repeatedly refused to validate his passport, PORTER sued Secretary of State Christian Herter, charging violation of congressional rights—but prudently trimmed his travel plans to include only Formosa, Japan and Okinawa. His official mission was to interview civilian employees abroad and report back to the Post Office and Civil Service Committee on the state of their morale, but PORTER clearly had bigger things in mind. Just before his takeoff early this month, he proclaimed that Nationalist China's president "Chiang Kai-shek should be sent to an old soldiers' home, preferably one with barbed wire around it," and sneeringly referred to the Chinese Nationalist Armed Forces as a "rubber dagger" and a "toothless tiger."

On his arrival in Tokyo CHARLIE PORTER was understandably hesitant about going on to Formosa. At his request, Ambassador Douglas MacArthur, II, made some discreet inquiries, assured PORTER that he was still welcome. He was. Although Chiang was, unsurprisingly, too preoccupied to see him, the top officials of the Nationalist Government turned out to greet PORTER at a dinner at the home of the U.S. chargé d'affaires, on the day of his arrival. Sensing a certain strain in the air, PORTER opened the conversation jovially: "I suppose that if I convince you of my point of view, you'll all be shot." A glacial silence descended on the party, and PORTER returned to Tokyo next day.

Battle of the Embassy: Back in Japan, PORTER got in a row with able U.S. Ambassador MacArthur at a private meeting. Calling in the press later, PORTER charged, among other things, that MacArthur had attacked his position on Red China and had promised to debate the issue back in the United States. Not so, retorted MacArthur; he has never suggested a debate. "PORTER said I was being unfriendly and uncooperative," said MacArthur. He said, "I will take care of you." Retorted PORTER as he prepared to fly home: "I still say MacArthur challenged me to a public debate, but the Ambassador's excess of adrenalin unfortunately has clouded his vision and memory."

In the wake of PORTER's memorable trip, his proposed recognition of Red China met with stony nonrecognition in the two places most concerned. "Crude interference in China's internal affairs," cried Radio Peiping. "Preposterous," said Hong Kong's pro-Nationalist newspaper, Shih Pao: "Our American friends should soberly think of the damage done to U.S. good will abroad by PORTER's shallow views."

Praise for Release of Surplus Food by the Men's Sodality of the Church of St. Ignatius Loyola in New York City

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. KEATING. Mr. President, the Vice President has been kind enough to turn over to me a letter he received from the president of the Men's Sodality of the Church of St. Ignatius Loyola in New York City, praising Congress for its action in the last session in releasing surplus food for the world's hungry.

Mr. James P. McCarthy's letter is an eloquent enunciation of America's responsibilities in this area, and I am pleased to have this opportunity to call it to the attention of the Senate. I ask unanimous consent to have this fine letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MEN'S SODALITY OF OUR LADY,
CHURCH OF ST. IGNATIUS LOYOLA,
New York, N.Y., December 7, 1959.

Hon. RICHARD M. NIXON,
Vice President,
Washington, D.C.

HON. DEAR SIR: Keenly aware of our responsibility, as a Nation, to assist our less fortunate neighbors throughout the world, the Men's Sodality of the Church of St. Ignatious Loyola wish to thank the Congress for having authorized our Government to again release our surpluses of food and to extend aid to the world's less developed countries. The people in need have a human dignity which they should be able to maintain.

President Eisenhower, during his speech on October 14 of this year, stated among other things, that there will always be many demands for the elimination of human indignities, of starvation, ill health, and suffering; with the result that all nations must continue to contribute their proportionate share in solving this problem.

We know that the Congress is well aware of this situation, and of the necessity of our contributing yearly a substantial amount of our surpluses to the needy peoples of the world. This in turn would eliminate the cost of building new granaries and save storage bills now being paid by the United States.

Assuring the Congress our thanks and appreciation for your efforts herein.

Very sincerely yours,
JAMES P. MCCARTHY,
President.

Frank DeLucia

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. GIAIMO. Mr. Speaker, in an era when the media of mass communication appears to be continuously fascinated by the misdeeds of society's antagonists, the true heroes of our time—the men and women who exhibit a sense of civic responsibility and concern for their fellowmen—are, too often, ignored and their acts go unnoticed. And yet, it is to these people that we must look if our civilization is to sustain our finest ideals and provide that wonderful world of which we all dream. I wish to call the attention of this House to one such man.

His name is Frank DeLucia. Mr. DeLucia drives a tractor trailer for the Adley Express Co., of New Haven, Conn. On January 14 he received the American Trucking Association's Pro Merits Medal, the trucking industry's highest award for heroism. In 1947 and 1948 Mr. DeLucia was named Driver of the Year by the Motor Transport Association of Connecticut. The events which have prompted the selection of Mr. DeLucia for these distinctions fully substantiate my appraisal of him as a remarkable citizen and a true hero of our contemporary times.

The Pro Meritis Award was presented by Gov. Abraham Ribicoff, of Connecticut, in acknowledgment of the courage Mr. DeLucia displayed on October 11, 1958. While driving his truck on that date, Mr. DeLucia spotted a car which had crashed into a power utility pole in Stratford, Conn. The pole had broken, dropping high tension wires which trapped the driver and set the car afire.

Despite the extreme danger of being electrocuted, Mr. DeLucia secured a stick of wood and used it to remove the live wires from the car. Then he helped the injured woman, Anna Celone, of Milford, Conn., from the blazing vehicle and covered her with his coat to prevent shock.

After calling the Stratford police for an ambulance, Mr. DeLucia returned to the scene of the accident and put out the fire with an extinguisher which he carried in his truck.

In a letter written to the Adley Express Co., Mrs. Celone, who suffered three fractured ribs and a cut knee in the accident, said that if Mr. DeLucia had not come to her assistance when he did, she "would probably have been electrocuted."

To win the title of Driver of the Year which the Connecticut Motor Transport Association bestowed upon him in 1947 and 1948, Mr. DeLucia performed several acts of courtesy and safety. His deeds included removing an automobile from a garage threatened by fire, and towing a stalled car carrying an 8-year-old girl to a doctor.

In 1950 Mr. DeLucia exhibited his fine sense of civic responsibility when he encountered a drunken driver who was weaving across four lanes of a highway near Langhorne, Pa., on August 19, 1950. Mr. DeLucia lit a flare and held it out the window of his cab to warn motorists behind him of the danger. He then followed the car until it struck an oncoming tractor trailer truck. Due to his efforts, the driver and the occupants of the car were held at the scene until the police arrived. Later it was discovered that the car had been stolen.

Mr. DeLucia, who has been driving trucks since he was 16 years old, has an impressive safety record. He has driven an estimated 700,000 miles in the last 14 years without a single chargeable accident.

I am proud to salute Mr. Frank DeLucia, a neighbor in my community. Our Nation is a better place to live because of his wonderful deeds.

The Loyalty Affidavit

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. LONG of Hawaii. Mr. President, it is heartening that President Eisenhower has recommended elimination of the unwarranted loyalty affidavit now required by students as a condition for receiving aid under the National Defense Education Act. I still am hopeful that the Senate, during this session, will have a chance to vote again on the removal of this unnecessary provision. I ask unanimous consent that an editorial on this subject, entitled "Useless Affidavit," published in the Honolulu Advertiser of January 31 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

USELESS AFFIDAVIT

Somewhat lost in the shuffle recently was President Eisenhower's recommendation to Congress to eliminate the affidavit of disavowal from the Federal student loan program.

To participate in the program students not only have to sign loyalty oaths but also affidavits stating they neither believe in nor support any subversive organizations.

Many leading universities have quit the loan program in protest, charging the affidavit singles out students as a special group for suspicion and mistrust. They have also stated the affidavit really accomplishes nothing.

Other than noting that the affidavit isn't clear as to just what is considered a subversive organization, the regents of the University of Hawaii have had nothing to say about it.

But now with the President four-square against it, perhaps our regents would want to add their belated opposition to an unnecessary and useless requirement.

The President said, "the affidavit requirement is unwarranted and justifiably resented by a large part of our educational community which feels it is being singled out for this requirement."

We'd like to see our regents join the disapproving segment of the educational community of which the President spoke, add their voice to the demand that Congress get rid of the affidavit.

Stranglehold on Agriculture

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. WOLF. Mr. Speaker, all of the midwestern press has not swallowed the Benson line. The Des Moines Register, Wednesday, February 3, 1960, had an editorial which will be educational and helpful reading to all those who are trying to understand the problems in food production today.

Mr. Speaker, the editorial's closing statement is particularly significant:

Benson talks about farm programs as a stranglehold, but we believe many farmers would consider a 30-percent drop in net income even more of a stranglehold.

Mr. Speaker, we must write a farm bill which recognizes that the economic life of agriculture is at stake under our existing farm laws.

We must recognize the importance of the family farm before it has been completely removed from the scene.

We must recognize that more is at stake than money.

We must recognize the tremendous sociological advantages which family farm life has meant to America.

We must do it now—this year.

The editorial follows:

STRANGLEHOLD ON AGRICULTURE

In a recent leaflet for the Committee for Constitutional Government, Agriculture Secretary Ezra Benson argued strongly for further reduction of farm price supports and for the elimination of what he called the Government "stranglehold" on agriculture.

"We have made some progress toward sounder farm programs, but it has been limited and painfully slow. The agricultural acts of 1954, 1956, and 1958 provided only a fraction of the program we asked for and what farmers need. * * * The new corn program is a step in the right direction. * * * We must give freedom back to the farmers. We must get rid of Government's stranglehold on agriculture."

This kind of language does not contribute to thoughtful discussion of farm policy issues. We are not aware of any stranglehold the Government has over agriculture. Producers of some crops have been restricted by marketing quotas—but only after having voted these restrictions on themselves by a two-thirds majority.

Whether quotas are a wise policy is a debatable question, but talk about giving freedom back to farmers and strangleholds is sheer emotionalism and does not lead to sound thinking. Benson's policy proposals ought to be considered on their merits and in the light of the facts.

It happens that the Department of Agriculture has just completed an excellent study of the probable effects of Benson proposals. The study was made by civil service economists in the Department at the request of Senator ALLEN J. ELLENDER, Democrat, of Louisiana, chairman of the Senate Agriculture Committee.

Senator ELLENDER asked the Department to make projections of probable supplies and prices of important farm products for the period 1960 to 1965 under two assumed conditions: First, that all production controls other than those on tobacco were removed (except that there would be 30 million acres of cropland in the soil bank), and second, that price supports were lowered to such levels as would permit an orderly reduction of stocks to "normal" over a 10-year period. For example, it was assumed that the stocks of wheat would be reduced from 1.5 billion bushels as of 1960 to about 450 million bushels in 1965.

Under such conditions, the USDA economists figure that farm production as a whole in 1965 would increase to about 20 percent above the 1955–57 average. Livestock output would increase 25 percent.

Here are some of the price changes that would be expected under these conditions: Corn would drop to 80 cents a bushel by 1965, wheat to 90 cents, cattle to $15 and hogs to $11.20.

The effect on farm income would be very severe. The larger volume of marketings would result in cash receipts about the same as in the 1955–57 years, even though prices were lower. But net income would fall considerably because of higher production costs.

The USDA did not estimate net income for 1965, but an advisory committee of State agricultural college economists did. The committee assumed that nonfarm prices remained the same, but they calculated that total costs would advance because of more use of fertilizer, chemicals and other production items for a larger output.

Their conclusion was that net farm income would fall from about 10 billion dollars estimated for 1960 to 7 billion in 1965.

A similar study by the Agricultural Adjustment Center at Iowa State University at Ames reached even gloomier conclusions. The Iowa State researchers assumed no reduction in grain stocks, but they arrived at a higher estimate of grain output. So the estimates of total feed available for livestock were not far apart.

Here we have studies by two authoritative research groups indicating that a virtual disaster would overtake agriculture if a policy of free markets were established.

Benson talks about farm programs as a "stranglehold". But we believe many farmers would consider a 30-percent drop in net farm income even more of a stranglehold.

The Cost of Politics

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, February 8, 1960

Mr. CASE of South Dakota. Mr. President, one of the most thoughtful editors of my State is Harold W. Card, publisher of the Webster (S. Dak.) Reporter and Farmer.

In the January 28 issue of his newspaper, Mr. Card comments editorially on a subject which is of some interest to most of the Members of this body and should be of equal interest to the public as a whole, "The Cost of Politics."

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE COST OF POLITICS

(By Harold W. Card)

An Associated Press dispatch from Minneapolis Tuesday announced that Democratic leaders in Minnesota have started a campaign to raise $65,000 to help finance the primary election campaign in Wisconsin of Senator HUBERT HUMPHREY, aspirant for the Democratic presidential nomination. It is estimated that the Wisconsin campaign will cost $100,000.

All of which induces reflection upon the high cost of politics these days, and raises the query of how political campaigns can best be conducted and financed on national and State levels.

It is important, of course, in a democracy that no insuperable financial barriers be permitted to entrance of candidates into campaigns for political office.

However, when such large sums are required, they may easily, and often do, open the gate to large contributions from wealthy people and organizations whose motives may be, and sometimes are, questionable, with regard to influencing governmental policies or appointments. It has been commonly said in times past, that appointments to ambassadorships to foreign countries are often based by both political parties, not so much on the fitness of the applicant as by the amount of his, or her, contribution to the party's campaign fund.

With campaign costs so high, the situation reaches a point where none but the very wealthy can afford to run for high public office, unless he accepts, and in fact encourages, contributions from those who have an axe to grind and who may later demand repayment of the political debt.

An alternative, which is being tried by leaders of both political parties, is an effort to raise campaign funds from the rank and file of the party members. This is done by political dinners, maybe at $100 to $1,000 per plate in the higher echelons, and $5, $10, and $25 dinners on the lower levels. The smaller price dinners are frequently mere peanuts so far as raising sufficient funds are concerned.

Still other methods have been proposed. These include an assessment upon every

voter, somewhat like a poll tax, which would be paid along with taxes, and apportioned to the political party of his expressed preference. A variation of the same idea is that the Government itself should finance election campaigns, with adequate safeguards, and that these should include political forums with opposing candidates appearing on the same platform to expound their views. Such a system would involve considerable Government control and might be open to abuses. It is also subject to criticism as being contrary to the American way.

Another variation of the above proposal, with some merit, is to penalize the nonvoter by invoking a cash penalty for failure to vote, and to earmark this money for political party activities.

It is unlikely that any of these will find ready acceptance either among party leaders, candidates, or the people themselves. But the cost of political campaigns, the rising trend of public apathy and citizen nonparticipation in voting and selection of candidates, are alarming and call for sober study. We who oppose communism and one-party government need to improve our own system if we hope to continue our "government of the people, by the people and for the people."

Gloom in Nebraska

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. McGINLEY. Mr. Speaker, nothing is more beautiful to a midwesterner than the sight of a field of corn which foretells the prospect of a bumper crop. But in these times there is nothing so misleading. While Nebraska has been blessed with bountiful harvests the past 2 years, the farmers' income falls. There is all too much proof of the inability of the farmer, despite his ever-increasing skill in his job of food production, to get a fair and reasonable return on his investment and his labor.

Farm auctions have always presented a memorable scene and often were significant of a man's retirement from his life's labor—a full life—and a well-earned retirement. But today this scene is often bitter. Young, able, well-educated men who have worked hard and know their business well are being driven from the farm. Too often they are men who should and would like to be the food producers of tomorrow.

We of the Middle West are familiar with this problem. But the dismal future of agriculture at the present time has attracted others who take the time to take a look.

Mr. Speaker, I call to your attention an article in the January 30, 1960, issue of Business Week and under unanimous consent include this article in the Appendix of the RECORD:

This is the season when the bark of the auctioneer shatters the snow-wrapped calm of the Great Plains. It's a between-crops season for balancing the books—for figuring out how far last year's marketings will cover old debts and new needs, for guessing whether this year's marketings will let you come out ahead. Sometimes, the reckoning leads to a bitter choice: selling out.

This year, the cry of the auctioneering is rasping out loud and strong. "I don't have an open date until March," says Rex Young, of Plattsmouth, Nebr., in a voice roughened by 49 years of sales.

It's a hard decision for a farmer to sell out of farming and into a new way of life; complex forces are driving him to make the choice increasingly. Man, government, the elements all enter into the picture.

Take the fairly typical Corn Belt State of Nebraska. There, Dr. Everett Peterson, agricultural economist at the University of Nebraska, found an unusual atmosphere of pessimism after making a round of farms. "Land prices have hit their high so let's cash in while we can," is the attitude he found.

Business Week's Measure of Personal Income, noting the month-to-month changes in the economy, is just beginning to record the new atmosphere. In October, Nebraska's income fell below the year-before month for the first time in 1959. In November, it fell again. Retail sales recorded by the university fell in November to even with the year-before month, after running ahead all year by 5 percent to 18 percent.

Superficially, the 1959 drop in farm income could be blamed for all the gloom. But this would not be accurate; long term, 1959 was not too bad a farm year for Nebraska. It merely looks bad compared to bumper 1958.

Peterson estimates that 1959 cash receipts from farm marketings were $1,102 million, a drop of 12 percent below the U.S. Agriculture Department figures for the year before. Presumably, when figures are available, they will show an even worse drop in net income, because of rising costs.

Crops did more of the damage than livestock; cash receipts for crops were off 16 percent, to $392 million. Of Nebraska's two major cash crops, wheat took the licking—not corn. Nationwide, the 1959 wheat crop was down 25 percent from record 1958; in Nebraska the drop was 38 percent. Three factors hit the State: too little moisture at planting time, a severe winter, and plant diseases late in the season.

Corn was another story. Nationwide, the crop set a record, 16 percent above 1958, while Nebraska's corn was up 24 percent. Even with prices off slightly, the big output helped offset the decline in cash from wheat.

Nebraska's cash marketings from livestock went off 9 percent—to $710 million—with drops in both cattle and hogs. Greater marketings of cattle—much more important than hogs in Nebraska—failed to offset price drops in two categories. Late in the year, prices for feeder cattle, especially calves and heifers, fell steeply, while all year long there was a gradual decline in the prices that Nebraska's farmers could get for the cattle they fed themselves.

As for hogs, Nebraska suffered along with other States from the easily predictable cycle: With feed cheap, they raised too many hogs; then the tremendous marketings drove prices down so far that the increased sales were of little help.

Many farmers have decided to give up, after studying these short-term trends against the larger backdrop of the years. Dry-land (no irrigation) farmers were haunted by the 1955–56 drought, and feared another coming after rainfall that was excellent in 1958 and not too bad in 1959. Those who irrigate feared further drops in the price of corn as their costs go up. Particularly in eastern Nebraska, corn farmers are pinched between softening prices and demand reduced by cuts in the pig crop. Wheat farmers worried lest their acreage allotments be cut still further.

Farmers in Nebraska—unlike more industrialized States such as Illinois or even Iowa—have scant opportunities to eke out farm income with factory jobs. Omaha does claim 15 new factories since the war—the biggest, a 4,200-worker Western Electric plant—but that's only one a year and Omaha is remote from most of the State.

Omaha and the nearby State capital, Lincoln, are the only really bright spots in the State, with government and university payrolls to fatten out their scattering of factories. Their retail stores attract hinterland customers.

What's more, Omaha and Lincoln have gained from the defense switch to missiles from aircraft, which has brought so much woe elsewhere. Omaha is headquarters for the Strategic Air Command—with 9,100 personnel, including 1,200 civilians; and a $15-million Atlas missile base is being built. This spring, contracts are expected to be let for a $36-million Atlas base at Lincoln.

Address by Hon. Vance Hartke, of Indiana, at Dedication of Temple Adath Israel, Evansville, Ind.

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. KEFAUVER. Mr. President, all of us from time to time are called upon to speak before various civic, business, and religious groups. This is a privilege of our public office, and one which we accept with pleasure and pride. I was particularly impressed by a speech delivered by our colleague, the distinguished junior Senator from Indiana [Mr. HARTKE], when he spoke at the dedication of Temple Adath Israel in Evansville, Ind., last January 10.

In his talk, Senator HARTKE used as his theme, "Only in America." It is most inspirational and, I feel certain, will be of interest and value to my colleagues.

Mr. President, I ask unanimous consent that the speech delivered by Senator HARTKE of Indiana before Temple Adath Israel be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed at this point in the RECORD, as follows:

DEDICATION SPEECH, TEMPLE ADATH ISRAEL, EVANSVILLE, IND.

When I thought about coming home today to help dedicate this Jewish house of worship, I thought it could all best be summed up with the title of the best seller by Harry Golden. Of course, you know the title well—"Only in America". I am told this was a favorite expression among the Jewish people who had not been long in this blessed land, having arrived shortly before from countries ravaged by starvation, privation and pogroms.

The comment "only in America" was used to describe the thousands of phenomena which these immigrants found chiefly freedom. Today it is apropos once more.

You seen before you something which could indeed happen only in America. I stand before you as the cantor does on the Jewish High Holy days when he says, "Behold here am I, in deep humility."

I came from a small coal-mining town. My parents were of very modest means. I learned the meaning of hard work at an early age. But I got a chance to go to col-

lege, and then law school. You folks helped make me mayor at 36 and U.S. Senator at 39. Only in America could this happen.

Only in America could a poor boy from a Lutheran family find college training first in a Methodist institution and then in a State institution and then be invited to help dedicate a Jewish temple. Only in America could a Jewish congregation buy its temple location from the Catholic Church which obtained it originally from the State. Only in America could we look in one direction and see three great Catholic institutions as neighbors and then look in the other direction and see two Protestant institutions as neighbors—all while we dedicate a Jewish institution.

The words of the Psalmist are appropriate: "Then said they among the nations: 'The Lord hath done great things with these.' The Lord hath done great things with us; We are rejoiced."

Only in America do we see full flowering of the kind of life in keeping with the Mosaic Code of laws and of justice. Only here do we have the kind of daily lives and the kind of government that is in keeping with not only this code, but with the concept of the brotherhood of man and the fatherhood of God.

In deed, the Judeo-Christian concept of religion and the American concept of government carry similar goals and similar roads to these goals. The Goverment makes and carries out laws based to a great degree on the laws of Moses. But government of the kind we know in the United States of America is more than laws. It is a way of life.

So religion is more than ritual, more than buildings, more than rules and regulations. Religion, too, is a way of life.

True religion teaches living with dignity, righteousness and charity, fostering justice, peace, and brotherhood. This is God's way, we are taught.

Our kind of government could not exist without the same principles. This is what gives it morality and a sense of justice. The principles of equality of opportunity, human dignity, God-given rights are embodied in the earliest documents of this Republic. Every schoolboy knows that every great leader of this Nation has reaffirmed faith in God in almost every lasting address.

Anyone who has attended sessions of city council, the State legislature, or Congress knows that each is opened with a prayer. Every official in our land swears by his God that he will faithfully carry out the duties of his office in accord with the Constitution. Everywhere you go in this land you find that the country and all its divisions are rooted in belief in God.

It has been a source of joy and strength to find a capable and understanding Chaplain in the Senate. It has been inspirational for me to meet on Wednesdays with other Senators for breakfast and Christian meditation and discussion.

Yet, a country so grounded and whose leaders are so grounded in religion has no official religion. Only in America and few other lands is there full recognition of God and His word without an official religion. Here in America we take full and official and legal cognizance that every man is free to worship as he sees fit.

As I see it, part of the greatness of America stems from our collective belief—our nondenominational belief in God—and our dedication to protection of separate beliefs. The men who forged this unique concept of government have lighted the way along which the country has traveled, is traveling, and will travel.

From them we draw inspiration and knowledge. And this is the true role of history—to provide guidance and an example. James Madison, sometimes called the father of the Constitution, said that "to suppose that any form of government will secure liberty or happiness without any virtue in the people is a chimerical idea." Chimerical is his word. It means unreal or imaginary.

George Washington said it is not realistic to believe that good government is possible without people whose thoughts are rooted in morality and decency. He said: "Virtue or morality is a necessary spring of popular government."

Of course, we do not always live up to our ideals. But, so long as citizens are well trained in the principles of morality and government, those principles of the Mosaic Code, wrongs will inevitably be righted.

This is the true purpose of the edifice we dedicate here today. It is to carry on that unbroken chain of Judaism and its teachings which started with Father Abraham and has passed from generation to generation and which includes Jesus of Nazareth. It is to teach the lofty ideals of the Judeo-Christian belief—brotherhood, justice. It is to teach the Ten Commandments and the other moral codes of religion upon which man has not been able to improve in many hundreds of years of trying.

So long as Temple Adath Israel of Evansville, Ind., and thousands of churches and synagogues like it throughout this land can teach the ancient truths and beliefs and morals of the Bible and the prophets, rabbis, teachers, and disciples, the system we cherish in this country will live.

This is more than a house of worship. It is, as the synagogues have also long been known—a house of teachings, a meeting house, a house of God. The Jewish tradition of strong family ties is legendary. Without it how could a religion and a people have survived so much for so long? It is a bedrock upon which sturdy foundations have been built.

So it is no wonder to the thinking man that this temple of a modest congregation in a medium-sized city contains not only a beautiful sanctuary combining the traditional with the modern, but also many fine classrooms, a youth recreation center, an auditorium-gym combination. You are trying to keep on the traditions of learning which has become synonymous with the Jewish people.

Citizens so educated not only pass on to future generations the great traditions and knowledge of a great people, they are also essential to continuing this great country of ours. Without citizens of the future trained in the teachings of Judaism and Christianity, imbued with a spirit of basic morality, there is no future for this country.

Jefferson once wrote: "I know of no safe depository of the ultimate powers of society but the people themselves. And, if we think them not enlightened enough to exercise their control with wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education."

Madison put it this way: "Knowledge will forever govern ignorance."

In our way of doing things, religious knowledge—to know God, to understand Him, to fear Him as a son fears his father, to walk in His ways—is important knowledge because it gives meaning and depth, because it provides the morality the Nation needs to exist in its tradition.

Knowledge such as is taught in this building is truly the only hope we have of governing ourselves in the American way. It must govern the ignorance of godlessness and immorality. Therefore, it must be taught.

Thus, this temple is not alone the symbol of a religion. It is not alone the symbol of a community wherein Catholic, Protestant, and Jew are neighbors and like it. It is a fountainhead of knowledge and morality of the kind which has sustained not only the Jewish people, but the Judeo-Christian way and, indeed, the American way.

Milk Price War in Indiana

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. STEED. Mr. Speaker, under unanimous consent I include in the RECORD a letter from Mr. D. C. Scott Daniel, executive vice president of the National Independent Dairies Association, addressed to the editor of the Dairy Record of Minneapolis, Minn., which was printed in that organ of the dairy industry in its February 3, 1960, edition, as follows:

EXPLAINS NIDA POSITION

EDITOR, DAIRY RECORD:

We note in your January 27 issue a story under the heading "Indianapolis Milk Pricing Probe," and feel that you are entitled to further information in connection with that matter. The independent dairymen in Indiapolis and the surrounding area appealed to their Congressman and NIDA for assistance in connection with a price war which was in progress in the Indianapolis area. Mr. Brooks Robertson, chief investigator for the House Small Business Committee was present along with Congressman RANDALL S. HARMON and myself. This was not a public hearing, but only a preliminary investigation to determine whether or not Federal laws were being violated.

Members of the local press appeared at the meeting, and it was explained to them that the meeting was not a public hearing, but only for the purpose of obtaining information from the independent dairymen who had called the meeting. I made no reference to personal security, but I did say that the small dairymen present did not want to discuss the matter in public, because of their fear of reprisals by financially powerful concerns. From my experience in similar situations in other sections of the Nation, I felt that their position was a proper one and so informed the representatives of the press, telling them that I would be glad to discuss the matter with them after the meeting. Having been a trial attorney for the Federal Government for many years, I do not know of any time that a preliminary investigation of this type was made in public. On the question of reprisals I am enclosing herewith a statement made by Representative BYRON JOHNSON of Colorado, on the floor of the House of Representatives on August 17, 1959.

With regard to the price war in Indiana, we found that milk was being advertised and sold for as low as 39 cents per gallon, and were informed that the price paid by the processor to the producer for a quart of milk was 10.6 cents. Thus, milk costing the processor 42.4 cents per gallon was being sold at 39 cents per gallon. In our judgment this is a clear violation of antitrust law. Such sales below cost, if permitted to continue, in our judgment, would certainly tend to destroy the businesses of the independent dairymen, who must be dependent upon the localized areas in which they operate for their trade. We think it follows that, if the local dairy concerns are forced out of business, the farmer-producers would be seriously injured, for it would be a simple matter for the large chains, both grocery and dairy, to bring in milk from distant markets. Further, if the local dairymen are forced out of the market and the dairy industry is monopolized, the consumers would be placed at the mercy of the monopolists. In view of the testimony that has been brought out by the Antitrust and Monopoly Subcommittee of the U.S. Senate Judiciary Committee with regard to the

exorbitant profits charged where drug concerns have monopolies, we are satisfied that the consumers of Indiana, or any other State of the Union, do not want the industry which produces and distributes the most important of food items to become monopolized.

Small business is the backbone of our free and competitive enterprise system, and, therefore, it is imperative that small businessmen remain in the marketplace in the dairy industry. The small dairymen in Indiana, I am sure, only ask that competition be fair—based on service, efficiency, and quality of product. They do not ask any special favors, nor do they seek exorbitant prices—only a reasonable profit on the products which they sell. No small-business concern can continue to operate if it is compelled to sell its products at prices which are below cost. If the practices which were brought to our attention in Indianapolis are violative of Federal laws, and in our judgment they are, appropriate action should be brought by the Federal Government to bring them to a halt.

D. C. DANIEL,
Executive Vice President, National Independent Dairies Association, Washington.

The U.S. Savings Bond Tragedy

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. SCHOEPPEL. Mr. President, the problem of to raise or not to raise interest rates on Government bonds has been before this body for some months, and is of surpassing importance to our economy.

Former Congressman Howard Buffett, of Nebraska, has stated the case plainly and concisely, in Human Events, and I invite my colleagues and readers of the CONGRESSIONAL RECORD to read this article.

I therefore ask unanimous consent to have this document printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Human Events, Dec. 30, 1959]

THE U.S. SAVINGS BOND TRAGEDY

(By the Honorable Howard Buffett, trustee for the Americans for Constitutional Action; former Republican Congressman, State of Nebraska)

The scrimmage between the administration and the democratic majority in Congress over interest rates on Government bonds last session focused temporary attention on U.S. savings bonds. The Democrats, smarting with resentment over many defeats, used the request for higher bond interest rates as a scapegoat for their general frustration. But they finally relented on savings bonds only, and gave congressional approval to a raise in that rate to 4¼ percent from the previous 3.26 top. The Treasury promptly boosted the savings bond interest to 3.75 percent, retroactive to June 1, 1959.

Despite furious verbal exchanges, both sides generally avoided any talk or action that would bring into public view the investment record of savings bonds. That subject was strictly taboo.

Savings bonds were first offered in 1935. From the beginning the Treasury pulled out all the stops in glorifying the merits of these securities. In the early years the claim was made that "U.S. savings bonds are the safest investment in the world today."

While current advertising often takes a less superlative tone, even now the Treasury could hardly be accused of moderation in its sales promotion. Certainly it cannot be denied that the methods used have brought impressive results. An estimated 40 million Americans, mainly of the small income group, are the owners of over $40 billion worth of U.S. savings bonds.

The bond sales record of the Treasury stands in sharp contrast to the investment record to the bondholders. Technically, savings bonds have been absolutely "safe," just as the advertising claimed. Every investor in them has gotten his dollars back on demand plus interest from zero to 3.26 percent, depending on how long he held the bonds.

But this repayment performance tells only part of the story. For it is shocking, yet true, that since 1939 no large group of Americans has been hurt worse financially than that which placed its nest egg in savings bonds.

Depending on the date the bonds were bought, up to 50 percent or even more of the funds these bondholders loaned to their Government have been destroyed by the rotting of the dollar. The total loss in the purchasing power of the principal and interest has been well over $21 billion, a gigantic sum even in these days of colossal spending.

During this same period, of course, all holders of fixed dollar obligations suffered similar losses. Without minimizing their losses, it is our purpose here to examine the facts and circumstances surrounding the specific disaster to those who had directly entrusted the Government with their savings.

Fair play, to this special category of 40 million thrifty citizens, has been entirely within the control of successive Administrations and Congresses. It is the Government that created the inflation that has raised the cost of living 100 percent since 1939. Likewise, it is the Government that fixes the dollar income of the various groups paid out of the U.S. Treasury.

So it is instructive to learn how Congress has treated not only savings bondholders, but also several other groups whose income is determined by the lawmakers. Then it will be possible to decide whether or not savings bondholders have been treated fairly.

For this purpose four groupings, each of which depends directly on Congress for income increases to offset the rising cost of living, have been selected. The list is short, but representative.

1. U.S. Congress (Members of the Senate and House of Representatives): For each $100 paid a member of Congress in 1940, he or she now receives $225, partly tax-free. In addition, fringe benefits have been boosted. Thus his income has been increased upward of 125 percent.

2. Federal Civil Service employees: For each $100 of salary an average median grade of civil service employee received in 1944 (earlier figures not readily available), an employee having comparable stature today receives $249. His income has been increased 149 percent.

3. Social security recipients: For each $100 that a retired single worker received in 1940 from the social security system, he may now receive $211. This is an increase of 111 percent. Moreover, this income is Federal tax-free, in contrast with savings bond income, which is fully taxable under the Federal income tax law.

4. ADC beneficiaries: This grouping consists of families receiving payments under the aid-to-dependent-children legislation. Using national average figures, for each $100 paid to an ADC family in 1942, a similar family in 1959 may receive $296 in Governmental payments. This is an increase of 196 percent. (Note: The 1942 payment formula was different, so an exact comparison is impossible. The figures used here, and on the other groups, are calculated to achieve a fair comparison, and are based on statistics supplied by the Library of Congress Reference Department. Also, some payments vary according to correlative legislation and contributions by the various States.)

5. U.S. savings bondholders: For each $100 of interest paid or accrued in 1942, the amount paid or accrued (before the recent boost) had been raised by Congress to $139. The percentage increase to the savings bondholders' income was thus 30 percent between 1939 and 1959. (All savings bonds had to be held to maturity to get the interest rates used in this comparison.)

In tabulating the foregoing comparison, every effort has been made to present a fair and complete picture. Like all statistics, these can easily be distorted to present a different conclusion.

Nevertheless, the overall situation they reveal is clear. In the first place, they show that successive administrations and Congresses have been thoroughly aware of the rising cost of living. Second, they show that the Government has taken prompt and vigorous action to protect and preserve living standards for various other groups whose income comes direct from the U.S. Treasury.

The boost in income for the other groups listed ran from 111 percent to 196 percent, compared with a 30 percent increase for bondholders—and even that much only if the bondholder held his savings bonds to their stated maturity.

Are savings bondholders a class of second-rate citizens, entitled to less consideration than the other groupings mentioned? If an affirmative answer to this question exists, it could explain the harsh discrimination of which these Americans have been the victims.

However, a careful examination of characteristics common to most savings bondholders discloses no qualities that could possibly justify such unequal treatment.

Indeed, savings bondholders would seem to be just the opposite of a second-rate group. This is made clear when the following attributes, common to most of them, are considered:

They have by voluntary act shown a superior degree of trust in the Government.

They have been the most responsive to patriotic appeals by Government for financial support.

Despite low incomes, they have demonstrated the stamina to forgo comforts now in order to be self-supporting in their declining years.

They possess the industry and self-restraint to have achieved frugality in their personal finances.

Is there any item in this list of qualities that justifies a Federal policy of spoliation of these thrifty and patriotic people? If so, it would be revealing to hear it explained.

There is another characteristic of most of these bondholders which, while not a plus item, certainly does them no discredit. It is that the great majority of them are, as reported by the Treasury, in the low income group. This means that they can least afford to lose. Yet so far the Government has caused them to be among those who have lost the most from inflation.

It would be sobering to conclude that these better citizens have experienced unfair treatment simply because thy wre not organizd into a pressure group.

But, despite the proven cruel injustice suffered by savings bondholders, it is not now proposed that Government put escalator

clauses or cost-of-living bonuses on these bonds. Such a course would seem to have much equity in it, but it does not strike at the cause of the injustice. Such practices are frequent in the final stages of a runious inflation, and the protection they provide is largely illusory.

While no action can be expected that will temper the loss already suffered, the Government could put into effect interest rates on outstanding bonds in line with current money rates. This would mean considerably higher payments than the boost of one-half of 1 percent just announced by the Treasury.

The only real hope for savings bondholders is the reestablishment of a sound dollar. Tragically for America, that goal seems as far distant as ever, despite the belated and modest efforts made in that direction this year by President Eisenhower.

In the background there is a political aspect of this problem that should not be overlooked. The integrity of our electoral system ultimately depends on the preservation of economic independence by the small and middle income citizens. Unless this grouping can exist without Government subsidies, the term "free elections" can and will become a mockery. The savings bonds episode is the most devastating blow this segment of our electorate has ever been dealt.

Despite the obvious disaster of this situation, there is a lesson of transcendent value that can be gained from it.

Indeed the terrible loss suffered could be worth its cost if our people would learn from this episode that Government is not benevolent, is not humanitarian, is not filled with compassion for low income people.

If the delusion that Government ever truly embraces such noble attributes could be revealed for the mirage that it is, then this sad chapter in governmental finance could pave the way for a recovery of public understanding of the perils of the State.

The story of U.S. savings bonds should teach us that most political talk professing deep concern for the little people is nothing more than oratory designed to catch votes.

The learning of that lesson in all its ramifications could bring about a revitalized America—equal to the challenges of the modern world, both at home and abroad.

Report of the House Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. WALTER. Mr. Speaker, as chairman of the House Committee on Un-American Activities, I am placing in the hopper today a report of the work accomplished by this committee during the year 1959.

During the course of committee hearings, as the report points out, it has become increasingly apparent that the threat to our security from international communism is growing each day. It is urgent that each Member of Congress become aware and familiar with the operations of the Communist conspiracy, and I heartily recommend the committee's annual report as background material for study.

The Racial Problem Is Not a Southern Problem

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. STENNIS. Mr. President, the so-called racial problem is not a Southern problem. In many urban centers of the country the friction and tension is unbelievable when compared with our Southern communities, where the two race have existed in harmony and cooperation throughout the years.

One crucial reason for this lies in the attitudes of the local colored leaders.

A significant editorial discussing a problem which should be of concern to every American, white or colored, Southern or Northern, was published on January 29, 1960, in the Daily Journal of Tupelo, Miss., an excellent and forward-looking newspaper in my home State. It is short, but very timely. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEGROES LOSE AS LEADERS DESERT THEIR RACE

About a year ago this column emphasized that it has become increasingly important for capable Negro leaders to stick with their own people and help guide them toward higher education and moral standards rather than deserting their race at the first opportunity to mix with whites.

At that time we received several letters questioning our viewpoint and expressing the opinion that it is only just and proper that the more capable Negroes should break away from their old neighbors and try to win a place among whites.

Months have gone by, however, and at last evidence is beginning to appear which indicates that our view may, after all, have been basically correct.

For around the country informed Negroes are beginning to see what the loss of potential leaders is doing to their race.

And they suspect that there is more than a little hyprocrisy involved in the effort of many above-average Negroes to get away from their old friends to make new associations among whites.

How strong this feeling among thoughtful Negroes has become is indicated by an editorial in the Chicago Defender, one of the Nation's more widely read Negro newspapers.

Said that paper regarding the eagerness of the more capable, better educated Negroes to get away from their old associates at the first posible opportunity:

"Most of our so-called Negro leaders have integrated and then slammed the door behind them, leaving us outside.

"Such so-called leaders abandon their own people in order to protect their investment in their education and in their newly acquired social standing."

At a recent meeting of Negro professional people held in Chicago to discuss the need for lifting the standards of their people, one colored social worker commented that Negroes are now having to depend on whites for leadership in nearly every field of progress.

Then she added significantly: "There is a difference between Negro leaders and leaders of Negroes. The former are inclined to integrate and seek their progress among whites, while leaving Negroes to get along as best they can.

"Actually, among those who call themselves Negro leaders in Chicago, there is a notable desire to get as far away as possible from being considered leaders of the Negro people."

In other words, they want to do their leading among whites, not among those of their own race who need them most.

As a result of this desertion of their race by intelligent, educated, capable Negroes, colored people in cities like Chicago are being left virtually leaderless.

And without Negro leaders who could guide them to higher standards, they are slipping backward into a way of life far worse than they knew in the communities from which they came.

One of the latest reports of the Chicago crime rate in various major categories running from 5 to 72 times as great among Negro residents as among whites.

And there is little likelihood of improvement until the city's Negro leaders begin to remain among their old friends and help improve their standards rather than moving out to mix with whites the moment they complete their education.

We believe that one of the major reasons Negroes in this area are making real progress in many of the most important realms of human development while every big city is developing its own version of a crime jungle is the fact that here many of our most capable Negroes return home to serve their own people as teachers, as Scout leaders, in farm improvement, etc., rather than taking advantage of the first possible chance to get away from their old associates.

And any community which thus encourages the return of its more capable Negro leaders to guide their people to higher standards of work, education, and morality will, we believe, develop better relations between the races and build a higher degree of prosperity for white and colored alike than the community where the chief goal of capable Negroes is to get as far away as they can from the less-educated colored people around them.

The National Flower

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. COLMER. Mr. Speaker, an election in each State recently was conducted by a commercial firm, Florists Telegraph Delivery Association, Inc., for the purpose of aiding in the selection of the national flower.

The results of the poll in Mississippi showed that the rose was preferred by a majority of those voting. Placing second in the total State vote was the beautiful magnolia, my State's official flower. This result might have come about since Mississippi is referred to as "the Magnolia State."

However, Mississippi, the land of hospitality and charm, has bounteous wealth of other flowers which contribute to the pleasure of living there, one of which is the camellia, or japonica, which flourishes particularly well in the district

I represent. An editorial in the Laurel Leader-Call of January 26, entitled "Our National Flower," predicts the spread of the camellia about our Nation. The editorial follows:

OUR NATIONAL FLOWER

Congress has the immediate job of picking our national flower. Congressional committees have just received the result of a nationwide poll by the Florists' Telegraph Delivery Association which shows the rose to be the favorite.

As a matter of fact, the rose turned out to be a 2 to 1 favorite over its closest competitor, the carnation.

Mississippi went along with 47 other States in selecting the rose. Colorado and Hawaii placed the carnation first.

The runners-up were, in order, the chrysanthemum, lily-of-the-valley, orchid, tulip, gladiolus, camellia, black-eyed Susan, mountain laurel, geranium, magnolia, goldenrod, rhododendron, daffodil, peony, shasta daisy, grass, corn tassel, marigold, and a varied assortment of others.

It's easy to see why the rose won. It can be grown well practically everywhere in the United States. It's easily identified and easy to cultivate.

Years ago roses came in four basic colors—red, white, yellow, and pink. Now they come in all sorts of colors, even purple and orange.

The garden writers of America have just been polled by the American Association of Nurserymen to determine the best roses introduced within the past 15 years.

The roses voted best, were in order, Queen Elizabeth, Tiffany, Kordes Perfecta, Spartan, Montezuma, Ivory Fashion, Circus, White Knight, Pink Peace, Jiminy Cricket, and Angel Wings. The first two are pink—the Queen Elizabeth being a clear pink grandiflora and the Tiffany an orchid pink hybrid tea.

While the rose will probably continue to be the ruling favorite for many years due to the ability to grow it practically anywhere, the camellia is certain to increase swiftly in popularity. This is evidenced by the fact that it currently stands eighth in popularity and is gaining daily. Camellia fanciers have grown by the thousands since World War II. The proper climate has a lot to do with camellia culture and and this is why there are so many camellia clubs in the South and in California. But new and more hardy varieties of camellias are being developed daily and this means that camellia culture is extending further northward. The Japanese have also taught us recently how to cultivate camellias so they can be grown successfully in metropolitan apartments, something exceedingly difficult to do with the rose.

Yet the rose is now so widely spread it is unlikely the camellia will topple it from its place of honor for years to come.

So it now looks like we'll have the rose as our national flower.

How American Business Can Recapture Its Pioneering Spirit

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 8, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Louis E. Wolfson, a leading American industrialist and chairman of the board of Merritt-Chapman & Scott Corp., which was delivered before the Executives' Club of Chicago, October 16, 1959.

I commend this address to the consideration of all Members of Congress and to industry and labor alike. Mr. Wolfson sets forth in clear terms the challenge facing our country. He points out the necessity of surpassing the Soviet challenge. He recites some of the excellent programs of several American industries to train young people for future leadership. He points out what American industry and labor can do and expresses confidence that the challenge will be met with new vitality and American enterprise.

I have been advised by the Public Printer that the address will make approximately 3¼ pages of the CONGRESSIONAL RECORD at an estimated cost of $263.25.

Notwithstanding this cost, I ask that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW AMERICAN BUSINESS CAN RECAPTURE ITS PIONEERING SPIRIT

(By Louis E. Wolfson)

I want to discuss with you a subject of concern to me and every American businessman interested in our country's welfare: How can American business recapture its pioneering spirit, end the threat of conformity and meet the challenge it faces?

The hard fact is that American business leadership no longer emphasizes the pioneering spirit which helped build this Nation. At the same time, much as we hate to admit it, Soviet Russia has embraced pioneering and it is making her powerful. We have now had time to appraise Soviet Premier Khrushchev's visit. You may recall how often he reminded us his nation was first to hit the moon and first in other pioneering achievements. Russia's moon-shot was dramatic, but behind it, there is the story of an economic contest even more basic to this nation's future.

The head of our Central Intelligence Agency, Allen Dulles, last spring pointed out that Russia grew in 30 years from a relatively backward position into the second largest industrialized nation in the world. She has made this spectacular advance because her people want to tread new paths, are eager to innovate and to progress.

If we are to meet the perils implicit in the growing strength of the nation opposed to our concepts, we Americans must ensure that the pioneering spirit is recaptured in every phase of our national life. This applies particularly to our business structure, for it is basic to our national well-being.

How can we bring this about?

THERE ARE PRACTICAL WAYS

Most people, businessmen included, think of pioneering as serving the national welfare in a narrow way. For them, all roads to new frontiers now lie only through science and technology.

In newspapers the country over, you will find corporate advertisements pleading for scientists and engineers with creative, pioneering ability. They promise such men every opportunity to develop their own ideas; offer them every corporate resource. They emphasize exploration and opening of new fields of science, even at the cost of short-term failures along the way.

As do all Americans, I applaud this encouragement to scientific progress. We must give science even greater emphasis than it is now receiving if America and the free world are to survive the Soviet threat. Leaders in science who bemoan the lack of creativity in their field and stress the need for increasing the number of creative scientists deserve our interest and backing.

But science alone cannot solve all our problems. We must equally encourage the same spirit of pioneering and venture throughout our business structure. It is ironic that while business admires and pleads for creativity and pioneering in science, it increasingly discourages these same qualities in other areas.

In too many firms, business discourages the executive from pioneering and exploring. Instead, business presses him increasingly into a mold of conformity. In the interest of orderly procedure, business more, and more encourages, if not orders him, to do as others have done before him. Business too often looks askance at originality and initiative. Businessmen often talk about the need for "new blood," but they generally want it to run to the same blood type. A recent article in Nation's Business pinpoints this attitude. It suggested that rugged individualists are unwanted. Business actually wants, the writer says, "creative conformists who are proven profit makers with vision."

This is, of course, a generalization only. In discussions and correspondence I have been conducting with presidents of representative leading American companies, many recognize the dangers of the conformity trend. They tell me they see the urgent need for pioneering at all levels of business. They agree it can be accomplished. Others express reservations. Much as they want men with creative initiative, they question their possibly disruptive influence on orderly procedures and on the efficiency of a business organization.

My recent survey also shows—and my own experience confirms—that there are practical ways of combining individual initiative with the chain of command necessary in a business organization. This is done without making a cult of nonconformity or sacrificing necessary discipline and control. Such partnership gives new strength to America's economic structure, restoring vitality to American business and in that way to America. Never in history did this Nation need it more.

In the final analysis, the success of every business depends on individuals. We can gain our objectives only by infusing every individual throughout an organization with pioneering viewpoints and attitudes toward matters both within and outside their company. All our top policymaking executives should have the pioneering spirit. The same holds true for all members of the organization—our production force, our clerical aides, our stenographic pool.

We at Merritt-Chapman & Scott know such attitudes pay off. To cite one instance, no bridge would link upper and lower Michigan across the wide Straits of Mackinac today—on foundations built by Merritt's construction department—if it had not been for men with creative daring who refused to believe it was "the bridge that couldn't be built." Nor would the world's first nuclear-powered passenger-cargo vessel, the NS *Savannah*, have been built by our New York Shipbuilding Corp., had it not been made possible by men of vision.

In a talk at Louisville last year I said that "robot executives" constitute a growing threat to American industry. These are the men—and I am sure they are well known to you—who are reluctant to attempt anything not well established by precedent. They fear to venture into new paths or to encourage

fresh ideas by others. No matter how successful their patterns of conformity, their attitude blocks the venturesome progress of business growth on which the United States must rely, in great part, for its survival.

As Canada Dry's president, Roy W. Moore, Jr., observed to me, too many executives tend to follow the road proved safe, rather than the dynamic approach of self-reliance, individualism, and initiative. I agree with him. Such men are the ones who encourage the dangerous philosophy that a job is more important than a man. Instead of regarding a job specification writeup as simply an orderly way of noting aptitudes and skills that a man needs for a particular position, they try to fit people rigidly to impersonal job specifications and end by manufacturing more robots and robot executives.

RESTRAINTS ON INITIATIVE

As a case in point, a young business school graduate recently wrote to me to complain about the stock answers he had received from a number of companies in response to his application for a job. One said, in part:

"At the present time we are unable to locate a suitable opening for your particular background. Your qualifications are very acceptable, and we are sorry our present openings do not match them satisfactorily."

The young man closed by saying somewhat bitterly:

"What employee with any kind of ambition wants a job to 'suit his qualifications perfectly'? If he has any pioneer spirit whatsoever, he will use his interest and abilities to do any job."

I said at Louisville that business education at graduate and undergraduate levels should orient its training of students to emphasize qualities of initiative and pioneering. Business should then use these men, so that we may regain the dynamic spirit American business has sacrificed in its emphasis on conformity.

Considerable exciting and encouraging comment poured in on me following my remarks on the threat to initiative posed by the conformist pattern. Evidently many more people than you would imagine worry about the problem. Educators, for example, told me their schools are trying to attract and educate brilliant young men, but many of them wondered if business is not too deep in the rut of conformity to make good use of them. One educator said the so-called "hard-boiled" businessman restrains all nonconformity, "becomes about as solidified in his thinking as a hard-boiled egg, and presses his employees in the same kind of mold."

Many businessmen, on the other hand, wanted to learn how corporations could successfully encourage creative men within a necessarily disciplined organization. This interest and their questions set me off trying to find some answers.

In talking to you today, I will describe some actions being carried on in a number of companies to solve this difficult problem. I shall draw on my own experience as a corporation head, on the literature on the subject, on personal discussions and on recent widespread correspondence with leading American industrialists. I appreciate the keen interest the latter took in sharing their experience with me. I only wish time allowed me to cover more completely the many stimulating ideas they gave me. Top executives of Canada Dry, General Aniline & Film, B. F. Goodrich, Westinghouse Air Brake, Worthington Corp., Wyandotte Chemicals, and others, provided me with valuable facts.

SOCIAL SCIENCES GIVE AID

First, I will touch on current studies carried on by leaders in academic and social science circles, working alone and with business leadership. Then I will suggest yardsticks by which the executive can measure himself and his corporation before proceeding. Next, I will touch on personnel selection. Finally, I will offer examples of how some companies, my own included, stimulate and reward creativity through incompany and extramural activities and incentives. All this, I hope, will encourage you to move ahead.

One fact impressed me particularly. Whatever their field, businessmen have the highest respect for laboratory research and new product development. They recognize that the future of business depends on it. Findings about human personality and how it functions often arouse skepticism, however. The term "social sciences" raise questions of doubt. Yet as businessmen we should be as willing to accept the aid of the social sciences as we do the physical sciences. Social scientists are constantly discovering new facts about our greatest business asset—people. We should be as willing to adopt such findings as we are the newest chemical or electronic discovery.

Today the problm of creativity and initiative is getting a thorough going-over from educators, social scientists and students. Universities carry on research. Academic-business conferences try to bridge the gap between the two fields. Profit and nonprofit research organizations constantly produce new methods studies.

THREE BASIC CONCLUSIONS

A few high spots in this activity illustrate the diversity and thoroughness of this present-day research.

Dr. Morris I. Stein, associate professor of psychology at the University of Chicago, has worked out practical measurements to evaluate individual creativity and to assess a corporation's environmental factors as an influence on creative work.

In another project, a class of students at the Harvard Graduate School of Business Administration spent many months on a 300-page study, "Individual Creativity and the Corporation." Its case histories serve a useful purpose for any companies that may care to use them.

The Foundation for Research on Human Behavior at Ann Arbor came to valuable conclusions recently. Among others, it encouraged use of tests for measuring creativity; it outlined steps management can take to increase originality through organizing groups within the corporation to counteract conformity. It suggested participation in decisionmaking to change the direction of group goals and conformity pressures. The foundation's conclusions are worth reading and acting on.

The Arthur D. Little research organization at Cambridge, Mass., has worked on this business problem of adjusting the structured organization to the need for constructive individualism. Many corporations apply their findings.

Publications on the subject increase in numbers. From all this research, we draw three basic conclusions:

First—many barriers—social, business and individual—block the road to meeting our goals. Society exerts strong pressure against nonconformists. Society tags as nonconformists those who question things as they are.

The bigness of American business, an essential element of its efficiency, also makes it difficult to bring about change within itself. Business leans heavily on systematizing, standardization, and unquestioned authority. All make for resistance to change. Rather than appear to deviate, the individual himself, assuming protective coloring, fears to appear better than average, to be a dreamer, to be different. And it's hard to make a man think imaginatively when he has been trained to follow routine.

As one executive wrote to me: "As companies grow bigger, efficiency is increased by having general rules that apply to everyone. But then such uniformity, however, useful to efficiency, is death to creativity. * * * By its very nature, bigness tends toward averages, and unfortunately in the case of thinking ability, the average is too close to mediocrity." What we must do is find ways to preserve the advantages of bigness while at the same time we overcome its stultifying effect on individual initiative.

Second—no one easy or universal way stimulates constructive individualism in business. No one rule of thumb accomplishes the result wanted.

Too many businessmen, unfortunately, believe the problem of superimposing individual initiative on the organizational pattern can be solved by some single approach. They rely on a magic method—perhaps on personnel selection, a suggestion box. Or they place their full reliance on decentralization. Each has its virtues. But remaking an organization's attitudes, thinking, and action is more difficult. It requires a many-sided approach and stems from a broad program. And even then every step may not yield the desired result.

Third—most important, a company that tries to break conformist patterns must make certain of the attitude of the top man or men. Top management must first want to stimulate initiative. These men must want it so much that they will move to change the administrative climate of their organization from top to bottom. The desire to stimulate initiative must permeate the whole organization. Only top management's attitude and action can bring this about.

One corporation does this in a unique way. Grant G. Simmons, Jr., president of the Simmons Co., wrote me they rather pride themselves "on having at least one or two 'pikes' in the pond—strong men of spiny and frequently unpopular personalities who keep the other organizational fish all stirred up." As this comment suggests, the individual with different ideas often risks unpopularity.

SEVEN QUESTIONS FOR EXECUTIVES

In considering the problem, it might be a good idea first of all for each of us to analyze ourself and our company's attitudes. Ask yourself these seven questions:

1. Are you willing to take a calculated risk on a good new idea, or do you feel more secure if you wait for someone else to try it first?

Too much of business is run by people who will try something new only after someone else has proved it feasible and profitable. Timidity means slow death to American business.

2. Are you as receptive to new ideas from your subordinates as you are eager to have your ideas accepted by those above you? Or do you discourage ideas from below with the thought that it's better to let well enough alone?

Distrust of originality discourages individuals from independent thought and action.

3. Do you encourage a man to suggest ideas beyond the scope of his own work?

Initiative dies when new ideas are discouraged because "that's another man's department." Many businesses have developed intergroup communications so that the various departments are eager to cooperate and exchange ideas.

4. Are you ready to assume equal responsibility for the failure of a new idea suggested by others? Or is a man penalized for a suggestion that doesn't work out?

If the latter is true, don't expect anyone to risk job suicide by volunteering ideas.

5. Do you give credit to others for a successful idea, or claim it as your own?

Too many bosses make it standard practice to take credit for the ideas of those under them.

6. Are you prepared to judge the creative ability of a present or potential employee

strictly on his merits, regardless of race, color, or creed?

Only through conscious elimination of bias can we enable every individual to contribute to his fullest. This, in turn, will develop the available work force in the United States to its maximum potential, with consequent benefit to business and society.

7. Last, but far from least, are you as venturesome and receptive to pioneering ideas now as you were when you were "on the way up?"

No business, or nation, can stand still. We must move forward or eventually lose ground. I thought of that again when, in a telecast of that now famous kitchen debate in Moscow, I saw Soviet Premier Khrushchev flap his hand at Vice President NIXON and say, "We'll wave as we pass you by."

Now let us look at some methods that are in use to help solve our problem.

Some industries rely primarily on the careful selection of personnel. In every instance, personnel departments should keep abreast of the latest applicable findings of the social sciences. Today's selection tools still need refining, but are definitely helpful pending further progress. The 1958 Ann Arbor Conference made this point in listing eight tests for individual originality which, in its judgment, management can use as a supplement to other information.

THOROUGH PERSONNEL SELECTION

Above all, make sure your employment office understands your instructions. Personnel departments usually hire the kind of people they think the top brass really wants, regardless of official pronouncements. You must make it clear, by deed as well as word, that company management wants to hire creative persons.

Also, accept as a fact that you will not find the ideal person for every position. Despite all available tests to determine the right man for each job, the supply for such people simply is not enough to go around. But if you select key executive personnel with sufficient care, they can, by example, progressively develop the needed environment for encouraging constructive individualism.

And constructive individualists do need encouragement. Without it, they lose their push and drive. Often what looks like laziness is lack of motivation. Many times I have seen men of great potential failing to do their best work just because of that lack. Nothing is more disturbing to me, and I am sure this is true of other businessmen as well, than to see innate talent going to waste. Their failure is the company's loss as well as their own.

As this suggests, the initial selection of personnel is only half the problem. After you have your people on the job, you must constantly encourage further development of the qualities you want. Industry uses a number of methods to do this. This entire field is so new, however, and so rapidly developing, that there is as yet no set pattern of classification. Therefore, I have worked out my own categories and offer them to you merely as several approaches for your further study.

SIX DIFFERENT APPROACHES

1. A number of companies use management consultants to seek solutions of company problems through discussion, exchange of opinion and suggestions for new policies and practices. To name a few, such companies include General Aniline & Film, Koppers Co. and Allied Chemical. Some organizations use committees at many policy and operational levels to foster individual initiative. I favor such committees, if they do not get too involved in their own functioning and don't deteriorate into yes-men groups.

2. Conferences and training courses are used effectively by many companies to further constructive individualism. They vary in subject matter from courses on problem findings to creative thinking. For instance, at the United States Steel Corp.'s Gary plant, a trainee program divides the men into small groups of eight. They go into the plant to study and observe a problem situation involving costs, working conditions, or whatever. They work out specific ways to better the situation. Trainees thereby gain the experience of putting their own solutions into action terms, certainly a sound approach. United States Steel points out that this is just one of the many training programs the company has implemented.

Polaroid utilizes an independent "Office of Career Growth." Organizationally, it works completely independent of any other line or staff executive, and of the personnel office. This office helps the individual realize his greatest potential and usefulness to the company. It gives him information on employment opportunities and skills needed within the organization. It meets head on the current disposition of many businesses to keep the good man where he is. "Don't move him. He's doing a good job." How long he will continue to do a good job is another question.

Worthington Corp. encourages the continuing development of the individual by a self-development activity that includes on-job coaching and training, special assignment, committee work, reading programs, etc. Basic elements of this program embrace personal inventory and self-examination.

One company brought to my attention a twist on this idea many of us might adopt to advantage. The American Alcolac Corp. requires every professional and managerial organization member to write a semiannual or annual letter to his respective boss, outlining his objectives, embodying suggestions for changes and improvements, and outlining future plans for his own work. Initially required every 6 months, the time interval is eventually lengthened to about 1 year for executives who have been with the company for some time. This seems to me a new challenging way of developing what we want.

McCormick & Co., Inc., Baltimore, where multiple management originated in 1932 has the junior board of executives approach, which develops a feeling of belonging, free self-expression, and opportunity to advance by merit. Of the 19 men now serving on the company's senior board of directors, elected by the stockholders, 15 served on the company's junior board, factory board, or sales boards.

General Electric originated a creative engineering program as a training method. In the first 6 months, they teach the men a creative philosophy and try to develop the individual's creative ability. They stress fundamental engineering concepts, materials and processing, and the presentation of ideas and human relations. Before the first half of the course is over, each student creates an original idea, works it out on paper, and builds a working model. GE reports that graduates of this program continue to develop new processes and patentable ideas at an average rate almost three times that of nongraduates. The company aims this plan specifically to further creative engineering. It applies, it seems to me, to trainees of every kind.

3. American Brake Shoe innovates with top-to-bottom delegation of authority, a more daring approach. The company bases its philosophy on "freedom to fail," defined as "freedom to act, to take risks, to make decisions—and to do so without fear of the consequences."

American Brake Shoe calls it "bottom-up management." It delegates authority to many throughout the organization. Not only top and lower echelon executives, but also rank-and-file people solve problems. Foremen, for instance, help negotiate union contracts. The company does not penalize a man for failure if he has sincerely and intelligently tried to innovate a new idea.

I am greatly intrigued by this method. Obviously, decentralization must go with this approach—something which I support.

Operation creativity

4. The Kimberly-Clark Corp. offers a good example in the "banker idea" as one facet of the company's program to encourage creativity. "Operation Creativity," as they call it, establishes a reserve bank of men of diverse backgrounds who act as a team to solve problems. None of them are specialists, though they may consult specialists if they feel it desirable. This small group works on any problems its members believe important. It has its own budget, laboratory, and machine shop. I can see the value of such a plan, but also two questions. How many companies can afford to support such a unit? And might it result in a creative elite so powerful in prestige as to discourage individual initiative in others?

5. A fifth method, "brainstorming," stems from the advertising field, where it was used as a problem-buster. A group of men throw out ideas about a problem, with no critical comment at all. The theory is that group members stimulate each other's creativeness. Later, suggestions are evaluated and weeded out. Advocates maintain "brainstorming" supplements individual problem-solving. I think thoughtful study by men pounding their brains in solitude is more productive than this kind of group titillation.

6. Under the heading of "incentive and reward," Remington Rand gives the old-time suggestion box a new dimension. Its suggestion plan administrator encourages suggestions and helps sell them to management. This is considered a major advance in stimulating in-company innovations. Only one limitation applies: The would-be innovator must have his idea pretty well developed before he comes to the suggestion plan administrator.

My short listing just touches on the infinite variety of methods used in in-company programs to recapture individual initiative. According to general consensus and my own thinking, the most important factor for effectiveness, as I noted earlier, is the kind of support the program receives from the chief executive officer; the degree to which he develops a corporate climate that encourages an exchange of ideas at all levels, free communication, and delegation of authority. He must be willing not only to spend time and effort to study and adapt the experience of other businesses to his needs, but also to use what the social scientists have found out about how to deal with people. He must give both theory and experience a fair trial in his day-to-day business operations. He must take into account the desires of the individual for recognition, encouragement and understanding, for reasonable security and a chance to advance.

Extramural activities, or outtraining, cover the last broad category of activities for review in the brief time permitted.

We all realize increasingly that in business administration specialist skills alone are not enough. Top executives must be men of the broadest knowledge and understanding. It is obvious that, with the increasing complexity of business and society, an increasingly higher degree of judgment is demanded at every level. As F. R. Kappel, president of American Telephone & Telegraph, summed it up, "We need the most in creative imagination, ability to take on new assignments and selective judgment."

LEADERSHIP TRAINING

Some larger corporations encourage executive attendance for long or short periods at leading universities and colleges on company

time and expense. The Bell Telephone System, for example, sends top executives for an extended study of the humanities to widen their perspective. IBM has worked with New York University's Work Simplification Round Table. However, expense and the crippling effect of executive absences rules out such projects for most businesses.

Some companies pay all or part of tuition fees for approved after-hours study courses. Some require courses to be job related. Others do not. Western Electric, for instance, refunds up to $250 a year tuition for study at accredited colleges when the courses relate to the employee's present job, or to one he might reasonably hope to hold. At Merritt-Chapman & Scott, we encourage both job related and nonjob related courses by subsidy, and have been encouraged in turn by the enthusiastic response of our junior and middle management executives to this program. I look for great expansion in this area.

Finally, let me tell you about a few other activities at Merritt-Chapman & Scott designed to recapture the pioneering spirit. Our experience at Merritt has shown us that by conscious effort we can develop increased initiative. We are therefore constantly exploring new ways to offer the needed encouragements and incentives. Our program is built around what I have described earlier as a receptive climate. Prove to the people of your organization you welcome new ideas, and you will get them—at all levels.

The performance record of Merritt's junior executive council, established 2 years ago as part of our long-range management training and development program, is a case in point. The council, comprised of junior executives, represents all the administrative and operational divisions based at our headquarters offices. One sentence describes it: To develop original thinking, and to train young executives to decisionmaking of their own. They study and submit proposals they consider of potential benefit to the company, either new ideas or improvement of existing methods.

The council has full latitude to study existing corporate procedures and to recommend changes or innovations. A committee of the council first analyzes each situation thoroughly, and then the group analyzes it. A management steering committee, composed of senior executives, gets the proposals that survive this preliminary examination, and determines whether they merit further study.

When it gets the green light, the junior executive council further studies the projects with potential promise and comes back with a definite recommendation for management consideration. Inevitably, some of these proposals turn out to have flaws or to be impractical. In those instances the steering committee reviews the basic facts and explains them to the council.

AN INNOVATOR'S RESPONSIBILITY

The percentage of workable fresh ideas that have developed is encouraging. More important, the council members have grown increasingly mature and independent in their judgment. In 2 years, the council has reviewed a wide range of recommended proposals, from technical to administrative. Of about 30 proposals studied, the group developed 10 in detail for submission to management. Management has adopted five in various forms and is considering several others.

In this process, our junior executives have received a more thorough insight into the overall operations of the company than they could in the department where they work. More thorough understanding of the responsibilities that are tied up with the formulation of new ideas has resulted.

This point I emphasize strongly—the innovator and independent thinker must be instilled with an awareness of his responsibilities. Many businessmen feel he is a disruptive force. We have found in most cases that we can adjust the creative individual to work harmoniously with others without losing his pioneering drive. And that is the heart of the matter. While the individual necessarily originates new fresh ideas, they remain only ideas unless accepted by others. They can succeed only through group effort. A business organization in turn must stagnate if it insists on a conformist pattern and rejects as nonconformists those who would do things differently. Neither can succeed without the other.

STRONG ECONOMY OUR BASIC DEFENSE

To sum up, we face the most urgent challenge in our history. In dramtic fashion, the public thinks of both challenge and defense in terms of competing scientists perfecting intercontinental missiles and other weapons. Actually, our business economy is a far more basic bulwark and defensive weapon, both for our own Nation and for the free world. This is because we are an industrial society. Industry is the very heartland of our social fabric. On industry's well-being depends the economic well-being of all those varied elements of our national life. Together they make our Nation great and strong. Without the taxes industry pays and the wages and dividends it disburses, scientific pioneering would be irreparably slowed. Without them we would be unable to forge protective weapons with the speed and in the quantity needed.

Even on the lesser personal security plane, every American has a tremendous stake in a continued strong economy. Many men plan ahead carefully for their future security and the security of their families. But if the economy weakens, what becomes of a man's savings, of pension funds, of investments—of all the personal anchors to windward?

Therefore, from every standpoint, as businessmen we have an obligation to utilize maximum originality and pioneering in all phases of our day-to-day business operations in order to continue American leadership and a healthy economy. Unfortunately, it has become an increasing habit to describe a good part of our day-to-day operations as "routine business." Nothing in our business world should ever be regarded as completely "routine." The business world must keep pace with the pioneering spirit so dramatically evident in our science and technology. Every new technological advance demands, in fact, a broader range of view by our business executives, whatever their sphere of activity.

This need becomes increasingly acute. The past 45 years, since World War I began, have brought startling scientific developments. Our limited imaginations cannot attempt a forecast of what the next 45 years will bring. Our executives of coming generations, whether now in business or in school, must be encouraged to be pioneers and not robots.

We must revitalize a key American resource badly neglected—the individual in the business structure. We need to replace robot executives with constructive individualists. We must adjust the needs of the business organization for orderly procedures with society's need for individual initiative. American enterprise must permit the individual to make his fullest possible contribution, rather than relegate him to the role of a well-oiled automaton. By doing so, we can recapture the pioneering spirit that made America.

This is our challenge as businessmen. When I spoke on this subject in Louisville last November, the outlook was depressing to me. Increasingly and almost unconsciously, we were slipping deeper into a pattern of robot conformity, with little prospect of change in direction.

From my many talks since then with outstanding businessmen and educators, I now believe a great number of people in many fields recognize the seriousness of the problem. They are trying to overcome it. I am confident that a determined move is growing to erase the robot weakness and inject new vitality into American enterprise. You as businessmen can help this effort. I urge you to give it your thought and constructive leadership.

The Golden Anniversary of the Forest Products Laboratory

EXTENSION OF REMARKS

OF

HON. CATHERINE MAY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mrs. MAY. Mr. Speaker, as a native of the State of Washington, I have watched many a logging truck pass by to satisfy the hunger of our great timber industries. Some of the trucks carry only one log, and require a special guide car to warn motorists that a wider than highway limit load is following. Others may carry a load equivalent to several small trees. The species include Douglas-fir, western hemlock, sitka spruce, ponderosa pine, white pine, white firs, cedars, lodgepole pine and many other lesser known varieties.

I have long marveled at the great variety of products made from these logs which vary so widely in size and type of wood. It is evident that the Forest Products Laboratory, which does our Federal utilization research on wood, has dealt with a broad and complex field during these past 50 years.

The timber industries are not the only ones who benefit from work of the laboratory. During the past few years the laboratory has collaborated with the Agricultural Research Service in improving the engineering design of palletized field boxes used for harvesting apples and other crops. Some excellent designs have already been developed through this joint effort.

I am also grateful to the laboratory for the advances it has made in use of wood in the home. The warmth of wood makes it a favorite material in home construction. The development of better finishes and paints for wood, better ways to protect wood from insects, decay and fire, and more economical ways of using wood for the structural parts of the home are of great value to all home owners and prospective builders.

I subscribe to the principle of "wise use" expounded by the Forest Service. The development of economic processes to use all of the products of the forest should be an important part of the job. I am sure that the Forest Service can rise to the challenge in its Forest Products Laboratory.

I wish to join with my colleagues in saluting the internationally famous Forest Products Laboratory on its 50th anniversary.

Questionnaire on Public Questions Submitted to People of North Dakota

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. YOUNG of North Dakota. Mr. President, recently I sent questionnaires to 27,000 North Dakota people. This represents about 1 out of every 10 voters in North Dakota. They reached every voting precinct in the State. The return of the questionnaires was amazingly good and, when completed, there will be approximately 7,000 replies.

I ask unanimous consent to have the results of the questionnaires printed in the Appendix of the RECORD.

There being no objection, the questionnaires and returns were ordered to be printed in the RECORD, as follows:

The 5,697 questionnaires tabulated to date (from a total of 27,000 mailed to North Dakota people) represent a good cross section of views. It should be noted, however, that there was a higher proportionate return from farmers than nonfarmers. Every effort was made to describe the major farm proposals pending in Congress fairly and accurately in the small space available. "F" where used means farmers; "NF" means nonfarmers.

1. Do you think that foreign aid should be: Abolished? 803. Continued with present amount of funds? 1,687. Continued with greatly decreased funds? 2,607.

2. Do you favor legislation to provide Federal aid to education? Yes, 3,033; no, 2,116.

3. If you plan to vote Republican this year, which of the following would be your choice for President? Nixon, 2,132; Rockefeller, 1,371.

4. If you plan to vote Democrat, which of the following would be your choice for President? Humphrey, 2,249; Kennedy, 782; Stevenson, 248; Symington, 381.

5. If the following were nominated for President, which one in each group would be your choice? (All candidates listed alphabetically.) Humphrey, F, 2,329; NF, 529; total, 2,848; Nixon, F, 940; NF, 875; total, 1,815. Kennedy, F, 1,451; NF, 468; total, 1,919; Nixon, F, 1,123; NF, 837; total, 1,960. Nixon, F, 1,200; NF, 918; total, 1,118; Stevenson, F, 1,243; NF, 376; total, 1,619. Rockefeller, F, 1,492; NF, 935; total, 2,427; Stevenson, F, 1,033; NF, 309; total, 1,342.

6. (The bracketed comments on the following farm measure did not appear on the original questionnaire.)

(a) Abolish all price support programs and controls? [Many commented that these programs should be abolished gradually.] Yes, F, 607; NF, 564; total, 1,171. No, F, 3,203; NF, 1,023; total, 4,226.

(b) Provide high price supports and marketing quotas for every commodity a farmer produces, with stiff penalties for violation of marketing quotas? Under this proposal price supports would be based on direct production payments for each commodity. [This is basically the farmers union program.] Approve, F, 2,048; NF, 543; total, 2,591. Disapprove, F, 1,224; NF, 732; total, 1,956.

(c) Abolish present mandatory 75 percent of parity price supports for wheat and dairy commodities; elimination of the 15-acre provision; elimination of acreage allotments and marketing quotas; price supports for wheat based on the support level for corn (which is primarily based on a 3-year market price average) with adjustments for differences in quality, etc.? According to testimony of proponents, this would result in price supports of approximately $1.10 to $1.20 a bushel. [This is a brief outline of the American Farm Bureau Federation program as it appeared in the December 21, 1959 issue of the American Farm Bureau News.]

Approve: F, 632; NF, 389; total, 1021; disapprove: F, 2735; NF, 804; total, 3539.

(d) Provide price supports for wheat at 100 percent of parity (presently $2.36 a bushel for that portion of the farmers' production which is consumed within the United States. (This would be about half of his production.) For the other half, the producer could receive the market price or whatever minimum price support the Congress might provide. Proponents claim that under this program acreage allotments or quotas soon could be eliminated. [This is the Young proposal as contained in Senate bill 892. It is substantially the program sponsored by the National Grange and the National Association of Wheat Growers.] Approve: F, 2861; NF, 941; total, 3802; disapprove: F, 643; NF, 395; total, 1038.

7. If it would appear impossible for Congress to agree on any new farm legislation, would you approve modifying the present program to make it more workable until a new one could be enacted? This would envision some further cut in production, reducing the present 15-acre exemption to 12 acres or less, and stiffer penalties for violation of quotas. Approve: F, 2615; NF, 1021; total, 3636; disapprove: F, 751; NF, 381; total, 1132.

8. Do you approve of the soil bank program? Yes: F, 1365; NF, 446; total, 1811; No: F, 2354; NF 1263; total, 3617.

Unsettled Conditions in East Coast Shipyards

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, last Thursday, February 4, 1960, I addressed your House with reference to the unsettled conditions in our east coast shipyards. On Friday, February 5, 1960, the Department of the Navy informed me by telephone that it was the intention of the Navy to remove from the Bethlehem Steel Co.'s Fore River Shipyard the cruiser *Springfield—CLG–7*—to the Boston Naval Shipyard.

This step by the Department of the Navy indicates the urgency of bringing about a settlement of the present strike.

The failure of the present administration to take affirmative steps on this matter are very apparent. I need not remind the membership of Congress that contract agreements between Bethlehem and the shipbuilding unions expired July 31, 1959. On September 3, 1959, many Members of Congress including myself addressed Congress and warned of the impending strike.

Two weeks have gone by since the strike began. Eighteen thousand persons are idle along the east coast. Thirteen thousand persons in my congressional district are idle. Work on the nuclear vessels, the *Long Beach* and nuclear powered frigates have come to a halt. Our shipbuilding program for defense is seriously impaired.

This morning I received a letter from the Department of the Navy confirming the telephone message of last Friday. For the RECORD I wish to include this letter for the edification of the Members of Congress.

The letter follows:

DEPARTMENT OF THE NAVY,
BUREAU OF SHIPS,
Washington, D.C., February 5, 1960.

The Honorable JAMES A. BURKE,
House of Representatives,
Washington, D.C.

MY DEAR MR. BURKE: This is in reply to your letter of January 27, 1960, asking if it is true that the Navy is considering the removal of some ships now under construction at the Bethlehem Steel Co.'s Fore River Shipyard and stating your strong opposition to any such action at this time.

At the present time, the only ship the Navy has considered removing from the Bethlehem Steel Co.'s Fore River Yard is *Springfield (CLG–7)*. Removal of this ship came under consideration as soon as the Navy learned of the strike impending there and later commenced on January 22, 1960.

Springfield is within 3 to 4 percent of completion. There is an urgent operational requirement for this Terrier missile ship as an addition to the Navy's striking power. In view of this immediate requirement for *Springfield*, the Navy took steps to determine, as far as possible, how long the strike might reasonably be expected to last. The Navy has been unable to obtain any reasonable assurance that the strike will end in an acceptable period of time. Accordingly, we have indicated to the Bethlehem Steel Co. and the union our intention to move *Springfield* on about February 15, 1960, unless the strike has been settled by that time, or unless the company and the union are able to agree by that time on terms under which the ship can be completed in Bethlehem's yard even though the strike continues. Both the company and the union have agreed to cooperate in moving *Springfield* if neither of these alternatives transpires. It is planned to move the ship to the Boston Naval Shipyard, which recently completed the similar conversion of *Providence* and where outfitting can proceed at the same time the ship is completed.

With kindest regards.

Sincerely yours,

R. L. MOORE, Jr.,
Rear Admiral, U.S. Navy, Acting Chief of Bureau.

Responsibility for Deficiencies of Farm Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. FULBRIGHT. Mr. President, Mr. Leland Du Vall, a member of the staff of the Arkansas Gazette, is one of the most discerning critics of our agricultural programs that it is my good fortune to know.

Recently in one of his columns he has reduced this very complex problem to its

bare essentials. Very succinctly he has presented the facts so that anyone may understand them and how and why the administration policies have resulted in waste and confusion in our agricultural programs.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, Jan. 31, 1960]

IKE MUST ACCEPT BLAME FOR WOES OF FARM PROGRAM

(By Leland DuVall)

Since the Eisenhower administration assumed responsibility in 1953 for the operation of the farm program it has attempted to maintain the attitude of an innocent bystander who could not be blamed for what was happening to agriculture. All criticism was turned aside with the explanation that Congress would not give Secretary of Agriculture Benson the necessary weapons with which to deal with surpluses and low prices.

The "don't blame me" attitude is becoming increasingly difficult to maintain.

After all, Mr. Benson has headed the Department for 7 years and during that period virtually all the farm laws have been changed so that they conform more nearly to his philosophy. Surpluses have climbed steadily and—for some reason which Department spokesmen have neglected to explain—the accumulation is highest where the laws are closest to the Benson theories.

It is true, of course, that none of the laws are exactly what Benson recommended—no production controls and little or no price supports—but some of them are getting close. Where this has happened, surpluses are building faster than in commodities where tighter controls have been maintained.

This would seem to indicate that when Congress refused to go all the way with the Benson philosophy it was simply saving the Secretary from his own folly. Corn provides a good example.

Under the law in effect during the early part of Mr. Benson's tenure, corn farmers in the commercial areas had the option of planting within their base acreage and receiving price supports or ignoring the base acreage and receiving no assurance that the loans would be available. The law was flexible and the Secretary was permitted to administer it in such a way that "noncompliance" corn might be accepted as collateral for loans. Under these conditions, the carryover from the 1952 crop was around 500,000 bushels, a level that was neither big nor burdensome. Actually, a reserve of this amount could be justified on the ground that it provided insurance against drought or crop failure from other causes. The support rate for compliance corn had been at 90 percent of parity.

In 1954, when Mr. Eisenhower was in firm control of a Republican Congress, the idea of loans at 90 percent of parity (in exchange for compliance with planting restrictions) was traded for the sliding scale. This was supposed to be the answer, since it would permit the Secretary of Agriculture to reduce loan rates and destroy the "incentive" for excessive production.

Administrative rulings, rather than an act of Congress, resulted in making loans available on noncompliance corn (where farmers ignored their base acreage). Obviously this stimulated, rather than discouraged, surplus production. Some farmers continued to observe, voluntarily, their corn bases in order to qualify for the slightly higher loans.

The Benson theory was followed rather closely in writing the new corn law. It removed all acreage restrictions and set the support rate at a percentage of the market average for the past 3 years, rather than on a parity basis. It was a long step toward the "freedom to produce" Mr. Benson had been advocating. According to the theory, farmers were supposed to gear their output of corn to market needs.

Somehow, it did not quite work out that way. Farmers harvested nearly 4,400 million bushels of corn last year, a volume far above any previous record and some 35 percent higher than the 10-year average. By no stretch of the imagination could this be blamed on the laws Mr. Benson "inherited" when he took office.

Production, of course, is not an accurate measure of surpluses. One key to the Benson theory is that "freedom to produce" will result in increased sales. If the higher corn production could be moved into markets in sufficient volume, the situation would not be so bad. Unfortunately, it did not quite work out that way.

The Crop Reporting Service revealed Friday that 4,453 million bushels of corn were stored in all positions on January 1. Stocks of corn on farms were reported at 3,094 million bushels or about 15 percent higher than the amount 1 year earlier. The corn on hand January 1 amounted to some 526 million bushels more than stocks 1 year earlier. This, it should be noted, was more than the total carryover the first year Mr. Benson was in office. January 1 stocks have set a new record each year since 1954—the year when Mr. Benson began getting his first farm policies into operation.

The acreage reserve of the soil bank helped delay the accumulation of surpluses, but it did not solve any problems permanently.

Cotton and the other basic crops moved a little more slowly toward the free market, but they are following the pattern. The new cotton law is almost certain to rebuild surpluses—held down by the acreage reserve and by vigorous export programs—and drive prices still lower.

The keystone in Mr. Benson's reasoning is the assumption that free production and lower prices will result in a larger sales volume (because of cheaper prices) and thus give the farmer a bigger gross income. It has not worked out that way.

The theory of unhampered competition assumes that a producer will move freely from one commodity to another or from one industry to another. Under these conditions, production resources would be concentrated in the industries and in commodities within an industry where the possibility for profit was greatest.

Climates, soils, and other natural conditions have always restricted farmers to a limited list of crops. A farmer in the Arkansas Delta, for example, was never free to substitute wheat for cotton on a 1-year notice simply because there happened to be a greater surplus of cotton than wheat.

In modern mechanized farming the restrictions are more rigid than ever before. Agriculture now requires huge investments in machines designed to do a limited number of jobs. A farmer who owns one or more mechanical cotton pickers finds himself—because of the huge investment—restricted to a particular kind of farming. The same is true of all types of farming.

Farmers drift out of agriculture because of economic pressures, but the move always means a sacrifice in the sale of equipment.

The misuse of the word "incentive" in connection with commodity loans also creates confusion. So long as a man remains on the farm, he is under compulsion to operate at full capacity, regardless of the price level. So long as the capacity to produce is above the effective demand—a condition that is essential to the health of the whole economy—there will be surpluses. Production controls, administered wisely, can hold these surpluses within a reasonable level.

The volume of surpluses is bound to get out of hand when the administration is more interested in avoiding political blame and creating the illusion that it is innocent of mistakes than it is in assuming its responsibilities to the Nation.

Cranberries, Caponettes, Heptachlor—and More

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. HARRISON. Mr. Speaker, the hint of a threat to the public health will make a headline any day of the week. It would seem that the Secretary of Health, Education, and Welfare is guided more by this premise than by public responsibility in his succession of pronouncements on chemicals used in agriculture.

Secretary Flemming attempted a seasonal Madison Avenue-type coup in the cranberry fiasco. Cranberry farmers, relatively few in number, apparently were evaluated as politically expendable, whereas tobacco farmers, who might be disadvantaged by firm action based on other findings of Mr. Flemming's department, could be expected to make more effective protests.

Let this be understood, Mr. Speaker, the farmer—if such there be—who knowingly would send to market grain, vegetables, meat, or any other food product carrying a chemical taint dangerous to the health of the consumer, would meet the most severe opprobrium of the agricultural community. What disturbs farmers today, however, is the irresponsibility of the press conference pronouncement in a paneled room in Washington whereby Mr. Flemming, by a few sentences, heedlessly can disrupt farming practices, which, a few moments before, were recognized as legitimate and safe.

All the American farmer asks is reasonable evidence, reasonable notice, and reasonable consideration in readjusting his practices to conform to new findings, provided such findings are based on indisputable scientific fact. This he has not been given. He has been made the "fall guy" in a publicity maneuver in which evidence of a minimal threat has been magnified into scare headlines.

Under leave to extend my remarks in the Appendix, Mr. Speaker, I include two editorials.

[From the Virginia Farm Bureau News, January 1960]

ON CRANBERRIES AND CAPONETTES

Every time a Russian sputnik probes into the stratosphere, there are a good many people in our country who must let out a carefully muffled and camouflaged howl of glee. For them it means security—it guarantees the continuous flow of billions into the pockets of those who are even remotely associated with our efforts to win the sput-

nik race. A sputnik kisses the moon and up go the howls for new or expanded Federal aid for everything under the sun—public schools, institutions of higher learning, public housing, highways, and hottentots.

But it's difficult for Mr. Flemming, Secretary of U.S. Health, Education, and Welfare, to capitalize on the fearsome sputnik as fully as he would like. So he proceeds to develop a few of his own. His agents find a few cranberries that may have been contaminated by the use of a weed killer. The weed killer in question is said to be capable of causing cancer in mice. Although proof seems to be lacking as to just how many tons of cranberries would need to be consumed in order to produce cancer in man, does this deter Mr. Flemming in his blurb that all but ruined the cranberry industry? Not on your life. Mr. Flemming had to have his sputnik, too. If, in fact, the cranberries in question were known to be harmful, he might easily have quietly issued a stop-sale order on the suspected berries, removed them from the market and that would have been the end of it. Uncontaminated berries would then have gone their merry way onto millions of turkey-graced tables, adding immeasurably to the enjoyment of said turkey and to the prosperity of cranberry growers. But, then, Mr. Flemming would not have had his sputnik and a sputnik he had to have. For sputniks have a way of frightening people, and frightened people demand larger appropriations for those who protect them.

But cranberries are seasonal. Some people probably never eat them. Mr. Flemming needed a more permanent type of sputnik—one that would cause year-round uneasiness on the part of a lot of people.

And there was poultry. In a few instances, producers were making use of a hormone called stilbestrol in producing a specialty line known as caponettes. Under certain conditions, the drug is said to be capable of causing cancer of the breast in men. We have never known of a case, but if this is true, Mr. Flemming might easily have forbidden the further use of the drug, issued a stop-sale order on birds produced by the use of it, and people would have continued to eat poultry and be happy ever after. Did Mr. Flemming follow this course of action recommended by leaders in industry and in other Government agencies? Indeed not. Mr. Flemming had found a sputnik—so he damns another industry with suspicion. We, too, are entitled to our suspicions. We suspect Mr. Flemming of pure, unadulterated chicanery.

If the purpose is public protection, why wait until suspected materials have already been used before sounding off to consumers on possible dangers? Why not first advise growers and producers that foods produced by the use of unapproved materials cannot be offered for sale to consumers? It would appear that, to Mr. Flemming, the protection of the public is purely a secondary matter. To heck with the horse—so long as Mr. Flemming gets the price of a golden, diamond-studded padlock with which to lock the door.

Might we suggest that a boot through the door for Mr. Flemming would be more appropriate.

[From Barron's National Business and Financial Weekly, Feb. 1, 1960]

POLITICAL QUACKERY—FOOD AND DRUG LAWS NEED A DOSE OF COMMONSENSE

At a hearing of the House Interstate and Foreign Commerce Committee, solemn lawmakers last week debated what historians one day, in a footnote perhaps, will describe as the great lipstick crisis. According to Representative LEONOR K. SULLIVAN, Democrat, of Missouri, the health of the women of America is threatened by synthetic coloring agents which are used to produce such desirable shades as boldface purple and striking pink. In an effort to rebut her testimony, harassed spokesmen of the industry sought refuge in the facts, notably, that in order to suffer ill effects, a person would have to swallow 100 lipsticks per day. As might be expected, however, the attractive solon (who, by all accounts, was wearing a suspiciously light, bright lip rouge herself) had the last word. While a woman naturally wants a product which best matches her complexion and outfit, Representative SULLIVAN asserted ringingly, she gladly will sacrifice beauty for safety.

However, bizarre it might have seemed elsewhere on Capitol Hill, this crusading spirit was peculiarly fitting to the time and place. For the hearings on color additives have brought out in full force, from legislative and executive branches alike, officials who fairly might be described as health zealots. In their misguided view, the Government must go far beyond its time-honored role of establishing reasonable, scientific standards for determining the safety of substances used in food and drugs. Instead, in the guise of protecting the public from a dread disease, it should be empowered to take whatever measures it deems necessary or politic. The end is certainly laudable; everyone is against cancer and all the other ills to which the flesh is heir. The proposed means, however, are unmistakably suspect; for they would open the door to all kinds of bureaucratic abuse, the threat of which was underscored recently in cases involving, among other things, caponettes and cranberries. They are based not on knowledge, but on the lack of it. Perhaps worst of all, in a realm once distinguished for careful, objective inquiry, such a change of policy would substitute prejudice and superstition for scientific truth.

Such risks are not mere theory; since 1958, when Congress passed various amendments to the Federal Food, Drug, and Cosmetic Act, they have been all too real. In official language, the legislation was designed "to protect the health of consumers by requiring manufacturers of food additives and food processors to pretest any potentially unsafe substances which are to be added to food; and to advance food technology by permitting the use of food additives at safe levels." The product of protracted discussions between Government (as represented by the Food and Drug Administration and the Department of Agriculture) and industry, the measure by and large was sane and sensible. At the last minute, however, an unwelcome rider, the Delaney amendment, was affixed to the bill. As interpreted by FDA and its politically conscious superiors in the Department of Health, Education, and Welfare, this proviso has been used to ban outright, and wholly without regard to the rule of reason, any food additive "found to induce cancer when ingested by man or animal." Sentiment in favor of a similar prohibition for color additives has been mounting fast.

In emotional and political terms, the Delaney amendment has a powerful appeal. By any other yardstick, however, it is a foolish and mischievous piece of legislation. To begin with, it has bestowed sweeping powers upon an agency which, the evidence suggests, is not immune to arbitrary action. Thus the Food and Drug Administration recently discovered that a synthetic hormone known as stilbestrol, which is used, among other purposes, to spur the growth of chickens, caused cancer when fed to rats in excessive amounts. FDA promptly cracked down on the poultry raisers, halting their output at the taxpayer's expense. However, it continued to allow the same substance to be used to fatten cattle and sheep, as well as in doctors' prescriptions. The degree of concern over public safety, it appears, tends to vary with political pressures.

In carrying out its mandate, moreover, FDA scarcely has proven a model of scientific objectivity. The agency has shown an unbecoming penchant for publicity, a trait which has brought it into disrepute not only with farmers and manufacturers, but also with professional associations of doctors and lawyers. Moreover, in screening substances for their carcinogenic (cancer-inducing) qualities, its researchers have leaned heavily on experimentation with mice, a technique which, in the view of some independent experts (notably one at the Sloan-Kettering Institute), is open to serious challenge. It also has bowed to the groundless prejudice, so popular among lawmakers, that artificial substances are apt to be more deleterious to health than natural ones (in fact, sunshine and eggs, to name two, have been found to be cancer-inducing).

Finally, in its recent rulings, the agency has shown an appalling disregard for the simple precepts of commonsense, to say nothing of the scientific method. In order to suffer ill effects from tainted cranberries, a person would have to eat 15,000 pounds a day. To run a risk from lipstick, as noted, a woman would have to consume 100. Here, then, is a triumph of superstition over science. Here, cloaked in an emotion-packed crusade against a terrible plague, is bureaucracy gone hogwild.

In the process, the rights of thousands of people have been trampled. What is at stake, however, involves far more than poultry farms or cranberry bogs. For in the hands of ambitious politicos, Federal food and drug laws have become a palpable threat to the advance of food technology, without which this Nation never could have moved from the farm to the city, and upon which, if anything, its dependence is likely to grow. According to the U.S. Department of Agriculture, which looks askance at the hanky-panky now going on at FDA, "We cannot continue to produce adequate amounts of safe and wholesome foods without chemicals. Abandoning their use would result in an immediate decline in the quantity and overall quality of our food supply and cause a rapid rise in prices paid by consumers." The United States needs—and over the years has enjoyed—protection against genuine enemies of its health and welfare. Now, to paraphrase an old French saying, it needs to be protected against its so-called friends.

Interest Rate Issues

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 8, 1960

Mr. PROXMIRE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the prominent economist, Gardiner Means, which appeared on February 5 in the Washington Post.

There being no objection, the letter was ordered to be printed in the RECORD as follows:

[From the Washington (D.C.) Post of Feb. 5, 1960]

INTEREST RATE ISSUES

Your January 31 editorial on Government interest rates troubles me. It seems to imply that because long terms could now be sold at a lower current interest rate than short terms, their interest cost to the Amer-

ican public would be less. This would be a very shortsighted view.

In historical perspective, interest rates are now high and we can reasonably expect prosperous periods in the future when interest rates will be much lower. To issue long terms at 4½ percent or more can commit the public to high rates for 30 or 40 years. The temporary payment of a somewhat higher short-term rate will allow refunding to wait until long-term rates are lower.

At no time in the last 40 years has the Government paid more than 4 percent on its long-term issues. It has not even used the power to pay 4¼ percent.

I cannot imagine a competent financial counselor advising a big, solvent corporation to refund its short debt into long terms at the present time in the light of the high current rates, the long history of lower rates and the known policy of tight money.

It seems to me that the 4¼ percent limit is a sound and needed protection of the public interest. There is always the danger that an administration, whether Republican or Democratic, will, through poor judgment or through too close association with the financial community, saddle the public with 30 or 40 years of unnecessarily high interest charges. It would seem to be a legitimate exercise of congressional responsibility and wisdom to guard against this danger by setting a limit so that refunding into long terms can only be done when long-term rates are below 4½ percent.

That the danger is real is suggested by the history of the last few years. The present administration came into office with the announced intention of (1) bringing about higher interest rates, and (2) refunding the Government debt into longer terms. Both objectives made some sense at the time, particularly the latter because of the intention to bring about higher interest rates.

However, the administration worked on the first and not the second, so that today interest rates are high while the average duration of the public debt is shorter than 7 years ago. The sudden urge to be active in refunding the debt for a long period to come, at high rates, can hardly help but raise the question of why, in the light of the inaction during the last 7 years.

GARDINER C. MEANS.

VIENNA, VA.

Resolution by the Shasta County Board of Supervisors

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Shasta County Board of Supervisors:

Whereas the Senate Interior Committee was instrumental in having a study made for the ultimate use and development of our National Forests entitled "Program for the National Forest"; and

Whereas the Northern California County Supervisors' Association is in accord with this study and program; and

Whereas the administration has endorsed this long-range program, but postponed any appropriation of funds; and

Whereas the application of this study would be extremely beneficial to Shasta County, to the State of California, and to the Nation as a whole: Now, therefore, be it

Resolved by the Shasta County Board of Supervisors, That it compliments the Honorable Senator CLAIR ENGLE for his work on this program and does hereby support the program and appropriations requested by Senator ENGLE to carry out said program.

Passed and adopted by the Board of Supervisors of the County of Shasta, State of California, at a regular meeting thereof on the 25th day of January 1960.

LEE S. FOSTER,
Chairman of the Board of Supervisors of the County of Shasta, State of California.

Attest:

A. RAY TAYLOR,
County Clerk and ex-Officio Clerk of the Board of Supervisors.

Tour by Three Senators of Soviet Dams

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. CHURCH. Mr. President, I was privileged recently to meet with the Interior and the Public Works Committees, to hear the report of the distinguished junior Senator from Utah, the distinguished junior Senator from Maine, and the distinguished senior Senator from Alaska, on their findings about the progress of the Soviet Union in the field of hydroelectric power development. They made an intensive study in a 6-week, 13,000-mile trip last fall.

An account of this trip was contained in the publication I. F. Stone's Weekly of January 18, 1960. This account reflects the great importance of this study, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY THE U.S. POWER TRUST WISHES RUSSIA WOULD KEEP ITS IRON CURTAIN SHUT TIGHT—TOUR BY THREE SENATORS OF SOVIET DAMS SPARKS PUBLIC POWER FIGHT HERE

One U.S. industry which wishes that Russia would stop lifting the Iron Curtain is the private electric power industry. It fears a glimpse of Soviet progress in this field will stimulate public power in this country. Power interests have opened an attack on a dramatic report made public January 4 by three liberal Democratic Senators on the giant progress in the U.S.S.R. (and China) in hydroelectric power development.[1] The three, Moss of Utah, GRUENING of Alaska, and MUSKIE of Maine made a 12,500-mile trip through the Soviet Union last fall.

Perhaps the most important story about the trip is only hinted at in the report. The Senate Committee on Interior and Insular Affairs published a preliminary report at the end of 1957 on the work being done in the U.S.S.R. and China in power development. In the middle of 1958 the Senate unanimously passed a resolution directing the Interior and Public Works Committees to make a joint study. Arrangements were made under the Soviet-American exchange program for a visit of inspection to dams and powerplants in U.S.S.R. in the fall of 1958 by a delegation to include representatives of the two Senate committees, the Department of the Interior, the U.S. Army Corps of Engineers, the Federal Power Commission, the Tennessee Valley Authority and interested private organizations.

INTERIOR RAISED OBJECTIONS

Interior Department, which has been under the influence of private power interests since the Republicans took over in 1953, began to throw up bureaucratic roadblocks. It objected that two representatives of public power interests would be included in the trip—Clyde Ellis of the National Rural Electric Cooperative Association and Alex Radin of the American Public Power Association. While Interior held up the exchange, the Edison Electric Institute, general staff of the power trust, hastily sent two delegations, the first to European Russia, the second to Siberia, turning in two grudging reports. It took an angry series of letters from Senator FULBRIGHT to the State Department before the way could finally be cleared for a Senate delegation to make the visit last fall. The original plan, which would also have allowed TVA, Army Engineers and Federal Power Commission to have a look at Soviet projects, is still on the shelf.

The three Senators took with them, along with Ellis and Radin, two Truman administration officials with wide experience in hydroelectric development, former U.S. Commissioner of Reclamation Michael W. Straus, and former Assistant Commissioner Harvey McPhail. Their 175-page report, ignored or buried in the press, gives a vivid picture of the enormous dams being erected in the Soviet world. "The Soviet power program," it concludes, "has produced the largest hydroelectric stations in the world, yielding the greatest project volumes of electricity from the largest generators connected by the longest transmission lines operating at highest voltage."

CHINA BUILDING THE BIGGEST DAM OF ALL

The visiting Senators saw Kuybyshev Dam which when completed in 1958 took from Grand Coulee the title of world's largest; Stalingrad Dam, already operating, which will be bigger than Kuybyshev when completed in 1961; and Bratsk Dam at Lake Baikal (with more water than all our Great Lakes combined) which will be bigger yet. They were told of the work begun on Krasnoyarsk which will surpass Bratsk and of an even more grandiose project underway in China.

There the Chinese Communists, utilizing plans first drawn up by John Savage of the U.S. Bureau of Reclamation during World War II, are building a dam at the Ichang Gorge on the Yangtze River which "will be 12 to 20 times the size of Grand Coulee" when completed. The report hints at the need for a "similar" study of what is going on in China. It would be good if our first official exchange of visits with Peiping were centered about so fundamental and constructive an activity as hydroelectric power.

The United States is still far ahead of the U.S.S.R. We have 142 million installed kilowatts compared with the Soviet's 53 million. But the Senate committee says the Russians could overtake us by 1975 unless we speed up or they slow down. The Senate report is discreetly silent on one point—the way in which dog-in-the-manger private power monopolies restrict development in the country. But Senator BENNETT in an attack issued so swiftly he could hardly have had time to read the full report, says that "reading be-

[1] Relative Water and Power Resource Development in the U.S.S.R. and the U.S.A., report pursuant to S. Res. 248, 85th Cong., 2d sess., U.S. Senate Committee on Interior and Public Works.

tween the lines, it is clear that the committee staff believes expansion of our public power program is the key to our future in the power field."

POWER GOING TO WASTE AT GRAND COULEE

The problem is not simply one of expansion but of more fully using existing facilities. The report touched a sensitive point when it said the Soviet is extending its grid system until eventually it will cover the whole U.S.S.R. "The efficiency and economy of shifting peak powerloads over a geographic area that embraces seven time zones from Leningrad to Vladivostok," the report says, "is apparent to any housewife whose lights have dimmed at dinnertime when electrical use is heavy. The Soviet plan is in sharp contrast with the absence of planned or actual transcontinental transmission interties in the United States and the lack even of local interties in many parts of the United States." These intertics enable surplus power quickly to be switched from one area to another to take advantage of the fact that peak usage varies from one section to another.

In this country private power companies have fought grid system expansion, fearing it would lead to greater public control and ownership. In fact a major battle is brewing at this very session over proposals to build transmission lines which would make surplus Bonneville power from Grand Coulee available in California's Central Valley.

The private companies are fighting a rearguard action to delay or control any such interchange. They blocked action at the last session, and Interior Department is helping them. The Senate report may figure in the coming debate. BENNETT already attacks it for the startling recommendation that the Federal Government "embark on a massive program to build transmission lines to interconnect Federal projects." Though the report speaks of interchanging private power as well, BENNETT says: "Quite clearly the committee wishes to push us far down the road toward complete nationalization of power transmission facilities."

ATOM BETTER FOR WAR THAN PEACE

"Construction of the limited number of atom plants in this country has fallen behind schedule. * * * The costs of the plants have soared. * * * Even abroad, where power costs are generally higher, the pace of atomic power development has been discouragingly slow."—New York Times economic survey, January 11.

"Also in the U.S.S.R. as in the United States, atomic power is not expected to supply significant amounts of power during the next few years. The U.S.S.R. regards conventional sources, both thermal and hydro as more economic and expeditious."—Senate report on Soviet power projects.

A Fractional Voice in National Politics Is No Substitute for Municipal Self-Government

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, last week the Senate added presidential votes for Washingtonians to a proposed constitutional amendment—already overloaded with miscellany—and approved the resulting hodgepodge by the necessary two-thirds rollcall. For this constitutional amendment to become law, it must be approved by two-thirds in the House and be ratified by three-fourths of the States. Regarding the Senate-passed plan the Washington (D.C.) Daily News said editorially, on February 5:

Everyone here wants to vote for President (many now do so as absentees from their respective States), but such restricted extension of the suffrage is not even a faltering first step toward home rule, which consists of control of public affairs in one's hometown—not a fractional voice in national politics.

This newspaper favors national suffrage for the District's citizens but is under no delusion that this means municipal self-government. It gives us nothing to say with ballots about the taxes we must pay for local services, management of schools, or control of police power, and so on.

If spokesmen, in their arguments, do not keep this distinction clearly in mind as they plead with Congress for both national suffrage and local autonomy, our town is in danger of getting neither.

Since coming to the Congress I have been deeply concerned about the numerous problems facing our voteless Nation's Capital. The serious lack of cultural facilities in the District of Columbia, so serious that the staid New York Times has been moved several times to call the Nation's Capital a "hick town," has been a subject in which I have been particularly interested. But, whether the need is for a dynamic drive for a sorely needed National Cultural Center; or to save the historic Patent Office Building to house the century-old National Collection of Fine Arts and a National Portrait Gallery after the administration recommended it be razed in order that the site could be used for a parking lot; or for improvement of the District of Columbia General Hospital and the ending of unjustified politically motivated attacks upon it—underlying all is the necessity for restoring to the citizens of our great National Capital the fundamental right to manage their own municipal affairs; namely, home rule.

Unfortunately some confusion has been injected into the fight to obtain home rule for the fine citizens of the District of Columbia. The fact of the matter is that there are some who would deliberately confuse an attempt to secure national suffrage by amending the Constitution with municipal self-government. I have found no better analysis of the enormous difference between these two avenues to suffrage than the editorial appearing in the Scripps-Howard newspaper, the Washington (D.C.) Daily News to which I referred earlier.

Because of the intense interest in home rule for our Nation's Capital, I include this editorial for the information of my colleagues:

[From the Washington Daily News, Feb. 5, 1960]

THIS ISN'T HOME RULE

As in previous campaigns for home rule during the last dozen years, so many proposals get made that the separation of actual home rule and the proposals at issue become fuzzy to the busy citizen.

This week the Senate added presidential votes for Washingtonians to a proposed constitutional amendment—already overloaded with miscellany—and approved the resulting hodge-podge by the necessary two-thirds rollcall.

For the pending constitutional amendment to become law, it still must win not only two-thirds approval of the House, but ratification by three-fourths of the States.

Everyone here wants to vote for President (many now do so as absentees from their respective States), but such restricted extension of the suffrage is not even a faltering first step toward home rule, which consists of control of public affairs in one's hometown—not a fractional voice in national politics.

This newspaper favors national suffrage for the District's citizens but is under no delusion that this means municipal self-government. It gies us nothing to say with ballots about the taxes we must pay for local services, management of schools, or control of police power, and so on.

If spokesmen, in their arguments, do not keep this distinction clearly in mind as they plead with Congress for both national suffrage and local autonomy, our town is in danger of getting neither.

Practical Opportunities for Tax Reduction

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I am including in the RECORD for the information of all the Members and the interested public a speech which the distinguished and able chairman of the Committee on Ways and Means, the Honorable WILBUR D. MILLS, made on February 3, 1960, before the Freedom Forum in Oklahoma City, Okla., entitled "Practical Opportunities for Tax Reduction." Due to the widespread and, indeed, intense interest in the subject of Chairman MILLS' speech, I commend it to my colleagues in the House.

The speech follows:

PRACTICAL OPPORTUNITIES FOR TAX REDUCTION THE BUDGET AND EXPENDITURES

(Remarks of Hon. WILBUR D. MILLS, chairman, Committee on Ways and Means, before the Freedom Forum, Oklahoma City)

My invitation was to talk about practical opportunities for tax reduction. In doing so, the logical place to start is with the budget and expenditures.

Some may feel that the predicted $4.2 billion surplus for fiscal 1961 means we will have a general tax cut this year. I do not believe this will or should happen, as things now appear.

In the first place, there is a question as to whether we will really have a $4.2 billion surplus as the President predicted. Budget estimating is a risky business. You may remember that only 2 years ago the President predicted a surplus for fiscal year 1959 and we ended with a $12.4 billion deficit.

A Federal budget is not written on a clean slate. A part of it is a guess as to the size of expenditures under preexisting laws. A good example is payments to veterans. The

total cost for any year is simply a matter of how many eligible veterans there are using these provisions.

In the area of agriculture, the estimate of the cost of the support commitments in the law is a guess as to such things as the weather, good or bad crop conditions, and market demand.

The accuracy of the $9.6 billion estimate for interest on the Federal debt depends largely on future business conditions and on the monetary policy of the Federal Reserve Board. The estimate of interest costs for the current fiscal year is now approximately $1.2 billion above the budget prediction made just 1 year ago.

The expenditure forecast can miss actual spending quite widely due to unpredictable factors.

Another uncertainty as to the budget surplus is that the budget assumes that all the President's legislative recommendations will be enacted. This, I dare say, never happens. Again this year the expenditures carry a postal deficit, for example, which is reduced by $554 million on the assumption that the Congress will act on the recommendation to increase postal rates. This increase was specifically voted down last year and will not, in my opinion, pass this year.

The most difficult prediction problem in the budget is forecasting revenue. This involves business conditions 18 months in advance. Compared to other recent economic outlook studies, the President's outlook appears moderately optimistic although certainly within the realm of possibility. A somewhat slower growth in the economy than he predicts could easily mean budget receipts of less than the figure in the budget document.

Although we should strive to attain it, we can by no means be sure of a $4.2 billion surplus. It is, nevertheless, timely to discuss priorities for action if we should become convinced that it or something close to it will occur.

Many urge that first priority should be given to increased expenditures such as for defense, education, housing, highways, etc. The Congress is now reviewing the missile lag and our capability for limited war. There will be much debate in the Congress in this and other areas of expenditures.

If the receipts estimate should prove to be accurate and if the Congress does not vote significant changes in recommended expenditures, we then face the question of priority between tax reduction and debt reduction. As I stated, I do not think an immediate general tax cut can be justified. Nor do I believe that our citizens will be dissatisfied with a $4 billion surplus being applied to debt reduction. The economic outlook underlying the budget forecast is essentially a continuation of the inflationary situation which has beset us now for quite a few years. A budget surplus is an effective way of dealing with this inflationary pressure and is at present a basic requirement.

I have always urged that we plan our tax and expenditure programs to produce surpluses in good years to approximately meet the deficits of recession years. Much of the trouble that we are experiencing today in my opinion arises because we have not followed such a plan in the past. In fact, we have operated fiscal policy in such a way as to produce surpluses in only 4 of the last 29 years.

What are the prospects for tax reduction through expenditure limitations over the longer run?

As I stated legislation calling for large continuing expenditures is already on the books. Here are a few examples. We have commitments for highway expenditures running into the mid-1970's. Outstanding commitments for public works, public housing, and community improvement amount at the present time to some $17 billion. The commitment to future veterans benefits and Government retirement payments at the present time amounts to something more than $350 billion.

In spite of these known commitments and if expenditures are prevented from rising as rapidly as tax revenues rise in a growing economy, some reduction in tax rates can be enacted through this action alone. But such reduction in my opinion cannot be enacted in anticipation of freezing or reducing expenditure levels, but only after those conditions have materialized.

TAX REFORM

I will now turn from a consideration of the budget outlook as a basis for tax reduction to the possibility of tax reform that can provide a reduction in rates.

It is my view that tax reform is always timely provided equitable and desirable proposals which are practical of enactment can be developed. The Congress should periodically review the operation of our tax system and the relative burdens imposed on our citizens in order to assure the fair sharing of the burden of necessary taxation.

All too often, however, tax revision or reform programs have resulted primarily in enactment of legislative proposals for special tax relief, or, for the elimination of so-called discriminations by the extension of the application of existing relief provisions to additional taxpayer groups. Frequently these programs have resulted in provisions which were designed to meet some special social or economic need existing at the time of their enactment. Once entrenched in the law, such provisions have proven to be self-perpetuating and self-proliferating and have been retained and expanded even though changing times may have eliminated the social or economic objectives which were their initial justification. Historically, therefore, tax revision and reform programs have more often than not resulted in what has been aptly termed an erosion or a narrowing of the tax base. This, in turn, has resulted in the consequent necessity of imposing high tax rates in order to obtain the revenues needed to meet the costs of Government operation.

In my opinion, our tax rates are too high and they have a strong tendency to blunt incentives and stifle economic growth. As you know, a large part of our present Internal Revenue Code, including its high rate structure, had its origins during wartime when concern over economic growth was not a factor which had to be considered, and it still persists today in virtually the same form though its adverse impact upon incentives and economic growth and stability in a peacetime economy is becoming increasingly evident.

There is general agreement that in order for this country to maintain its economic strength domestically and to continue in its dominant position in today's world, our rate of economic growth in the next decade must exceed that of any previous decade in history. As a part of achieving this objective there must be a substantial revision of our war-engendered and revenue-inspired tax system in view of the strong doubt that such growth can be attained under our present tax system. This is particularly true under our present high rate structure, which, because of its rates and the unevenness of its application, limits initiative and causes tax considerations to override business decisions which would otherwise be dictated by the signals of the market place.

Although it is my firm conviction that the basic purpose of taxation is to raise revenues required to meet the costs of government, gearing tax revision and reform to the objective of economic growth and stability is in no way inconsistent with this viewpoint. It is obvious that when the cost of Federal Government accounts for approximately one-fifth of the total activity of the economy, we cannot ignore the economic impact of taxes.

With these factors in mind, the Committee on Ways and Means has under way an inquiry into the operation of our tax system under today's economy.

It is my view that the major objective of tax reform is a reduction in our stultifying tax rates and that this may not be possible to the extent required except through broadening the tax base. In arriving at this objective we must strive to develop a tax system that is characterized by fairness and equity in the distribution of tax burdens; that is conducive to the attainment of a desired rate of economic growth in the years ahead; that is neutral in economic impact and interferes as little as possible with the operation of the free market mechanism in directing resources into the most productive uses; and that affords greater ease of taxpayer compliance and governmental administration.

The first phase looking toward this end was initiated by a 5-week period of panel discussions before the committee late last fall. These discussions were designed to present an appraisal of our present income tax system in the light of the objectives that I have just mentioned and particular attention was given to the various provisions of the income tax law which serve either to narrow the tax base or to provide differential treatment for items included in such base, in order to permit a reevaluation of their original social or economic justifications for inclusion in the code in light of conditions as they exist today.

As I pointed out in my statement at the conclusion of these discussions, some of the suggestions appear to offer some practical possibilities; others do not. There must be an assessment of the various issues from the standpoint of their effect on fairness among taxpayers, on revenues, on economic growth, on economic stability, and on ability to pay. Before there can be any resolution of the issues raised by these panel discussions, there must be a considerable amount of study of all the problems involved.

One of the proposals advanced by some panelists is the concept of imputed rent. This concept, which is primarily an economic concept, rather than a tax concept, would impute as income to a homeowner the net rental value of his house and is included in the Department of Commerce's figures of annual total personal income. It was discussed in connection with a consideration of exclusions and deductions from income. Some panelists proposed that the deductions presently allowed for interest on home mortgages and for real estate taxes should be offset by the inclusion of the related imputed rent in gross income. Alternatively, it was suggested that the failure to include imputed rent in gross income was sufficient justification for a denial of these deductions. The discussions developed that there are serious questions as to constitutionality, administrative feasibility and desirability that far outweigh any economic concept for including this in the tax base.

There were a number of other suggestions made by the panelists which would broaden the tax base by including in income certain cash payments which are presently exempt from tax, such as veterans' disability pensions. These items are income in the broad economic sense and their exemption from tax is a preference. However, their inclusion in the tax base, as a practical matter, would not increase net revenues that could be used for rate reduction since the effective reduction in the amount of such payments that would result from making them taxable would very likely be offset by a compensating increase in the amount of such payments in order to maintain the status quo of the recipients. This is a case where theoretically the elimina-

tion of a preference might lead to greater fairness and equity among taxpayers but as a practical matter there would be no increase of revenue available for reduction in tax rates in end result since any revenue gains would most likely be offset by increased appropriation expenditures.

A like proposal for expanding the tax base was one that would include social security benefit payments in income but would allow employees a current deduction for the amount of their contributions to this system.

Under present law, as you know, an employer's share of social security contributions made for the benefit of his employees is deductible, and hence exempt from tax, even though the full amount of the social security benefit received by an employee upon disability or retirement is also exempt. Thus, no tax is ever paid on the funds used by an employer to make these contributions—either by the employer or by the employee. Here again fairness and equity might be considered to call for the elimination of this preference; however, such elimination would give rise to demands for an increase in social security benefits to offset any additional taxes imposed on the beneficiary. Analysis of the suggestion in this context indicates, in addition, that the combination of including the social security benefits in the base and exclusion of all contributions at the time made to the fund would actually produce less net revenue. It is highly questionable, therefore, whether the adoption of this proposal would result in any overall improvement.

These types of suggestions as well as some others made by some of the panelists for revising the law are really not the type of changes which are basically needed in my opinion in connection with tax reform. They are either impossible of administration or else would make no contribution by their inclusion in the base to rate reduction.

Suggestions were also made for broadening the tax base by curtailing or eliminating a number of the personal deductions that are presently allowed in computing taxable income. In this area there was no firm agreement among the panelists as to which of the various deductions now existing could be eliminated, but I believe that all agreed that some of the deductions should not be eliminated. Whereas it may be that all of the deductions now accorded to taxpayers cannot be justified, as I believe, it is equally true that some of these deductions do accomplish social or economic objectives. This area, like all other areas, if viewed strictly from the standpoint of tax policy, including ease of taxpayer compliance and administration, would present no real difficulty of decision, but before action can finally be taken all other factors must be weighed. I have often pointed out what could happen to the rate structure if they were eliminated, but I have reached no final conclusion as to which of these should or can be eliminated.

In the area of business deductions, you as businessmen interested in depreciation allowances will probably be pleased to learn that the majority of the panel of experts that discussed this subject were in favor of increased, rather than decreased, depreciation allowances. Among other things, it was suggested that this be accomplished by accelerating depreciation deductions through shortening depreciable lives, increasing the allowable depreciation rates, or allowing larger initial writeoffs in the year of acquisition. Proponents of these accelerated depreciation proposals would also provide ordinary income treatment rather than capital gain treatment to the proceeds received on the ultimate disposition of rapidly depreciated assets.

The panel of experts on the subject of depreciation presented compelling arguments as to the adverse effect of present depreciation policies on the growth of our economy and on the ability of our manufacturers to compete in either the domestic or world markets with their foreign competitors. In this connection, let me reiterate what I have said earlier; that is, that in my view, gearing tax reform to the objective of economic growth is not inconsistent with the basic purpose of taxation, the raising of revenue. However, the advantages of the adoption of liberalized depreciation rules and the resultant effect on revenues must be balanced against the distortion that would inevitably result in the distribution of the total tax burden among other sectors of the economy. It is conflicting factors such as these that the committee must weigh in its overall consideration of a program of tax revision and reform.

I regret that time does not permit me to refer to all the topics covered in the panel discussions.

The Committee on Ways and Means in my opinion has been impressed with the magnitude of the job of reaching a sound judgment with respect to what changes should be made in our income tax structure and in the manner in which changes should be made in those areas which do appear to offer some practical possibility of achievement.

As I have said many times before, constructive tax reform cannot be accomplished overnight in view of the extreme care and thoroughgoing analysis that must be given to the various proposals that have been made. However, evidence was presented to the committee that certainly justifies our maximum efforts in this undertaking. For example, it is stated that the elimination of the major preferences and differentials presently contained in the Internal Revenue Code would permit a 30-percent across-the-board reduction in rates without sacrificing present revenues.

This would mean that the present individual rate scale that starts at 20 percent and progresses to a maximum of 91 percent could be reduced to about 14 percent and 64 percent respectively. Even if only some of these preferences and differentials were eliminated, the evidence indicated that we could have a 20-percent rate reduction across the board and thus have a minimum 16-percent rate and a maximum 73-percent rate without jeopardizing the revenues. Similar percentage reductions could also be expected in corporate income tax rates.

It should also be pointed out that during the course of the panel discussions the committee not only looked to possible changes in the law itself but also to the whole broad area of administration of the existing provisions of the code to determine whether there are areas wherein collections of revenues can be improved. Some witnesses pointed out the possibility that as much as $28 billion of personal income presently subject to tax might be escaping taxation. This would represent, in terms of revenue, perhaps as much as $5 billion. If this were found to be true, and if this amount of revenue could be collected and thus added to a $4 billion surplus that is in the future available to be so used, we could reduce rates by almost 20-percent across the board.

While a reduction in rates is the primary objective of the revision and reform study of the committee, we are seeking at the same time a system with greater simplicity, greater ease of compliance, and better enforcement procedures. The balancing of these with the other factors that I have mentioned precludes our coming up with overall revision legislation promptly.

Should it develop that expenditures can be reduced, I would agree with those who contend that this is the easier and most expeditious way to achieve prompt tax rate reduction. However, to produce a fair and equitable tax system that is easy to enforce and that is conducive to sustained economic growth is a much more difficult and time-consuming task, particularly if revenue requirements continue at their present or even higher levels. The attainment of such a system, in my opinion, will require more than merely its sponsorship by a committee of the Congress. It can be realized only by the full and active support of the public generally and businessmen such as you in particular.

The Argument Against Capital Punishment

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. KEFAUVER. Mr. President, thoughtful and conscientious Americans from all walks of life, and of all races, creeds, and religions, at one time or another have asked themselves whether they believed in capital punishment. Many of these citizens have revolted against the practice of legal executions. Others have decided that capital punishment is a necessary penalty for certain criminals convicted of certain heinous crimes

Much has been written on the subject, both pro and con.

Our courtrooms echo with arguments supporting both the State and the defense. Law-enforcement groups have argued the question, as have religious groups. Indeed, the issue is most controversial.

I was particularly impressed by an article which appeared in the January 1960 issue of the American Bar Association Journal. The article contained the closing argument of Joe W. Henry, Jr., of the Tennessee State Bar, Pulaski, Tenn., in defense of Wash Jones, accused of murder. It is a brilliant argument, the most scholarly I have ever read against legal executions.

Mr. President, I feel certain that Mr. Henry's argument will be of interest and of value to many Members of the Senate. For that reason I ask unanimous consent to have printed in the Appendix of the RECORD many parts of the article as it appeared in the American Bar Association Journal for January 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TENNESSEE VERSUS WASH JONES: THE CLOSING ARGUMENT FOR THE DEFENSE

(By Joe W. Henry, Jr., of the Tennessee Bar)

May it please the court: 53 years ago, in a bleak and barren and God-forsaken building on the banks of the Cumberland River at 5 o'clock in the morning, a Negro man, made in God's own image, bearing the name of Julius Morgan, and from Dyer County, Tenn., became the first citizen of our State to be legally murdered by electrocution.

Two years later, on July 8, 1918, the second kilowatt killing was conducted. This time the hapless victim was one, J. D. Williams, a Negro citizen, of Giles County.

The third time the stench of searing and scorched human flesh came out of our penitentiary was that same July day in 1918, when Eddie Olsup met his Maker at the hands of the civilized State of Tennessee and in order to preserve the peace and dignity of the State. He, too, was from Giles County.

In all, 123 persons have walked that last mile.

One hundred and twenty-three times we have turned our backs upon the command of the decalogue: Thou shalt not kill.

One hundred and twenty three times we have arrogated to ourselves the right to destroy the image of God on earth.

One hundred and twenty-three times we have disputed the sacred idea that no man is beyond redemption.

One hundred and twenty-three times we have reverted to our primitive and savage origin bred in generations in the jungle.

One hundred and twenty-three times we have closed the door on a man's life and sent him to his Maker with a crime on his soul and guilt in his heart and denied him his God-given right to repentance, redemption, and forgiveness.

One hundred and twenty-three times we have usurped the divine authority of Heaven.

One hundred and twenty-three prosecutors have sung their hymns of hate as hapless human beings prepared to hang down their heads and die.

One hundred and twenty-three times we have proclaimed to the world that State government has no obligation to be civilized.

Who were these 123 men?

Their names are unimportant, but I have a list that shows them all—the roll of horror.

One cannot look at this yellow sheet—significantly it is yellow—the color denoting cowardice, the color of the Army's dishonorable discharge, the color that describes the worst fever known to man, the color that describes the jacket of the pestiferous hornet, the color that describes the worst brand of journalism—one cannot look at it without thinking of all the widows and orphans we have made, of all the tears that were shed in their memory and of the God who loved them, but who was thrust from their hearts by the cold hand of vengeance.

Ten men and two women sit upon this jury. Five of you owe your spiritual allegiance to the Methodist Church; two to the Church of Christ; two to the Cumberland Presbyterian, and one to the Baptist Church.

All of you stated on your examination that you believed in God, that you accepted Jesus Christ as your personal Savior, that you subscribed to the precepts of the Christian religion, believed in the set of ethical standards proclaimed by Christ, believed in a future system of rewards and punishment, the forgiveness of sins, the resurrection of the body and the life everlasting.

In short, you are Christians and civilized citizens.

You have all—some reluctantly—expressed your belief in capital punishment.

As you follow my argument, I ask that you search your souls in an effort to arrive at a rational and Christian conclusion based upon a fresh look at the evidence.

I ask that you erase from your minds any opinion that you may have on capital punishment until I have presented the case against capital punishment and have reviewed the issues and separated superstition from fact.

ESSENTIALS OF PUNISHMENT

It is generally accepted that there are three esssential ingredients of all punishment. All must be present and if any one is missing the punishment is defective.

First, the punishment of the offender;

Second, the rehabilitation of the offender and his restoration to useful and productive citizenship;

Third, the protection of society by deterring others from the commission of like offenses.

We may dispose summarily, and without discussion, of the first two, because I will readily admit that death by electrocution definitely fulfills the essential ingredient of punishment. I am sure that the district attorney and his associate, likewise, will concede that death is fairly permanent and when the penalty of death is imposed rehabilitation and restoration are impossible. Thus, it is, at the very outset, one of the essentials of punishment is missing.

DETERRENCE

This leaves for consideration the major ingredient and the one that completely overshadows the first two, i.e., deterrence. Does the death penalty serve as a warning to others? Does it keep them from committing similar crimes?

There are those who contend that we are living in an age when we have witnessed more brutality and slaughter than all our ancestors since the birth of Christ; that this is perhaps why we don't worry too much about the death of one man, that we have become inoculated to brutality and immune to human suffering.

My whole being rebels at any such philosophy. I am morally persuaded that throughout the history of time each generation has been successively better and upon the rungs of its progress we are steadily climbing the ladder that ultimately leads to a perfect order of existence.

Men of good will recognize it to be incontestably true that we are our brothers' keepers and just as a pebble cannot be thrown into the ocean without disturbing every drop of water in the sea, so one man cannot be abandoned and sacrificed upon the altar of society's sometimes unreasonable demands without disturbing all mankind.

Yes, we have made great progress.

Throughout the recorded history of time the human race has devised many and varied means of punishing those guilty of infractions of good order, and while we have not reached perfection, our progress has been praiseworthy.

There was a time when society thought that criminals should be beheaded, burned, boiled or buried alive; when men were strangled, stoned, skinned, or starved to death; when they were torn asunder by trees fastened to their limbs, or devoured by wild beasts; when they were forced to drink poison, crucified, or drowned; when they were chopped in two while still alive, or eaten alive by insects or sewn in a bag with snakes—all of this in the name of justice and all because it was "the law of the state."

As odious and savage as these practices sound to us today, let's face the fact that a hundred years from now when capital punishment has long vanished from the American scene as it has in most of the other civilized countries of the world—electrocution will be listed as another barbarous punishment along with drawing and quartering—for I submit to you any punishment that takes the very life of a human being is barbarous, cruel, un-Christian, and uncivilized and a throwback to the Dark Ages.

Time was when pigs, horses, and cattle were tried and executed for murder. It was the law of the state.

In 1474, a rooster was tried for the heinous and unnatural crime of laying an egg and sentenced, together with the egg, to be burned at the stake. It was the law of the state.

There is another, in 1801 of a British child being hanged for stealing a spoon. It was the law of the state.

There is a recorded case in England of a 9-year-old girl being hanged for stealing 2 pennies worth of salt. It was the law of the state.

There is another in 1748 of a boy of 10 who was executed for murder. It was the law of the state.

There is the case of the 12-year-old American boy who was hanged for stealing a sheep. It was the law of the state.

I am sickened every time I hear a prosecutor apologetically asking for the death penalty and offering the pitiful excuse "It's the law of the State."

In England during the reign of Henry VIII, there were over two hundred crimes, ranging from shooting rabbits to associating with gypsies for which the death penalty was exacted and during this period, to the shame and disgrace of our mother country, 72,000 Englishmen were executed. This, however, did not seem to deter Englishmen from committing crimes.

During the reign of Queen Elizabeth I, 19,000 Englishmen were executed but the crime rate continued to rise.

No doubt bloody Queen Mary was actuated by the noblest motives, but for all the blood she drew, crime continued unabated in Merry England.

Peter I, Tsar of Russia, issued an edict against men wearing beards and, in order to enforce it, in 1728, put to death 8,000 Russians, and yet today we can hardly think of a Russian without a bearded image flashing before our eyes.

There was a time in England when pickpockets were hanged and when the public hangings took place the pickpockets gathered and picked the pockets of those who came to witness the execution.

The death penalty did not deter the 7,000 people in America who committed murders, in 1958.

Crime has a tendency to beget crime, and bizarre punishments have always adversely affected law enforcement.

One of the most famous of all English hangmen was John Price, who was himself hanged for murder, as was Hangman Dennis and Mr. Hespel.

Then there is the interesting story of a former head hangman at the Oklahoma State Prison, who was tried for murder himself on no less than four occasions.

Ordinary prudence and common judgment would tell us that if the imposition of the death penalty is to operate as a deterrent, executions must be performed publicly so that all may see what a horrible and hideous fate awaits the wrongdoer. Criminals should have front seats; it should be carried on television; movies should be made; the penalty made more brutal, and sheer, stark terror should be stricken into the heart of all the people so that they, in heat of passion, or while temporarily insane, will stop and think of the gruesome fate that is theirs.

Nonjustifiable murders can take only two forms:

First, those in heat of passion.

Second, those premeditated and planned.

In the first group the murderer has lost all reason and all control of his faculties and, therefore, the consequences of his deed do not enter his mind.

In the second group, the murderer thinks he has planned the perfect crime and will not be apprehended, and so he gives no thought to punishment.

Again, where is the deterrence?

The State of Delaware has just become the eighth State to outlaw capital punishment. A California legislative committee reported in 1957:

"A worldwide survey shows that nowhere has the abolition of the death penalty led to an increase in the number of homicides."

In the face of these and numerous other studies, and against all the evidence to the contrary, there are those who still insist

that the death penalty is a deterrent and that its abolition would result in an increase in crime.

Let's take a look at the record.

The death penalty has been abolished in the following countries of Europe: Austria, Denmark, Finland, Holland, Italy, Norway, Portugal, Rumania, Spain, Sweden, Switzerland, West Germany; of South and Central America: Argentina, Brazil, Colombia, Costa Rica, Dominican Republic, Ecuador, Honduras, Mexico, Panama, Peru, Puerto Rico, Uruguay, Venezuela; elsewhere: Greenland, Iceland, Israel, New Zealand, and Turkey.

In the United States it has been abolished in: Maine, Michigan, Minnesota, North Dakota, Rhode Island, Wisconsin, Alaska, Delaware, and Hawaii.

In all of the foreign countries, for which I have the figures, their murder rate went down after the abolition.

In the United States during the 10-year period 1931–40, the average rate of murders was 8.1 per 100,000, whereas, in the States that did not have capital punishment, the rate was only 2.3 or only one-fourth as high.

It is significant that the State of Maine, which abolished capital punishment in 1887 after an innocent man was executed, has one of the lowest murder rates in the United States, whereas Georgia with 14 crimes for which the death penalty may be exacted, has the highest murder rate in the Nation.

So much for the argument that capital punishment serves to deter others from the commission of crimes. The record completely refutes this argument.

CONVICTIONS BY MISTAKE

To me, one of the most compelling arguments against capital punishment is the possibility of mistake. Moreover, every lawyer and judge knows that bold, bald, unblushing perjury all too frequently stalks into our courts and makes a mockery of that intangible commodity we call justice.

All America has harked to the saga of Tom Dooley, the folk song imploring a gay blade headed for the gallows to hang his head in shame before he was executed, but I wonder how many know that the song was written about a North Carolina man named Tom Dula, who was convicted of murdering a young lady acquaintance and was hanged because it was the law of the State.

Unfortunately for Tom Dula it was a number of years later before the real murderer confessed.

So many times have the innocent been mistakenly convicted or wrongfully convicted on what later developed to be perjured testimony that a number of books have been written about numerous of these cases.

BIBLICAL PRECEDENTS

Then, there are the great cases of recorded history where, even though it was the law, the death penalty was not inflicted.

God, Himself, set the first precedent. Cain gazed upon the beaten and bleeding body of his own brother. The denunciation of Heaven was ringing in his ears. He expected to find vengeance at every hand. But God did not visit capital punishment on him. Instead, He banished him from society, placed a mark upon him—a mark of his crime, but also a mark that would warn the rest of mankind against his destruction. This was the judgment of Almighty God in dealing with the first murderer and I submit that it is exempt from any possibility of error.

Then, there is the case of David, who was responsible for the death of Uriah the Hittite, and who was not executed but continued, in spite of his heinous crime, to grow in favor with God and man and the holy writ tells us that he was "a man after God's own heart."

The case of Moses is in point—Moses who slew the Egyptian in a fit of anger and who became a fugitive from justice, and yet, God sought him out and, from the burning bush to the heights of Pisgah, from the Red Sea to the mountain peak whence he was taken by God to survey the promised land from Dan to Beersheba, he, a murderer, was the right hand of God Almighty.

What if David and Moses had been executed because "It is the law of the state?"

THE NOACHIN LAWS

Those who urge the continuance of capital punishment forget all these things. Instead, their delight is in quoting from obsolete scripture, taken out of context and bodily lifted from the circumstances surrounding their utterance. Just as patriotism is the last refuge of a scoundrel, so the Bible is the favorite stamping ground of those who enjoy quoting scripture for their own purpose. With fiendish glee and triumphant manner they turn to the ninth chapter and sixth verse of the Book of Genesis and chant: "Whosoever sheddeth man's blood, by man shall his blood be shed."

But circumstances alter cases. Let us look at the circumstances under which this law was laid down. The world had gotten so evil that God repented that He had made man (Genesis 6: 6), the great flood came, the former race of mankind with all their laws and customs had been swept away and destroyed by the waters of death.

In gratitude, the little family of Noah gathered about the altar and received the seven precepts or laws, we know them as the Noachin laws, for their government. They were few in number and temporary in nature. They embraced only the subjects necessary in their peculiar situations.

All of these seven laws were aimed at repopulating a destroyed earth. Two of the seven laws read "be ye fruitful and multiply." The little family of Noah was a germ from which all the future nations of the earth were to vegetate. Every possible care therefore had to be taken for its preservation. So the right was expressly given directly by God to take away the life of its members, there being no other possible means of effectuating the purposes of Heaven in their preservation. But no such direct and divine authority has been given the 3½ million people of Tennessee.

THE MOSAIC LAW

Then, there are those who look to the Mosaic law and cite it as authority to show that God's power over life and death has been committed to His creatures. They overlook a number of significant factors. First of all, the law delivered to Moses amid the fire and flame and the smoke at Mount Sinai was divided into three parts—moral, political, and judicial. The moral law, the Ten Commandments, is universal in its operation and perpetual in its obligation. But the political and judicial laws are only of interest from a standpoint of Biblical history. They constituted a civil and criminal code for the government of the Jews only.

Their authority commanding the infliction of capital punishment is no more binding on a Christian nation than the laws of the Medes and the Persians, or of the various tribes that were driven from Canaan by the sword of the Lord and of Gideon.

Strong measures were needed to bring the headstrong, moody, and murmuring people of the children of Israel across the wilderness. Every student of the Bible knows how they taxed the combined authority of both God and Moses. Never before or since has there been such a rebellious tribe of people and never were such extraordinary measures required to keep a nation in subjection. Even as Moses was on the mountain, receiving these very laws amidst the most sublime and awful and awesome demonstrations of the power and grandeur of God, this wayward people set themselves to dancing, in idolatrous worship, around an image made of gold.

I wish that time permitted me to delve more deeply into this with you, but it does not.

THE LAW OF CHRIST

Ladies and gentlemen of the jury, centuries after the Mosiac Law and almost 2,000 years ago, a solitary wayfarer walked the shores of the Sea of Galilee, healing the sick and casting out the demons that possessed the mentally ill. Persecuted by the mighty Roman Empire, crucified by the edict of a court composed of His own countrymen, denied thrice by one of His trusted disciples in His hour of greatest need, and betrayed by the traitorous deed of another, mocked, spat upon and ridiculed, He, a victim of capital punishment, died the most ignominious death known to His day, and yet He was not deterred and His teachings of faith, hope, charity, courage, and love have endured unto this day and wherever free men have instituted free government, the very cornerstone has been the ethical standards taught by Jesus of Nazareth.

There are those who forget:

The mild benevolence of His precepts,

The meekness of His spirit,

The philanthropy that breathes in all His words,

The golden rule which He established,

The Christian charity which He taught.

When they quote the Bible as a sanction for the death penalty, they pervert the spirit of His holy and merciful religion.

If I were inclined to support my opinion by arguments drawn from religion, the whole New Testament would be my text, for if it teaches anything, it teaches the forgiveness of sin and, therefore, a system of reform rather than extirpation.

Since so many of you are Methodists, as am I, may I read the position of our church from its official discipline:

"We stand for the application of redemptive principle to the treatment for offenders against the law * * * for this reason we deplore the use of capital punishment."

HOW THE STATE KILLS

You have been told in great detail just precisely how Wash Jones killed and murdered Wes Howard. Now let us see how the State of Tennessee would kill and murder Wash Jones.

At about 5:20 in the afternoon of the eve of the execution the prisoner is shaved, bathed, and his head is clipped. He must be clean so that it is unnecessary to bathe his body after the electrocution. His head must be clipped so they can apply the electrode.

Then they give him a new shirt and a new pair of pants, without a belt, and shoes without laces. No belt and no shoe laces. After all he must not hang or strangle himself and cheat the chair.

Next, the minister of his choice visits him to offer whatever words of assurance and solace he can conjure up.

Then the condemned man is given an opportunity to eat a hearty meal of his choice.

Then his family is permitted to visit with him until midnight. Then at about 10 minutes to 5 the warden and the guards and the execution party come and they start to walk the last mile down the dimlit corridor, which leads to the chamber of horrors to the electric chair.

They place him in the chair, roll up his trouser legs in order to clamp the electrode to his right leg. Then to his clipped head they clamp the other electrode.

Then they ask him for his last words. Only the prisoner, the warden and God are present in the room. The warden is doing his statutory duty, the prisoner paying his debt to society and as to him, I am sure he feels that God has forgotten him.

Then they place the mask upon his face—not for his benefit, but to keep the witnesses

from looking upon the hideous countenance of the dying man as his facial features contort in pain and agony.

The warden looks through the little window at the man who throws the switch—$25 the State pays for his service—the warden has his stop watch in his hands and upon his signal the switch is thrown. Then, there comes the sound from the electrician's niche—a sound like that that comes from an X-ray machine, a crackle, a whine, a buzz as 2,300 volts, for 30 seconds and then 500 for 1½ minutes are sent circulating through his body as it convulsively jerks and writhes.

And then when his body has cooled off enough to touch, the physician applies his stethoscope and pronounces him dead.

He is then placed in cold storage—in a deep freeze—because the State does not embalm. Now another name is added to the yellow list—the roll of horror—the State has got another pound of flesh. But it is the law of the State.

I ask you in the name of all that is sacred and holy, how can such a spectacle as this ever magnify the law or make it honorable or preserve the peace and dignity of the State?

And they say that Wash Jones killed in cold blood.

Wash didn't lock Wes Howard in a room, keep him there for weeks and months, announce ahead of time the date and time of his death and leave the condemned man to die a thousand deaths.

Ladies and gentlemen, you and you alone can send Wash Jones to the electric chair. There can be no division of responsibility, you can never say that the rest overpowered you. It must be your deliberate, cool, premeditated act. It takes your vote.

I plead for human consideration, for charity, for mercy. Man was truly created in God's image, but humane treatment of our fellow man is necessary in order that the divine image may not be obscured.

I hope and pray that the Tennessee Legislature will at this session veto this unconscionable decree of blood and write for the State, as the State has written for its citizens, the injunction—at once rational, scriptural, salutary and humanitarian: "Thou shalt not kill."

Cotton Comment

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. EVERETT. Mr. Speaker, I believe that the Members of Congress will be interested in reading the following article about the National Cotton Council which appeared in the February 4 edition of the Commercial Appeal, an outstanding newspaper of the Nation.

This is a very timely article which tells what the National Cotton Council is doing for the industry. It is written by Mr. Gerald L. Dearing, who is the market editor. Mr. Dearing is very close to this situation and has prepared this splendid article which follows:

COTTON COMMENT—WHAT IS THE NATIONAL COTTON COUNCIL?—IT'S A DREAM COME TRUE, A UNITED INDUSTRY WORKING FOR ITS OWN SALVATION

(By Gerald L. Dearing)

DALLAS, February 3.—What is this National Cotton Council that brings together the six segments of the industry in a meeting to develop greater use of cotton, better production and marketing methods and greater understanding of the problems of all in the industry?

The answers can be found in the reports of the staff and the membership committees which will be aired here the balance of this week as a preliminary to the meeting of the delegate membership Monday and Tuesday of next week.

Staff members began arriving here Wednesday and by Thursday the committee members will have started their informal discussions which will precede the committee meetings on Friday and Saturday.

WORK ILLUSTRATED

The farflung activities of the council are illustrated by banners in Japanese stores proclaiming National Cotton Week, a project in Mexico to speed the time required for breeding new varieties of cotton, a process that promises all-cotton stretch socks, and a panorama of "5,000 Years of Cotton Fashions" showing in stores across the country.

The central organization of the raw cotton industry represents fulfillment of a dream of the late Oscar Johnston, of Scott, Miss. It unites producers, ginners, merchants, warehousemen, cottonseed crushers, and spinners. They're dedicated to a common goal—increasing consumption of United States cotton, cottonseed, and their products.

At a time when cotton was selling for less than a dime a pound, synthetics and other competitors were beginning to make a serious bid for traditional markets, and spirits of the industry were at a low ebb, the farmer-statesman called a few leaders together. Recognizing the conflicts in interests and areas, he reasoned, at the same time, that there was one point on which all could agree: The necessity for expanding markets for cotton and its products.

GOALS OUTLINED

He pointed out that hope for accomplishment of this goal rested in research and promotion. Research objectives were twofold: (1) Increased efficiency, with a consequent lowering of production, marketing, processing, and manufacturing costs, thus making cotton more competitive pricewise; (2) improvement of lint, seed, and their products, thereby making cotton more competitive quality-wise. Promotion should employ modern techniques to create consumer demand for cotton products at home and overseas, thus stimulating sales and consumption.

Mr. Johnston's reasoning made sense and led to organization of the Cotton Council in late 1938 and early 1939. The council today is a representative body composed of 245 delegates selected by the Nation's cotton farmers, ginners, warehousemen, merchants, spinners, and cottonseed crushers through their own State or regional organizations.

Each branch, voting separately, must approve every council recommendation by a two-thirds majority, thus assuring unity of purpose and action.

VOLUNTARY FINANCING

The council is financed voluntarily. Producers pay 20 cents per bale, collected by participating gins. Cotton manufacturers pay 10 cents per bale; cottonseed oil mills, 7½ cents per ton of seed; merchants, 3 cents per bale, and warehousemen, 1 cent per bale. Collections are realized on about two-thirds of the crop.

There are four program divisions of the National Cotton Council—production and marketing, utilization research, sales promotion, and foreign trade. The executive vice president is responsible for general operation and legislative and other activities not covered by the program divisions. Overseas programs are under supervision of Cotton Council International.

Research and its application to attain higher quality and lower costs in producing, processing, and marketing raw cotton—from seed breeding to the cotton mill—are embodied in the program of the council's production and marketing division.

Market studies, development of new products, and improving efficiency and quality of fiber and textile processing from mill to consumer are the concern of the utilization research division. Sales promotion at home and abroad is carried out by the sales promotion and foreign trade divisions.

PROGRESS IS SHOWN

Many of the key leaders who worked with Oscar Johnston are attending the council's meeting here. They look back on two decades of unparalleled yields—up to nearly a bale per acre—more than a third of cotton production fully mechanized, dramatic promotional programs in the United States and 14 foreign countries, wash and wear, and other textile miracles. Through its research and promotion programs the council has spearheaded such developments.

The programs have received international acclaim but, more important, have infused the cotton industry with a new spirit. It has confidence in the merits of its products and their response to research and promotion.

Cotton has maintained its position as the most widely used fiber—accounting for about two-thirds of the total fiber consumption. With increasing population, rising living standards, and a consequent growing demand for fiber, the potential for increased consumption is bright. Through the National Cotton Council, the industry is pressing aggressively toward achievement of this potential.

What Can We Pay for Plenty?

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by my friend, Harley Libby. It appeared in the October 15, 1959, issue of the Oregon Farmer. His comments are thought provoking and deserve close attention.

I have known the author for a long time; he has a strong and keen mind, the sort that is needed today with respect to the farm problem.

The article follows:

WHAT CAN WE PAY FOR PLENTY?

(By Harley Libby)

So much has been said about our farm problems and about subsidies and surpluses that one hesitates to make any addition. But operating on the assumption that TV commercials can't all be wrong and that constant repetition does bear fruit, I offer the following with the hope that it may stimulate some serious thinking.

THE COST OF OUR ABUNDANCE

True, the problems of plenty are real and must be dealt with realistically.

We would do well to decide, first of all, that life is much more kind to people in a land of plenty. To know freedom from hunger and cold should be counted as a blessing and not a cross to bear.

No sound-thinking person believes that we can ever achieve an exactly balanced program of production-to-need. Then, isn't it better that the balance be on the side of

abundance and that we do have a reasonable food bank to insure against hunger?

And should we not apply business thinking and write off the cost of that insured security as we might car, life, or fire insurance?

But surpluses beyond reason do present a real challenge. What have we done about them? Not enough, surely.

The National Farmers Union has long advocated a unit measure of bushels, tons, etc., rather than heavily fertilized acres as the proper measure for production quotas, and a broadening of the basics. It has also asked for a definite dollar-and-cent limitation on price supports to any one producer.

The purpose for both: (1) To discourage overproduction; (2) to stop channeling so much acreage into the few protected crops; (3) to prevent undue individual benefits.

To date Congress, the U.S. Department of Agriculture, and the national administration have all failed to take a firm stand.

Senator NEUBERGER'S proposed food for peace plan calling for the use of surpluses to feed the hungry peoples of the world certainly has merit. (Incidentally, I was pleased to note the Oregon Farmer's support for this suggestion.) To date we have seemingly preferred to send money and munitions, writing the cost off to national security. Would not food to the hungry create equal good will—and much less suspicion? And wouldn't that be a living demonstration of international humanitarianism and also a contribution to national security?

Likewise, the Oregon Wheat League is to be commended for its excellent work in the field of expanding uses of surplus commodity.

FOOD STAMP FUTURE

The food stamp plan, embodied in a bill by Senator WAYNE MORSE, could also well meet a domestic need and present both a saving and an outlet. With our abundance of food, why have we hesitated so long? Surely we would not seriously disrupt our trade economy by supplying food we cannot sell to those who have no money to buy.

The school lunch program has been an excellent example, not only of food distribution to the right people, but of food promotion. Teachers and those who do the actual contact work in the schools can tell of the increased taste for milk and vegetables so necessary to young growing bodies. (Just think what the brewing industry would give for such an opportunity.)

These programs should become more universal. They will certainly show long-range dividends in national health.

THE SOIL BANK IDEA

The soil bank idea, based on the theory that it is better to store fertility against future needs than to store excess surpluses, makes sense. As enacted into law, it has been badly abused but the necessary "teeth" have now been added.

Many people find it difficult to reconcile the soil bank program with the activities of the reclamation service in bringing in new acres, or with the USDA's regular requests for more money for research for increased yields, to realize the hope of 100 bushels-per-acre wheat, for example. Or with the USDA's advice to further mechanize and to apply expensive fertilizers in greater abundance.

The advice is theirs and I leave the answer to them.

EIGHTY PERCENT PROSPERITY

Most discussions and articles on the farm problem, particularly if they come from departments which live by legislative appropriations, avoid the matter of what farmers actually receive for their production.

The critics are often more inclined to describe glowingly the growth of vertical integration and the glories of expanded farm operations. In their enthusiasm they temporarily forget what is happening to the countless thousands of farm families without farms that most surely go hand in hand with the growth of vertical integration, contract farming and the decrease of market opportunities.

When the ills of the shrinking farm dollars are discussed they are often cheerfully blamed onto the fickle fancies of the consumer whose changing demands increase cost.

No one denies the changes, but let us look at this last one carefully and put part of the blame where it properly belongs.

The manufacturers, processors and distributors who do fancy packaging and costly duplication in a competitive struggle to capture more and more of the profit in the consumer's dollar must also share responsibility.

It was not consumers who demanded five name brand bread deliveries at the corner grocery—and of loaves costing 30 cents plus and containing some 3 cents worth of wheat each, for example.

Nor was it you and I who asked for atomic age fishfin fenders and double-jointed tail lights that sent the cost of cars, repairs and insurance to new heights.

It is well past the time that economists and farm advisers, including our own U.S. Department of Agriculture, need to become farm price conscious. It is time we all join in better acquainting the consuming public with what part of the dollar the farmer actually receives for his commodity at the farm.

Those who would advise should know that there are many young farmers today who face near bankruptcy in a losing struggle. It takes more than efficiency to pay for expensive modern farm machinery at a 100 percent plus parity price with farm commodities sold on an 80 percent of parity market.

It is time to come down to earth and realize that any farmer, regardless of size or volume or efficiency, who produces and markets a commodity at less than the cost of production has about as much chance as a woodpecker above timberline to share in the national prosperity.

It is a small and doubtful honor to be able to prove that by efficiency you were the farmer in your community who lost the least.

PEOPLE ARE IMPORTANT

Sometimes I wonder if in our zest to deal with statistics and in our eagerness to enthuse about bigness, we haven't forgotten the human factor that gives all others purpose—the people themselves.

Enough has been said in recent years to inform everyone that the farms of this Nation and the families that live on them are becoming fewer and fewer.

Always, and properly, there has been a constant and voluntary departure of members of the farm families to enter other fields, to find employment.

Recently, however, that trend has become an exodus, and certainly not all voluntary. Nor are they all young, employable people. We are informed that about 75 percent of our young people today leave the land, and that about 50 percent of them are working today in organized labor.

Certainly we cannot hold this against them. They are our children. We have done our best to teach them the value of organization. We know that if labor today was as loosely organized as farmers, laborers too would be working for an 80 percent of parity paycheck.

Labor rallied well to meet the revolution of automation in industry by demanding—and receiving—better wages and shorter hours. We as farmers met the challenge of mechanization by producing more and more for less and less.

REWARD FOR EFFICIENCY

We seek no protective wall around inefficiency. Efficiency, good management and industry are entitled to their just rewards. We know some people will prosper more than others in any vocation.

But many farmers would still remain upon the land, knowing that their economic returns would be a little lower than if they went to the city. They are following a chosen way of life and they would willingly exchange the opportunity to "eat a little higher on the hog" for the many fine intangible benefits of family life on the farm.

But this does not mean that these people should be crowded off into migrant labor status, by an unfair economic set-up. They are entitled to a fair price for their production. These family farm people are truly the salt of the earth. They believe in the land and what it can do. They live on, and from, the soil, in a partnership with God and nature. If democracy is ever put to the test for final existence, it is here in these country homes that its roots will be found most deeply inbedded and where it will live the longest.

LET'S SUM THIS UP

Freedom from hunger and cold is a blessing. We had best recognize it as such and write off its costs as we would any other sound insurance program.

Excessive surpluses are a challenge but can be made manageable by a varied attack. Production must be controlled to reasonably meet the needs of the day. But production should be limited by intelligent controls—not by ruinous prices.

Any farm program that does not plan for an equitable price for commodities to the producer renders little economic service to American agriculture.

People are important. They should come neither last nor least. They create the problems and the necessity for answers. Any solution that allows human values to become submerged in economic issues his missed its basic purpose.

FARM INCOME DOWN

Net farm income nationally for the first three quarters of 1959 was down sharply from the similar period of 1958, according to the USDA's current farm income situation report. (And many weren't getting rich in 1958.)

Income for the first 9 months of 1959 was reported as approximately $11,500 million; this was $1,500 million under the 1958 period—a decline of 12 percent. However, it was still 4½ percent above the recession year of 1957.

This year's January-August total of cash receipts from livestock and products was 4 percent less than last year's. Although prices averaged higher for cattle, they were substantially lower for hogs, broilers and eggs.

Total crop receipts in the first 8 months of 1959, however, were reported as about the same as 1958. Receipts from corn, oranges, and tobacco were up considerably; but they were offset by a sharp drop in receipts from sorghum, grain, and wheat.

Hoard's Dairyman: 75 Years of Service to Dairy Farmers

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. KASTENMEIER. Mr. Speaker, under leave to extend my remarks, I would like to relate the story of Hoard's Dairyman, a magazine which has served

the interests of dairy farmers from the time it was founded in Fort Atkinson 75 years ago in 1885. This semimonthly publication, read avidly by more than 330,000 dairy farmers in every State as well as in every English-speaking country, is celebrating its 75th anniversary this year. Throughout its history Hoard's Dairyman has had only three publishers—the magazine's founder who is best known as the father of American dairying, the late William D. Hoard, and his son, the late Frank W. Hoard, who headed the firm in 1918 following his father's death, and his grandson, William D. Hoard, Jr., who has been the firm's president since 1939. This illustrious magazine is edited by W. D. Knox, son of my distinguished colleague, the Honorable Victor A. Knox, of Michigan. The Hoard's Dairyman story, as told in "Hilltop Decision," the magazine's anniversary booklet, follows:

THE YEAR IS 1871

A July sun bakes down on the rolling Wisconsin countryside. Up a dirt road a covered buggy leaves a low drift of dust which slowly settles, waiting to be stirred again by the next horse-and-buggy traveler.

But this solitary buggy carries a tall Lincolnesque figure, who, in the next few hours, will make a decision which will affect the lives of every man, woman, and child in his State and eventually the Nation.

As he nears the crest of the hill, his mind is occupied with the day-to-day problems of any smalltown weekly newspaper editor with a growing family. Since moving West from his upper New York State farm home, life's road has been rough. Only long, dedicated hours have kept his pioneering publishing venture in the black. But this is the lot of the pioneer and he accepts it, taking a satisfying bonus in the personal inner rewards to those who serve their fellow man.

When his bay mare slows at the top of the hill, the driver eases his rig to a stop and his horse settles with a sigh of relief. From this hill, William Dempster Hoard can view his adopted State. He sees all around him fields of wheat rapidly ripening in rolling fields.

But the stands are thin.

In fact, the yields have been falling each successive year.

On the next hill to the north is an abandoned set of farm buildings, now owned by the bank as the former owner gave up and moved farther west to new land.

There are other farms like this in the area.

Why should this be so?

An uneasy doubt enters the editor's thinking. His logical mind explores the possible causes.

Low fertility and the chinchbug have taken their toll. Wheat yields in recent years have dropped to a low of 8 bushels per acre.

Maybe those who left were poor farmers, incapable of success in farming.

But he knew many of them and this was not true.

There must be a more fundamental reason.

Hoard finds it in his childhood memories and his rudimentary knowledge of geology. This is glacial soil. These Wisconsin farms really rest on a thin foundation of topsoil, not at all like that of the unglaciated prairie land of Illinois, Indiana, and Iowa.

Then Hoard recalls how farmers in New York State had mined their fields with continuous wheat, too. The dairy cow had been the salvation of many of those neighboring farms. The healing power of her grassland and the humus and fertility of her droppings had revived tired acres, made them bear again as they had when broken from virgin timber.

As Hoard's horse dozes in the July sun, the lanky editor is lost in thought. The outline of an editorial begins to form in his mind. But it is more than an editorial. This should be an editorial campaign in his weekly newspaper, the Jefferson County Union. In fact, the need is so great he could devote his life to no greater cause.

And thus a crusade was born.

From that day forward, Hoard became the apostle of the dairy cow for a permanent, prosperous, soil-conserving agriculture. He was to live to be honored nationally and internationally, be cited as the "father of American dairying," and be quoted generations after his passing.

In the beginning, however, Hoard's crusade fell on unreceptive ears. Tradition-bound farmers, in the well-worn seasonal rut of plowing, planting, and harvesting wheat, wanted no part of the year-round chores which were the obligation of the dairy husbandman. The passive resistance of these stolid Nordic farmers would have chilled the enthusiasm of anyone less dedicated than Hoard.

But time and economics were the editor's allies. As crop income dwindled, more of the farmers listened to Hoard. Though questioned and challenged at his every appearance, Hoard's arguments dented the crust of farming habit and a few dairy cows began to appear on the hills and in the valleys of Jefferson County.

This new type of agriculture brought with it a demand for information. Feeding, breeding, and management of the dairy cow, and marketing of milk and cream were foreign to the lives of these new dairymen. Hoard filled his paper with the knowledge he had gained in his native New York and drew liberally on the advice of a few advanced dairymen in the East and even in Europe. A prodigious reader, Hoard combed every farm periodical and corresponded with anyone and everyone who gave promise of providing the most reliable information available.

His crusade rapidly outgrew his country weekly. In 1885 a national dairy farm magazine was launched. To supplement the power of the written word, he took to the speaker's platform to fulfill engagements throughout the land. His training for the ministry as a young man helped him become known as one of the greatest speakers of his time, a period characterized in history as an era of colorful speakers and leaders of men.

It should be remembered that when Hoard began his crusade America's dairy industry was not unlike that which still prevails in many countries of the world. On city streets, wagons carried battered cans of warm milk. A tin dipper was used to fill the housewives' pans and pitchers. Among the millions of multiplying bacteria in the milk were tubercle bacilli, Brucella abortus, and many other human health hazards. Butter made from sour cream was of varying quality and often adulterated with beef tallow and vegetable fats.

These were the challenges before Hoard. In the beginning he little realized the magnitude of the task he had undertaken. As dairy farming expanded, however, he came to grips with the tangled problems of sanitation, health, and marketing as well as those of dairy husbandry. All of his mental and physical resources were thrown into the struggle to build what has become the largest and most stable part of American agriculture.

Great men have come and gone but rare is the man who has lived on as Hoard. Today, almost nine decades after that hilltop decision, his crusade carries on through Hoard's Dairyman, the magazine he founded 75 years ago. A son and now a grandson have, in successive generations, added materially the luster of the name and the quality of the service to man.

A $10 billion dairy industry today serves all Americans the highest quality dairy foods available to any people on earth. Nowhere else in the world can be found such quality and safety in this most nearly perfect food—and nowhere can it be found in such abundance.

The beneficient creature which Hoard, his son, and grandson championed has healed the soil sores of a continent, from the thin, glaciated soils of the North to the eroded red gullies of the South.

In this year 1960, nearly a century following the hilltop decision, let us review briefly the great service rendered by the "father of American dairying," and his lengthened shadow, Hoard's Dairyman.

Don't Sell MATS Short

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial entitled "Don't Sell MATS Short" which appeared in the News-Democrat of Belleville, Ill., on Wednesday, February 3, 1960:

DON'T SELL MATS SHORT

A local spokesman for the scheduled commercial airlines would begrudge the Military Air Transport Service commendation for its noteworthy safety achievement of 1959. MATS succeeded in racking up a perfect year without one fatality, in fact without even a casualty. Day before yesterday we made editorial note of this accomplishment. Today, in the Forum, we are printing a letter from the airlines' representative who takes us to task for our remarks.

Although our critic does not directly challenge the lament that "MATS is handicapped by an overage and obsecent air fleet, sorely needful of replacement by swift jet transports," the left-handed inference is that anything spent toward modernizing MATS equipment would entail astronomical waste by duplication.

Says he, "We might keep in mind that all these new (commercial) jet aircraft are in the military reserve and are ready and willing to go into the service of our country in case of a general war. In fact, on 24-hour notice they would be turned over to the Government under the CRAF (Civil Reserve Air Fleet) plan."

It is specious, of course, to confuse CRAF with any military connotation. And to say that these planes and aircrews are to be "turned over to the Government" is an overstatement.

As its name clearly states, CRAF is a civil gesture, and as such its value when the chips are down is severely curtailed. Military airmen can be, and regularly are, commanded into combat. There is no authority, however, to order or compel a civilian flier to take such risks. This much is a foregone conclusion: CRAF would fly in the service of our country up to a point—to be determined by individual restriction, by the Air Transport Association and the Air Line Pilots Union—

and you can be sure that point would be well insulated by long distance from any combat or contaminated area.

That is the agreement on CRAF, and the Defense Department entered into this compromise with its eyes wide open and, we suspect, with its back to the wall.

CRAF is nothing more than a crisis extension of the peacetime carrier augmentation program for which Congress is guaranteeing the scheduled airlines some $85 million this fiscal year whether that much service is needed or not.

That's even lusher than going after civilian business, which is a legitimate province of the airlines. But it also helps explain why the airlines' propaganda mill is working round the clock and shooting every angle to undercut and put MATS on the hummer.

This ruthless campaign of greed must not succeed. Only yesterday, Gen. Thomas Power, chief of our Strategic Air Command, again reiterated his grim warning of U.S. vulnerability to Russian missile assault.

We pin our hopes for survival on SAC. It is the invincible "deterrent striking power of the United States" which Vice President NIXON referred to in Chicago the other day. And MATS is a vital part of it all. For without MATS, SAC is not a mobile striking force. Its mission is to haul in all the hardware of war needed to keep SAC's giant B-52 bombers hammering the enemy.

It's cutting it too thin for safety, expecting MATS' lumbering old piston-engined junkers to sustain the prodigious needs of the B-52's.

Certainly CRAF offers no solution, since all its jet DC-8's and Boeing 707s are strictly passenger planes.

MATS' assignment is logistic support—transporting freight as well as all airborne troops. Commercial passenger planes are totally unsuited for the job. They are designed to carry people, not cargo. Their floors aren't stressed to support the enormous weight. Nor could these passenger planes taken off the scheduled airline runs be remodeled at the last minute when time is of the essence.

It is imperative that the MATS goal of air fleet modernization be vigorously and promptly implemented. Pray let us not be diverted by red herrings or siren songs, for our national survival in the critical years ahead might well hinge on what we do now.

The Heart of the Struggle

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mrs. ST. GEORGE. Mr. Speaker, an article entitled "The Heart of the Struggle" appeared in the Wall Street Journal of February 5. This article brings out a fact that many Americans in and out of Congress seem to overlook, namely, that in our zeal to outdo the Russians we may simply be emulating them. In other words, if we cannot beat them we will join them, as the old saying goes.

If we do indeed simply become a monolithic state opposing another such state, we have lost not only a battle but a war. From the quotes in this article, the President seems fully aware of this danger. If we cannot survive and still provide our people with the abundant life and the goods and services they require, then we are indeed in a sad plight. This I will never believe, and I am sure that the vast majority of our people will never believe it or submit to such an end to our great Republic.

The article follows:

THE HEART OF THE STRUGGLE

The condition confronting the United States in the world is both philosophical and practical—a question of survival of values and a question of just plain survival. To both questions President Eisenhower the other day addressed himself.

Queried at his press conference about rapid Russian progress in missiles and space rockets, he recalled the early day of World War II, how we were almost overawed by Hitler's blitzkrieg successes. "Why, of course, we talked about this great efficiency.

"This is dictatorship. If you take our country and make it an armed camp and regiment it, why, for a while you can—you might do it with great morale, too, if you could get people steamed up like you did in wars * * * you might do this thing * * * in very greater tempo than we now are doing it."

And—make no mistake about it—turning America into a garrison state is what a great many people are really talking about today even if they rarely put it that way. They would spend without stint on all kinds of arms; but more than that, they would drastically change the priorities of national life and make the Government the governor of those priorities so as to match the totalitarian efficiency of the Soviet system.

They are right if what is wanted is to match and surpass that kind of efficiency, for that kind of efficiency must be centrally regimented and reach down into every aspect of life—just as the Soviets, in the President's words, pick a potential athlete and make it a national responsibility to make him the best in the world if they can.

The price, to be sure, is the loss of precisely those human values which distinguish our society from Communist society (and which distinguish man from the beasts of the field).

So the philosopher might ask, What does it profit a nation to survive and lose its free soul? The pragmatist can retort, What does it profit a nation if it doesn't survive to enjoy its freedom?

But those are not the real questions. First, as to the alleged virtues of the garrison state, we all know what happened to Hitler's vaunted totalitarian efficiency when the West took countermeasures.

Are we today, then, doing enough in the way of practical military countermeasures? To answer that it is necessary to ask what it is we are trying to do. We are not trying to mobilize a military force with which to conquer the Communist world (we, not the Communists, are the true believers in peaceful coexistence in the sense of live and let live). We are trying to keep in being and constantly improve a military force so powerful that the Soviets will not push the button for fear of the devastation it would bring upon themselves in retaliation.

What is needed to deter the enemy is not the same as what is needed to launch a total attack on him. Mr. Eisenhower put it cogently: "What you want is enough, a thing that is adequate. A deterrent has no added power, once it has become completely adequate, for compelling the respect of any potential opponent for your deterrent and, therefore, to make him act prudently."

Obviously the deterrent cannot remain static; for continuing adequacy its technology must constantly improve. If it should be improving now at a faster rate, the remedy is not to be found merely in more money. Noting appropriations of nearly $7 billion a year for missiles alone, the President said this "is getting close to the point where money itself will not bring * * any quicker development." In any case, no one denies that the technology of the deterrent is constantly improving.

When vocal politicians and commentators glibly say the national priority should be on survival instead of tail fins, they are missing the point that the free society is able to provide the people with both the means of survival and material abundance. But they are missing the further point that free consumer choice is merely an expression of political liberty.

And that is the point of the cold war. To turn to a garrison state is too high a price and, as a practical matter, an unnecessary price. It is to give the Soviets victory without a shot being fired or an effort made to preserve the philosophical values which are the heart of the struggle.

Treasury Tap Proposed To Speed Home Sales

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. WIDNALL. Mr. Speaker, there is currently pending before the House Banking and Currency Committee a new $1 billion spending program, the so-called emergency home ownership bill. An article in the Washington Post of February 6, 1960, rather aptly describes the proposal.

The article follows:

TREASURY TAP PROPOSED TO SPEED HOME SALES

(By Vincent J. Burke)

An alliance of strange political bedfellows is trying to persuade Congress to tap the Treasury for $1 billion to make it easier to sell new houses in the lower-price range.

The administration is opposed.

In the forefront of the fight for the legislation is the liberal wing of organized labor, the liberally oriented Americans for Democratic Action, and one segment of the usually conservative business community—the homebuilding industry.

During a weeklong hearing by a House banking subcommittee a parade of homebuilders, including a spokesman for a national association of pre-fab builders, endorsed the proposal. None opposed it.

The national association of home builders—in which there is a dispute over the merits of the plan—restricted itself to a policy statement adopted unanimously at its Chicago meeting which gave conditional endorsement to the proposal.

The association said it favored other measures to relieve the pinch on mortgage credit. In the absence of such measures, it said it would "as a last resort" favor tapping the Treasury for a large amount of mortgage funds.

The disputed plan would give the homebuilding industry a shot in the arm by applying the principles of the farm price support program to new FHA-insured and GI mortgages of $13,800 or less.

Government-backed mortgages today aren't worth 100 cents on the dollars because:

Interest rates are limited to 5¼ percent on mortgages guaranteed by the Veterans'

Administration and to 5¾ percent on FHA-insured mortgages.

The sharp rise in the cost of borrowing money during the past year enables lenders to get much higher interest on other loans, including conventional-type mortgages.

As a result, a lender today is reluctant to invest in a Government-backed mortgage, unless he can get it at a discount.

Discounts in many areas average 3 or 4 percent and in some areas range as high as 8 percent, which is equivalent to an additional 1 percent in mortgage interest. A $13,800 mortgage discounted at 8 percent sells for $12,716.

Under Government regulations, the builder is supposed to absorb the discount out of his profits.

Builders are complaining that the profits aren't that big and therefore many persons who would otherwise buy houses this year under the Government's low downpayment programs, won't get a chance to do so.

The disputed plan, advanced by the builders with strong labor backing, is designed to resolve this impasse. It would enable a lender to put up $13,800 for a $13,800 mortgage, secure in the knowledge that he could promptly resell the mortgage to the Federal National Mortgage Association for $13,800.

Regardless of the mortgage's market value, the agency would be required to pay 100 cents on the dollar for it. The excess over the actual market value would amount to a subsidy. Homebuilders contend it shouldn't be called that because the Treasury eventually will get the $1 billion back as the mortgages are paid off.

In any event, the plan would provide low downpayment financing for 70,000 to 80,000 homes.

Homebuilders last year built a near-record 1,341,000 privately financed homes. Everybody agrees housing starts will drop in 1960. Forecasts generally range from 1,100,000 to 1,200,000 new starts.

Backers of the emergency housing bill contend it is needed to cushion the impending cut in housing starts and avoid threat of a recession. Foes contend that inflation is the real danger and injection now of a Federal stimulant for housing would raise the price of houses.

Address by Hon. G. Mennen Williams

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the CONGRESSIONAL RECORD remarks of the distinguished Governor of the great State of Michigan, the Honorable G. Mennen Williams, to the Michigan State Chamber of Commerce in the Civic Center in Lansing, Mich., on December 9, 1959.

Those who want to hear a moderate, conservative expression of the situation in Michigan today owe it to themselves to read the remarks of our Governor.

The remarks follow:

EXCERPTS FROM ADDRESS BY GOV. G. MENNEN WILLIAMS, MICHIGAN STATE CHAMBER OF COMMERCE CIVIC CENTER, LANSING, MICH., DECEMBER 9, 1959

It is a very good thing, in my opinion, that you have determined to organize a Michigan State Chamber of Commerce. I offer you my fullest cooperation and the cooperation of the State government.

The State has been endeavoring, as you know, to do what it can through the department of economic development to encourage a broader and more soundly based economy. This agency has always had outstanding business leadership. But the Department is understaffed, undersupported, and its efforts have been sabotaged for political purposes. I hope we have seen the end of that sort of thing, and I welcome the chamber of commerce as a coworker in the cause to which the department of economic development is dedicated.

It is not quite clear to me what is expected of me here today. I read in some of the papers that there was going to be a tax debate between Senator Beadle and myself. One of the papers said Senator Beadle and I were going to "square off" for a battle.

Let me assure you that I am not going to debate, square off with, or battle my good friend, Senator Beadle. I have sincere respect for him. I feel sure that, if it had been left to him and me, this whole tax question could have been settled long ago, and the State would not be in the fix it is in today. But, unfortunately, neither he nor I is in personal control of the situation, and the last thing I want to do is to engage in any fruitless debate or recriminations.

Therefore, I propose to discuss with you three points: first, I want to try to put our tax problem in its historic perspective. Secondly, I would like to talk frankly with you about the subject of economy and its application to this question. And third, I want to speak briefly about Michigan's economic future. Then, as I understand the program, questions will be in order, and I will be happy to do my best to answer any that are addressed to me.

First, let us take a look at the historic background of our present tax problem.

Michigan's tax problem did not originate in the last couple of years. It has its beginnings in 1932 when the people of Michigan enacted the 15-mill limitation amendment on property tax levies. This amounted to a basic decision by the voters that future tax needs for education, in particular, would have to be met from State taxes, not from local taxes on property.

The 15-mill limitation put the cities and school districts into an inevitable financial squeeze. By 1945, their situation had become desperate. At the same time, the State was rolling in money. Wartime and postwar buying had ballooned sales tax revenues and shortage of manpower and materials had made it impossible to engage in the expansion of State buildings and services which everybody knew would be needed. The State treasury had a surplus of some $80 million, while the schools and cities were starving.

At least in part for the purpose of getting some of this embarrassing and tempting surplus out of sight, the legislature put $50 million of it aside for emergency aid to veterans. This is the origin of the famous Veterans Trust Fund which has been an issue in the tax controversy of the last year. And that is why I have never believed it was wrong for the State, in an hour of great need, to borrow that $50 million of sales tax money, contributed by all the taxpayers, and to use it temporarily with no loss to veterans in order to prevent the public disaster which has happened to us.

The establishment of the Veterans Trust Fund, removing $50 million of the State's surplus from the hungry hands of the schools and cities, did not quiet their demands. In 1946 the people, in response to those demands, adopted the sales tax diversion amendment. As later amended, this section of our Constitution requires the State to return to schools, municipalities, and townships five-sixths of the revenues the State collects from our basic tax, the sales tax.

The people, I believe, were justified in that decision. When repeal of the sales tax amendment was attempted in 1948, I opposed repeal and supported diversion. The money thus channeled from the State treasury to local schools, cities, and townships, has by and large been used for good and necessary purposes. Without that money, property taxes would have gone out of sight in the last 10 years.

The mistake was not in the people's decision to reclaim five-sixths of the sales tax; the mistake has been in the legislature's refusal to recognize that this money was irrevocably lost to the State treasury and would have to be replaced. In a 10-year period, sales tax diversion cost the State treasury more than $2,125 million. The average annual cost has been more than $210 million, and in the fiscal year 1958–59 the drain on the State treasury was $247 million.

It is obvious that, if the State had retained this money, there would be no State tax problem. It was also obvious from the beginning that the State would not be able to meet its own obligations unless a new tax program sufficient to offset all or most of this sales tax loss was adopted. Both my predecessors, Governor Kelly and the late Governor Sigler, warned that the State could not make ends meet unless the money drained away by the diversion amendment was somehow replaced with new income.

Yet for 11 years the legislature has persistently refused to levy the taxes necessary to replenish the State treasury. Some new taxes have been enacted, of course, or we would have gone broke as early as 1953. But the total annual yield of all new revenue measures adopted since 1949, exclusive of earmarked and special purpose taxes, is about $150 million. The difference between this figure and the current loss of nearly $250 million from sales tax diversion is very close to our deficit of $95.4 million as of June 30, 1959. That is no coincidence.

This is the real origin of Michigan's financial crisis. It is a lot easier and simpler, I know, to lay our troubles at the doorstep of some individual. It is a lot better politics to say, as the Wall Street Journal recently said, that Michigan is in trouble because Governor Williams spent all its money on wild welfare schemes. That may be good politics, but it results in mighty bad government, as we have all seen in the last 11 months.

Responsible people in both political parties recognize the situation as I have described it. Mr. Bagwell, the titular head of the Republican Party, has not agreed with me on many things, as you all know. But we did agree last winter that Michigan needed a personal and corporate income tax, and we did agree again this fall that a so-called payroll tax would be the best solution at the moment. Unfortunately, the power in this matter does not lie in the hands of responsible people in either political party. Since last May, when the Republican Senators broke a commitment to release the Veterans Trust Fund reserve, and thus forced a payless payday upon us, irresponsibility has been in the saddle.

Where do we stand today?

In simple terms, we face another year of deficit financing, delay in payment of bills costing us about $5,000 per day in discounts alone, mounting deficits, and continued cash crisis. The dominant majority in the State legislature appears to have made its decision. It will not make any adequate provision for the support of State services, the payment of overdue bills, and the retirement of the deficit, during the coming year. A program of nuisance taxes, to produce about one-third of our needs, has been adopted by the Senate, and is under consideration by the House. This irresponsible

program cannot be sponsored but will not be blocked by Democrats, and it will not be vetoed by the Governor if it is passed. We will take whatever revenues the legislature will give us, and do the best we can to keep the State's head above water until we get some responsible action.

The taxes now under consideration in the legislature are, of course, entirely repugnant to me. But the alternative to accepting them is financial chaos. Even a miserable tax program like the one we appear to be about to get is better, under present circumstances, than no tax program at all. The Republican Senators who are calling the turns have served notice they will not adopt anything else—so if the nuisance tax program fails it probably means no tax program until next spring. In either case, the decision of the Senators is for continued insolvency.

Now let us turn briefly to the subject of so-called economy. This follows naturally from what I have been saying about taxes, because many citizens mistakenly suppose that economy is an alternative to a tax program. I am often criticized for not giving more lip-service to the cause of economy, and I concede that it might be better public relations on my part to pose as the great saver, sitting on the lid of the budget, than to recognize the facts of our financial life as frankly as I have.

The facts which I have frankly recognized and perhaps too frankly promulgated are these:

First, the government of Michigan in the last 10 years has practiced economy effectively and constantly. There is always room for improvement, and we are constantly trying to improve the frugality and efficiency of the State's operations. But in comparison with other States, we show up very well in the practice of economy with the public funds.

Secondly, there is no way in which savings, desirable as they are in themselves, can be made in sufficient amounts to meet our massive financial problem. Our operations are already too tight to allow any room for sizable cutbacks without actually suspending essential government activities. Little cutbacks damage efficiency without making a dent in the deficit.

These two facts can be demonstrated to anyone who is willing to listen. For example, let us ask whether Michigan's government is a wastrel government as some of our critics have claimed. Look at the facts. The percentage increase in State government general expenditures in the last 10 years in Michigan was 97.7 percent. Does that figure cause you to gasp in dismay? Well, then, look at some of the other States. California's expenditures in the same period increased 222.8 percent under a long succession of Republican Governors. Ohio increased its costs 202.3 percent, Massachusetts 200.6 percent, Indiana 153.7 percent, and so on. The truth is that, under this alleged regime of reckless spending here in Michigan, our costs in the last 10 years increased less percentagewise than the costs of 46 other States. These figures are from the U.S. Census Bureau.

Is Michigan's public payroll overloaded? Again look at the facts. In 1957, the last year for which we have complete figures, the State of Michigan had 4 employees for each thousand of population, as compared with an average of 5.4 employees per thousand in the 48 States as a whole.

Is Michigan a debt-ridden State? Look at the Census Bureau figures again. In gross long-term debt outstanding, Michigan ranks 25th among the States of the Union.

Is Michigan a welfare State? In February 1959 Census Bureau figures show Michigan 34th among the States on a per capita basis in combined State and local expenditures for public welfare purposes.

Is Michigan a high-tax State? Most of you, I venture, would say it is. But the Census Bureau, in its report of last February, ranked Michigan 31st among the States in relationship of State and local taxes to personal income, and 12th among the States in per capita State and local taxes, regardless of income. The dollar figures are these: Michigan State and local taxes take $83.54 per thousand dollars of personal income, compared with a median of $88.51 for 48 States and the District of Columbia.

Have Michigan's budgets been extravagant? Let's look at the record. In the last 10 years the State agencies requested appropriations totaling $6.6 billion. I reduced these requests to recommendations which I made to the legislature totaling $5.8 billion, an average cut of 12 percent. The legislature actually appropriated $5.77 billion, a further cut of less than 1 percent from the total of my recommendations.

When a Democratic Governor and a Republican legislature come within 1 percent of agreement on State expenditures, I think it indicates that there was an an effective effort to hold those expenditures to the necessary minimum.

Now, it seems to me that we should be telling this story to the Nation, rather than allowing the reputation of our State to be destroyed by half-truths and falsehoods. Let me cite, as an example, a Wall Street Journal story praising the State of North Carolina for establishing a department of administration and saving 2 percent of the appropriations made over a 2-year period by their legislature. That's fine, and I salute North Carolina for that achievement. But the fact is that North Carolina's Department of Administration has patterned after the Michigan Department of Administration, established 12 years ago. And the further fact is that Michigan, over a 10-year period, has saved nearly 2.4 percent of the appropriations made by the legislature and turned the money back to the treasury.

North Carolina gets praise for saving $11 million in 2 years. Michigan has saved $75 million over 10 years and gets held up before the Nation as a spendthrift State that finally went broke. It seems to me this is a fertile field for a State chamber of commerce to work in. Maybe the Wall Street Journal will listen to you, where it won't listen to me.

Michigan's record for economy and efficiency has been grossly underpublicized. A few of the things we have done to save money are newsworthy. For example, the records center we established in 1951 is saving the State about $250,000 a year in space for storage of inactive but essential State records. If these records were to be stored in convential filing cabinets, they would completely fill five of the six floors of the Lewis Cass State office building.

But for every item of this kind there are literally hundreds of undramatic examples of economy nobody ever hears about. More than $4,000 a month is being saved by using existing State-owned gas pumps to service State-owned cars, instead of buying gas at commercial stations. A change in the type of paper used for official stationery is saving $10,000 a year. Eight hundred dollars has been saved on a new process for issuing cosmetology licenses. In 5 years about $200,000 has been saved on paint for highway markings. There are scores of examples of this kind.

These things are being done all the time and the State's record for zealously seeking out economical methods of operation can be matched, I believe, with the record of any private business firm.

Let me point here to a fact which may not have occurred to some of you. Democratic government, by its nature, has no built-in yardstick of profit and loss to determine its efficiency. Therefore, government can never be judged in the same balance by which private business is judged. Highways make no profits, mental hospitals make no profits, universities make no profits.

The test of a business is whether it gains or loses. If it loses money, it should fold up. The test of a mental hospital is whether it cares for all who need its care, and whether it has sufficient staff to get patients cured and out of its walls, rather than just keeping them in. To talk of holding the costs of a private business below its income makes good sense. To talk of holding Government costs below existing income frequently makes no sense, because the function of government is not to maintain a favorable margin between income and outgo, but to serve the needs of the people. If the income is not sufficient to meet those needs, whether they be roads, hospitals, schools, sewers, atomic submarines or ballistic missiles, the economic thing to do is to increase government's income, not to reduce its expenditures.

By inversion, this is one of the strongest arguments against socialism. If government owns all business, the yardstick of profit disappears, and the economy either becomes uneconomic, or it does violence to human rights in the effort to be economic. The Soviet system will work—but it will work either with immense waste which comes out of the hides of the people, or with massive coercion and deprivation which destroys the freedom of the people. Let us try to keep these distinctions between the objectives of government and private business clear in our minds, and we will have fewer groundless disagreements and semantic arguments.

Now let me address myself to the second point I mentioned—the impossibility of making sufficient reductions in expenditures to meet our financial problem. The reason for this is simple: the bulk of our costs are in areas which cannot be cut—mental hospitals, roads, welfare and education. Where cuts in services could be made, as for example in reduction of State police or regulatory agencies, the savings would be insignificant as compared with the deficit.

In 1957–58 we spent 79.6 percent of all State purpose expenditures for highways, education, welfare, and mental health. Not one of these can be cut. Highway funds, of course, are constitutionally earmarked and cannot be used for any other purpose. Welfare costs are determined by economic conditions. Cutting education or mental health would mean closing a college or university or shutting down a mental hospital if any significant savings were to be achieved.

If we canceled our entire budget for conservation, recreation and agriculture in 1957–58, we would have saved only $22 million, less than one-fourth of our present deficit. If we had wiped out the State police and the prison system, we would have saved $43 million, about half the total of our present pile of unpaid bills. Our whole general government cost—the executive, legislature, secretary of State, treasury, department of administration, and so on—cost a little over $31 million, and if we fired 20 percent of all the employees in these agencies we would save only about $6 million against a $100 million deficit.

You can add it any way you want to, there is no fat in the State's budget which would be thick enough to offset the shortage of income. I will give any one of you the facts about where State money goes and how much goes to each purpose, and challenge you to find a way to make any reduction significant to our present problem, without wrecking some essential activity of the government.

One more point: some people ask this question—if the population of Michigan is going up so rapidly, and thus increasing costs, why don't our revenues from existing

taxes go up accordingly, and thus meet our costs? That might well have happened if our population increase was entirely the result of adult immigration. But the trouble is that so many of our new citizens are children, who ordinarily do not pay taxes. In the same approximate period when our population was increasing overall by about 21 percent, the number of Michigan citizens under the age of 20 increased by 42 percent. Each year the number of children in our schools increases by 65,000 to 70,000. The added cost of educating these children far exceeds any added tax revenues which may result from adding them to the Michigan community.

Perhaps I have belabored this subject of cost cutting because I feel that many of you are deeply interested in it. Let me assure you that economy will continue to be the objective of my administration and, equally, that I will continue to speak the truth about this subject—that costs simply cannot be cut sufficiently to meet our financial problem.

Let me conclude by pointing to some of the brighter aspects of Michigan's picture. It is not all dark, by any means.

We have two basic problems. One is this State financial deadlock and the other is the failure of the automobile industry, since 1954, to provide the number of jobs it provided in years past.

The first problem is a political one. There is no reason for our troubles of the last year except the refusal of a legislative majority to face up to hard decisions. This can and will be corrected. No matter how long the State Senate may stall in its effort to operate without money, the time will come when it, or a succeeding Senate, must face the problem and solve it.

As you know, it has been and still is my conviction that the best solution would be a corporate and personal income tax. This program, developed after an 18-month study by a citizens' committee working with a legislative committee, would have solved our problem on a permanent basis. It would, also, have permitted substantial tax relief for many segments of business from the present business activities tax, the corporation franchise tax and from at least a portion of the local personal property tax.

In this connection, I would urge that each of you read an article on State taxes in the December issue of Reader's Digest, entitled "Watch the Taxes Closest to Home." This is a condensation of a longer study published in Fortune magazine. The authors, two eminent tax authorities, say flatly that the States must come to the enactment of personal and corporate income taxes in addition to sales taxes.

That, I believe, is what Michigan will ultimately come to, and the only question is how much damage we must suffer before we get a legislature with the courage to face the issue.

The second major problem of Michigan is a complex economic one. It results from three main factors—the loss of defense contracts because of the switch to missiles, electronic devices, and aircraft; the natural and inevitable decentralization of automobile manufacture; and the advent of automation and other new technologies which reduce the need for unskilled labor. These things are not in themselves bad. All we need to do is to recognize the economic changes involved and take intelligent action to turn them to the good of all our people. With effort and planning, we can build new industries to replace the losses we have suffered through economic change.

Michigan has every reason to look with confidence to the future. We have the natural resources, the people, the location, the know-how for a new period of prosperity and progress. It is the literal truth that investments, private or public, in Michigan's future cannot lose. The United States News recently projected population changes and concluded that by the year 2000—and that is only 40 years away—there will be 9 million people living in the Detroit metropolitan area, and nearly 20 million in Michigan.

One does not need to be a professor of economics to realize what that means in terms of the service industries, growth of real estate values, the expansion of opportunity. And nobody needs to be a prophet to realize the immense problems this growth will bring with it. We cannot face a future of these proportions with a little, narrow-minded, selfish 19th century philosophy. We must bring to that future the same breadth of vision that inspired Henry Ford when he instituted the $5 day, the same confidence that changed this State from a community of farms and wagon factories to the world's greatest industrial complex.

We cannot face this future without the active and civic-minded leadership of our businessmen. It is my sincere hope that we will be able to look back 10 years from now and say that this kind of leadership really began to take form and meaning on the 9th of December 1959.

Pittston's Saddest Sunday

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which was featured in the Wilkes-Barre Sunday Independent of June 28, 1959, written by Mr. James J. Corrigan, of Wilkes-Barre, who has made a large number of impressive contributions to the history of my district through his research and writings of the important events that have transpired in that section of Pennsylvania over the years:

SIXTY-THREE YEARS AGO TODAY—PITTSTON'S SADDEST SUNDAY—58 MEN NEVER FINISHED SHIFT IN THE TWIN SHAFT—NOT ONE OF TRAPPED ESCAPED AND NO BODY WAS EVER RECOVERED

(By James J. Corrigan)

Exactly 63 years ago today, on Sunday, June 28, 1896, occurred the anthracite mining industry's third greatest underground tragedy—the twin shaft disaster at Upper Pittston, in a section known as Pittston Junction.

At approximately 3 o'clock on that tragic Sunday morning, an extensive area of overlying strata in the twin shaft workings of the Newton Coal Mining Co. unexpectedly subsided and entombed 58 workers who were engaged in setting up timber to support the roof and in removing a pump. Not one of the trapped workers escaped, nor was any of the bodies ever recovered.

To that date, 1896, only one more tragic anthracite mining disaster had occurred—the Avondale catastrophe at Plymouth in 1869 when the lives of 110 workers literally were snuffed out by asphyxiation as the result of a burning mine shaft, the sole outlet to the surface for the doomed.

Anthracite's second of its only too numerous calamities happened 40 years ago this month. On June 5, 1919, an explosion of powder and dynamite in a train of cars carrying men and boys to work at the Baltimore Tunnel, east end, cost the lives of 92 men.

EVERYTHING WAS QUIET

At the twin shaft, a fissure was discovered above the mine workings in February, 1896, 4 months prior to the tragedy, the break allowing water to enter the mine. But, according to a report of H. McDonald, State anthracite mine inspector for the district, "not in sufficient quantity to create any anxiety or apprehension of danger." After several inspections of the mine, he said: "I did not see or hear any unusual disturbance of the overlying strata or the pillars. Everything was quiet."

Notwithstanding Inspector McDonald's close scrutiny of the mine, he was aroused about 4 o'clock on the fatal Sunday morning to be told that an explosion had occurred at the twin shaft. On his hurried arrival at the shaft, he was surprised to learn that, not an explosion, but a large cave-in, had occurred. McDonald still further was astonished on being informed that a large gang of men had been at work all night (Saturday and Sunday morning) setting up timber in an effort to halt a "squeeze," or a general settling down of the rock overlying a mine. This was a foreboding of the impending tragedy.

As the Sabbath dawn lengthened, news of the cave-in and entombment spread rapidly in the Greater Pittston area. A scene typical of all mine disasters unfolded. Kin of the 58 entombed, sobbing, despairing, yet hoping for a miracle, clung to the disaster site with uncontrollable grief; returning to their empty homes only after stark awareness that their loved ones were doomed in their underground place of livelihood.

This is the substance of the State mine inspector's report on the twin shaft disaster at Pittston Junction:

RESCUE WAS IMPOSSIBLE

It would be impossible to give an idea adequately of the danger that attended the work of attempted recovery of the workers alive, or their bodies. The pillars were crushing within 50 feet of the bottom of the shaft. It was impossible to get near the workers, owing to the crushing of the roof all around them.

Work in the slope was pushed vigorously day and night until July 29. The workmen then refused to continue work as their danger, of roof collapsing, was continually increasing, as the timbers were constantly settling and there was grave danger that the rock above the timbers might give way, crushing the timbers and closing the opening, thus making it impossible for the rescuers to escape.

Officials of the Newton Coal Mining Co. had deemed it advisable to assemble for conference at Pittston on July 24 all of the mine inspectors in the anthracite region as well as all of the superintendents of the neighboring coal companies, to consider the feasibility of continuing rescue attempt operations. A notable assembly of anthracite mining experts conferred. Following the conference it was announced:

"After a thorough examination of the mines and maps of the property mined from the Twin Shaft, the unanimous expression of opinion by this committee is that they were surprised at the progress made, taking into consideration the condition of the mines, the continuance of the squeeze, the presence of an enormous quantity of gas, and the fact that no explosives could be used in prosecuting the work. Their judgment is that everything possible had been done, and is being done, to reach the bodies of the entombed men.

WILLING TO SPEND MONEY

"The officials of the Newton Coal Mining Co. stated that they were desirous of receiv-

ing from the committee assembled any suggestions concerning the matter, and expressed a willingness to expend any amount of money necessary to recover the bodies.

"Deep regret was expressed by all present at the apparent impossibility of ever finding the bodies."

On July 1, Gov. Daniel H. Hastings had appointed Edward Roderick, William Stein and Edward Brennan, State anthracite mine inspectors, as a commission to investigate the Twin Shaft tragedy of June 28.

This official commission convened at Pittston on July 8, concluded taking testimony on July 17 and submitted its report to Governor Hastings on September 24. After lengthily going into the cause of the disaster—a squeeze, as has been shown—the commission recommended certain safety legislation for enactment into the State's coal mining laws.

An efficient Twin Shaft Relief Fund hastily was organized and chartered. Approximately $80,000 contributed to the fund from all over the Nation was distributed among about 150 widows, orphans and other dependents of Twin Shaft victims.

First Kindergarten Established in Watertown, Wis., by Mrs. Carl Schurz Over 100 Years Ago

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. KASTENMEIER. Mr. Speaker, the people of Wisconsin, and particularly those of Watertown, my home town, point with considerable pride to the fact that the first kindergarten to be established in the United States was opened in Watertown in 1856 by Mrs. Carl Schurz, wife of the German revolutionary. Any attempt to alter this fact or to forget it is viewed as heresy by my Wisconsin compatriots. In order to nip in the bud any such heretical views which may have outrun the following column in the Milwaukee Journal on January 24, 1960, I am placing it in the RECORD for your attention:

ON WISCONSIN—SHEBOYGAN, BOSTON ERR—FIRST KINDERGARTEN IN UNITED STATES OUT HERE

Here is something that comes close to treason in Wisconsin. A leading and respected journal—the Sheboygan Press—has sought to deprive our fair State of one of its real claims to everlasting glory.

"The year 1960," the Press has proclaimed editorially, "marks the 100th anniversary of the first kindergarten established in the United States. The kindergarten was opened in Boston in 1860 by Elizabeth Peabody."

Miss Peabody did establish a kindergarten very early in Boston. One authority gives the date as 1867 rather than 1860. She was responsible for much of the original drive to interest others, to improve kindergarten practices, to get new kindergartens started.

Every loyal and learned son and daughter of Wisconsin, however, must know that the very first kindergarten in the United States was opened at Watertown by Mrs. Carl Schurz, wife of the German revolutionary, American soldier, and statesman. The year was 1856.

It didn't last long, for Carl Schurz and his wife left Watertown soon after and by 1859 were in Boston. There Mrs. Schurz met Miss Peabody and told her about kindergartens in Germany and Watertown, Wis. Miss Peabody was so impressed by this and by Mrs. Schurz's enthusiasm—plus the good behavior of a Schurz child trained in the Schurz kindergarten—that she decided to start a "children's garden" herself.

So let Boston, if it wishes, celebrate 1860 as the centenary of the "first" American kindergarten founded by Miss Peabody. We are smug in our knowledge that the history books and Americana encyclopedia will uphold Wisconsin's prior claim on behalf of Mrs. Schurz.

Politics and Education

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DAGUE. Mr. Speaker, the so-called aid to education bill which has just passed the other legislative body has been branded by the Philadelphia Inquirer as a "political monstrosity" and I think even the proponents of Federal aid must recognize it as simply a political device to put the administration in a bad light.

As one who has consistently opposed educational aid out of the Federal Treasury I believe that I have been reflecting the sentiments of the majority of my constituents. To me the idea of tapping the Federal till at a time when we are staggering under a national debt approaching $300 billion is the sheerest demagoguery since quite obviously any outlay for additional Federal aid would have to be with borrowed money. And to assume that such school aid would not have to be ultimately extracted from the pockets of local taxpayers is to ignore a basic fact just as it ignores the fact that Pennsylvania will always pay into such a program more than she will receive as grants-in-aid.

Returning to the Inquirer editorial, we are struck with this analysis since it coincides so exactly with our own thinking:

The Democratic bill that has emerged from the Senate is not only exorbitant in the amount of proposed expenditures but nonsensical in the suggested method for distributing the funds.

In the first year dollars would be handed out in reckless handfuls without matching funds required by recipient States and with virtually no restrictions on the use of the money. It could even be spent for teachers' salaries—an open invitation to communities which are shirking their duty in this respect to be even more neglectful.

And then the Inquirer goes on to identify the entire maneuver as simply the rawest partisan politics in these words:

The school aid farce enacted on the Senate floor—with Democratic cast, script and direction—is unfortunately only the first of many such political productions intended to embarrass the Eisenhower administration and bewilder the voters in this national election year. There will be equally ridiculous bills on housing, agriculture and in other fields.

Thus warned, those of us who have a concern for the financial solvency of the Nation must be on our guard and stand undismayed in the face of the attacks that will be leveled at us by those who compose the Federal aid to education lobby. And in the ensuing battle it will be no small comfort to know that organizations like the National Chamber of Commerce and the Farm Bureau Federation will be lending their assistance toward stemming these raids on the Treasury.

The Inquirer editorial, appearing in its issue of February 6, 1960, is included as a part of these remarks:

POLITICAL SABOTAGE OF SCHOOL AID

The political monstrosity that was passed by the Senate this week as a so-called school aid bill gives aid to no one and obstructs the enactment of bona fide school legislation.

This bill was pushed to Senate passage by the Democratic majority for purposes not even remotely associated with education.

The object is to confuse the school issue and make the Eisenhower administration appear opposed to Federal aid.

The strategy is to send to the White House an aid-to-education bill so obnoxious that President Eisenhower will veto it for the good of the country.

The effect, the Democrats hope, will be to identify the Republican administration in the minds of the voters as a foe of better education when, in fact, Mr. Eisenhower has taken the lead in advocating a sound, constructive school aid program.

Expenditure of $1,834 million in the next 2 years is proposed in the Senate bill, more than three times the amount sought by the President for school aid purposes in the same period of time. It's a wonder the Democrats didn't suggest a spending program of $5 billion, or maybe $10 billion. As long as they are dealing in absurdities they may as well do a complete job of it.

Money is needed, desperately, to expand school facilities and improve education standards. If Democrats would join Republicans in support of a bipartisan Federal aid program reasonable in cost and scope, real progress could be made toward correcting deficiencies in public school systems that do a grave injustice to children and endanger the national security.

The Democratic bill that has emerged from the Senate is not only exorbitant in the amount of proposed expenditure but nonsensical in the suggested method for distributing the funds.

In the first year dollars would be handed out in reckless handfuls without matching funds required by recipient States and with virtually no restrictions on the use of the money. It could even be spent for teachers' salaries, an open invitation to communities which are shirking their duty in this respect to be even more neglectful.

A sound school aid program should be an incentive for States and communities to face up to their responsibilities in the field of public education, with Federal assistance channeled principally to impoverished areas where assistance is most needed.

The school aid farce enacted on the Senate floor—with Democratic cast, script, and direction—is unfortunately only the first of many such political productions intended to embarrass the Eisenhower administration and bewilder the voters in this national election year. There will be equally ridiculous

bills on housing, agriculture, and in other fields.

We doubt very much that the political hocus-pocus by the Democrats will fool many voters. The cloud of partisanship around the school aid bill passed by the Senate is readily discernible.

The tragedy lies in this reckless disregard of the country's education needs by Democratic Party leaders who evidently are more interested in acquiring political advantage for themselves than better schools for the youngsters of America.

This Is No Time To Give Away Our Rights in the Canal Zone

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following thoughtful editorial on the Panama Canal crisis published in the January 25, 1960, issue of the St. Petersburg (Fla.) Independent, as follows:

THIS IS NO TIME TO GIVE AWAY OUR RIGHTS IN THE CANAL ZONE

We are in for more trouble in the vital Panama Canal area.

Dictator Nasser of Egypt who found us ready to help when he grabbed the Suez Canal is getting ready to help Panama grab our canal in payment for our stupidity.

Nasser is opening a consulate in Panama, preparatory to exchanging ambassadors with the money-hungry leaders of the Panamanian Republic. He will send canal experts, undercover agents and agitators and other veterans of Egypt's successful drive to take the Suez Canal.

This effort to take the canal from Uncle Sam ties in with Castro's efforts to force us out of our naval base at Guantanamo Bay which guards our interests in the Caribbean, including the vital canal.

Now comes a report to a Senate subcommittee of a university study group which recommends that we turn the canal over to hemisphere council composed of 20 American republics including Castro's Cuba.

Unless Uncle Sam is getting a bad case of softening of the brain, this Nation which built the canal and has every legal right to it will keep it and run it in the future as in the past. And the same goes for the vital naval base at Guantanamo Bay.

If the administration up in Washington decides to give the canal away to keep the "peace" during the 1960 election, as it decided the British should give away the important Suez to keep the peace during the 1956 election, this Nation is in for rough sledding.

Already we have learned from Washington that maybe we should allow the Panamanian flag to fly in the Canal Zone and grant additional money to the republic to keep them happy and preserve the great togetherness. Such an action would be bowing to blackmail tactics and this would bring more such antics as the disorders which occurred recently in Panama.

There is just one answer to the problems of the Canal Zone and Guantanamo Bay and that is to enforce our rights and stand by our guns. We should tell the Communist stooges in Panama and in Cuba that the only way to get these two vital installations is to take them by force of arms and that Uncle Sam will be there to see that they learn a lesson, once and for all.

In its relative youth America dealt firmly with the Barbary pirates who sought to take that which did not belong to them. Isn't it time we started using the same attitude toward the pirates of today, be they Castros or Nassers?

The least we can do is to stand up and hold on to what is rightfully ours. We cannot give in to blackmail or blackmail will destroy us.

We like the attitude and the concern shown by St. Petersburg Post No. 14, American Legion, which has started to demonstrate some grassroots concern about the Panama Canal.

In a recent letter to Vice President NIXON the local post said:

"We believe that if we permit the Panamanian Government to fly its flag in this very strategic area (Canal Zone) it would be a sign of weakness, that it would lead to unwarranted demands on the part of Communists in Panama, and that ultimately a demand for Panamanian ownership would be made, just as Nasser demanded in the case of the Suez Canal."

The reply from NIXON gave the post no definite promises but it did confirm the idea of allowing the Panamanian flag to fly in Canal Zone "is being considered in light of treaty situation."

The treaty situation is exactly the same now that it has always been. The treaty gives us all the rights of a sovereign in the area, and if we are wise, we will preserve those rights. This is no time to start giving away rights and privileges, even in an election year when expedience might cause us to pay dearly for a temporary mess of friendship pottage.

Safety Record of MATS

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Enviable Safety Record" which appeared in the News-Democrat of Belleville, Ill., on Wednesday, February 3, 1960:

ENVIABLE SAFETY RECORD

So alarming is the crash rash that bedevils America's commercial aviation industry that Congress has turned attention to the waning safety.

Last year 294 persons died in crashes of scheduled U.S. airlines, almost 50 percent more than the 1958 record. And 1960, now only a month underway, bids fair to outstrip the dismal 1959 showing if the deterioration continues.

In startling contrast is the perfect year just wound up by the globe-girdling Military Air Transport Service: Not one fatality, not even one injury, in the 240 million passenger miles flown during 1959.

This is the outstanding achievement of our national defense strategic airlift.

It betokens a lot of know-how, especially inasmuch as MATS is handicapped by an over-age and obsolescent air fleet, sorely needful of replacement by swift modern jet transports.

Establishment of National Goals Commission

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. WILEY. Mr. President, the establishment of a National Goals Commission—as proposed by President Eisenhower in the 1959 state of the Union message—represents, I believe, a constructive effort toward promoting domestic progress and creating ever-improved national and international policies for the future.

In these fast-changing times, the Nation needs constantly to keep its eye on targets ahead, to crystallize objectives, and to streamline efforts to channel brainpower, manpower, and resources toward achieving essential goals.

The field is broad and complex. The major objectives can be attained only by concerted action of citizens, private enterprise, and local, State, and National Governments. Maximum progress can be achieved only by careful long-range planning.

The years ahead will be filled with problems, opportunities, and challenges.

Our Nation and its system of Government and, indeed, the whole free world are facing a threat to their survival from the international Communist conspiracy.

Our Nation will experience tremendous growth and expansion. It is estimated that by 1970, for example, there will be 33 million more Americans—14 million more workers, 13 million more in school—totaling 210 million. The increased population will require expansion of business and industry, more goods and services, and the development of domestic and international policies to deal with the problems arising in a shrunken world. All of these and other developments require the crystallization of long-range national goals, in order to help meet the growing needs in the years ahead.

The National Goals Commission has, I believe, one of the great opportunities, as well as responsibilities, to make a real contribution to our national effort to build a better, brighter future for our people.

Yesterday's New York Times contains an article which lists the splendid group of well-qualified persons appointed by President Eisenhower to serve on the National Goals Commission. Today, the Times has published an editorial, "A Call for Greatness" reflecting upon some of the challenges which will be faced by the Commission.

Because I believe that the establishment of the Commission represents a constructive step toward laying a sounder foundation for an ever-greater future for our country, I ask unanimous consent that the article and the editorial be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 7, 1960]

PRESIDENT FILLS HIS "GOALS" PANEL—NAMES NINE MEMBERS AND CALLS FOR PROGRAM TO MEET THE "GREAT ISSUES" OF ERA

(By E. W. Kenworthy)

WASHINGTON, February 6.—President Eisenhower gave his Commission on National Goals its franchise today.

In doing so, he called upon the Commission to "identify the great issues of our generation and describe our objectives in these various areas."

In effect, the President also told the 11-man Commission that it was to pursue its inquiry and arrive at its conclusions without reference to his own views or those held by the heads of executive departments of the Government.

In a letter to Dr. Henry M. Wriston, the Commission's Chairman, the President said that he hoped the panel would "develop a broad outline of coordinated national policies and programs for the next decade and longer."

"I should like to emphasize my desire," the President went on, "that the inquiry be conducted free of any direct connection with me or other portions of the Federal Government."

In making public this letter, the President also announced that the membership of the panel had been completed.

Three days ago the President named Dr. Wriston as Chairman and Frank Pace, Jr., as Vice Chairman. Dr. Wriston is president emeritus of Brown University. Mr. Pace, who served under former President Harry S. Truman as Secretary of the Army and Director of the Budget, is now chairman of the General Dynamics Corp.

The nine other members are:

Dr. James R. Killian Jr., chairman of Massachusetts Institute of Technology; Alfred M. Gruenther, president of the American Red Cross; Clark Kerr, president of the University of California; Learned Hand of New York, retired judge of the U.S. Court of Appeals for the Second Circuit; Edwin D. Canham, editor in chief of the Christian Science Monitor and president of the U.S. Chamber of Commerce.

Also, Colgate W. Darden, Jr., former president of the University of Virginia and former Governor of Virginia; James B. Conant, former president of Harvard and former Ambassador to West Germany; George Meany, president of the AFL-CIO; Crawford H. Greenwalt, president of E. I. du Pont de Nemours & Co., Inc.

PLAN ANNOUNCED IN 1959

President Eisenhower announced his intention of creating the National Goals Commission in his state of the Union Message in January 1959. He put Robert E. Merriam, one of his assistants, in charge of finding a chairman and members and also the private foundations to provide the financing.

The 13 months' delay has been occasioned by the difficulties that Mr. Merriam encountered in carrying out both parts of his assignment.

It was only a week ago that the Commission membership was completed.

The failure to get financial support from private foundations, according to officials in the foundations, was attributable to the fact that Mr. Merriam was unable to supply a prospectus that satisfied the foundations on what the committee was expected to do.

The White House announcement today did not mention financing. However, it was understood that the Alfred P. Sloan Foundation would put up part of the money; there were also reports, which could not be confirmed, that the Ford Foundation had agreed to pay part of the cost.

Mrs. Anne W. Wheaton, associate White House Press Secretary, said that the Commission would announce its Executive Director, William P. Bundy, a son-in-law of former Secretary of State Dean Acheson, is expected to get the post.

In a memorandum to the Commission, the President also said:

"It is no wonder that a Nation so recently thrust into a position of world leadership is sometimes bewildered by its new role."

In this situation, the President declared, "the Commission has the opportunity to sound a call for greatness to a resolute people, in the best tradition of our Founding Fathers."

[From the New York Times, Feb. 8, 1960]

A CALL FOR GREATNESS

In what could be a historic step in the development of our free institutions, President Eisenhower has named a distinguished group of private citizens, under Dr. Henry M. Wriston's leadership, to a Commission on National Goals. The President has defined the group's task as that of sounding "a call for greatness to a resolute people."

Greatness for a nation like ours in this era of unprecedented rapidity of change and unprecedented challenges to freedom must be composed of many elements. In terms of our basic values the search for greatness must be in important part the search for greater liberty and greater dignity of every individual in our society.

In setting goals for a still greater future America the Wriston Commission will have to point the way to elimination of those barriers which still prevent large numbers of our fellow citizens from realizing their full potentialities. The elimination of discrimination based on color, on race, on religion, on national origin, or even on sex must obviously be one of our prime aims. And high on our priority list must certainly also be a radical improvement in the quality and quantity of the education available to our people, for education in a democracy is the magic key which opens the door of opportunity for maximum development of each individual's capabilities.

Since the economic power of our Nation is central in determining what we can do as a nation and how well we can live as individuals, the Wriston Commission will have to pay close attention to our possibilities in this area. Fortunately, a good start has been made in this field by the earlier work of the Rockefeller Brothers Fund. Clearly something like a 4- or 5-percent average annual gain in our total output is needed if we are to meet the problem posed by our rapidly growing population, by the requirements of defense and of financing the needed rapid expansion of scientific research, and by our moral obligations to the hundreds of millions of our fellow human beings in underdeveloped nations that are now beginning the industrialization process. And to get this rapid economic growth we need major gains in productivity and substantial reductions in production costs, essential improvements in our economy which are required also to meet the challenge of ever-increasing competition on world markets.

Even this brief résumé of some of the key areas to which the Wriston Commission must devote its attention makes clear how complex are the problems it faces. But even more complex than setting American goals for greatness is the task of implementing those goals. The Wriston Commission has not, and we may be sure does not want, the power to order our people to do anything. Obviously what President Eisenhower has in mind is the belief that if the call to greatness is sounded by such a distinguished group our democratic political system has the potentialities for responding to the call.

To lay down the goals for a better and still greater America is to give our Nation a sense of purpose and a sense of direction which enlightened and vigorous political leadership can then use to mobilize our people toward the attainment of those goals.

Stored Foodstuffs and Fallout

EXTENSION OF REMARKS
OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. MATTHEWS. Mr. Speaker, I know that many of us are very much concerned about the possibility of adequate foodstuffs in the event of a nuclear attack upon this country. Such an attack, however horrible in its comprehension, might occur, and the article which follows, by Dr. J. R. Neller of the University of Florida Agricultural Experiment Station in Gainesville, Fla., gives us some very interesting information about this problem.

I noted with a great deal of interest that Dr. Neller recommends that the present levels of stored foodstuffs should be carefully maintained. This statement emphasizes the feeling shared by many of my colleagues that our surplus food is a blessing rather than a curse. I hope that a study, as recommended by Dr. Neller, can be made as a possible means for improving the storage of our foodstuff against fallout contamination.

The complete article by Dr. Neller follows:

[From Science, Jan. 1, 1960]

STORED FOODSTUFFS AND FALLOUT

(By J. R. Neller)

Because of the high concentration of radioactive fallout in bombed areas after a nuclear attack, soils would be contaminated and crops could not be grown for a considerable period. The effects of this critical period of possible starvation could be mitigated by utilization of so-called surplus grains, milk, and egg products from storage. The shelters that house the foodstuffs would keep them from being contaminated by strontium 90 and other long-lived radioisotopes. These storage structures could be decontaminated far more easily and more quickly than the soils on which crops would have to be grown.

Much attention is being given to the problem of the accumulation of large supplies of surplus grains, milk, and egg products in storage in this country, and to the cost of maintaining the proper storage conditions to insure against spoilage. Granted that these costs are high, such surpluses nevertheless constitute the cheapest kind of insurance against possible starvation periods that would follow an atomic holocaust. In fact, protective storage of foodstuffs seems to be the only means of alleviating, at least to some extent, critical food shortages in contaminated regions.

The normal production of foodstuffs would probably be suddenly and completely cut off in extensive areas beneath bomb bursts. Data are at hand that show how long the present stored surpluses would supply the population. These data show that they would be consumed in a comparatively short time, even when rationed at a bare maintenance level.

For these reasons the present levels of stored foodstuffs should be carefully main-

tained. More than that, a study should be made of possible means of improving storage against fallout contamination. In addition, consideration should be given to the advisability of increasing the stored amounts of some foodstuffs and possibly decreasing others. Maintaining reserves of fiber materials should also be considered, particularly of materials needed for clothing.

Panamanian-United States Relations

SPEECH
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. BURLESON. Mr. Speaker, the Republic of Panama has requested the right to fly the Panamanian flag over the Canal Zone. This request has been under consideration in the executive branch, where it has apparently received mixed reactions. Up to the present time, there has been no formal and final decision. The pending resolution is most timely. The action we take on this resolution today will enable the executive branch to take cognizance of the views of the Congress before acting on the request by Panama. I believe that it would be a serious mistake to permit the Panamanian flag to be flown over the Canal Zone. Since the first U.S. treaty with Panama in 1903, ours is the only flag which has flown over the Canal Zone, where by treaty we exercise in perpetuity all the rights, power, and authority we would possess and exercise if the United States were sovereign.

The treaty language is not ambiguous. It is clear and to the point. It spells out that in the Canal Zone the United States has all the rights, power, and authority that the United States "would possess and exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

I am convinced that this resolution is urgently necessary. It is the result of hearings held by the Subcommittee on Inter-American Affairs on the flag question. The subcommittee did not formally pass on the wisdom of granting this request by Panama, although several members, including myself, were ready to vote in the negative. The resolution reflects the unanimous subcommittee view that it would constitute a major deviation from traditional treaty interpretation and that the executive branch should be enjoined from arrogating to itself the authority to bypass the joint approval requirements of our constitutional treatymaking process.

Although the issues seem clear to those of us who have followed and participated in the subcommittee hearings, I know that there are some very able and conscientious men who entertain doubts about the propriety of the Congress adopting a sense resolution on such a a matter.

Such misgivings were not overlooked by the subcommittee, nor were they ignored by the full Committee on Foreign Affairs which confirmed the subcommittee's action with but one dissenting vote. This resolution is before the House as the result of the mature judgment of those who carefully weighed the testimony and considered the conflicting views of a number of qualified witnesses, both official and private.

The views of those opposed to the resolution may be summarized as falling broadly within the following seven categories:

First. Changing conditions in Panama require flexibility of action in the Department of State and the resolution would prove a burdensome interefer-ence.

Second. The resolution may infringe on the constitutional power and duty of the President to conduct our foreign affairs.

Third. The resolution embarks the United States on a dangerous precedent in shackling executive prerogative and could lead to the necessity of congressional reapproval of every treaty situation which presents a novel point.

Fourth. The resolution raises, without answering, questions concerning the nature and definition of traditional treaty interpretation.

Fifth. That flying the Panamanian flag would be of no real consequence to our position there and would constitute a harmless and costless gesture of good will.

Sixth. That authorizing Panama to fly its flag would be an exercise, not a denial of our control.

Seventh. The resolution unjustifiably assumes flying the Panamanian flag in the Canal Zone could be a dangerous first step to other and more important rights.

Let us examine these points, one by one.

First, to hold that changing conditions require flexibility of action is plausible, but highly specious. Compromise can be good, but if carried to the extreme of surrender of a right, can be the worst solution for an exigency. Flexibility should always be held within reasonable and authorized limits. The proposal to fly the Panamanian flag in the Canal Zone is very definitely not within the authorized limits of our traditional interpretation of the treaty.

Second, the resolution does not deprive the Executive of any of its constitutional power and duty to conduct our foreign affairs. The resolution simply reminds the Executive that it has a partner in the treaty process who should be consulted before changes are made.

Third, the resolution would not lead to the necessity of congressional reapproval of every treaty situation which presents a novel point. I think the debate today has made abundantly clear that it is aimed at averting actions which would have the effect of improperly bypassing the Congress.

Fourth, the point that the resolution raises unanswered questions concerning the nature and definition of traditional interpretation is not likely to be raised by those who have studied the history of our treaty negotiations with Panama. Records of the 1955 treaty negotiations show that at that time our State Department held a strong negative view on the flag question and was vitally concerned with preserving our sole right to fly the flag over the Canal Zone.

Fifth, the view that flying the Panamanian flag would be of no real consequence is not shared by Panamanians, who are fully aware of its significance as a preeminently important symbol of sovereignty.

Sixth, granting Panama permission to fly the flag would not be an exercise of control. It would be a surrender of a symbol of control that could not easily be revoked.

Seventh, I fear that those who believe the resolution unjustifiably assume that flying the Panamanian flag in the Canal Zone could be a dangerous first step to other and more important rights are either unaware of the total demands of Panama, or have mistakenly discounted their real significance.

Actually, it is not so much that there would follow additional demands. We have now, and have had for some time, demands for further surrenders. To grant the flag request will unquestionably give encouragement for a renewal of a long chain of demands by Panama of additional rights.

The Republic of Panama has officially already urged a number of concessions, all of which were unequivocally rejected by the United States during the 1955 treaty negotiations. They were denied as being in conflict with the basic rights of the United States under provisions of the 1903 treaty with Panama. They are:

First. That the Panamanian flag be flown as well as the U.S. flag in the Canal Zone, including on vessels.

Second. That Spanish be the official language in the Canal Zone along with the English language.

Third. That foreign consuls in the Canal Zone be accredited by Panama rather than by the United States.

Fourth. That Panamanian citizens before Canal Zone courts be tried by mixed tribunals, American and Panamanian judges.

Fifth. That Panamanian postage be used on all mail matter dispatched from the Canal Zone.

Sixth. That the United States wholly recognize Panamanian sovereignty over the Canal Zone.

Mr. Speaker, I submit that these official demands constitute the best answer to those who feel that granting the flag request would not lead to further demands.

I find it somewhat appalling to realize the extent to which our present foreign policy is tinged here and there with attempts at appeasement when what we should do is stand firm on maintaining our rights.

Some people, disgusted by the unjustified vilifications, criticisms and recent mob violence directed against the United States, are seriously proposing the advisability of placing the Panama Canal under some form of international control. I am opposed to such an abdica-

tion of our rights and responsibilities. If in the remote future, however, conditions should become so changed and altered that the logical course would narrow down to a form of international control, I wish to point out that our authority and power of decision would have been impaired, if not completely negated by an earlier surrender on the flag issue.

When the executive branch took a strong stand in 1955 against flying the Panamanian flag in the zone, it inferred that the Congress would be consulted before taking any action which might be regarded as receding from the position of our sovereignty in that area. To yield on this point would be construed by many as a sign of appeasement and weakness and could result in erosion of our control as a matter or right. I cannot believe that in the long run the majority of Panamanians will head the exhortation of those unfriendly to us, whether they come from Castro, from Nasser, or from the Kremlin. We have an abiding friendship for the people of Panama, whose independence we sponsored and guaranteed. We must maintain a firm basis for our mutual friendship, esteem and trust. We must not embark on any course that would involve a double meaning, and that is just what granting the flag request would do. The proponents in the United States would treat it as a token gesture; the Panamanians would accept it for its true value and be justifiably provoked by our efforts to minimize it.

Mr. Speaker, for the sake of preserving our basic treaty rights, for the sake of avoiding needless future misunderstandings, and for the sake of truly promoting our mutual friendship with Panama, I urge the immediate adoption of this resolution.

Resolutions of North Dakota Association of Rural Electric Cooperatives

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 8, 1960

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the resolutions adopted by the Board of Directors of the North Dakota Association of Rural Electric Cooperatives.

This is a great organization of farmers and their views are the views of most of the farmers of my State.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION 1

We note that recommendations have been made for further enlarging the soil bank and we respectfully urge Congress to carefully and completely study and evaluate the effects any further increase in the soil bank will have on the whole economic life of all citizens of a preponderantly agricultural State such as North Dakota, before the soil bank is further increased.

RESOLUTION 2

We condemn the plans and proposals to increase or eliminate the ceiling on interest rates paid by the Government on Federal financing and further, we condemn all proposals to increase the interest rate on REA loans, and we urge our congressional delegation to oppose all moves in that diection.

RESOLUTION 3—SLACK WATER NAVIGATION

Since slack water navigation is deemed by many people to be a necessity downstream from the mainstem dams in the Missouri River, for the reason that navigation and power irrigation uses for water do not coincide; we have, therefore, in the past, requested that a study be made of slack water navigation in this area with an eye to conserving water for more provident and beneficial uses upstream.

In his budget message, President Eisenhower has included an item of only $10,000 to make such a study. However, the Corps of Engineers has stated that at least $300,000 would be needed to make an adequate study.

Since it appears that slack water navigation would solve both the irrigation power needs for water as well as those of navigation, we believe that it is in the best interests of the Nation to have this study made as soon as possible.

Therefore, we, the board of directors of the North Dakota Association of Rural Electric Cooperatives, do hereby resolve that we ask the Congress to appropriate the full amount of $300,000 needed by the Corps of Engineers to make a study of slack water navigation on the lower Missouri.

And we further resolve to ask Congress that these funds be granted as soon as possible in order that the study can start without undue, costly delay.

A Sound Civil Rights Plan

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Berkshire Eagle, in Pittsfield, Mass., dated January 29 and which I believe to be very important and timely:

A SOUND CIVIL RIGHTS PLAN

The stickiest political question confronting the 1960 session of Congress is how to frame a meaningful civil rights bill that will be at least slightly acceptable to the South. This, of course, is a perennial problem; but in a national election year it has particular political urgency. Neither party dares go before the electorate without a current civil rights record to point to.

Until this week, the picture on Capitol Hill was confused and not at all encouraging. The only specific proposal before Congress was a plan suggested by the President's Civil Rights Commission for appointment of Federal registrars to deal with situations in which Southern Negroes are systematically restrained from voting in national elections. Whatever its virtues, this plan was badly undercut by the President himself, who indicated some weeks ago that he doubts its constitutionality.

In the midst of this confusion, a new proposal has now been brought forward by Vice President Nixon's friend and protegé, Attorney General William P. Rogers. The Rogers plan is a substitute for the Civil Rights Commission's plan, but it goes considerably farther in several important respects. It nonetheless appears to have the blessings of the White House, and it offers a sane and practical rallying point for liberals of both parties.

The basic feature of the Rogers plan is that it would be administered by the Federal courts rather than by the Civil Rights Commission. It provides for appointment of "voting referees" by the Federal courts in localities where civil suits brought by the U.S. Justice Department have exposed a consistent pattern of discrimination against prospective Negro voters. The "voting referees" would then be authorized to certify as eligible voters persons in that locality who had previously been unable to register because of race, color or religion.

Unlike the Federal registrars proposed in the Civil Rights Commission plan, these voting referees would be empowered to qualify voters for State as well as Federal elections. They would also be empowered to see that qualified Negroes are actually permitted to vote as well as to register. And most important of all, any local election official who tried to prevent a person from voting, after that person had been declared eligible by a Federal referee, would be subject to prosecution for contempt of court at a nonjury trial.

This proposal is no panacea. Because the judicial process is necessarily slow, and because each locality in which the plan is invoked would be subject to separate legal action, the benefits it would bring would obviously come slowly. But it nevertheless would represent a big new step in the right direction. And it would take effective account of the fact that the right to vote is the right from which all other civil rights for southern Negroes must eventually spring.

In sum, the Rogers plan is one that deserves firm support not only from President Eisenhower, who has too often limited himself to vague platitudes on the civil rights question, but from liberals of both parties. Who gets the credit for a workable civil rights bill this year is a lot less important than that a workable bill be passed.

What Is Democracy?

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. SHORT. Mr. Speaker, each year the National Association of Broadcasters and the Electronic Industries Association, in cooperation with the Veterans of Foreign Wars, sponsors the Voice of Democracy contest among high school students. In my opinion, they render an outstanding public service by conducting these contests as a means to stimulate American youth to think about the meaning of our form of government in our own lives and to communicate their ideas to others. Winning essays are selected by a panel of judges, after which the top essayist for each State comes to Washington on a 4-day, all expenses paid, trip. Their activities here

will begin on Sunday, February 21, the eve of George Washington's birthday, and be climaxed by a national awards program on Wednesday, February 24.

The North Dakota winner in the 1959–60 Voice of Democracy contest is Miss Bonnie Nelson of rural route No. 2, Mandan, N. Dak. She has written an excellent article on what she herself found democracy to mean, and I am proud to commend it to the House of Representatives.

The article follows:

THE VOICE OF DEMOCRACY

One Saturday afternoon, while sitting at home, I began thinking of the essay I should write for "The Voice of Democracy" contest. It occurred to me that if someone asked me, "What is democracy?" how would I answer? The more I thought of this, the more I began to realize that I couldn't define it with just a word, a sentence, or even a paragraph. Finally, I came to a rather frightening realization that I couldn't really answer that question. So I began my search for the answer to "What is democracy?"

I found that democracy is the foundation upon which this United States of America rests. It is the very basis of our system of government. I went on with my research and dug out the history of our democracy.

The United States was not always democratic. In 1776 it was under the tyrannical rule of an English king. The quest for democracy prompted the drafting of the Declaration of Independence. Democracy is the groundwork that our Constitution was built upon; the search for it steered men through the Revolution and led Washington and his handful of bloody and battered men across the Delaware. Was this democracy? No, it was the base of our democracy, but this wasn't the elusive definition that I was looking for.

I went on with my search and came to the battles fought for freedom's sake. There was the French and Indian War, the War of 1812, and finally, as the awful culmination of man's desire for equality—the Civil War. That was the bloody and horrible price we had to pay.

As I read further I came to World Wars I and II, and then to the Korean conflict. What did I discover? That we—as a nation—had upheld our rights and our freedoms. We had protected our democracy. But, where is this democracy? What is this invisible object that many have paid the supreme sacrifice for? We have fought with words, bullets, and prayer. We have maintained our right to practice democracy.

I went to bed that night with democracy ringing in my ears. It was still there when I awoke the next morning and dressed for church. After church, while I mingled with the people, I heard men discussing who would be the man to fill North Dakota's vacancy in the Senate. The merits and demerits of a number of people were being discussed. Continuing on, I came to a cluster of people talking about the sermon they had heard that morning. All speaking their minds freely. Arriving downtown, I began looking at store windows, and suddenly it struck me. Why, of course, this is democracy—the people. I had seen it all that morning, just as I did every other day. Democracy is all around me. There is free enterprise; the refinery upon the hill and the stores lining the streets. Free political discussion; unrestrained, heated, and sometimes very critical and controversial. And my church—there it was, for anyone to worship in.

Here, then, was democracy. Democracy had been surrounding me everywhere, but I had been too blind to see it.

I felt better now, but I still wasn't satisfied. I asked myself, "What, to me, is the most important facet of democracy?"

There it was again—"to me"—the individualistic point of view. Democracy is opinion, rights, beliefs, and freedom.

But I think the aspect of democracy that is most important and indispensable, is the side of democracy born in the soul of every human being, regardless of the color of his skin, or where he makes his home: the right to worship his God whenever and wherever he wishes.

Now when I think of democracy, I don't necessarily picture legal documents and history books; I picture the little church around the corner. The children coming to Sunday school, and later on, their parents bringing, not sending them, to church.

Democracy is what you see every Sunday morning in front of the churches, cathedrals, and synagogues, and hear within their walls. This, to me, is its most important phase. It is that part of democracy that is within a man's soul—it can be neither destroyed nor enslaved.

Now, I was fully satisfied. I knew what democracy was. I now knew how I would answer the query, "What is democracy?" Democracy is Main Street, U.S.A.

World War I Veterans' Needs

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. MADDEN. Mr. Speaker, Harold E. Stearley, commander of the Veterans of World War I, Barracks No. 1178, Brazil, Ind., sets out in the following letter to the editor of the Indianapolis Star, true facts regarding the plight of the vast majority of World War I veterans. Congress has completely overlooked legislation which would give the rapidly dwindling ranks of World War I veterans proper recognition for the services and sacrifices they endured during their youthful years. Some of these veterans' education and established businesses were completely terminated by reason of military service at that time.

WORLD WAR I VETERANS' NEEDS

(By Harold E. Stearley, commander, Veterans World War I, Barracks No. 1178, Brazil, Ind.)

It needs to be brought to the attention of the powers-that-be that ever since 1917 the World War I veteran has been working at a financial and physical disadvantage * * * It now is more than apparent to all, who will but stop and consider, that the World War I veteran, in order to stay in the present-day economic race, must have a monthly return of at least $100 a month from the Government (no strings attached) in order that he or she may make that long last mile (outside the breadline).

Ten thousand eight hundred World War I men are dying every month, 360 every day, 15 every hour, 1 every 4 minutes. Most are going to an early grave from worry for lack of proper food, clothing and shelter. * * * Whenever a pension for veterans of World War I is mentioned in Congress, invariably certain propagandists attempt to stampede the taxpayers by citing astronomical cost projections.

Let us consider a case in point. In 1959 this barracks had a membership of 119. During said year we lost seven members by death. It is reasonable to assume that this death rate will increase each year as the years go by; but even with the same annual death rate within 17 years our membership will be entirely used up; and the same ratio is bound to apply to the entire national membership.

By 1976 any World War I man will be living on borrowed time. It naturally follows that the cost of this proposed pension will be reduced 6 percent the first year in effect; 12 percent the second year and, therefore, by 1976 only 6 percent of these men will be still living and the cost of said pension will have been reduced 94 percent. These facts and figures are arrived at by simple arithmetic. It is impossible for the propagandists to juggle the above figures.

We would like to call it to the attention of the powers-that-be that the majority of World War I men cannot qualify for social security, and the remainder can draw only a token amount per month. They were born 20 years too soon.

Brazil Barracks No. 1178, therefore, wishes to respectfully request the legislative and executive departments of the Government of the United States to immediately enact special World War I pension legislation along the same lines as that enacted for the Grand Army of the Republic and for the Spanish-American War veterans.

Battle Lines: 1960

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times, January 30, 1960:

BATTLE LINES: 1960

Conservatism—a label that the Republican Party has worn for as many years as anybody can remember—had its face scrubbed by Vice President NIXON in his kickoff speech of the 1960 campaign. The result should be of great benefit to the Republicans who go to the people in the fall elections.

In his Chicago speech, NIXON, as top spokesman for the 1960 brigade of GOP candidates, restated the party's devotion to basic principles (and drew the campaign battle lines) in these words:

"We Republicans have unshakable faith that the way to achieve [America's] goals is by the free choice of millions of individual consumers, by the productive efforts of free management and labor, and by local and State action wherever possible—supplemented when necessary but not supplanted by the Federal Government.

"The philosophy of most of our opponents is just the opposite. They claim that the road to progress has to be paved with bigger government, more spending and higher tax bills for the people to pay.

"For 20 years Democratic administrations promised to give the American people the economic abundance and prosperity that the people, stimulated by 7 years of Republican faith in freedom, have in great measure now achieved for themselves. And as long as they are left free of arbitrary controls, the American people will continue to achieve greater and greater abundance with fair shares for everyone."

There will, thus, be no change in the party's attachment to Government frugality and

concern for keeping Government's hands as far as possible off the processes of everyday economic life.

But conservatism, in the old sense, went out the window when the Vice President turned to world affairs:

"We offer partnership, our advice and assistance in helping peoples everywhere to achieve the economic progress which is essential if they are to have better food and housing and health than they presently enjoy. * * * Let our mission in the world today be to extend to all mankind not just the ideal but the fact of freedom—by preserving and protecting and defending it, by helping others achieve it, by offering our own example of a free society at work."

And domestically, he set targets for increased protection for the aged, the unemployed and the disabled to match, we should think, anything the Democrats may propose—and certainly a more forthright civil rights program than they will find it convenient to match.

Extremists of the right and left will quarrel vigorously with parts of the program. The majority of thoughtful moderates will find, we think, that it boils down to a simple logical proposition: The Nation's obligations to improve the well-being of its people and help build a durable peace in the world can best be met by the unequaled energies of our free system.

Call it liberal conservatism, conservative liberalism, or plain commonsense—we think it is cut to the pattern of the space age.

Reduction and Stricter Control of Importation of Beef and Other Red Meat

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I include herewith a resolution adopted by the Kansas Legislature, calling upon the Congress, the U.S. Tariff Commission, and the U.S. Department of Agriculture to do everything within their respective powers to bring about a reduction and stricter control of the importation of beef and other red meats.

The resolution is as follows:

HOUSE CONCURRENT RESOLUTION 13

Concurrent resolution memorializing the Congress of the United States, the U.S. Department of Agriculture, and the U.S. Tariff Commission to reduce and control the importation of beef and other red meats from foreign countries and to establish smaller quotas and other controls on such imports

Whereas the expanding imports of beef and other red meats on the hoof and in the frozen or processed form pose a very serious threat to the domestic cattle and livestock industries of this country; and

Whereas such imports into this country of beef and other red meats are currently expanding at a rate which is altogether out of proportion to any justifiable need and at the present time such imports constitute at least 10 percent of our domestic consumption of beef and other red meats; and

Whereas the domestic livestock producers of this country have for some time been expending their own funds to expand the national market for beef and other red meats and if imports of these commodities are not further restricted any expansion in said national market will result only in providing foreign competitors with a most attractive market at the expense of the American producers; and

Whereas the feeding of grain to cattle and livestock by the domestic cattle and livestock industries provides the principal means of solving the burdensome feed-grain surplus now depressing the total agricultural market; and

Whereas a reasonable restriction on imports of beef and other red meats would provide a means of reducing this feed-grain surplus, as then Americans would consume American-fed beef and livestock rather than that fed in foreign countries; and

Whereas the further prosperity and strength of this country is in a large measure dependent upon a prosperous and growing domestic agricultural economy: Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That we respectfully urge and request the Congress of the United States, U.S. Tariff Commission, and the U.S. Department of Agriculture to do everything within their respective powers to bring about a reduction and stricter control of the importation of beef and other red meats in any form from any foreign country and to establish smaller quotas for the importation of the same, such quotas to be predetermined on an annual basis, thus providing American beef and livestock producers with the needed protection and vital encouragement necessary for the maintenance and welfare of their own industry, and helping insure the future prosperity and strength of this country; be it further

Resolved, That the secretary of state be directed to transmit an enrolled copy of this resolution to the President and Vice President and Secretary of Agriculture of the United States, to each member of the Kansas delegation in the Congress of the United States and to the Chairman of the U.S. Tariff Commission.

I hereby certify that the above concurrent resolution originated in the house, and was adopted by that body.

FEBRUARY 2, 1960.

JESS TAYLOR,
Speaker of the House.
A. E. ANDERSON,
Chief Clerk of the House.

Adopted by the senate February 4, 1960.

PAUL P. WIMSETT,
President Pro Tempore of the Senate.
RALPH E. ZARKER,
Secretary of the Senate.

The Late Honorable John J. O'Connor

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. WALTER. Mr. Speaker, it was with great sorrow that I received the news of the passing of the late Honorable John J. O'Connor. To those who knew him, he has left behind him a true and deep spirit of admiration, not only for his personal integrity, but as one who with courage undaunted in the face of adversity, remained intellectually vigorous and high spirited until the last, never losing the hope of combating his illness and returning to the work he loved, that of helping his fellow men. This spirit of survival and good humor until the last is truly worthy of the man that the late John O'Connor was.

Many things could be said in superfluity of the individual activities of such a man, but it is the spirit of the man which held forth through his many undertakings and which endeared him to his friends. To his family and loved ones, I extend my deepest sorrow and the comfort that this fine person lived life to his fullest capacity, never suffering defeat even to the last, but merely passing into the fuller life for which he strived, and one which he deserved.

President's New Reconstruction Bill

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted I insert herewith in the CONGRESSIONAL RECORD an article from the February 15, 1960, issue of U.S. News & World Report discussing the President's proposal for the enactment of legislation to police elections. As the article so clearly states, this new proposition brings back memories of the force bills of the reconstruction days following the War Between the States. As was once said, "he who fails to remember the past is condemned to live it again." The operation of the reconstruction force bills in New York, Illinois, Pennsylvania, New Jersey, and other States outside the South should serve as a warning to all who would support this new revolutionary proposal.

The article follows:

HERE'S THE LATEST PLAN FOR CRACKING DOWN ON SOUTH

Judges in Federal courts, already wrestling with the problem of integrating races in schools, may soon be given the added job of policing elections.

President Eisenhower wants to set up machinery that can be used to assure that Negroes in Southern States are allowed to register and vote in State, local, and national elections. This machinery would be operated by judges in Federal courts with the help of so-called voting referees.

To the South, this proposal brings up memories of the "force bills" of Reconstruction days after the Civil War. Once before, back in 1871, the Federal Government passed a law to police voting, but only in elections for Members of Congress. This law was administered by election supervisors appointed by the Federal courts. Their powers, however, were abused by politicians in the big cities of the North, and the act was repealed in 1894.

At the present time, the plan is to bring Federal power to bear to protect or assure voting rights with more safeguards against abuse than were contained in previous legislation.

The plan, as being offered to Congress with White House backing, proceeds in methodical steps.

FIRST, A COMPLAINT

A Negro in the South, for example, complains that he is not permitted to vote, although qualified. If the Department of Justice, which gets the complaint, decides that it has merit, suit is brought in Federal court under the 1957 Civil Rights Act.

The suit is heard before a judge, without a jury. If the court finds that voting rights have been denied because of race or color, and that there has been a pattern of such deprivation, a U.S. voting referee is appointed to continue the investigation. The referee is authorized to receive complaints from any other persons in that State who claim to have been deprived of their voting rights.

After holding hearings and listening to evidence, the referee sends his findings to the Federal court where the case was originally opened. The judge accepts the referee's report, "unless clearly erroneous," and puts the findings in the form of a decree listing the names of those kept from voting because of race or color.

Voting certificates are issued to every person named in the decree. Copies of the decree are served on all election officials of the State by the U.S. Attorney General's Office. Any State official who refuses to honor the decree faces action for contempt.

FOR A LOOPHOLE: A PLUG

In the South, some voting registrars in various States have resigned, leaving their positions unfilled. This effectively blocked efforts of some Negroes to register and vote for the first time.

The administration's proposal would plug this loophole by providing that, if a voting registrar resigns and no successor is named, any act of the registrar which constitutes a deprivation of voting rights should be considered an act of the State, and the State may then be sued in Federal court.

HOW OLD LAW WORKED

The "force bill" repealed by Congress in 1894 was not linked to race or color. It was based on the constitutional power of Congress to regulate its own Members.

Under the force bill, so-called supervisors of elections were appointed by Federal courts, which then stepped out of the picture. These appointments could be made if two or more citizens in towns with a population of more than 20,000 requested to have "guarded and scrutinized" the registration of voters for any congressional election, or the election itself.

The supervisors were empowered to challenge the qualifications of anyone seeking to register, and to mark the registration lists in such ways as to detect irregularities.

In elections, the supervisors were authorized to challenge any voters and to count the ballots. Federal marshals assisted the supervisors. Interference with these officials was made a criminal offense.

The supervisors reported to a chief supervisor on the fairness of an election. If irregularities were found, the chief supervisor had authority to hold hearings, take testimony and issue subpenas. Results of such investigations were to be filed with the clerk of the House of Representatives.

IN THE SOUTH: LITTLE EFFECT

History records failure of the Federal election law in the South. Federal authorities tried thousands of times to prosecute violations of the act, but few convictions resulted.

In South Carolina, for example, there were 1,392 indictments, but only 114 convictions under the election law.

One-party control by the Democrats made enforcement extremely difficult. Moreover, as the Ku Klux Klan gained strength, it severely restricted voting by Negroes and northern carpetbaggers.

TROUBLE IN THE NORTH

It was in the big cities of the North that the Federal election law had the most impact. Democrats in Congress charged that Republican Party machines in the North deputized criminals, drunks, and armed thugs as marshals, and used them to keep Democratic voters from the polls.

In 1876, of 5,001 Federal deputy marshals appointed to protect voting rights, 4,194—more than 80 percent—were appointed in the three northern States of New York, New Jersey, and Pennsylvania. One election supervisor in New York City drew fees totaling $145,000 for his services.

In 1892, a special investigating committee of the House of Representatives went to New York City to observe the presidential election. A majority report written by the three Democratic members recommended repeal of the election law because it has "failed to produce any good results in the direction of the purity of elections or the protection of the ballot box."

The law was used, the majority report said, "only as part of the machinery of a party to compensate voters who are friendly to it, and to frighten from the polls the voters of the opposing party."

BRIGADE OF TROOPS

In House debate on a move to repeal the law in September 1893, Representative John C. Black, Democrat, of Illinois, described the use of Federal marshals in the 1892 election in Chicago:

"Early in the morning of that day, or rather in the shades of the preceding night, the supervisors and deputy marshals were arrayed, and there came 3,786 of them, more than a full brigade of such troops as they were.

"They were drawn from the alleys, this militia of oppression. They were drawn from the slums, this battalion of bummers * * * and thus they stood, armed and equipped for their service, to protect the election in the city of Chicago, and in the great State of Illinois."

In the Republican minority report, it was said that Federal supervisors and marshals were needed to combat ballot-box stuffing and the issuance of fraudulent naturalization certificates by Democratic Party machines.

With Democrats in control of Congress, the force bill regulating voting was repealed in 1894.

OPPOSITION IN SOUTH

Despite the differences between the old reconstruction law and the administration's new proposal, Democratic opposition in the South remains strong.

Senator HERMAN E. TALMADGE, Democrat, of Georgia, has called the plan for establishing referees "bait in a new election year for a second reconstruction era which would throw into Federal receivership the election machinery not only of the Southern States, but also of all 50 States."

"Now we are asked," said Senator A. WILLIS ROBERTSON, Democrat, of Virginia, "to repeat the mistake which Congress made nearly 100 years ago."

With these objections and the record of past experience in mind, Congress, in the weeks ahead, must decide whether it wants to hand over to Federal control the problem of policing voting rights of Negroes in the South.

NATO: Its Second Decade

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful article by Dr. Howard White, of the department of government, Miami University, Oxford, Ohio, on the problems facing NATO as we enter the second decade of the alliance.

Dr. White was a delegate to the Atlantic Congress held in London last June and participated in by about 650 delegates from the NATO nations and was an observer at the fifth NATO parliamentarians' conference held in Washington last November.

The article follows:

NATO: ITS SECOND DECADE

The North Atlantic Treaty Organization, NATO, was born in the cold fear that gripped Western Europe after the Communist takeover in Czechoslovakia in 1948. NATO was created as a military alliance in 1949. Western Europe was only beginning to recover from war's devastation. The Communists were the largest political party in Italy and France. They were stirring up discontent among the impoverished peoples of Western Europe. If civil wars were started, Russian troops in Eastern Germany and other satellites could readily come to the aid of their Communist comrades. Collective action by the nations of Western Europe, aided mightily by men and equipment from the United States and Canada, was promised by the treaty which created NATO. There was an imperative need for mutual protection, then.

Now, NATO has entered its second decade. Western Europe is prosperous. Industry, commerce, agriculture have surpassed prewar levels. Living standards are higher and are still rising. The fear of Communist aggression against the West is receding, fostered by Khrushchev's soothing propaganda. Although in its meeting in Paris last month NATO's Council repeated its annual call for speedy attainment of NATO's goal of 30 ground divisions, governments of member states continue to stall on meeting their obligations. Secretary Herter's reminder to their Foreign and Defense Ministers that our commitment to maintain troops in Europe was made on the assumption of an integrated defense system of adequate size, seems to have left them unmoved. If Europeans are unconcerned, why should we maintain armed forces so far from our shores? Shall our soldiers come home?

France stands out as the chief obstacle to attaining a military force of the nature and size planned for NATO. Even before De Gaulle returned to power, practically all of the French troops assigned to NATO had been withdrawn to wage war in Algeria. Last year, he withdrew naval contingents from NATO command and denied French air bases for U.S. air forces equipped with atomic weapons. De Gaulle contends that an integrated military force under supernational command is dead. The grandeur of France permits no recognition of a higher authority than his.

Before condemning De Gaulle's perhaps misguided attempt to restore the grandeur of France, we should look further into NATO's defensive strategy. Even if the recommended 30 divisions were in being, integrated, and fully equipped, they would only be NATO's shield. They could hold off Russia's 175 divisions only a short time. They are only a shield. The sword is the U.S. Strategic Air Command, assisted by British forces. Neither of these nor the forces eventually to be armed with intercontinental ballistic missiles are integrated under NATO's Supreme Headquarter's Command. Do you blame the French for insisting upon a position corresponding to that of their allies? And if the larger powers will not let their forces be completely integrated under NATO's command, why should the smaller nations hasten to do what they are asked to do?

Perhaps nothing shows more clearly how precarious is the NATO alliance than the split over the policy for West Berlin. Adenauer and De Gaulle oppose negotiating with Khrushchev over the status of West Berlin. Macmillan seems to have persuaded Eisenhower that some concessions, such as reducing the number of troops stationed there, will not impair the military position of the West. Our Government seems to ignore the warning by former Secretary of State Dean Acheson that any concession to Khrushchev brings closer to realization his often-announced objective: the withdrawal of foreign troops from oversea bases. Some of our generals are suggesting that when intercontinental ballistic missiles become operations we will not need to maintain our troops in Europe. Already, we have agreed to withdraw from our bases in Morocco. If our armies are brought home, is it reasonable to expect that the sword will flash out to avenge attack on any of the other 14 members of NATO? If you think we would go to their defense, you are more optimistic than I am.

NATO members are divided three ways over trade policy. The European Economic Community, the Common Market countries, comprise West Germany, France, Italy, Belgium, Netherlands, and Luxembourg. They form a customs union with a common external tariff and common trading policy toward the rest of the world. They are more than a customs union. They plan integration generally in economic matters, even to establishing a common currency. They think that they are taking the first step toward political unification of Europe, toward establishing the United States of Europe. Opposing the Common Market is a new group, the European Free Trade Association, the so-called outer seven: Austria, Denmark, Norway, Portugual, Sweden, Switzerland, and United Kingdom. They propose to abolish all trade barriers among themselves, but will leave each country free to deal independently with all other countries. This division between NATO members is not primarily economic. Germany exports more to the seven than to her Common Market partners. The Common Market leaders have worked on the assumption that political union must come with economic union. The outer seven believe that politics and economics can be kept separate. The third group comprises the two transatlantic NATO members: Canada and the United States. Why should these two countries remain in a military alliance if they are excluded from the economic benefits to free trade with Allies? Possibly a workable arrangement will be made at a meeting in Paris this week.

Trade policy is not the only economic issue disrupting the alliance. There is the question whether the other prospering NATO members will join the United States in giving financial and technical assistance to underdeveloped nations, which have been able to fend off Russian domination, largely due to aid from the United States. Obviously, this calls for an extension of NATO, functionally as well as grographically. Already, as a military alliance, NATO has spread beyond the North Atlantic to Italy, Greece, and Turkey. Greece and Turkey, as well as the struggling nations of southern Asia and the emerging states of Africa, need help from the economically stronger NATO members. NATO's Secretary General Paul-Henri Spank has said that "It is in the underdeveloped parts of the world that the decisive struggle" with the Communist world will be waged. Time and again has Khrushchev challenged us to economic competition in place of a military conflict. Verbally, the challenge has been accepted. The NATO Council at its December meeting in Paris agreed upon a 10-year program to branch out into economic and scientific cooperation—without any relaxation in military defense.

Genuine cooperation in fiancial and economic aid to underdeveloped countries as well as in producing weapons for their own defense is imperative. The drain on our gold reserve—over $4 billion in 1959—cannot long be tolerated. Secretary Herter made it plain to the NATO Council that unless Europe does more to meet NATO commitments militarily and helps shoulder the burden of technical and financial aid to underdeveloped nations, the United States will not be doing it much longer.

The evidence I have presented: Failure of the allies to maintain an adequate, integrated military shield and sword; disagreement over the status of West Berlin; over a common trade policy looking toward closer political as well as economic union; and over aid to less developed peoples—this evidence seems to warrant the conclusion that NATO's second decade will either be its last or, if it endures, it will have to grow into a political federation, an economic union, and a military alliance with an integrated defensive force.

From Paris where the NATO Council met last month came the report that the cracks in NATO's structure are widening. "The North Atlantic allies are engaging in what has been very much the look of the old game of power politics. Rivalries and hostilities are more and more nakedly exhibited—Franco-German alliance on the continent versus the British-led group on the periphery"—the United States and Canada on the sidelines: Canada unwilling to offend its senior partner and the United States girding for its quadrennial campaign to choose a President.

Most observant, thoughtful men and women in NATO lands have become aware of the degeneration of "the most powerful peacetime alliance in the history of the Atlantic community." Illustrative of their concern was the Atlantic Congress which met in London last June. Almost 650 delegates from 14 of the 15 member states spent 6 busy days and nights in subcommittee, committee, and plenary sessions, devising what they thought should be NATO's program for its second decade. The Congress adopted the declaration that "The time is ripe for these nations to build an Atlantic community with responsibilities extending to military, political, economic, social, and scientific fields." The building of such a community was left to the national governments which should "convene" a special conference of leading citizens to examine exhaustively means of attaining greater unity."

Last November, the fifth NATO Parliamentarian's Conference assembled in Washington, the first time it has met on this side of the Atlantic. NATO Parliamentarians are a cross-section of majority and minority parties in their national legislatures. They cannot act to bind their governments. However, since they had initiated the proposal for the Atlantic Congress and many of them had been active in its deliberations, their sessions in Washington were largely devoted to considering ways and means for carrying into effect the recommendations of the Congress.

They unanimously recommended that a conference of not more than 100 representative citizens be assembled at the earliest possible date and for whatever length of time is required to examine exhaustively and recommend how greater cooperation and unity of purpose within the Atlantic community may best be developed. The delegates seemed confident that their national legislatures would soon provide for this special conference. Our own Congress may act within the next 2 months.

The NATO Parliamentarians adopted two important resolutions from the Economic Committee of which Senator Javits was chairman. One warned against letting the six states in the Common Market and the Outer Seven develop into antagonistic groups. It called upon the governments to "work to assure the development of harmonious relations between member countries of NATO and the creation of conditions which would serve to expand international trade." The other resolution emphatically declared "that the accelerated development of the less-developed areas is a proper and desirable concern of the NATO countries"; and "that acceptable progress in the further development of the less developed areas requires the NATO countries and other more developed countries to do more than they are doing now to help accelerate such further development. * * *."

The direction for development during NATO's second decade has been pointed out. Will the citizens and their governments move in that direction? Either we will, or all will fall under the domination of a powerful nation with unfaltering faith in its Communist mission.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ALGER. Mr. Speaker, I include the following newsletter of February 6, 1960:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS, FEBRUARY 6, 1960

TAXATION OF COOPERATIVES

What should be done about cooperatives' taxation? At present co-ops can escape Federal taxation completely while corporations are taxed twice—once as a corporation (30 percent first $25,000 of profit, 52 percent all above $25,000) and again when what's left is distributed to stockholders, each of whom pays personal income tax according to his bracket. Yet both co-ops and corporations engage in many of the same business activities.

Co-ops originated from the voluntary banding together of farmers who wanted to strengthen their bargaining position in sales of their products and the purchase of needed supplies. Despite the legitimate aim of farmers, the tax inequity of the present situation is recognized and admitted by all but a few of the most extreme farm organizations. In 1951 Congress tried to remedy the situation by passing legislation to tax all co-op income a single time either at the co-op level retained earnings) or the co-op patron. However, the courts have rendered the legislation ineffective inasmuch as the certificates of value frequently issued by the co-ops were ruled nontaxable to the patron since they weren't money. Certificates were issued as representative of a patron's investment and earnings in the co-op. The earnings were left in the co-op for growth purposes. Result—this double-jointed problem demanded answer—how to tax the noncash certificate and how to tax the retained earnings of co-ops which weren't distributed? The demands came from corporation personnel and stockholders who saw huge co-ops spring up, engaged in manufacturing, distribution, and processing in such widely divergent fields as oil production, cotton processing, fertilizer manufacture—all grown big by tax-free retained earnings. By contrast, corporations,

must pay at least half their earnings in Federal income taxes.

The Ways and Means Committee hearings concluded this week were but one of a series over several years without legislative action. Approximately 50 witnesses testified this week, representing divergent viewpoints, including business, government, private citizens, agriculture and various associations. Some of the views differed greatly and warrant study

Arguments advanced in behalf of co-ops

1. "Tax co-ops only once, to either the co-op or the patron, but not both; noncash allocations to patron must be reported as taxable income by patrons." (W. E. Rumble, National Federation of Grain Co-ops.)

2. "Spell out the intent of the 1951 law so there are no loopholes." (E. S. Sietton, Minnesota Association of Co-ops.)

3. "Co-op businesses enjoy no tax advantage over their competitors. On the contrary, co-op businesses pay all taxes under the same law and at the same rates as do their competitors. Exceptions are minor in nature." (Jerry Voorhis, Co-op League of U.S.A.)

4. "Co-ops have spread into other fields in only a mipor degree—any inequity that may exist by reason of the corporation double tax should be relieved by gradual elimination of the double tax and not by extending it to co-ops." (M. R. Garstan, National Milk Producers Federation.)

5. "The co-op is merely a vehicle—there should be a single tax and at the patrons' level." (Wilmer Smith and Horace Smith, Texas.)

6. "Our farmers co-ops have not been able to achieve the size that is necessary." (F. V. Heinkel, Missouri Farmers Association.)

7. "We are opposed to enactment of legislation classifying co-op savings as corporation profits." (John Baker, National Farmers Union.)

Arguments in behalf of business

1. "Co-ops do all the things their non-co-op competitors (corporations) do; co-ops enjoy the benefits of corporate citizenship; co-ops should share the cost of government." (Roswell Magill, Grain and Feed Dealers National Association.)

2. "Co-op tax privileges should be ended for three reasons: (a) It's inequitable; there's discrimination between sources of revenue, and unwarranted competitive advantage; (b) It's uneconomic, hurting Nation overall since other taxpayers must make up the difference, and is monopolistic; (c) Loss of revenue to Government."—Dr. R. T. Patterson, National Tax Equality Association.

3. "All organizations engaging in business should be taxed equally—co-ops should be taxed on retained earnings besides cash distribution."—John White, Council of State Chambers of Commerce and American Cotton Shippers Association.

4. "Co-ops have U.S. Treasury funds as capital with cotton as collateral—selective control of cotton results in overvalued cotton inventories owned by the CCC."—R. W. Williamson, American Cotton Shippers Association.

5. "Of the $66 million net savings of the Southern States Cooperative, only $17 million was paid to patrons, leaving $49 million for business expansion free of income taxes."—J. Howell, Southern States Industrial Council.

6. "Ninety percent of people polled wanted co-ops to be taxed equally with corporations."—George Burger, National Federation of Independent Business.

7. "We do feel it our duty to request that the difference in the tax laws concerning our company and co-ops be corrected. It is unfair."—Harold Garner, President, International Chemical Workers Union, Local 644 (AFL-CIO), Henderson, Ky., Spencer Chemical Co.

8. "All net savings and income of farmer co-ops should be subject to a single Federal income tax."—Charles Shuman, American Farm Bureau Federation.

9. "Wealthy landowners not only get the lion's share of the price-support money and acreage allotments, but they are indeed the principal beneficiaries on the income tax exemption accorded farm co-ops."—A. L. Reed, Public Information Committee of the Cotton Industries.

The alternative proposals suggested as solutions

1. Rumble suggestion, proposed by co-ops, that net earnings or savings of co-ops are to be taxed only once and then to either the co-op or the patron but not both. Noncash allocations are to be reported as income by patrons. (Disadvantage here is that patron must pay tax when not getting any money.)

2. Simpson bill (Treasury bill)—H.R. 7875: Tax co-ops retained earnings but do not tax at co-op level the cash distributions or 3-year 4 percent promise-to-pay-certificates (both of which are reported for tax by patron).

3. Davis bill H.R. 3848 assesses the entire tax to the co-op itself, then extends a tax credit to the patron when he receives a co-op distribution. His tax credit is equal to the tax paid by the co-op on the member's share of the earnings.

4. Cash compromise: Co-ops to be taxed as corporations on retained earnings, except all cash pay-outs are to be fully deductible from co-op tax but taxable individually to patrons.

5. Mason bill H.R. 199: Co-ops to be taxed just like corporations.

For my part, I dislike as much as anyone the double taxation of corporations today. Therefore, I dislike extending it to co-ops but in equity and in the interest of consistency, I see no alternative.

The entire controversy surrounding co-op corporation taxation is another demonstration of too heavy a tax load and the effort made to avoid it. The real answer is reduced Federal Government spending which would make possible sound tax reduction. My continued efforts directed toward these twin goals of less spending and lower taxes should please both cooperatives and corporations.

What will be done by the Ways and Means Committee and Congress? Well, it's an election year. More than ever, Members of Congress will respond to the demands of the more vocal constituents (sometimes, facts to the contrary notwithstanding). As always, it's up to the people, even on occasion, to providing the leadership. Yet, I am sure that a substantial majority of Members of Congress recognize the need for immediate legislative action.

What Is National Greatness?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star:

WHAT IS NATIONAL GREATNESS?

Vice President NIXON gave us all something to think seriously about the other day. He complained about people who are saying that the United States is becoming a second-rate power. Maybe we are. Maybe we have never been a first-rate power. It depends, dosn't it, on how you define power rating among nations. And that is what we ought to do some serious thinking about.

Does wealth make us a great power? If it does, we have enjoyed the top rating for many years. We have taken a big piece of a continent, rich in natural resources, and squeezed wealth in fabulous amounts from it. Half of this has been luck—the natural resources. The other half—the development of them—we can take some pride in. But does this wealth make us a first-rate power?

Or shall we measure our greatness by our ability to defend ourselves from attack? It is in this area that the big debate is now raging. The Soviet Union forged ahead of us in the last decade in missile development. Some experts think we are now too vulnerable to consider ourselves the top military power in the world. And with the constant development of nuclear weapons, the time may soon come when no nation can be secure from attack.

Is the measure of greatness connected with the willingness to give aid to other nations? If it is, we should be the topranking nation. Since World War II, our generosity in this respect has added up to nearly $100 billion. But there is doubt, not only at home but abroad, whether the world equates generosity and greatness.

Idealists say the true measure of greatness is in the way we live. Are our moral standards high, is there justice for all in the land, do minorities have the same rights and privileges as the majority, do we give things of the mind and spirit at least equal status with material things? Doubt surrounds the answers to these questions.

If you think about these things a while, you may get a new slant on Mr. NIXON's complaint.

The question may not be, "Are we becoming a second-rate power?" but "By what standard have we ever been a first-rate power?"

Chinese Communists Are Having Trouble With the Courage and Character of Chinese Scholar

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report from the Chinese News Service, an information service of the Republic of China. It is refreshing to read of a Chinese scholar who subscribes to Communist economic theory but refuses to bow to Communist tyranny over the human mind. There are many more such scholars and their protest will grow. The report follows:

RED UNIVERSITY HEAD REFUSES TO ADMIT ERROR

The puppet Peiping regime's much-publicized campaign of catching up with Britain in industrial production is meaningless; what determines the standard of living of the British and Chinese on the mainland is output per capita rather than the total output. These obvious truths have been pointed up by an outspoken, fearless, U.S.-educated Chinese scholar on the mainland in a lengthy

article in the November issue of the Communist periodical New Construction. He is the controversial, 76-year-old rightist President of Peking University, Dr. Ma Yin-chu.

Discredited by the Chinese Communists since the publication of his non-Marxist theories on population control in 1957, the Columbia University educated economist insists that if the catch-up-with-Britain drive had any meaning, mainland China's production must be at least 10 times that of Britain. He repeats his old contention that the constantly increasing population on mainland China makes it impossible to improve people's standard of living. He writes: "More people give rise to more ideological problems, more living problems, more work evasions, more bureaucracy and more idle labor."

Ma's article is meant to be an answer to the Communist writers who criticized his book "My Economic Theory, Philosophical Thought and Political Standing," published in 1958. His article has caused a sensation in Peiping not merely because of his scholarly, well-reasoned counter-criticism of the Red regime's economic blunders but because of his daring refusal to admit his errors and his sharp attack on the ignorance of Communist writers. A fearless man, he declares: "I am nearly 80 and am aware that I am outnumbered. I will accept the challenge single-handed and fight until I die. I will never capitulate to those critics who are bent on bringing others to submission by force and not by reason." He resents name calling, distortion, meaningless words, empty talks, and eight-legged essays.

Ma says his friends have advised him to retreat and admit error, lest his political position be jeopardized. But he retorts: "One should be brave to correct mistakes, adhere to truth and bear all consequences, even if such actions are harmful to one's private interest or one's life." He adds: "I am infinitely grateful for the advice prompted by sincere friendship, but I cannot accept it. I feel that this is not a political but a purely scientific question. In scientific matters the more they are discussed the more they are clarified. One should not do what a Chinese proverb says: 'The wise man preserves his life and retreats 90 miles.'"

Castigating his Communist critics as bandwagon climbers, the elderly educator writes: "Communists should behave courageously, maintain the truth and proceed from reality and not bend with the wind. It is always necessary to learn how to make progress and to go ahead manfully. Some comrades do not follow the direction of progress, but go the way the wind blows. They watch what others are doing and do the same without considering whether his action is right or wrong. Thus these comrades act in a ridiculous way."

"Why do these comrades bend with the wind?" Ma asks. "The trouble is that they want to be progressive, and are afraid that they will be considered as backward. Without looking at the circumstances, they just want to dash to the front. Some do it because of vanity; others do it because of a desire to show off. Such an effort to dash to the front is not in keeping with the Communist party's slogan: 'Gather all the strength and go upstream.' Members of the Communist party must work sincerely for the people and not for vanity. We have to act in accordance with reality and not like weather cocks." He hopes his 10,400 students at Peking University would face reality in their future career and meet criticism without abject surrender.

Dr. Ma maintains that he is a Marxist. He is also a member of the Chinese Communist Academy of Sciences, a deputy chairman of the Chinese Communist Soviet friendship association. Being the president of one of the leading universities in Peiping since 1951, he admits that he owes his position and even his life to a top Communist friend in the Red hierarchy, believed to be Chou-En-lai.

Poison in Our Foods

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. MADDEN. Mr. Speaker, the following article from the editor of the Prevention magazine at Emmaus, Pa., in support of the legislation introduced by Representative DAVID S. KING, brings out some pertinent facts pertaining to the future health of the American people:

GOOD LEGISLATION ON CHEMICALS IN FOOD

Recently introduced into Congress was a bill and a joint resolution which should have the support of every Prevention reader.

The bill is numbered H.R. 9150. It proposes a law for establishing a commission to conduct an impartial and scientific study and investigation to determine the effects on the public health of the practice of adding various chemicals to water supplies and food products.

The joint resolution, House Joint Resolution 523, is to prohibit officers and employees of the United States from treating communal water supplies with fluoride compounds until a report from the Commission on Food and Water Contamination shall have been submitted to the Congress of the United States.

These important pieces of legislation were presented by Representative DAVID S. KING, of Utah, who made an excellent speech in the House on the day after he presented the bill. He said, among other things:

"When the American housewife wheels her cart around the supermarket, she is only dimly aware, if at all, that it is almost impossible for her to purchase any article of food that has not had chemicals, bleaches, preservatives, additives, dyes, adulteratives and other foreign substances added to it. Until last year, the law was so worded that any new chemical compound which was not a known poison could be added to any food for consumption and the burden then fell on the Food and Drug Administration to prove that these foreign substances were deleterious to human health. This proof was difficult to adduce, from a legal point of view, even when immediate toxicity could be demonstrated. But it was almost impossible to do when the toxicity of the chemical compound was of such a nature that it could not be detected until after the expiration of many years. Because of the outstanding work of the Delaney Commission, the food additive amendment was passed last year which requires food processors to submit to the FDA the results of their tests on new chemical compounds. But the law is still filled with loopholes.

"It seems to me that it takes only a slight leap of the imagination on the part of the American housewife to grasp the proposition that where the incidence of degenerative diseases such as cancer, arteriosclerosis, and degenerative heart disease suddenly increases, and, apparently, for no known reason, and where it is shown that contemporaneously with such increase there occurs a phenomenal increase in the total amount of chemical compounds consumed, then there may well exist a casual connection between these two phenomena. I am quite aware of the fallacy of oversimplification, and I fully recognize the probability of a multiplicity of causes in any phenomenon as complex as disease. What I do say, however, is that the ever-increasing scientific evidence renders it highly probable that the invariable concurrence of disease and body contamination by the consumption of toxic chemicals is more than coincidental.

"It is apparent that this entire subject requires a thorough investigation. The health, and maybe even the survival, of the American Nation is at stake. Our laws on nutrition are loose and inadequately drawn. Public knowledge is fragmentary and riddled with misinformation and discarded dogmas. The means of disseminating information on this subject are inadequate."

We think this is one of the finest statements we have ever seen on the perils we all face from chemicals in food and water. It is well hidden in the CONGRESSIONAL RECORD. How many of the folks in your town or city will ever know of its existence? How many will ever know that such a law has been proposed?

WORK FOR THE PASSAGE OF THIS GOOD LEGISLATION

There is one sure way that you can help them find out about it. Very few people read the CONGRESSIONAL RECORD, but almost everybody reads the daily paper. And most people take time to read the "Letters to the Editor" column. If you feel strongly that you want to be better protected against chemicals in food and water by stronger and more easily enforced Federal legislation, write a letter to the editor of your local newspaper. Say anything you want to say, so long as you state only facts that you know to be true. We think it would be good policy to quote some or all of the words of Representatives KING as we have quoted them above.

Ask your townspeople to write to their Congressman urging him to support Representative KING's proposed law. Give the number of the bill—H.R. 9150 and the joint resolution, House Joint Resolution 523.

Give the name of your Representative so that everyone will know where to write. (Your newspaper can tell you his name if you do not know it.) His address is House Office Building, Washington, D.C. He wants to hear from the folks back home. How else can he know what you want him to do in Washington?

Let's have a letter, at least one letter, to the editor on the page of every newspaper in the United States. Now is our chance to be heard—and to be in favor of something rather than always being against. We are 100 percent in favor of this legislation.

Chief Judge John W. Murphy, Former Member of Congress, Honored at Testimonial Dinner

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of Friday, February 5, 1960, which comments upon the honor bestowed upon

Chief Judge John W. Murphy, of the middle district of Pennsylvania, at a testimonial dinner held last Saturday evening. Judge Murphy, a native of my district, has had a long and distinguished career and it was my pleasure to be one of the many who honored Judge Murphy at Saturday evening's dinner. I know that many Member of this body remember Judge Murphy during his tenure for three terms as the Representative of Pennsylvania's 10th Congressional District and will be happy to learn of the latest recognition extended to a former colleague.

The editorial follows:

DINNER FOR U.S. JURIST

The fact that reservations for the testimonial dinner to Chief Judge John W. Murphy, of the Middle District of Pennsylvania, at Fox Hill Country Club on Saturday night, were quickly exhausted and scores of friends and well-wishers will be disappointed because accommodations were not available for them is an impressive tribute in itself to the Federal jurist who was born at Avoca and now makes his home at Scranton.

Judge Murphy was serving his third term in Congress when he was named to the U.S. bench in 1946. He was advanced to chief judge when Albert Watson retired in 1955 and a vacancy was created. For 7 years, Judge Murphy served in the office of the Lackawanna County district attorney. He has had a distinguished career of public service, although he still is in his prime.

Like so many self-made men of the area, Judge Murphy, 1 of 12 children, started his climb up the ladder of success in an anthracite breaker. He rounded out his formal education at the University of Pennsylvania which awarded him the degree of bachelor of science in 1926 and bachelor of laws in 1929.

Judge Murphy is endowed with a warm personality as well as broad experience and learning in the law to equip him for the duties of the important post he now holds. The pride of Greater Pittston in his achievements is understandable, although his name long has been linked with Scranton and Lackawanna County.

Trujilloland: A Private Estate

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the December 26, 1959, issue of the Nation:

TRUJILLO: MORE CROESUS THAN CAESAR

(By J. I. Jimenes-Grullón)

MERIDA, VENEZUELA.—Latin America has suffered from many dictatorships, but all were almost exclusively political. The case of Trujillo is different. He usurped power and then, gradually, took over the national economy. For him the State is an instrument at the service of his boundless ambition for wealth. It could be said he is more Croesus than Caesar and that, psychologically, he is more gangster than politician.

Much has been written about the terrorism of his 30-year-old regime—the suppression of civil rights and liberties, the mass murders perpetrated upon helpless peasants, the assassinations Trujillo has engineered not only on his own soil, but in the United States and Cuba. Much less is known of the extent to which the dictator has turned a whole country into a private estate.

More than 70 percent of the Dominican Republic's sugar plantations, and 60 persent of all other agricultural land, belong to him or to his family. Similar figures are applicable to the nation's small industry. Exact statistics are impossible to ascertain; indeed, it is even impossible to separate what belongs to the state from what belongs to Trujillo—both form a single entity. The judiciary and legislative arms of the government are under his thumb, and both operate to assure the steady growth of the ruler's fortune, already estimated at more than $500 million.

The country's tax system is ideally geared to protect Trujillo's monopolies. According to the Anuario Estadistico (Yearly Statistics Bulletin) of the Dominican Republic, in 1954 revenues from direct taxes amounted to $13,599,489.63, while indirect taxes totaled more than 6 times as much—$83,492,918.03. It is not the property owners who bear the tax burden, but the great mass of the people, whose poverty thus becomes a double burden.

At least 75 percent, perhaps more, of the Dominican Republic's gainfully employed population work for Trujillo directly or indirectly—directly in one of his agricultural, industrial, or commercial enterprises, indirectly as members of the government bureaucracy. One result of this economic monopoly is to strangle private enterprise; and this phenomenon, combined with the growth of population, results in turn in an increase of unemployment. Already 40 percent of the country's employables are without jobs, a fact which increases the dictator's power over his people. For, to get work, the people must turn to him. Trujillo controls not only the natural, but also the labor resources of the country—a situation unique in Europe and the Americas.

One begins to understand, now, how Trujillo's tyranny has managed to survive. He has coupled the ruthless use of violence with an equally ruthless manipulation of man's instinct for survival; his people, to eat, must submit to him. And to these two factors, a third must be added: the dictator's seeming immunity on the international scene. Despite his persistent violation of international accords—notably the Human Rights Convention—he has never been criticized officially by any of the great democracies. The United States, ignoring the crimes which Trujillo has committed on its soil, continues to maintain cordial relations with him in the name of nonintervention.

Despite these circumstances, Trujillo's opposition is growing. The exile-engineered invasion of the Dominican Republic last June, even though abortive, forced the dictator into an arms purchase program that is threatening the economy of the regime. This, in turn, has increased the misery of the people; the per capita income, recently estimated by the United Nations at $137, has suffered a further drop. Were the democracies, in protest against Trujillo's repeated violations of international accords, to break diplomatic relations with him and to declare an economic boycott against his regime, it is doubtful that the dictator could outlast the morrow.

As the South Sees It

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. HUDDLESTON. Mr. Speaker, a new book stating the South's position in the segregation-integration controversy has just come off the press. Written by Mr. William D. Workman, a Columbia, S.C., newspaperman, and published by Devin-Adair, "The Case for the South" has been reviewed by Richard Whalen in the February 13, 1960, issue of National Review. With the thought that Mr. Workman's book and Mr. Whalen's review will be of interest to thoughtful people in all sections of the country, I insert the review in the CONGRESSIONAL RECORD herewith under leave heretofore granted:

AS THE SOUTH SEES IT

(By Richard Whalen)

Immediately following the Supreme Court's decision in the school segregation cases in May of 1954, the jubilant evangels of integration were supremely confident. The South, they asserted, would submit quitely to the new sociology. A month after the decision, Thurgood Marshall, chief counsel of the NAACP, set September of 1955 as the target date for abolishing segregation in all public schools throughout the United States.

That timetable seemed accurate enough in the early days. Washington, D.C., set out to become the "Nation's showplace" of integrated education. The Border States, with varying degrees of enthusiasm, fell into line. To be sure, there was some foot-dragging in such places as Clinton, Tenn., and Sturgis, Ky., but the NAACP and the northern press laid the blame on rabble-rousing John Kasper and Company. The South would obey, the law of the land would prevail, chorused the integration-minded. But it soon became obvious that the South would not obey. How grossly outsiders misjudged the southern temper may be seen by the fact that, after years of turmoil and mounting bitterness, all but 175,000 of some 3 million Negro children in the South will observe the sixth anniversary of the Court's decision in segregated schools. Nearly three-fourths of the biracial school districts ruled unconstitutional in 1954 remain unchanged today.

Observers from afar, in the vocal North especially, are dismayed by the white South's granitic resistance to desegregation. But their outcries betray ignorance. Almost 6 years after *Brown* v. *Board of Education*, those outside the South are coming to discover fiercely held convictions on the other side of a momentous question long presented as one-sided. And before they cram change down unwilling throats, would-be revolutionists should pause to determine why their hopeful dreams of swift victory are broken.

"The Case for the South" (Devin-Adair, $5) provides a lucid answer. As spokesman for an embattled one-fourth of the Nation, William D. Workman, a Columbia, S.C., newspaperman, has prepared a lively brief. If his case is not airtight, it is certainly challenging. Especially necessary is his debunking of the widely held notion that "merely a handful of recalcitrant, ignorant, and misguided individuals stand in the way of wholesale racial intermingling in the

South." On the contrary, writes Workman, "for every hate-mongering crackpot or 'bullyboy' who hits the headlines with an act of brutality or of utter stupidity, there are literally thousands of solid, substantial citizens whose opposition to enforced integration is as constant and steadfast as it is peaceable."

One of the doleful results of new sectional antagonism is the belief of many northerners (tutored by Tennessee Williams and William Faulkner) that southerners are "lawless." Like many in Dixie, Mr. Workman takes the 10th amendment seriously. His contention is that "the clash is not between the people and the law, but between two opposing sets of laws—those of the central government and those of the local government." In the southern view, segregated schools, in the absence of a specific prohibition, are constitutional. Moreover, they are made essential by the social geography of the South.

Whatever they may think of the southern conception of the Constitution, northerners and westerners must acknowledge that the South is different. It is too little understood that, in many areas of the South, acceptance of integration would mean the mingling of a handful of white children and a multitude of Negro children. Further, the Negro children of the South Carolina low country and the Mississippi Delta (through no fault of their own) differ markedly from the clean, well-mannered Negro children who add a touch of democratic color to schools in northern suburbs. The reluctance of white parents to send their children to essentially Negro schools is humanly understandable, if not in accord with the precepts of modern sociology.

At the heart of southern resistance to integration is the belief that the schools are woven into the social fabric of the community; that a tear in the classroom may rip apart everything. What the white southerner wishes to hold together is a society in which his moral and cultural standards prevail. Against bombast from the press and scolding from the pulpit, he steadfastly argues that status cannot be conferred; it must be earned. To buttress his argument that the Negro has not earned the right to be treated as an equal, the white southerner marshals impassive statistics on Negro illegitimacy, crime and insolvency.

But the case for the South, when offered in black and white, adds up to a fatal weakness. Granted, the Negro, as a race, does not measure up to the white standard, but what of the growing Negro middle class? The Negro white-collar worker, who has achieved middle-class rank by great exertion, is excluded as ruthlessly from white schools and society as the shiftless Negro fieldhand. To his credit, Workman rises above the storm of North-South calumny and acknowledges that "the white man has provided no place in the southern order of things" for the Negro middle class. He writes: "The white southerner can contribute importantly to the easing of segregation tenseness, and to the ultimate adjustment of the racial problem itself, by the simple expedient—the word is used deliberately—of extending to the Negro southerner a larger and more adequate share of personal dignity and decency."

The Negro middle class is the key to future race relations in the South—and the North as well. Negro leaders, if they see the wall of white resistance transformed into a gate of acceptance, may assert themselves more effectively in dealing with the social and moral problems of the Negro community.

Understandably, the center of attention in the desegregation controversy has been the Negro, whose involvement is dramatic and immediate. But white men, North and South, are equally involved. It is a truism that interracial lines of communication are all but broken in the South; but the lines of intersectional communication between white men are almost nonexistent. Beneath the indignation of northern hypocrisy and political expediency, there is in "The Case for the South" an appeal for a North-South dialog which reasonable men will approach without blind self-righteousness.

It is sadly ironic, paradoxical indeed, that the South should feel itself excluded and unheeded, unable to make its voice heard, for the voice of modern American literature is distinctly southern. Out of the "Sahara of the Bozart" mapped by Mencken have come the literary giants of our time. While journalists traveled south to upbraid the supposed Yahoos, men of ideas sent north the ingredients of culture. One group of southerners is especially important: the poets and critics who met, by happy coincidence, at Vanderbilt University in the 1920's. In "The Fugitive Group" (Louisiana State University Press, $5), Louise S. Cowan traces the common creative roots of such men as John Crowe Ransom, Allen Tate, Donald Davidson, Robert Penn Warren and Merrill Moore, who made—without self-consciousness—of their regional heritage a profoundly influential art. In the Fugitive, their little magazine, these civilized young men sowed the seeds of the toweringly dominant new poetry and new criticism. In the 1930's, the leading spirits of the Nashville group styled themselves "Agrarians" and telling protested the dehumanizing inroads of industrialism in a manifesto, "I'll Take My Stand."

By their talent and intellect, these southerners stirred a renascence that has brought their region unchallenged literary supremacy. The civilizing role of the South in the past three decades makes ludicrous the glib libels of the neoabolitionists, whose regions have given to American culture the hipster and beatnik. Defamed from without, caught in its own contradictions, the South will yet be heard, for in contrast to much of the United States it has something important to say. Its genius may be, as fugitive-agrarian Donald Davidson has written, that "it offers its people belief rather than doubt, conviction rather than skepticism, loyalty rather than distrust."

Raising Interest Ceilings

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement relating to the need for congressional action raising interest ceilings on long-term Government securities:

STATEMENT BY REPRESENTATIVE JOHN V. LINDSAY, REPUBLICAN OF NEW YORK, RELATING TO THE NEED FOR CONGRESSIONAL ACTION RAISING INTEREST CEILINGS ON LONG-TERM GOVERNMENT SECURITIES FEBRUARY 8, 1960

The continued existence of the 4¼ percent interest rate ceiling strikes directly at the pocketbook of the average American. As a taxpayer, he must bear the cost of the highly uneconomical management of our huge national debt that results from the Treasury Department being forced to do all of its financing on short-term securities at high interest rates. Conservatively estimated, this is costing the taxpayer about a half billion dollars a year. As a man who wants to buy an automobile, he is hurt by the stiff competition that arises from the Treasury being forced to do all of its borrowing in this way. As a consumer, he may be hurt by still further increases in the cost of living, because the concentration of all Treasury borrowing on very short-term securities, which are very close to being money, has much the same effect as creation of money by running the printing press. If this archaic and harmful restriction is not removed, it is the average American citizen who will be hurt—and hurt badly.

The question of whether the Congress will act responsibly with respect to the interest rate ceiling is much broader than the question of the ceiling itself; it is a question of whether this Nation will return to the discredited and highly dangerous cheap money policies of the past. The demagogs can cry out against high interest rates, but the only alternative they can offer is simply to create more and more money to try to bring interest rates down. This can only lead to debasement of the currency, inflation, and all of the hardship and misery that a depreciating currency entails. If this great Nation were to embark on such a program it would inevitably weaken, and perhaps destroy this country's position of leadership in the free world.

This is no idle theory; it is a lesson of history, testified to by the countless instances in which fiscal recklessness and irresponsibility have led to economic ruin.

Castro's Cuba Versus Human Freedom

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a synopsis of an address delivered by my friend, the Reverend Father Joseph F. Thorning, Ph. D., D.D., associate editor of World Affairs, before the faculty and student body of the visitation Academy for Young Ladies, Frederick, Md. This Visitation Academy has been a center of sanctity and knowledge for many years. Consequently, it is inspiring to know that, at a time when some journalists and educators were bewildered by the course of events in Cuba, the instructors and students in this historic and celebrated institution were well aware of the facts. Now almost everybody knows that the stakes in the Caribbean are freedom and decency, principles that must be upheld against the criminal conspiracy controlled by the Castro brothers, Fidel and Raul. Those who acted as press agents for Fidel Castro can see the folly of their action. In matters of this nature it is important to be able to interpret human character and to size up the trend of events. Father Thorning did this in the National interest. The article referred is included at this point:

REV. DR. THORNING DECLARES CASTRO POLICIES THREATEN PRO-U.S. NATIONS

Delivering his first talk after participation in the initial jet flight by Pan American World Airways to the Caribbean, Rev. Dr. Joseph F. Thorning, pastor of historic St. Joseph's Church, Carrollton Manor, and a specialist on inter-American history, de-

cleared before the faculty and study body of the Visitation Academy here that "turmoil will continue throughout the American Mediterranean as long as Fidel Castro's blood-stained tyranny is permitted to serve as a staging area for new invasions of nations friendly to the United States."

HAITI ALERT

The Maryland educator, author, and diplomat added:

"The people and Government of Haiti are on the alert for fresh aggressions from Cuba. Officers of the U.S. Marine Corps in this Republic are training members of the Haitian armed forces in the most modern techniques of ground fighting, recognizing that only hand-to-hand combat will be able to defend the island against Castro units now being taught guerrilla warfare tactics by Gen. Alberto Bayo, the latter a veteran of the Spanish civil war.

"In the meantime, the Cuban telephone operators, most of them girls who formerly were fanatical supporters of the Castro dictatorship, now put through calls after reminding their clients that 'Hubert Matos is innocent.' Major Matos was the Castro commander who was fired and jailed by the 'supreme chief of the revolution' for warning against Marxist-Leninist domination of the present regime in Cuba.

MANY DISAGREE

"Moreover, Castro's demand that his followers engage in wholesale espionage and deletion of citizens who disagree with him has revolted decent elements in the population. This is identified by all groups in the Caribbean as a most vicious police-state technique. Many spies and informers are simply venting personal spite against fellow citizens that they dislike, or whose property they covet. The rights of God and man are being trampled in the dust."

Rev. Mother Mary De Chantel and Sister Claire Joseph, directress of studies presided at the gathering here.

Fifty Years of Progress in Scouting

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. OLIVER. Mr. Speaker, this morning it was my privilege to attend the breakfast meeting, commemorating the 50th anniversary of the Boy Scouts of America. This meeting was built around the thesis of report to the Nation of this great organization of the youth of America.

As I viewed and heard cross sections of youth of this Nation, I forgot for the moment some of the cynical viewpoints which are being expressed, daily, about the teenagers of this generation.

Having just participated in committee hearings in various areas of the United States which emphasized the traffic in filth overwhelming our newsstands, our mails, and in too many instances, our entertainment world, it was like a breath of fresh life to attend the memorable meeting.

Realizing that in these 50 Explorer Scouts, America does have strong and dedicated leadership among our youth to meet the swelling tide of indecency and excesses of all kinds gives me a renewed faith and feeling of confidence that America is competent to meet its many distressing problems and developments.

The positive contributions which the Boy Scouts have made and are making toward the betterment of our society give us this faith. The BSA is a living, evolving organization. The founding of the Boy Scouts in 1910 was followed by the Cub Scouts, the Sea, Air, and Senior Scouts, and finally the Explorer Scouts. Each one of these programs was created as a result of careful study, to meet a definite need. This, in itself, illustrates the vitality of the scouting program, the ability not only to recognize a need but to create a program to solve that need.

Today, the need for the Boy Scout organization is even greater than it has been in the past. Transmission of obscene literature through the mails is only one example of the many ingenious methods utilized by unscrupulous operators in attempting to corrupt our youth. The Boy Scouts in establishing the Explorer Scouts both recognize and meet their responsibility. They provided a program through which older boys can further develop their skills and initiative.

I feel certain that we have not yet witnessed the full development of the Boy Scouts of America. The future holds many challenges for our youth. I am sure that the Boy Scout organization will meet these challenges just as they have met those of the past.

I am pleased to include the remarks of William R. Henry, an Explorer Scout chosen to represent Maine in making the BSA's 50th Anniversary Report to the Nation. Bill Henry is truly representative of the many intelligent, aggressive young Americans who are active in the scouting movement. It is with special pride that I take this method of paying well-deserved tribute to this neighbor of mine from Cape Elizabeth, Maine:

FIFTY YEARS OF PROGRESS IN SCOUTING

(By William R. Henry)

During the past 50 years there have been tremendous advancements in science, math, and history. This is also true of scouting. From February 8, 1910, when Lord Baden-Powell started scouting to this present day, there have been many changes and improvements. When Lord Baden-Powell started this movement, there were many rivals in the same field. Those in this Nation were united into one organization under the name of the Boy Scouts of America. This was a great step in the Americas since Scouting was rapidly spreading to all corners of the globe.

This was an improvement in itself, but there was still no program for the younger boys. Again Lord Baden-Powell came to the rescue of boys. He devised a plan for Cub Scouts in 1916 and his ideas were accepted in 1919. This gave the boy who wanted to be a half Scout until he was of age, an opportunity to be a full member of the Scouting movement.

After I had been a Cub Scout for a short time, I said to myself, "Bill, you are going to become an Eagle Scout someday." I feel that Cub Scouting helps the young boy into the Boy Scout program and gives him the drive to advance. I know that it did that for me.

With these advancements, scouting was almost complete. Even then there was one thing lacking. What about the older boys? What were they going to do? They are not allowed to work very much because the child labor laws restrict it. Should they roam the streets and get into trouble? The National Scout Office didn't think so. Sea scouting, air scouting, and senior scouting was developed to take care of this problem. They were a great improvement, but there were still many more improvements to come. In 1949, the National Executive Board devised an exploring program for boys of the age 14. This program continued until 1959, when the University of Michigan made a study of teenagers and the things that they would like to obtain from a program. As a result of the Michigan study, the new Explorer program went into effect.

I feel that the new Explorer emblem is a symbol of these 50 years of achievement, and I also think that it prophesies the future of all scouting. The emblem is three circles, two prisms which meet at infinity, and the traditional fleur-de-lis of scouting. The three circles around the Explorer of his American heritage and stand for his enviroment. The fleur-de-lis is symbolic of Scouting. The prisms depict duty to God. I feel that this emblem of circles, prisms, and the fleur-de-lis is a dynamic image of the progress of the past and that which will certainly be made in the future.

I feel that the new exploring program is the crowning achievement of the past half-century. It is the result of tremendous effort and drive on the part of its creators, and will help boys when they are at the most critical age.

Arthur A. Schuck, the chief Scout executive, has said, "The record of the past has been written. But no movement can rest on its past—the very word 'movement' suggests progression."

"Mortgage" on United States—$750 Billion

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BOSCH. Mr. Speaker, there has been certain conjecture about what to do with the estimated $4.2-billion surplus referred to by the President of the United States in his state of the Union address. There are many who believe that we should embark on additional spending programs without regard to an obligation to practice fiscal responsibility. I believe the American people would like us to work toward the day when their heavily overburdened tax load may experience substantial relief and the national debt be substantially reduced and paid off.

In this connection, I include an article by the Director of the Budget as it appeared in the U.S. News & World Report of February 15, 1960, which is worthy of serious reflection on the part of all of us:

"MORTGAGE" ON UNITED STATES—$750 BILLION

(By Maurice H. Stans, Director of the Budget Bureau)

In the last decade, from fiscal year 1950 to fiscal year 1960, for the Federal Government alone:

Total Federal taxes and receipts show a rise from $36.5 billion to $78.6 billion—an increase of 115 percent;

Expenditures for agricultural programs have increased from $2.8 billion to $5.1 billion—a rise of 85 percent;

Expenditures for natural resources rose from $1.2 billion to $1.8 billion—a growth of 50 percent;

Expenditures for public health went up from $244 million in 1951 to $850 million in 1960—an increase of 250 percent;

Expenditures for major national security rose from $13 billion in 1950 to $45.6 billion in 1960, an increase of 250 percent;

Expenditures for interest on the public debt increased from $5.7 billion in 1950 to $9.3 billion in 1960—an increase of about 60 percent.

Here is one more statistic: The Federal Government in fiscal year 1961 will spend $79.8 billion. Now, if you add up what we will have spent on interest on the public debt from 1950 through 1960, it comes out to $75 billion—almost enough to cover all our expenditures for the next full fiscal year. That's a high price to pay for years of spending more than we took in.

I ask you to realize that, when you look only at the budget for 1 year at a time, you see only the visible portion of the iceberg; the dangerous part of it is under water. The brutal truth is that we have made our job unnecessarily and grievously difficult; and, further, that there are pressures at work on all sides to drive us deeper into the hole.

Fact No. 1 is that the Federal Government is piling up c.o.d.'s for the future at an astounding pace:

It will cost over $30 billion to complete the Interstate Highway System.

Federal civil public-works projects already started will require expenditures after 1961 of about $7 billion before they are completed.

The Federal Government is committed to contribute $5.5 billion in the future for public housing.

Merchant marine subsidies and ship replacement constitute a Federal liability of $4.3 billion.

These and a variety of other obligations, when added to huge, unexpended balances in the defense program, total $98 billion of commitments for future Federal spending.

In one sense, and standing alone, this is not too bad, for most of these expenditures will add to the Nation's assets. But this isn't all.

Fact No. 2 is this: Even if this session of the Congress doesn't add any new programs to the budget, the level of Federal spending is going to go up. The reason is that there are built-in increases in existing programs which are now producing a continuing upcurve in expenditures.

The catalog of built-in increases covers such programs as outer space, civil aviation, merchant shipping, urban renewal, science education, medical research, public assistance, loans to underdeveloped countries, and veterans' pensions. Interest on the public debt will run still higher, and the farm program may cost more and more, unless we get realistic legislation on both. Defense technology is putting increasing pressure on expenditures.

Now, for 1961 alone, these built-in increases amount to over $2 billion; that's why this budget is up over 1960. For 1962 there are already built-in increases of a billion dollars.

Of course, there are few built-in decreases, because Government programs seem almost invulnerable to reduction or elimination.

Fact No. 3 is that our present national debt of $290 billion is far from all we owe for the past. Here are some items it doesn't include: Our already accrued liability for military retirement is about $30 billion. Our unfunded present accrual for retirement benefits for civilian Government employees is almost $28 billion. On top of that, future pensions, compensation and other benefits voted to veterans will cost about $300 billion. Now, the $290 billion of current public debt, plus over $350 billion of future obligations for past services, plus $98 billion of c.o.d.'s, adds to the almost incredible total of nearly $750 billion.

That is the Federal Government's mortgage on America's future—on ourselves and our children—beyond the regular annual costs of defense, welfare and commerce. Is it any wonder that your President pleads for a sense of proportion, for a limit on compulsive spending, for a passion for responsibility?

Fact No. 4 is that the pressures for new spending programs are increasing in intensity. In the last session of the Congress alone, there were 20 major spending bills introduced in the House, along with 20 others in the Senate, for new programs which altogether priced out to more than $326 billion over an average period of 5 years. If these bills were passed as their sponsors want them, they would add $50 to $60 billion a year to our present spending.

This is the bleak situation we will do well to contemplate when irresponsible groups ridicule $80-billion budgets as austere and reactionary, and when we are asked to believe that we can have more spending and tax cuts and prosperity for everyone, all in the same breath. The false theory that we could spend ourselves into prosperity was supposed to have died 20 years ago.

Haven't we been chasing our tails around that one just about long enough?

Why Not Use the Court

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. LINDSAY. Mr. Speaker, sometime ago the New York Times ran an important editorial on the subject of the Connally amendment. The editorial was reprinted in the February 4 issue of the Christian Science Monitor. Under unanimous consent I insert it in the RECORD:

WHY NOT USE THE COURT?

For nearly a decade and a half there has been an International Court of Justice, under United Nations auspices. For many years before World War II began a somewhat similar body, authorized by the League of Nations, and called the Permanent Court of International Justice, also sat in the red brick Peace Palace at The Hague. The trouble with the present Court, as with the former, is that no nation has to take a case before it and that the decisions it does render are not enforceable.

The United States complained to the Court in 1952 about a Russian attack on one of our airplanes off the coast of Japan and Russian treatment of a U.S. air crew forced down in Hungary in 1954. In each case the Russians contended we were at fault and that no Court inquiry was necessary. The Court then held it had no jurisdiction. A case that kept the court pleasantly occupied last year had to do with 35 acres of land in dispute between the Netherlands and Belgium under agreements of 1839 and 1843.

This country, in line with action taken by some other countries, ratified the Statute of the Court in 1946 with a reservation that we would decide for ourselves whether or not a case was within the domestic jurisdiction of the United States. Within the last year or two the Eisenhower administration has been concerned with getting this, the so-called Connally amendment, repealed. The President urged repeal a year ago and again this year in his state of the Union message. This week Secretary of State Herter and Attorney General Rogers have appeared before a Senate committee to support Senator HUMPHREY'S repeal resolution. Whatever may be the nervous fears of some of our still surviving isolationists, there really is no great danger that we will have to go to The Hague to explain the segregation situation in Little Rock, defend a tariff on wool or argue the restrictions on immigration.

If we believe in government by law at home, there is no reason why we should not sustain the rule of law throughout the world. We will have plenty of sovereignty left after the 15 elderly gentlemen at The Hague have done all that they possibly could to deal with any complaint that might be brought into Court against our country.

Summing Up and Looking Ahead

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial about the Boy Scouts, 5 million strong, who are celebrating the 50th anniversary of their organization's founding, February 8, 1910. The editorial appeared in the Boston Traveler on February 6, 1960, and reads as follows:

SUMMING UP AND LOOKING AHEAD

On a miserable day in London half a century ago, a Chicago newspaper publisher, William D. Boyce, was hurrying to keep a business appointment when he lost his way in the fog.

As he stood still in the confusion trying to get his bearings, a youth approached, offered to help and soon guided him to the address he sought.

Along with his thanks, Boyce proffered a shilling tip, but it was refused. With a smile and a salute, the lad vanished into the fog, saying:

"I'm a Boy Scout, sir. We don't take tips for doing good turns."

Boyce never learned who the Boy Scout was, but he made it his business to learn enough about British scouting to found the Boy Scouts of America on February 8, 1910, a short time after he returned to this country.

In the intervening 50 years, upward of 33 million men and boys have participated in the American Boy Scout movement, all pledged to do a good turn every day.

They were boys from every kind of home—rich and poor, farm and city—from every race, color, and creed—Catholic, Jewish, Protestant.

And across the decades they have been linked by one universal code that prescribes loyalty to country, reverence to God, and helpfulness to all fellow human beings.

For the record of good citizenship, good deeds, and wholesome living they have amassed, today's 5 million active American

Scouts and millions of old alumni deserve the Nation's praise, as they celebrate their Golden Anniversary.

They'll surely receive a fitting round of congratulations in a week-long program of birthday ceremonies that begin with special religious services tomorrow and will include citations by mayors, Governors, and even the President of the United States.

In some families three generations of Scouts—son, father, and grandfather—will be taking part in festivities that pay tribute to the organization from its beginning.

Growth was gradual in the early years of scouting when clubs and group activities for young people were nowhere near as common as they are today.

It took time for the appeal of that unique combination of close companionship, high ideals and the rugged outdoor life that characterizes the Boy Scout movement to spread among the Nation's teenagers.

But almost from the start scouting got a sharp impetus from what came to be known as National Good Turns, in which all Boy Scouts participated.

The first one came in 1912 when the members worked for a safe and sane Fourth of July.

World War I gave Scouts a tremendous opportunity to serve their country and they made the most of it.

They took orders for some $200 million in Liberty bonds and war stamps. They collected tons of fruit pits that were used in the filtering material for early gas masks. They distributed literature for the Government, ran errands and completed myriad projects to conserve fuel and food. Not the least of these was cultivating thousands of victory gardens.

Such patriotic outlets for lads to young to take up arms attracted so many members to the Boy Scouts that by 1919 their ranks numbered 462,000.

Growth during the organization's second decade was hardly less spectacular, with distant travel and unusual adventure as part of an expanding program of fun, skill and public service.

It was during the 1920's that American Sea Scouts and Eagle Scouts went on various scientific expeditions to the Arctic, the Antarctic and Africa. And U.S. delegates attended international Scout jamborees in England and Denmark.

The opportunities of scouting had come to hold a good deal more than learning to light a fire by rubbing two sticks together or earning a merit badge by tying knots. More even than learning to be a good U.S. citizen and a good friend to other American boys.

As the international aspects of the movement grew—there are now about 8 million Scouts in 67 free countries—individual members began to develop an awareness of the interdependence of nations and of men.

Our boys not only went abroad to become friends with foreigners, they received boys from strange lands as guests in the United States.

As their scope increased, their numbers did too, so that on their 25th birthday in 1935 they were pushing 1 million.

The great depression and World War II gave American Boy Scouts chances for unusual service to their country and fellow citizens. They were the backbone of many wartime collection drives for scrap metal, rubber and paper. And they performed a wide range of distribution and courier chores for the Government.

Again their membership leaped ahead to 2,580,000 by 1949, stimulated not only by the desire to help in emergencies but by a lowering of the age limit for membership.

Scout leaders at local and national levels have been particularly apt at readying and encouraging their young charges to worthwhile public endeavor.

Their motto is "Be Prepared" and on the whole, they live up to it remarkably well in helping out in such community disasters as fire, flood and storm.

In the past decade, while doubling their numbers, they have twice taken on a countrywide task of enormous proportions and significance.

In the presidential campaigns of 1952 and 1956 they cooperated with the Freedoms Foundation in a nonpartisan get-out-the-vote drive. The Scouts hung registration reminders on 30 million doorknobs and distributed a million posters. They plan to perform a similar national good turn in 1960.

But for their special service to the Nation in this Golden Jubilee year the Boy Scouts will emphasize conservation—spreading the message of preserving America's natural resources.

Of all its assets, none is more to be cherished than the vigor, the courage, the hope and the high purpose of the 5 million American Scouts. May their tribe and their troops increase.

The Federal Fair Trade Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. DINGELL. Mr. Speaker, during the last session of Congress I opposed H.R. 1253, the Harris Federal fair trade bill. The bill would have vested in the hands of manufacturers the power to control prices, not only on the manufacturer level but also on the wholesale and retail levels of distribution—in fact, from the plant gates until the time it reached the hands of the ultimate consumer. The bill would permit those who control the prices to deal ruthlessly with retailers and wholesales who did not follow their high fixed prices.

According to reputable economists, who are unanimously opposed to fair trade, this specific bill would cost consumers $10 billion a year.

Proponents of this iniquitous legislation did not make any complaint of unfairly high and improper manufacturer and wholesale prices. The principal sponsors of this legislation are the National Association of Retail Druggists, wholesale drug associations, and some of the big drug manufacturers.

The hearings being conducted by the Honorable ESTES KEFAUVER in the U.S. Senate have revealed some additional and shocking reasons why the enactment of fair trade is not in the public interest. These hearings have shown conclusively that fair trade is a danger even beyond that anticipated by the Federal Trade Commission, the Attorney General, and every Government agency which uniformly opposed it as a "pro tanto repeal of the antitrust laws." This legislation would authorize complete price fixing in the drug and pharmaceutical line, where factory prices are already fixed exorbitantly high by big drug manufacturers.

Here are some examples of gouging practices which have been engaged in by large pharmaceutical manufacturers, according to hearings conducted by the Kefauver committee, which are good reasons for defeat of fair trade legislation. Enactment of such legislation would place still further power to gouge consumers in the hands of those now fixing manufacturer prices at exorbitant levels:

First. A large pharmaceutical house bought female sex hormones for 14 cents a gram and sold them to druggists for $15 a gram, an increase of over 10,000 percent.

Second. The same large pharmaceutical house sells an arthritis wonder drug in Britain for $7.35 per hundred tablets, while U.S. customers are charged $17.90, 2½ times as much.

Third. Steroid compounds are sold for markups of 1,000 to 8,000 percent by manufacturers to wholesalers. The defense is made by manufacturers that this markup finances research. However, Dr. Philip Berke, vice president of Formet Labs in New Jersey, a small bulk manufacturer of steroids, said that his firm could supply "the steroid needs of the world" on an investment of $5 million.

Fourth. A large firm markets an antiarthritic drug for $17.90 per 100 tablets, while competitors market the same for $4, $6.75, $6.95, or $12. The smaller firms say that they can do this because of low promotional budgets.

Fifth. Another large drug house markets a drug, which costs 3.05 cents a tablet to produce, for 17.9 cents a tablet. Small competitors are able to sell the same drug at prices ranging from 4 cents to 12 cents a tablet, oftentimes buying the substance in bulk from the first large manufacturer and then processing it into tablets.

The Military Medical Supply Agency asked for bids and bought the same drug for 4.15 cents and later for 2.09 cents.

The Veterans' Administration negotiated a purchase of the same drug, prednisone, for 13.6 cents and later bought it by bid for 3.85 cents and in another instance for 2.2 cents a tablet.

Prices of other miracle drugs, pharmaceuticals, steroids, and other substances necessary to the health and welfare of our people are being raised to astronomical price heights by greedy persons who are profiting unduly from the misery of our sick and aged.

Remember, the prices I cite are only prices to wholesalers and the ultimate price may actually be 50 percent to 200 percent higher by the time the commodity in question reaches the ultimate consumer through the retail outlet.

To place in the hands of such ruthless, greedy persons the vast power over the whole price structure by enactment of a Federal fair trade law would be a mistake which cannot be made by the Congress charged with protecting the public interest.

Enactment of a Federal fair trade statute would mean precisely such power and would be dangerous to our economy and to our people beyond telling.

Passage of a Federal fair trade statute would permit other industries, such as hardware, appliances, food, clothing, soft goods, auto accessories, gasoline and oil to adopt the pricing practices prevalent in the drug industry.

Protecting Water Resources

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DADDARIO. Mr. Speaker, when this House considers H.R. 3610, to amend the Federal Water Pollution Control Act, it will be taking up legislation vital to the continued progress and growth of this country. The importance of our natural resources should be unquestioned; the protection and rehabilitation of the water supply unchallenged. I supported this bill a year ago when it first passed the House; I shall support the conference bill.

Connecticut, as a busy and growing industrial State, is well aware of the importance of its streams. I have been particularly interested in a provision of the bill which would permit communities to team up to control pollution and still qualify for grants. I have in mind an instance in which four communities—New Britain, Berlin, Cromwell, and Middletown—have studied mutual efforts in a difficult situation and projected plans even crossing county lines.

The importance of our watersheds is being brought home forcefully to all our people. Two of the most interesting statements in this respect recently came to my attention in the Farmington Valley Herald, a newspaper in my district, which printed the winning essays in a contest sponsored by the Farmington River Watershed Association. These essays are by Laura Deming and Tony Wallace, Jr., respectively, the former of Farmington High School and the latter of Simsbury.

I commend these students on their excellent statements.

It is Federal aid in pollution control which will enable cities to treat their municipal sewage problems. A year ago, a survey of progress in Connecticut showed that no municipal projects had been gotten underway in the preceding 12 months without Federal aid available within the appropriations.

Mr. Speaker, under unanimous consent I insert these essays at this point in the RECORD:

CONSERVATION AND THE FARMINGTON MEADOW

(By Laura Deming, first prize)

One small part of the Farmington River watershed is the Farmington meadow. This meadow, containing a great variety of land: swamps, forests, grasslands, and rich farmland, has played an important part in the history of Farmington; and today, when undeveloped land is becoming more and more valuable, this area remains an important part of the town.

A refuge for wildlife, the meadow supports deer, rabbits, skunks, squirrels and many other small animals as well as fowl. A common sight to many are the blackbirds, meadow larks, and other birds which fill the air with songs as they flit over the fields of corn and hay. From early spring until late fall, the clanking of plows, tractors, and other farm equipment is heard. The gentle lowing of cattle resounds near the banks of the river. The lonesome whistle of the freight trains is heard twice daily, as well as the honking of automobiles speeding past the meadow.

This beautiful meadow serves a purpose in the delicately balanced plan of Nature, a plan which man has often upset. The grassland provides food for the cattle; the forests feed the wildlife; and the rich topsoil produces food for mankind. If any one of these areas is destroyed, the balance will be upset, and man will ultimately suffer.

During the past generations conservation was not considered as important as it is now, for the land was not so valuable. With the great demand for housing, however, land has been developed at an astounding rate, and it is becoming more and more difficult to preserve some land in its natural state.

The Farmington meadow has not been excessively maltreated; therefore because it is in good condition, the main problem of conservation lies not in restoration, but in finding effective ways to protect the land.

Fires, which can do vast damage in a short period of time, are caused mainly by carelessness. A second thought, before pitching that cigarette from the car window, or a last check on that campfire, could have saved acres of forest and grass from destruction. Smokey the Bear and his few words of advice should be heeded by all.

Floods, part of that mysterious plan of nature, are, to some extent, beneficial to the land. Frequent or severe floods, however, can cause considerable damage by destroying valuable topsoil and other natural resources.

The banks of the Farmington River are quite low in the meadow area; thus flooding is very common. Perhaps excavation of the river bed would alleviate the condition somewhat. Dams on the tributaries of the river might also improve the situation, but these are costly to build and maintain, and tend to cause flooding upstream.

Junkyards, lumberyards and other sources of loose objects which can be washed downstream with the current and jam in narrow channels should be removed from the river banks. Bridges, which constrict the flow of water and other obstructions in the water or on the banks, which tend to slow the speed of the current, should be removed or remodeled. These changes will allow the water to flow more quickly and evenly into the Connecticut River.

Pollution of the river causes death to the fish as well as to grass and other vegetation which are flooded. Modern sewerage systems have been installed in several communities in the Farmington River watershed and soon Farmington will be one of the several. When the other towns in the watershed also meet this requirement, damage done by pollution to the meadow and all other areas in the Farmington River Valley will be greatly decreased.

In this era of a rapidly expanding population, undeveloped land is becoming more valuable; therefore, the problem of conservation has increased tremendously in importance. If the Farmington meadow is to retain its beauty, the citizens of Farmington and the other towns in the Farmington River Watershed must work together, for it is only by total cooperation that the Farmington River Valley will be a place in which it will be a joy to live and work.

THE FARMINGTON RIVER VALLEY—OUR PRESENT AND FUTURE

(By Tony Wallace, Jr., runner-up)

Connecticut is the fastest growing State in the Northeast; and during the next 20 years it is estimated that the State's population will grow by 38 percent. One of the most rapidly growing areas in Connecticut is the Farmington Valley, which is expected to grow twice as fast as the State as a whole between now and 1975. This rapid growth of population makes it extremely important for us to begin to conserve our natural resources now, if we expect to be able to handle the thousands of additional people, homes, factories, stores and other businesses on the same amount of land. To do this, we must consider the following resources of our valley:

Land: The valley is made up of 609 square miles of which one-fourth is in Massachusetts and the balance in Connecticut. Two-thirds of the total land area of the valley is wooded; yet, most of this is level enough to build upon. This means that there is enough space for population growth, providing it is properly regulated. Fortunately for us, all but the four smallest towns are protected by zoning laws, so we can be certain that zoning will control some of the growth.

Where zoning does not exist, every effort should be made by the people to create zoning commissions in order for all the towns to have this protection. Needless to say, sound planning should precede all zoning in order for us to have the best possible valley.

Forests: Our forests are important to us for several basic reasons First, they provide beauty to our towns and countryside; and, secondly, they help to control floods, soil erosion, and silting.

Since our valley attracts people because they like to live here, it is important that we save much of our forests in order to keep our natural beauty and good living opportunities.

The threat of floods every spring also makes it essential for us not to destroy the trees. In fact, in addition to saving much of our present tree cover, we should reforest areas where soil is now being washed away by heavy rains and flooding, thus insuring the preservation of our woodlands.

Water: Water is our most important natural resource. Without an adequate supply of water (quantity and quality), we would be unable to maintain our present economy, let alone attract new industries and people to the valley.

The Farmington River water is used principally for domestic supply. About 500,000 people are served by water utilities which use the Farmington River. It is expected, however, that the use of this water will triple within the next 40 years.

Although pollution is not a serious problem in the Farmington River or its tributaries, there are some 250 pollution sources which should be cleared up if we are to make the best possible use of this valuable resource. This means that some of our cities must treat their municipal sewage, some industries will have to clean their industrial waste, and a number of homeowners must do likewise. When this is done, we will have clean water for greater recreational uses. At the present time, we do not have enough water facilities in the valley for such outdoor sports as swimming, boating, and fishing. To meet these needs, we should also give thought to creating artificial lakes, which can be made after the pollution problem is solved.

One other important source of water is our ground water supply about which very little is known. Here is another place where we can plan on the future by encouraging towns and the State to set up engineering

studies to learn more about the availability, source and supply of these waters.

Fish and wildlife: To meet the growing needs of our expanding population, we must develop wildlife protection, production, and educational programs, where such programs have proved successful, on all farms and forest lands of the valley; encouragement of stream flow regulations for better fish habits; and develop a junior conservation camp for the training and education of young people of the valley in proper conservation practices.

Summary: The natural resources of the valley belong to all the people and we must therefore work together. There is no easy cure-all for many problems of resource protection and development; however, if all citizens in our towns and cities in the valley make a combined effort to work on the problems which I have outlined, we can be certain that our valley will always be the most beautiful and enjoyable place in the world.

Nonacquiescence Isn't Enough

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I would like to include an editorial which appeared in today's New York Herald-Tribune, entitled "Nonacquiescence Isn't Enough."

This editorial strikes very hard at the core of the problem in the Near East. It points out that the fundamental problem is the consistent refusal by the United Arab Republic to recognize the status of the State of Israel.

It also becomes very discouraging to those of us who are interested, as we all should be, that we have been strangely inactive compared to our conduct shortly after the Sinai campaign.

The editorial very accurately indicates that you cannot treat the sympton of a disease by totally ignoring the cause thereof, and unless and until this administration shows at least one-tenth of the leadership in making it crystal clear to Mr. Nasser that international agreements must be observed that it showed when it aligned recently with the U.S.S.R. and the United Arab Republic against our allies, then there is no hope for the situation.

The editorial follows:

NONACQUIESCENCE ISN'T ENOUGH

Now that comparative tranquility has been restored to the Israel-Syria border in the neighborhood of Tawafik, reporters are being invited to view the scene from both sides, scanning the terrain with binoculars, observing distant figures moving about, and recording their impressions. It's an interesting but not a very revelatory pastime. For the questions of what happened at Tawafik, of who fired the first shots, and who really owns the little stretch of farmland, are rather trivial.

Similarly, any determinations that may be made on the spot by the United Nations Mixed Armistice Commission will be relatively unimportant, too. For the answers to the strife and struggle that erupt intermittently along the Arab borders with Israel cannot be found purely locally, any more than the stopping of Israel cargoes in the Suez Canal can be ascribed to the whims of the customs guards at Port Said.

Both the fighting on the Syrian frontier and the blockade in the Suez Canal are, of course, symptomatic of the state of war which the Arabs maintain against Israel. To treat the symptoms while ignoring the underlying disease is poor practice medically, and in this case, at least, it doesn't seem to be working very much better diplomatically.

Nor is it encouraging to note that the initiatives of U.N. Secretary General Hammarskjold have failed to achieve any improvement. Mr. Hammarskjold is understood to have labored diligently to persuade President Nasser, of the U.A.R., to ameliorate his blockade of the Suez Canal—this being one case in which responsibility for illegal action is clear cut and indisputable. Yet the results have been nil. Speaking about the Suez situation at a press conference last week, Mr. Hammarskjold said: "The fact that certain attitudes of member governments are not adjusted to what, from my point of view, is the United Nations line does not mean any acquiescence either from the United Nations or from the Secretary General."

That is about as close as Mr. Hammarskjold customarily gets to being critical. Yet it is becoming increasingly evident that mere nonacquiescence by the U.N. isn't enough to solve the underlying problems in the Middle East, and may not be enough to prevent a recurrence of a flareup at least as big as the Sinai war of 1956. Surely the U.N. has a more important function to perform today than trying to figure out who did what at Tawafik.

Col. Glenn T. Eagleston

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. MOULDER. Mr. Speaker, one of the most able and outstanding officers of the Armed Forces is Col. Glenn T. Eagleston. I am sure you will agree that every Member of Congress is proud of his brilliant record and services performed by him for the American people in Okinawa. Most certainly this man should be recommended for the Legion of Merit citation and I submit the following statement and briefing, sent to me by my good lifelong friend, Homer C. Sellers, which clearly shows that Colonel Eagleston is deserving of more recognition than the Legion of Merit:

KADENA AIRBASE PEOPLE-TO-PEOPLE PROGRAM,
DECEMBER 10, 1959

Col. Glenn T. Eagleston, commander, 6313th Airbase Wing, APO 239, San Francisco, Calif., has been recognized by the High Commissioner of the Ryuku Islands as having one of the most effective community relations and people-to-people programs on Okinawa. The island of Okinawa is divided into 13 regions, with the major military installation located within that area having the responsibility of representing all U.S. military forces with the local citizens. This representation is conducted through the Koza City Regional Committee, Ryukyuan-American Community Relations Advisory Council. The committee is composed of the mayor and eight officials of Koza City, the USMC commander of Camp Koza, and Colonel Eagleston as chairman.

Colonel Eagleston's success is based on the fact that every assigned individual, unit, or organization, is expected and encouraged to be an ambassador of American ideals; and the "Keystone of the Pacific" (Kadena AB) base is a meeting place where Okinawan educators, civic leaders, editors, and public officials are encouraged to meet with him or staff members on all matters involving intercommunity good will. All projects are closely coordinated with the USMC Camp Koza commander and maximum effort has been expended by him and the USMC in completing major construction and grading projects. Colonel Eagleston insists upon Mayor Chojo Oyama and other city officials utilizing their permanent passes to the base for visits with him. The president of the Koza City Chamber of Commerce and its members have made him honorary president because of his interest in the local economy. Qualified businessmen of Koza City are encouraged to submit bids on all government contracts for equipment and services. Military dependents have every opportuity to promulgate and foster projects and programs of great interest to their Okinawan counterparts.

Colonel Eagleston has insured the continued success of his people-to-people projects and programs by organizing an NCO Advisory Council composed of 10 senior noncommissioner officers and civilians who personally advise him on all facets of community relations. A requisite for membership is to volunteer to encourage maximum participation by all personnel in civic, youth, health, educational, recreational, and other community-level activities. He has a staff member during his absence to attend monthly meetings with the Koza City officials who takes immediate action on all matters that affect the prevention and promotion of harmonious relations. Squadron and unit commanders are duly recognized for their effective civic responsibilities during reporting periods. The "Keystone of the Pacific" base sponsors maximum tours for civic groups, students, and other organizations. Special events, such as Friendship Week, Ryukyuan-American carnivals, Library Week, Operations Friendship, and intercommunity sports receive maximum support and encouragement.

Specifically, Colonel Eagleston and members of his command have received recognition from Ryukyuan officials and governmental agencies for the following activities:

The 10 elementary and secondary schools of Koza City are being sponsored by squadrons or units on Kadena Air Base. This adoption is considered to be one of his most influential community-level-type programs in that the assigned personnel of these respective squadrons are determined to have the finest school on the island. They are utilizing off-duty time to build sidewalks, paint, repair windows, and roof; conduct music appreciation courses; show Japanese language movies on government, education, sports, and the United States; contribute condemned or surplus athletic equipment to form athletic and sports teams; schedule and host on-base tours that include American homes, the base exchange, libraries, chapel, and commissary; arrange for Okinawan students to participate in the American dependent school program through the PTA meetings; arrange for TV programs that include Okinawan teachers and educators; collect clothing for the needy; grading of school grounds; and individual or collective participation in their athletic and other school celebrations.

Donation of condemned or surplus buildings to Koza City schools greatly improve their educational facilities and permit more deserving Okinawan students to enroll.

Japanese language news editors have and are participating in our committee meetings; are included in social and official luncheons; and have been encouraged to help him in seeking recognition for the many Okinawans and American military personnel who successfully complete worthwhile projects in behalf of the Ryukyuans.

Military dependents on base are encouraged to personally invite Okinawan families into their homes for a first-hand observation of American customs, living habits, and hospitality. These visits include family picnics, church functions, sports, and youth activities such as dancing and roller skating.

Educators—teachers and principals—are attending PTA meetings for firsthand information on teacher-parent-student participation, who are adopting this practice in the Okinawan schools.

The American handshake is the accepted custom with all Koza City officials during visits and meetings. The chief of police, for instance, has requested and received instructions on the military salute.

The postmaster, banker, chief of police, and other public servants have visited similar activities on Kadena Air Base to study supervision, management practices, and to coordinate intercommunity procedures. The postmaster, for instance, was utilizing the same principles as established by Admiral Perry until 1958. Businessmen and merchants are also encouraged to study American methods.

Permanent base passes and open mess honorary memberships have been extended to the Koza City officials and other Okinawans who are interested in fostering good will between the communities.

Medical facilities and services on Kadena Air Base have been made available on occasions which won the gratitude of every citizen in Koza City. Professional and technical assistance have been provided by the flight surgeon for the first health cleanup program ever conducted in Koza City.

English language classes have been organized for teachers, merchants, and on base employees.

The effectiveness of the NCO Advisory Council and the squadron and organizational commanders permits Colonel Eagleston to utilize them as his representative to many of the Koza City official functions. The Okinawans accept these delegates without reservation.

Crosswalks, water drains, and street-lighting projects have contributed greatly to the safety of the Ryukyuan pedestrian, schoolchildren, and military motorist and sanitation standards. The base was highly effective in its efforts with governmental agencies to provide Koza City with water.

The NCO and the Airmen's Open Messes have made time deposits of over $200,000 with the Bank of the Ryukyus. This action permitted the banking facility to extend vitally needed loans to deserving Okinawan merchants who have improved facilities, services, and merchandise that benefit Americans. Americans are now opening personal accounts with all locally established banks.

The 1958 Ryukyuan-American Welfare Carnival was considered a success by all concerned. This activity included over 83 American and Ryukyuan concessionaires; all U.S. military forces on Okinawa participated in one form or another; over 200,000 people attended during the 3-day event; and an equal amount of the $32,000 net profits was earmarked for local welfare programs.

The 1959 Ryukyuan-American Godo (Friendship) Festival included over 150 Americans and Ryukyuan concessionaires who catered to an estimated 225,000 people for the 3 days. The prime objective of fostering and promoting friendship was accomplished and the Ryukyuans received over $14,000 of the profits for welfare projects.

The "Operation Friendship" project provided American-type Santa Claus gifts of toys, school kits to over 22,000 children in December 1958. A similar project will be conducted in December 1959 with an estimated 26,000 children and adults participating in the Christmas activities. "Operation Friendship" is financed entirely through the efforts of our airmen, officers, civilians, and their dependents, at a cost of approximately $9,000 per year.

The Wives Clubs on Kadena Air Base have made financial contributions, totaling more than $14,000, to many worthwhile Ryukyuan projects. Okinawan ladies are participating in club functions and visiting with individual members.

A Ryukuan-American friendship center is over 85 percent completed, which has been made possible only through the efforts of Colonel Eagleston. The Government agency responsible for programing for cultural centers on Okinawa could not program adequate construction and administration funds for this facility that had been only a suggestion for over 4 years. Colonel Eagleston will be long remembered by the Koza City citizens for making this center a reality. Over $30,000 has been earmarked from the above carnival and festival projects, including a $16,300 contribution from the High Commissioner's funds.

A scholarship program has been established by the Protestant Chaplain Fund which is used to send deserving and qualified Ryukyuan high school graduates to Japanese universities of their choice. All expenses for a 4-year course of study are paid for and the recipient must only give his word that upon completion of his schooling he will return to Okinawa to work in his chosen field. The cost is $400 per year per student. To date, over $8,000 has been contributed to this student aid program. One medical doctor, one school administrator, and four clergymen are now busily working at their vocations on Okinawa as a result of this practical demonstration of neighborliness. There are seven sudents currently enrolled in Japan universities. Aside from the financial assistance, from chapel-sponsored activities, which totaled over $15,000 in 1 year, the program has other facets that contribute to good community relations. The young people of the Chapel meet with their counterparts for social affairs. Students from the University of the Ryukyus are entertained. Groups of Americans visit the school for the deaf, dumb, and the blind children and provide parties for them. The lepers of the leper colony are entertained and provided with comfort articles. The orphanages are visited and children are given tours of the base. The old folks are provided with reading materials and movies. All are friends and neighbors. The chapel program contributes to good community relations.

The 558th Air Force Band has presented many concerts to the Okinawan schools in Koza City and surrounding towns. Students are encouraged to participate by leading the band or playing musical instruments.

Following the Ishikawa-Okinawa tragedy in 1959, involving an American plane crash, a committee was established by the Americans and before the day was over funds, clothing and household utilities were collected and delivered to care for the needy families. Approximately $5,000 was collected through volunteer contributions; over 5 tons of used clothing and foodstuffs were collected; a complete whirlpool bath was purchased and installed in the Koza City Hospital to assist in the treatment of children suffering from burns; each child in the hospital received kits of toothpaste, toothbrush, wash towel, clothing, comic books, fruit, etc. At the conclusion of this project 25 huts were moved, renovated, and completely furnished, providing homes for those who were left homeless as a result of the incident. This is another instance of good neighborliness.

In addition to all of the welfare projects for the local community, during the 1959 Taiwan disaster, the personnel of the base, within 1 week, contributed 21 tons of rice, 5 tons of flour, and 4 tons of used clothing.

A special American-Ryukyuan Friendship Week was observed the last week in May 1959, at which time over 4,000 Ryukyuans visited homes on the base of Americans, and at the same time great numbers of Americans were granted the privilege of visiting the homes of their Ryukyuan friends.

The Sturgis High School, Sturgis, Ky., has agreed to organize a "pen pal" club and become affiliated with the Chuo High School, Koza City, Okinawa. This activity will permit the Okinawan students to practice and utilize the English language training, which they receive approximately 14 hours of each week.

The Governor of Kentucky, A. B. Chandler, has awarded the mayor of Koza City a "Kentucky Colonel" certificate for outstanding services rendered in the promotion of good will between the Ryukyuans and Americans. Mayor Chojo Oyama is considered to be the first Okinawan ever to receive this award from the Governor of Kentucky.

Correspondence and arrangements have been made with USCAR to provide the Koza Health Center and Koza Hospital with vitally needed surplus medical equipment and supplies; motor vehicles (cars and trucks) for official transportation and use within the street department; and other equipment that can be utilized in community relations projects.

A blood bank system has been arranged with the Koza Hospital for emergency operations. Donors are military personnel assigned to the squadrons on Kadena Airbase.

Japanese citizens and dignitaries visiting with the Koza City officials are given a VIP tour of Kadena Airbase, luncheons at the clubs when appropriate, and a factual briefing on our people-to-people program with the Okinawans.

The civilian personnel officer, Kadena Airbase, is vice chairman of the American-Ryukyuan Vocational Training Council, which is composed of representatives from USCAR, Army, Navy, Air Force, and USMC, and from the Plans and Statistics, Economic, Education, and Labor Departments of GRI. The U.S. Chamber of Commerce, Ryukyuan Chamber of Commerce, and the University of Ryukyus are also represented on the above council. The purpose of this council is to encourage the development of improved school programs, private training programs, and community training programs. A survey of over 100,000 Ryukyuan workers has been conducted and serves as a guide for individual employers to select and train for occupations in which there are existing or anticipated shortages. Many compliments have been received on the manner in which this council serves the Ryukyuan citizens, the local economy, and the manner in which Ryukyuan employees are being utilized in Government and military organizations.

Colonel Eagleston has completed many other people-to-people projects that have won for him and the U.S. military forces the heartfelt gratitude of thousands of Okinawan friends and neighbors. He desires to see Koza City sponsored by a sister city in the United States; exchange of many students and visitors; a library for the blind; maximum support of orphanages; closer relationships between the Okinawan and American students through correspondence; and many other community-level activities.

Boy Scouts of America 50th Anniversary—Hampden Council No. 234 Also Celebrates Its 50th Anniversary

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. BOLAND. Mr. Speaker, all America tips its hat today to the Boy Scouts of America on the occasion of its 50th anniversary. I take pride in noting that Hampden Council No. 234, with its headquarters in my congressional district, also celebrates its 50th anniversary this year. Both events were marked by an impressive banquet held in the Springfield, Mass., auditorium on January 27, 1960. I was highly honored to be asked to deliver the anniversary address. But, more significantly, I was privileged to witness the presentation of honors and awards to scouts, scout leaders, and distinguished citizens for their outstanding contributions to and in behalf of scoutdom.

Mr. Speaker, under unanimous consent I include in my remarks the program, the list of recipients of special honors, and my address.

The address, program, and list of recipients follow:

ADDRESS BY HON. EDWARD P. BOLAND

When I was first asked to come here to partcipate in this event, I felt then, and I know now that my talents would not be equal to the task. For this is no ordinary, run-of-the-mill, routine occasion—the kind of event that people in public life experience so much and too often. No. This gathering is something extraordinary—an episode that happens infrequently and the only time it will occur in the history of this great organization.

You honor me indeed to invite me to be a part of it. I appreciate very deeply your gracious request. I welcome it enthusiastically.

All of us gather here tonight to mark the 50th anniversary of the Boy Scouts of America—the golden jubilee of Scoutdom. But as we look back at the pages of Scout history, we can say with certainty that every year has been a golden year.

What a glorious history it has been. No other youth movement has caught on so fast * * * none has succeeded as well. None will endure as long.

My friends, this is not just happenstance. It is so because of the very nature of the movement—the bedrock upon which it is built. Its whole activity appeals to the finer instincts of youth and adult. Its entire program is geared to building a better boy—trained to the true values of physical strength, mental alertness—and moral straightness. Its total concern is attuned to the Scout doing his duty to his God and his country. On this basis and in this atmosphere, it is no wonder that it developed into the magnificent organization that opens its golden door on February 8, 1960.

It all started with Lord Baden-Powell, British military hero, author and artist. This remarkable human being drew on his vast and interesting experiences to shape the "Boy Scout theme" in the first Boy Scout camp the world had ever known on Brownsea Island, off the southern coast of England in 1907. The germ of scoutdom was planted in the United States by a newspaper and magazine publisher, William D. Boyce. A good deed—a simple one—by an English Boy Scout, guiding this visiting American through a dense London fog, was the spark that ignited Boyce's interest. He talked to and learned from the chief Scout himself, Baden-Powell, the aims and program of scouting. He came back to America to spread the idea. With his friends, Colin H. Livingstone, Edgar Robinson and other people in the Nation's Capital, Boyce established the Boys Scouts of America on February 8, 1910.

How it has flourished over the past years is emphatically told by the figures—58,456 troops—3,288,446 cubs, scouts, and explorers—1,271,702 adult volunteers. Think of it. Some 5,000,000 people in the Boy Scouts of America alone. And from the time of its birth, some 30,000,000 people of the United States have participated in the movement.

The impact that this great group has had on the American way of life can never be measured. You will find that their influence has been, and is being felt in every facet of the American scene. The contributions that they have made and are now making in building a better Nation: A stronger country: A healthier America—these contributions can be noted through the history of your Boy Scout movement. The pages of your membership are emblazoned with the names of great and dedicated Americans who have served this Nation courageously and devotedly in peace and in war—Presidents, Governors, Senators, Representatives, university presidents and educators, religious leaders, generals and privates in the Armed Forces—in business and in industry, labor and agriculture, the arts and sciences—the whole gamut of American life on the National, State, and local levels.

All of this gives eloquent testimony to the worth, the value, the untold influence of scoutdom.

Scoutdom succeeds because into it go the hopes, the aspirations, the thrills, the good, the deeds of millions. It offers the things that young people strive for, that boys want, when they are given the opportunity and the leadership.

The scout oath, its 12 laws, the motto and scout slogan, all add up to a code that can and does produce the best in the character of human mind, body and soul. Scoutdom is built on lasting values, something like the very nature of the Nation itself. This country was not solely built by its majestic mountains, its tumbling waterfalls and streams, its racing rivers, its rockbound coasts, its magnificent plains, docile and beautiful harbors. It did not, alone, come to life with its teeming cities, shaded towns and villages and its almost infinite wealth of natural resources. No! A nation is not built merely of brick, mortar, and timber to fall in the first storm. Rather it is built and bound together by the hopes and fears, the love and the labor of millions of men and women seeking a way to the infinite.

So it is with Scouting. It is based upon the combined and patient labor of millions of men and women determined that American boys, no matter where they live, shall have the opportunities that spell faith, hope, and love.

To you, the leaders of the Scouting movement, go the grateful thanks of the Nation. Without your enthusiasm, your zeal, your devotion to this movement, it could not succeed, expand, and prosper. In assisting the young to grow, you grow yourselves. In giving of your ability, your time and efforts, I know you have felt the sense of giving to yourself. How true Walt Whitman's words, "The gift is to the giver and comes back most to him."

With the challenge that faces our existence on all fronts—adversaries from without and decay from within—you cannot relax the steady and tremendous work that is yours to continue to educate our youth in the business of scouting and responsibility. You have taught and are teaching much of our youth to love and respect our country, in making the individual boy conscious of his obligation to his patrol, his troop, to his community, State, and Nation, you have instilled in him at an early age the kind of responsibility that our country needs if it is to last and survive in this atomic, hydrogen, missile, and space age.

With prejudice, hatred, and fear, youth delinquency seemingly running rampant in many parts of the world, as well as in our own great land, the need for the program you offer is perhaps greater today than every before.

The task that lives before the leaders of the Scout program is great. Yet heavy and difficult assignments are ofttimes reduced to featherweight from the shear joy of the job and the knowledge that it must be done. What greater happiness can be experienced than that of helping your fellow man—particularly the youth—to offer a chance, to provide the means and the toops to develop their talents, to learn of and enjoy the world about them. And this, all tending toward building a good boy for today, a better man for the morrow.

May I say that only you—and people like you throughout the land and in freedom loving countries across the world—only you can make this plan work. Volunteers, completely unsefish people, dedicated to love of people, of country and of God. You are the reason why the Boy Scout movement does and can succeed.

Oh, there have been other youth movements that have been tried and tested. We know of some of them in the past and some of the present—youth movements predicated upon government conscription and controlled by paid hirelings of the state to inculcate hate, arrogance and love of war into the impressionable youthful mind and character.

Many of you can recall, as I vividly do, the documentary films on the Nazi youth movement made prior to World War II. Mere boys, the same kind and age of those you have trained, being mentally framed to love war, hand-to-hand combat, gas warfare, how to shoot, how to kill.

This was their youth movement and many within a few years went off to war—confident, proud, arrogant. I remember seeing many of them as captives at the end of war—bitter disillusionment written on their faces. Their entire training, as mere youths, had been geared to the vicious doctrine that they were the master race and the only good was to conquer and to rule.

In defeat, they were lost—aimless. They had nothing in which to believe and little will or capacity to turn elsewhere. Their souls and their minds had been wrenched from them. What a pity to behold.

And today, we can be sure that the youth movements behind the Iron Curtain—in Russia and her satellites—though, perhaps playing down the war games, are engaged in a massive propaganda program. This effort is scaled to the task of educating through young peoples organizations the supremacy of the state—that communism is to rule the world—that any means justifies the end—that religion is the opiate of the people. Relentlessly pounded into fertile youthful minds is the theme the people exist for the state—not the state for the people. The state is all—the state is everything. And they are continually being told that they can and will bury us.

Well, this is what can happen and has happened when the State controls youth organ-

izations. The boys and girls become mere pawns in the scheme of the political masters.

Thank the founders, and the long list of Scout leaders, that this cannot happen to your movement. By its very nature, the Boy Scouts of America could not decay to this end. From the beginning, it was made certain that no Government funds were wanted to maintain and support scouting—for such funds too often lead to political and State interference.

But most of all, it cannot happen because of the hundreds of thousands of unpaid, intensely interested volunteers who want to run their own shop and abhor the thought of being told what to do, when to do it and if it can be done at all.

As I flew here this afternoon and watched the great sprawling cities of Baltimore and Philadelphia and New York below, I thought of the values that made America and what must be done to preserve it—the tremendously significant part that the Boy Scouts of America have played in the role of building this Nation, and what scoutdom must do in the present and the future. It seems to me that your chief Scout executive, Arthur A. Shuck, summed up the job:

"You must go forward with scoutdom aggressively * * * as you do so, you must keep in mind that tremendous parade of youth growing up in the years before you, and safeguard the future of our country by adequately training our boys in those things that make for the spiritual minded, dedicated citizen who will, in turn, guarantee the future freedom, not only of America but of thet world. This is the goal to which the Boy Scouts of America stand dedicated."

With this goal in mind, the Boy Scouts of America can look ahead to the next 50 years secure in the knowledge that is is doing its part in the development of our youth to be physically strong, mentally awake, and morally straight, to be citizens of character, with high spiritual ideals and motives. This is not just a desirable thing, but is essential if America is to fulfill its mission as the leader of the free world.

I close with my congratulations and again express the thanks of the people of America to Hampden Council, Boy Scouts of America, for its service of 50 years to the youth of our community.

I am also privileged to bring to this great gathering, the greetings of the honorary president of the Boy Scouts of America, Dwight D. Eisenhower, the President of the United States.

BOY SCOUT BANQUET PROGRAM, HAMPDEN COUNCIL NO. 234, JANUARY 27, 1960

Opening ceremony.

Invocation by Rev. Leslie H. Johnson, D.D., Protestant Scout chaplain, pastor, Wesley Church.

Dinner.

Introduction by Toastmaster Charles M. Healey, Jr., council commissioner.

"Facing the Next Fifty," by A. Lionel Lawrence, council president.

Eagle badge presentation by Lee V. D. Schermerhorn, council advancement chairman.

Training achievement by Andrew F. Fitzhugh, council leadership training chairman—Arrowhead honor, den mother's award, scouter's award, scouter's key.

Special recognition by Russell G. Exley, scout executive.

Woodbadge presentation by Harry W. Blodgett, director, Horace A. Moses Scout Reservation.

Silver Beaver Award for Distinguished Service.

Address by Hon. EDWARD P. BOLAND.

Closing ceremony.

SILVER BEAVER AWARDS FOR DISTINGUISHED SERVICE

William R. Falconer, Jr., Leon J. Carman, Eugene Ouimet, Melvin D. Southworth.

WOODBADGE INTERNATIONAL TRAINING AWARD

Alexander Hryniewicz, scoutmaster, troop 163; Roger D. Ball, scoutmaster, troop 18; John Redman, scoutmaster, troop 173; Warren LaBorde, assistant scoutmaster, troop 173; J. Arthur Baron, chairman, Chicopee Health and Safety Committee; Harold Guyton, scoutmaster, troop 89.

SCOUT AWARDS

Receiving the Arrowhead Honor for outstanding commissioner service to the units of the Hampden Council, Boy Scouts of America, and upon completion of the required years of service plus local and national training courses were the following: Algonquin district, Horace "Doc" Ashline, of Feeding Hills; Nipmuck district, Rudolph Longtin, of Springfield; King Philip District, David Katz, of Springfield.

The Scouters key, a formal recognition of successful youth leadership plus attendance at district, council, national training courses, and roundtables were the following Scouters: Frederick M. Converse of Troop 41 of Springfield; Wilfred Thivierge of Troop 150 of Chicopee; Earl Nugent of Troop 48 of Springfield; Adrian LaPointe of Cub Scout Pack 100 of Westfield; Edward Whittemore of Troop 63 of Springfield; Arthur Kingston of Troop 300 of Chicopee; William Luke, neighborhood commissioner of Westover Air Force Base; Donald Rice of Cub Scout Pack 34 of Springfield; Ludger Morin of Troop 149 of Chicopee Falls; Charles McCall, neighborhood commissioner of Westover Air Force Base; Richard Gour of Troop 54 of Springfield; Douglas Taylor of Troop 21 of Springfield; Gerald LaPalme of Troop 358 of Ludlow; Julian Pomfrey of Troop 101 of Westfield; Frank Nowatka of Cub Scout Pack 124 of Westfield; Michael F. Regan of Cub Scout Pack 141 of Chicopee; Fred Held of Cub Scout Pack 143 of Westover Field; Alex Johnson, neighborhood commissioner of Westover; Robert Kaczman of Troop 108 of Westfield.

Receiving the Scouters Award, recognition in the adult field of leadership: Kenneth Boggs of Troop 48 of Springfield; Frank Biza of Troop 89 of Agawam; Richard Gingras of Troop 89 of Agawam; Basil Pederzani of Troop 89 of Agawam; Frank Pinio of Troop 89 of Agawam; Woodrow Roberts of Troop 89 of Agawam; Kenneth Howe of Troop 161 of Palmer; Edgar Canty of Pack and Troop 141 of Chicopee; Julius Thal of Troop 32 of Springfield; Albert Domainque of Pack 56 of Springfield; Robert Pollard of Pack 173 of Sixteen Acres; John Parent of Troop 18 of Sixteen Acres; Charles Amos of Troop 182 of Ludlow; Arthur Sattler of Troop 117 of Westfield; Alton Foote of Troop 4 of Indian Orchard; Kenneth Walcott of Troop 150 of Chicopee; Fred Schultz of Troop 150 of Chicopee; Charles Agen of Troop 181 of Ludlow; Armand Gamache of Troop 180 of Ludlow; Sam Fine of Troop 21 of Springfield; Romeo Meunier of Troop 54 of Springfield.

"Den Mothers Award," symbol of trained dedicated leadership for youth; Pack 4 of Indian Orchard, Jeanne Sas, Isabelle Jambora, Marie Fay, Mary Dodge; Pack 161 of Palmer, Louise Ball, Pauline Santucci; Pack 140 of Westover Air Force Base, Frances Held; Pack 56 of Springfield, Mrs. George Dwyer, Esther Grolcau, Mildred Domainque, Evelyn Surprenant, Anne Denis, Alice Hamre; Pack 48 of Springfield, Rose LaBonte; Pack 54 of Springfield, Edith Guevin; Pack 102 of Westfield, Audrey Grant; Pack 52 of Springfield, Margaret Mikesh; Pack 173 of Sixteen Acres, Betty Plouffe; Pack 131 of Chicopee, Vera Paci; Pack 124 of Westfield, Ina Berggren; Pack 15 of Springfield, Mrs. Henry Stebbins; Pack 182 of Ludlow, Barbara LaPalme; Pack 83 of West Springfield, Iris Stefnowich; Pack 87 of West Springfield, Beulah Russell; Pack 150 of Chicopee, Mrs. Wilfred Thivierge; Pack 27 of Springfield, Dolores Mungert; Pack 107 of Westfield, Elizabeth Ann Regan; Pack 34 of Springfield, Mrs. Jean Stratton; Pack 78 of Feeding Hills, Elaine Roberts; Pack 15 of Springfield, Mrs. Herve Pondrice; Pack 7 of Brimfield, Jean McGann; Pack 21 of Springfield, Myrtle Picard.

West Virginia University—Symbol of Hope for a Great Future

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. HECHLER. Mr. Speaker, throughout West Virginia this week, citizens are observing the 93d birthday of our great State university, which was founded on February 7, 1867.

The founding of West Virginia University at Morgantown is of special interest to Members of Congress because an act of Congress enabled my State to begin the development of its first great university.

On July 2, 1862, Congress passed the Land Grant (Morrill) Act—an example of how Federal aid without Federal control can be used to stimulate the growth of education. This is a timely example as we consider current proposals to strengthen our educational system through Federal aid. The Morrill Act spurred the development of great State universities through our land.

The tremendous achievements flowing from this act of Congress dramatize the dynamic role Federal aid can play in strengthening our educational system. As an example, let us look behind the magical door which the Morrill Act opened for higher education in West Virginia.

When the Agricultural College of West Virginia opened in 1867, there were 2 buildings, 6 faculty members and 122 students. The college was valued at $137,000. Its name was changed to West Virginia University the following year.

From this modest beginning, a great university has emerged. Today West Virginia University has 35 buildings on 3 campuses totaling 480 acres. The faculty and staff have increased to 1,800. And the student body has grown from 122 to 6,000 students in 6 colleges and many schools. The overall value of the university is estimated at $100 million.

West Virginia University has made tremendous strides under the outstanding leadership of its dynamic young president, Dr. Elvis Stahr.

One of the world's most modern medical centers will be completed this summer at a cost of $30 million on a new, 145-acre university campus. This magnificent West Virginia University Medical Center, an outstanding architectural achievement, is the first 4-year medical and dental school in the State's history.

Another new university campus is rising near the medical center. A large building for the College of Engineering and two classroom-office buildings and a greenhouse for the College of Agriculture are under construction at a cost of $10 million.

But the heart of any great university is its faculty. In practically every field, West Virginia University faculty members have distinguished themselves through their research and imagination. And, among State universities, West Virginia University is among the leaders in the proportion of its alumni who are included in "Who's Who in America."

In 93 years of tremendous expansion, West Virginia University has not lost one of its greatest assets—it's campus and the community of Morgantown—which the board of visitors of the old Agricultural College described to Gov. Arthur I. Boreman in 1867 as:

Unsurpassed for health, good order and morality. The view and scenery, embracing mountain, river, forests and farms, are exceedingly attractive and picturesque.

This description adequately fits most of West Virginia, which is indeed one of our country's most scenic States. Despite the distorted picture which an itinerant writer for the Saturday Evening Post tried to present, West Virginia is on the threshold of tremendous economic expansion. I am convinced that my State will grow and prosper in the years ahead as its university has in the past 93 years. West Virginia University symbolizes the State's hope and promise of dynamic growth in the future. Its graduates, and those of our great State colleges, will provide the imaginative leadership which West Virginia's great future demands.

Castro's Cuba—By Robert Taber

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. PORTER. Mr. Speaker, when Robert Taber writes about Cuba he knows what he is talking about, which is more than you can say for many of the commentators today whether they are political, editorial, or something else.

American journalism has a long way to go before you can say that it is adequately covering news events in Latin America.

"The talk of punishing Cuba by cutting the sugar quota is," according to Taber, "nonsense." He points out that in a large measure Cuba sugar is U.S. owned and that it is indispensable, as has been demonstrated in two world wars.

"To threaten economic sanctions against the Cuban Government is to invite retaliation," Taber points out, mentioning that Cuba could easily double its sugar production and dump "a vast and ruinous surplus on the world market in defiance of all existing marketing agreements."

Under a previous consent I am including the text of Robert Taber's article in the Nation for January 23, 1960 ,entitled "Castro's Cuba," which follows this biographical note which appeared at the beginning of the article:

CASTRO'S CUBA

(By Robert Taber)

As a CBS newsman, Robert Taber was an eyewitness to the Cuban revolution during four critical periods; in April 1957, he spent 3 weeks with Castro in the Sierra Maestra, and was the first newsman to do a radio-TV interview with the revolutionary leader; he was again in Oriente Province during the total war phase of the fighting in the spring of 1958; in the summer of that year, he spent 2 months with Fidel's brother, Raul, watching the guerrilla fighting in northern Oriente; and a year ago he witnessed Fidel's triumphant entry into Havana. He has since returned to Cuba several times doing research for a forthcoming book, M-26: Biography of a Revolution. The following article is based on materials from the book.—EDITOR.

In "Our Man in Havana," novelist Graham Greene wrote a farce about a debt-ridden British vacuum-cleaner dealer in Havana, who was recruited as an intelligence agent for his country. Lacking information of the sort required by his employers, the dealer began to invent it. In due course, he filed a report about a mysterious concrete platform being constructed, he asserted, in the remote, rebel-controlled mountains of eastern Cuba. Then, when pressed by his superiors for more details, he was reduced, in desperation, to drawing plans of a gigantic secret weapon, which he said was being installed on the mysterious platform in the mountains. His model and source of inspiration: a streamlined vacuum-cleaner attachment among his wares.

Greene presented this, of course, as gentle satire, spoofing the puerile but deadly serious and occasionally frightening preoccupation of the great powers with the cloak-and-dagger fantasies of their "cold war." What the novelist did not consider, perhaps, was that such fantasies can be made credible once they are put in the frame of reference of propaganda to which people have already been conditioned.

Thus, David Santner, in the Hearst headline service newspaper column "Washington Window," of November 12, 1959:

"Are Red Russian military technicians helping the anti-American Castro Cuban Government to build a missile base?

"There is a gigantic concrete 'emplacement' in Camaguey Province in Cuba, nearing completion. It is marked 'off limits' by the Cuban authorities and it is heavily guarded by Castro soldiery.

"This much our intelligence agents know, but no more."

The Hearst columnist goes on to say that there is evidence that small arms were smuggled ashore from Russian submarines during the struggle against Batista, adding that there is, however "no corroboration to date of the new Cuban regime having received any missiles," i.e., from the Soviet Union.

The plain inference is that the Cubans have received Soviet missiles, smuggled ashore from Russian submarines, and that this will soon be corroborated.

Presumably, no one has yet plagiarized our man in Havana to the extent of sending drawings of vacuum-cleaner attachments to our Central Intelligence Agency in Washington. However, much of the reportage on the Cuban scene during the past year supports the suspicion that even this might not be too much to anticipate.

The fact is that the "gigantic concrete emplacement" mystery of the Hearst newspapers differs only in degree, certainly not in kind, from the great bulk of what has been reported in the press and on radio and TV in the United States concerning the Cuban revolution since Dictator Fulgencio Batista's precipitate flight from Havana on New Year's Day, 1959. We have witnessed a virulent press campaign, concocted of ignorance, half-truths, name calling, connotative misdirection, and outright fabrication, all tending to erode the first bright image of the revolution and to discredit its leadership.

COMMENTS WHICH DON'T ENDEAR

One must concede at once that the Cuban revolutionaries themselves have provided, gratis, a great deal of the ammunition which has been hurled against them. Fidel Castro's off-the-cuff remark that in the event of United States military intervention in Cuba "* * * 20,000 gringos would die" was scarcely calculated to endear him to the North American press or people. He has added a great many provocations to this initial one since last January. Oratorical intemperance, a Cuban flair for exaggeration, and a failure to take account of other people's prejudices, have all contributed to damaging misunderstandings.

It is barely possible that a more adroit public relations effort vis-a-vis the United States might have eased some of the strain. But one must instantly add that no amount of oil spread on troubled waters could have ameliorated the underlying conflict of interests of which the surface storm of propaganda is merely symptomatic. Nor could clever press relations long have concealed this paramount fact: The Cuban revolution was and is, above all, a Cuban declaration of independence from the United States.

This is what made it certain that Fidel Castro's U.S. press notices would be mostly unfavorable. They could not have been otherwise.

LET'S FACE REALITY

In order to understand the nature of the conflict, one must consider briefly the status of the island before the revolution, and then proceed to review the developments of the past year.

From Cuba's founding as a republic in 1903 until December 31, 1958, when the Batista regime abruptly collapsed, the country was for every practical purpose a U.S. colony, captive both economically and politically. Its first constitution gave the United States the privilege of intervening in Cuban affairs, both internal and external—a privilege invoked more than once under the detested Platt amendment, which was not abrogated until 1934. Cuba's trade treaties were written in Washington and Wall Street. The greater part of its resources—sugar, mineral rights, public-utility concessions, cattle lands—were controlled by U.S. capital. In such circumstances, it can scarcely be doubted that the succession of rapacious professional politicos who ruled Cuba during most of the half century or so of its republican existence were necessarily the caretakers of a vast amount of American, rather than Cuban, wealth. And whatever else he may have been, the dictator who fled to Santo Domingo on the first day of 1959 was one of these—a discredited, dispossessed custodian of the Yankee dollar.

A sizable part of the Cuban business community—the small merchants and the economic nationalists of finance and industry—

had opposed Batista and made common cause with Fidel Castro's bearded revolutionaries for reasons of their own. But to the extent that these Cuban businessmen understood the radical fidelista program, set forth in all its essential details as early as 1953, they were wary of him. At best, they wished him only a limited success—that is, they hoped that he would serve as a cat's-paw to destroy the Batista regime but that he would subsequently be forced to accept a "liberal" coalition government representing their interests. If worst came to worst, they felt, it would probably be possible to "do business" with Castro, very much as business had been done with other nominally popular governments in the past.

Fortune magazine, discussing the question of agrarian reform under the Castro government in its September 1959 issue, put the matter very well:

"If the rich, powerful, and normally cynical Cubans began to be disquieted by the realization that giving land to somebody involved taking it from somebody else (i.e., themselves), they didn't raise the point. Some prominent citizens thought that the new hero was merely making appropriate noble noises, and that when the excitement subsided he would give them the cordial and cooperative government they liked."

That impression certainly prevailed among the rich, powerful, and normally cynical American with a stake in Cuba, and no doubt was shared by Washington as well.

These cynics were soon disappointed. Even before Fidel had reached Havana, the "noble noises" of the fidelistas were echoed by the crash of revolutionary rifles as the first and worst of some 550 war criminals, notorious torturers and mass murderers of the Batista regime died before firing squads.

At the outset, Castro installed a politically "equidistant" government in the presidential palace in Havana. Only a few of its members were actual revolutionaries. However, any hope that the conservatives of the new Cabinet would soon restore "business as usual" was speedily dashed by the realization that the provisional government was not, in fact, governing. The administration of state affairs, like the trial and execution of the war criminals and the reorganization of the armed forces, remained in the hands of Fidel Castro and his supporters.

A month after Batista's overthrow, Fidel accepted nominal as well as actual authority by becoming Prime Minister. The Cabinet was reorganized, and the long-promised social revolution got underway.

CUBA IS REDISCOVERED

A horrendous outcry had already arisen in the U.S. press in reaction to the war-crimes trials, which were seen as a portent of the intransigent radicalism of the Castro movement.

The island of Cuba, of slight interest to the newspaper-reading public during 7 years of struggle against the Batista dictatorship, was suddenly rediscovered only "90 miles off our shores, site of the American naval base that guards our southern defenses, anchor of our defense of the Panama Canal, and key to the future of Latin America. * * *" An army of American journalists flocked to Havana, and torrents of sensational, adjective-packed prose—more than had been written during the two preceding years of civil war—began to flow back. Members of Congress took up the cry. Republican Senator CAPEHART, of Indiana, perceived "the spectacle of a bearded monster stalking through Cuba." Representative WAYNE HAYS, possibly better informed about the sugar-beet industry of his own Ohio than about Cuban affairs, demanded to know what the State Department intended to do to calm Castro down, before he depopulates Cuba. Time magazine informed its reader that the fidelistas were taking revenge on a conquered foe, and listed among typical victims the name of Alejandro Garcia Olayon, a naval officer accused of having roasted six persons alive, and of having supervised the slaughter of some 300 persons, after an abortive uprising in Cienfuegos in 1957.

The campaign abated somewhat as understanding dawned that the revolutionary tribunals, although following a code of Cuban rather than Anglo-Saxon juridical procedure, were administrating strict justice, that there was no slightest question as to the guilt of those condemned, and that all sectors of the Cuban population, as well as the Catholic clergy itself, stood amazed at the furore of foreign criticism. Perhaps it was perceived, too, that the revolutionary government did not seem to be doing anything so revolutionary in its first month in office that it would seriously jeopardize the $850 million of private U.S. investment capital in Cuba.

Fidel's accession to the Premiership in February signaled an important consolidation of power by the fidelista movement. To quote The New York Times of February 22:

"The action of Fidel Castro in personally taking over the office of the Premier of the Republic of Cuba reflects his recognition of the fact that the people accept him as their supreme leader. The truth is that they regard him as not only Premier in the Government of Dr. Manuel Urrutia, whom he proclaimed President, but as the very Government itself."

Precisely so. It does not follow, however, that opposition to the revolutionary process had ended, as we shall see.

In mid-April, the Cuban Premier made a visit to the United States that seemed, briefly, to promise improved relations with Washington. But friendly gestures were no substitute for deeds; basic conflicts of interest, both economic and political, proved irreconcilable, and the rapproachement failed to take. Cuba had embarked on a revolutionary course from which there has been, to date, no turning.

CUBA CHOOSES ITS OWN PATH

On the political plane, Castro made it clear that his government had no intention of following, in blind submission, Washington's lead in the cold war. He said that although his revolutionary movement was "not Red, but olive green" (a reference to the color of the revolutionary uniform), it did not intend to persecute the Cuban Communists of the Partido Socialista Popular. With regard to the island's foreign policy, he said that Cuba would choose its own path, both politically and in its commercial relations with other countries. U.S. interference in matters related to Cuban defense—specifically the question of some British aircraft which Cuba sought to buy and the State Department persuaded Britain not to sell—subsequently produced the statement that if the island could not satisfy its needs in the West, it would do so "elsewhere," i.e., in the Communist countries, if need be.

In the United Nations, where Batista's representative, Nuñez Portuondo, had been considered the bellwether of the U.S. solid Latin American bloc, Cuba broke the united front for the first time by abstaining from voting on a U.S. proposal to postpone debate for another year on the question of seating Communist China.

A mere glance at the bare bones of the fidelista economic program is sufficient to disclose the reasons for the attraction that it originally exerted on the economic nationalists in Cuban business and banking circles. The same facts and figures reveal as well, however, the basis of future opposition to the movement on the part of other, larger and more powerful, economic interests in Cuba and in the United States.

The promised diversification of agriculture meant that Cuba could hope to stop spending $20 million annually on Texas and Louisiana rice, and even greater sums on U.S. canned food products and bottled beverages, and produce its own. Protective tariffs and government aid to fledgling native industries promised to create both higher employment and an expansion of domestic markets, based on the increased purchasing power of a more productive labor force. Agrarian reform, to turn half a million squatters and itinerant agricultural workers into prosperous small farmers, held out the same hope of greater general prosperity and a better distribution of the nation's wealth.

NEW PATHS FOUND

And all of these measures, as well as others in prospect, signified something else of great importance: an end to the flight of capital, principally in the form of sugar profits, that had been flowing from Cuba by the hundreds of millions of dollars over the years, never to return.

If it seems paradoxical to say that sugar was the island's principal source of income and at the same time an incubus on the Cuban people, it is because a simple fact has not been considered: fully 40 percent of the Nation's sugar production, with an annual value of more than $600 million, was firmly in the hands of the U.S. corporations in 1958. (In the past, the percentage had risen as high as 70.) An additional 10 to 20 percent was controlled by Canadian, Spanish, and other foreign interests. Thus less than half of a product accounting for nearly two-thirds of Cuba's national income, and fully 80 percent of her export, was actually controlled by Cubans. And even the profits accruing to the Cuban sugar barons did not remain in Cuba: most of the return was banked or invested abroad.

The same conditions applied with respect to the great cattle ranches, to the Nation's mineral wealth (90 percent in American hands), to its oil (owned entirely by British and American corporations), to its public utilities (80 percent American-owned).

The importance of such facts cannot be exaggerated. They are the essence of economic colonialism, which requires neither a colonial office nor a colonial army to maintain itself when native politicians gladly serve as overseers at lower wages.

At bottom, economic colonialism has its basis in the same circumstance as feudalism: the monopoly control of a nation's wealth, in the one instance by foreigners, in the other by an obligarchy of one's own wealthy and powerful countrymen.

Cuba suffered from the two afflictions at once. Until the agrarian reform, fewer than 8 percent of the property holdings in Cuba accounted for nearly 75 percent of all cultivated land. That is to say, three-quarters of the agricultural resources of an agricultural country the size of England, and with a population half again that of Ireland, was in the hands of a few dozen wealthy Cuban families and giant U.S.-owned sugar and cattle corporations.

THE REAL STORY EMERGES

The social consequences of such a maldistribution of wealth are obvious enough. Cuba's illiteracy rate was one of the highest in the hemisphere, 33.5 percent. A million Cuban women and children had never worn shoes. Half a million campesinos had never tasted milk, or meat. More than a million had never had even the most rudimentary medical care. Thousands of guajiros in the Sierra Maesta were as isolated from the rest of the nation as though they lived on an island in the Pacific, without roads, communications, or any contact with the outside world.

Where was the sound economy, the prosperous nation, of which Batista's American public-relations agents used to boast? The sugar corporations were prosperous. The great cattle ranchers were prosperous. But who was paying the bill?

Felipe Pazos, one of the prominent bankers of the anti-Batista movement, has said that graft on public works alone during 7 years of the Batista administration came close to $500 million on a total public-works budget of less than $800 million. Cost estimates were customarily doubled, and the rakeoff apportioned among the thieves. Such practices extended into every aspect of the nation's economic life. A report written by Robert Alden in the New York Times of January 5, 1958, described "the agent of the government, the man with the outstretched palm who is the key figure in the large-scale corruption in Cuba":

"The owner of a small food store says: 'I pay $2 to the "collector" every time I pull the shutter of my shop in the morning. I pay $2 when I pull it down at night.'

"The taxicab driver pays the 'collector' $1 for the right to stay at his taxi stand for 3 hours, and, depending on their volume of business, a precise scale of payment is exacted from each of thousands of street vendors."

In February 1958, it was estimated that nearly 27,000 Cubans lived on the proceeds of gambling; 11,500 lived by or on prostitution; 5,000 lived by begging (Report of the Cuban National Council of Economy, 1958). The collector extracted tribute from them all.

The money lost on the Havana gaming tables by American tourists lined Batista's pockets and those of American gangsters in Las Vegas, Cleveland, and New York. Corporation taxes were low, for the benefit of foreign investors, and the Cuban latifundistas paid more in bribes than in taxes. The tax on an annual income of $1 million never exceeded 10 percent, and even this was seldom paid. But the middle classes groaned under taxation, and the working classes sweated to pay for imported rice, beans, and canned goods; the United States enjoyed a trade with Cuba which ran to more than $10 million a month in its own favor.

Of the total Cuban labor force of 2,204,000, some 361,000 persons were wholly unemployed throughout 1957; 150,000 were employed only part of the time; 154,000 were engaged in unremunerated labor—e.g., as domestic servants, working for their meals and lodgings. Of 1,539,000 Cubans gainfully employed, 954,000 earned less than $75 a month in a nation where the peso was on a par with the dollar and had even less purchasing power in Havana than in New York.

The nation's free gold and dollar reserves, depleted by assaults on the Treasury and an unfavorable trade balance with the United States, were down to $110,000 by the end of December 1958. The incoming government was faced with a current deficit of more than $50 million and a national indebtedness of close to $1.5 billion.

ABUSES ARE ABOLISHED

The revolutionary provisional government, coming to power in January, abolished the worst of the abuses of the Batista regime at a single stroke.

Thousands of Government sinecures were eliminated, along with the subsidies which had been paid, for political reasons, to most Cuban newspapers and to many Cuban journalists.

A ministry for the recovery of stolen property set to work to recover millions of dollars in cash and more millions in property illegally acquired under past regimes. Scores of contractors who had accepted kickbacks on public-works contracts were forced to disgorge their illicit gains, and the estates of former government officials, acquired dishonestly, were confiscated by the state.

Home and apartment rentals were reduced 30 to 50 percent, bringing dwelling rentals to what were considered more reasonable levels and at the same time injecting a considerable amount of fresh capital into the economy at the consumer level. The effect was much the same for Cuban wage earners as though they had received a sizable increase in pay, and the benefits were immediately felt, also, by thousands of retail merchants.

Mortgage rates were reduced in order to provide relief for the smaller landlords.

Under a cabinet decree, owners of idle property in urban areas were compelled to build on their vacant lots, or to put them up for sale to builders, in an effort to create employment, to end real estate speculation and to provide desperately needed urban space for industrial development.

Tax laws were revised to reduce the number of different taxes by about two-thirds and to provide a more equitable distribution of the taxload. Collections were rigorously enforced, and thousands of tax dodgers now found themselves paying not only current but past taxes, which they had thought to evade. (Of 30,000 members of Havana's 12 most exclusive clubs, it was found that only 6,000 had ever even filed tax returns.)

Although there was some grumbling, principally among landlords whose rentals were reduced, the reaction to the first reforms of the new government was generally favorable. The business classes had asked for honest government, and they discovered that they were getting it "for almost the first time," said The New York Times correspondent Herbert Matthews, "since Columbus discovered the island."

It quickly became evident, however, that the provisional government had no intention of stopping at this point.

CHANGES INSTITUTED

The big U.S.-owned utility companies were next to feel the effects of reform. Government intervenors were installed to oversee the affairs of the Compañía Cubana de Electricidad, a $300 million subsidiary of the American & Foreign Power Corp., supplying 90 percent of Cuba's electrical power. After an inspection of the books, the company was ordered to extend its rural service and to reduce its rates by 30 percent.

The books of the Cuban Telephone Co., a subsidiary of International Telephone & Telegraph, representing a $115 million investment, were also examined. Rate increases which had been granted by the Batista government were abolished, and the company was ordered to improve its notoriously inadequate and inefficient service.

The government had already armed itself with authority to impose controls on currency and imports, to halt the flight of Cuban capital and to restore a lopsided balance of payments. Within the first few months of the new administration, imports were reduced by more than 30 percent, the curbs being applied primarily to noneessential goods—e.g., bottled alcoholic beverages and television sets. Since Cuba had been the world's sixth greatest market for U.S. manufactured and agricultural products, it is not surprising that there should have been repercussions. The worst fears of U.S. investors were confirmed in June, with the promulgation of the agrarian reform law.

The distribution of idle Government landholdings to landless campesinos had already begun. Guajiros in the Sierra Maestra who had lived for generations on land nominally owned by absentee landlords under ancient Spanish grants had also been assured of title to their plots. The next step—under the agrarian reform law—was to invoke the provisions of the Cuban Constitution of 1940 which, although never enforced, had strictly forbidden the holding of latifundios, i.e., more than a thousand acres in a single property.

Exceptions were permitted in the new law to allow maximum holdings of 3,316 acres in rice and cattle lands—where it could be demonstrated that such holdings would be in the interest of more efficient production.

Holdings beyond the legal maximums were subject to expropriation, the land so acquired by the State to be distributed among Cuba's 700,000 landless peasants, with preference to be given to the sharecroppers or squatters actually living on the expropriated property. Each family was assured of 2 caballerias (66⅔ acres) gratis, and the privilege of purchasing 3 additional caballerias.

The law forbade the ownership of sugarcane holdings by mill owners, the purpose being to break up the large monopolies in the interest of the peasants and small cane growers. Ownership of Cuban land by foreigners, whether acquired by purchase or inheritance, was forbidden, and likewise the ownership of land by stock companies in which foreigners might hold shares.

The owners were shocked by the compensation offered for the property to be expropriated: 20-year Government bonds bearing 4½-percent interest. Although they had for many years enjoyed extremely low taxation as the result of minimal assessments, they were now dismayed to learn that expropriation payments would be based on these same evaluations.

AGRARIAN REFORMS DENOUNCED IN UNITED STATES OF AMERICA

The American press was prompt to denounce the agrarian reform as confiscatory. The complaints of the sugar cartel were translated into the language most familiar to the American newspaper-reading public: the land-reform program was a Kremlin-inspired plot to destroy free enterprise. In Washington, there was talk of reducing the Cuban sugar quota, an idea particularly appealing to the sugar Senators of Louisiana and to those legislators with an interest in Hawaiian and Puerto Rican cane sugar or U.S. beet sugar. (The question comes up for action in the current session of Congress.)

Altogether, nearly 2 million acres of cane land owned by or controlled by U.S. interests was marked for expropriation, final action being deferred until after the 1959–60 zafra, or winter harvest, so as not to interfere with sugar production. The first of the big American-owned cattle ranches to be expropriated, the 33,500-acre King Ranch in Camaguey, was formally seized by the Agrarian Reform Institute on November 15. The total extent of other American-owned ranches and other holdings marked for expropriation is thought to be about a million acres.

In Havana, the Government launched what was viewed as another shaft aimed at U.S. business interests: a 5-percent tax on the value of minerals extracted by mining companies, and a 25-percent tax on the value of minerals or ores exported from Cuba. A subsequent measure brought the oil deposits of the island under the control of the industrial division of the Agrarian Reform Institute.

When, in November, the Havana Government suddenly and without explanation replaced Dr. Felipe Pazos as president of the Cuban National Bank with one of the most radical of the Cuban revolutionary leaders, Dr. Ernesto "Che" Guevara, it was felt that the worst had indeed come to the worst.

It is easily possible to trace a rough correspondence between the policy decisions and actions of the revolutionary government and the rise and fall of the decibel level of the anti-Castro propaganda campaign in the United States and elsewhere.

The journalistic image of Fidel Castro varied, even during the struggle against Batista, in ratio to the assessment made of his intentions and capabilities in financial and diplomatic quarters. One saw, in succession, the romantic bourgeois hero (supported by the "best elements" of Cuban society), the potentially dangerous fanatic ("Burn the cane! After Batista we will have a zafra of liberty!"), the bearded leader of what Senator ELLENDER called "a bunch of bandits, burning sugar plantations."

By the end of the first month of fidelista control, the international wire services and their clients in the United States were in full cry against the new government, and it was difficult to distinguish the "liberal" journals—which had hitherto viewed Castro with cautious sympathy—from the most reactionary. The burden of the wave of criticism was humanitarian concern for the "victims" of the revolutionary tribunals, but the underlying preoccupation was apparent in speculation as to the probable economic orientation of the new regime.

As early as January—Fidel's first month in power—U.S. News & World Report, among other conservative journals, was inquiring as to the possibility of a dictatorship taking shape in Cuba, and it may be significant that, during the same period, Associated Press Analyst William Ryan, for one, perceived the clear possibility of U.S. intervention to save Cuba from chaos.

COMMUNIST BEACHHEAD SCARE

In May, with the beginning of the "Communist beachhead" scare, initiated on television and echoed by the Hearst press, there was renewed talk of intervention, this time to save Cuba not from chaos but from communism. United Press International's vice president, Lyle C. Wilson, speculated that Communists probably would "take over" the Cuban Government, and predicted that in such a circumstance "the United States would promptly apply force to prevent the Reds from getting a foothold in the island Republic," adding: "The United States wouldn't tolerate communism in our back yard."

The attempts of the Havana Government to cope with the increasingly disruptive conspiracies of counterrevolutionary elements both inside and outside of Cuba during the summer and fall of 1959 simply provided more fuel for the anti-Castro press campaign. The technique employed to discredit the revolutionary leadership is illustrated in the following excerpts from Newsweek magazine's edition of November 9:

"The revolutionary tribunals are coming back, and so are the firing squads. The mob has shouted its approval of Premier Fidel Castro's plan to arm the peasants and the workers. * * * They are not a bloodthirsty people, these Habaneras who keep crying 'to the firing squad.' The trouble is that they've been so brainwashed that whatever Castro says they automatically believe."

Who is trying to brainwash whom—and with what object? To be evaluated properly, the above quotation should be compared with another, published about the same time, from Hearst Columnist David Sentner:

"WASHINGTON.—The United States must immediately lead a movement by the Organization of American States and the U.N. for the replacement of the Communist-dominated Castro regime in Cuba. Otherwise within 6 to 8 months, many other Latin American nations will follow the Castro pattern and confiscate all American property.

"So predicts Dr. Emilio Nuñez Portuondo, former U.N. Security Council President and distinguished Cuban diplomat."

Sentner does not trouble to identify the "distinguished Cuban diplomat" as Batista's former United Nations representative or as the so-called "intellectual leader" of the anti-Castro batistianos-in-exile with headquarters in Ciudad Trujillo. However, he does say that the Castro regime has placed "a big deathprice" on Nuñez Portuondo's head, and goes on to quote him at length concerning an alleged plot, instigated by Moscow and Peiping, to "communize" Cuba.

It is not too difficult to see the relationship between the Newsweek article and the Hearst columnist's interview with Nuñez Portuondo. The one, painting a lurid picture of an evil, tyrannical, menacing regime, prepares U.S. public opinion for what the other bluntly proposes: an overt military attack on that same regime in the name of humanity, or self-defense, or something equally moral.

Thus it would seem that Fidel Castro's apprehensions with regard to the possibility of foreign intervention, dismissed in the American press as mere ranting or evidence of paranoia, could have some basis. And hence the preoccupation in Havana with counterrevolutionary conspiracies, both at home and abroad: The possibility of a successful counter-revolution in Cuba at the present time is so remote as to be nonexistent. On the other hand, the existence of a counterrevolutionary force, small but well financed, with a firm base in Santo Domingo, powerful backing in the United States and a manpower pool of former Batista soldiers, policemen and displaced petty officials in Cuba itself, does pose a serious threat to the revolution.

It was, after all, the fidelistas themselves who demonstrated how much confusion could be sown, and how much damage done to an economy, by a handful of fanatics.

But this is to discuss the lesser evil. The real danger lies in the use of to which the appearance of a counterrevolution could be put—if the United States were inclined to intervene in Cuba. A widespread, lasting campaign of terrorism, endangering American lives and property, would most certainly produce a ringing appeal for outside aid, in which Cuban conservatives would join. And although Washington—recalling the worldwide political repercussions of its thinly disguised intervention in Guatemala in 1954—would not be anxious to follow the same course again, it is easy to see how Nuñez Portuondo's plan might be adopted, i.e., United States military intervention under the aegis of the Organization of American States.

WHAT IS JUSTIFIED?

How much of the sound and fury of the U.S. press campaign, with its incessant theme of Communist "infiltration" in the Caribbean, has been justified by the actual developments of the first year of revolutionary government in Cuba?

From the point of view of the great Cuban landowners, the import-export bankers, the sugar cartel, the immediate dollar interests threatened, no doubt all of it is justified. From a more liberal, not to say more humane, position, very little indeed.

The picture of a Cuba dominated by Moscow or Peiping is not supported by a nose count of Communists in its government or in the armed forces. Their number is negligible, their influence minimal. Nor do the results of last year's union elections vindicate the notion of significant Communist influence in the ranks of organized labor. In the 500,000-member Sugar Workers Federation, to cite an instance, Communist candidates were elected in only 8 of 243 locals. Not a single Communist was elected to the executive board of the Confederation of Cuban Workers.

The revival of the revolutionary tribunals in October was the Castro government's answer to a series of counterrevolutionary threats dating back to August, when an invasion from Santo Domingo was aborted with the capture of a planeload of arms sent by Dominican Dictator Rafael Trujillo. The civil courts, rubber stamps for the Batista regime, had not yet been sufficiently reorganized to cope with any large number of trials or to dispense the speedy justice which would serve as a deterrent to further insurrection.

Further conflicts of ideology and interest are inevitable. It would be remarkable if a far-reaching social and economic revolution could be achieved in any country without such conflicts.

Fidel Castro is by no means above criticism. He has leaned far too heavily on his own political gifts, his personal influence, his oratorical skill, to solve the pressing problems with which he has been confronted. The result has been an appearance of demagogy which has alienated many of his erstwhile supporters and awakened deep concern even in the most liberal quarters.

The question remains whether it would have been possible to implement the program which has given the Cuban masses their first glimpse of hope, and the island the first honest government in its history, by less arbitrary, more conventional methods. One concludes, however reluctantly: no.

The history of half a century of parliamentary procedure and ballot-box representation provides almost overwhelming evidence of the simple fact that political democracy is meaningless without a generous measure of economic democracy. The introduction of the ballot box in Cuba heralded nothing more than an exchange of absentee landlords, Spanish for American, and the rise of a class of scavenging professional politicians whose hire was the loot of a rampant spoils system and whose ultimate effect was to pave the way for the ultimate disaster: Batista. It is certainly not surprising that Fidel Castro considers a public-opinion poll or a show of hands in the park in front of the Presidential Palace a relatively satisfactory substitute for national elections. Nor is it surprising that the great mass of the people in Cuba today show little interest in the subject.

WHAT ABOUT ELECTIONS?

The Cuban conservatives who are presently calling for elections are precisely those individuals who have had the most experience at manipulating the electoral process for their own private ends. It is most improbable that any candidate opposed to the fidelista program, or not endorsed by the revolutionary movement, could win an election in Cuba at this time. But there is no doubt, either, that an election campaign would serve as a sounding board for the spokesmen of powerful reactionary interests, would sow confusion, and help to revive a counterrevolutionary effort not yet fully under control. It would profoundly dishearten the Cuban man in the street who has learned through half a century to equate the ballot box with the pistol, the dishonest peso, and the privileged few who have been the exponents, practitioners, and principal beneficiaries of Cuban elections.

THE STAKES ARE HIGH

Certainly a great deal is at stake for the Cuban people. The organization of some 500 agricultural cooperatives, the construction of hundreds of schools, hospitals and low-cost housing units, early evidence of a new economic independence signaled by increasing production of rice and other staples, all indicate how great the stake really is.

For the United States, too, the stake is high, regardless of how such questions as the matter of compensation for expropriated U.S. properties are worked out. Cuba is the focal point of a manifestation that seems certain to spread farther in the hemisphere, and the United States can hardly afford to be indifferent. To cite a relevant passage by Herbert Matthews in the New York Times:

"About one-quarter of all our exports go to Latin America and one-third of our imports come from the area. United States private investments in Latin America now reach the amazing total of about $9.5 billion. * * * At every point it has to be said: 'If we did not have Latin America on our side, our situation would be desperate. To be denied the products and markets of Latin America would reduce the United States to being a second-rate nation and

cause a devastating reduction in our standard of living. * * * Latin American raw materials are essential to our existence as a world power. A friendly Latin America is necessary to our military security.'"

Apparently this, and not the mere dollar investment in Cuba, big as it may be, is the heart of the matter. The question remaining is—what to do about it?

It was the end of World War II that marked the close of the colonial period and the beginning of a wave of profound political, social, and economic change throughout the world. In every instance, the essential drives are the same: for independence, self-determination, economic emancipation, social justice.

In the underdeveloped agricultural nations—and that defines most, if not all, of the American republics—the essential first step toward freedom is agrarian reform. To withhold that is to withhold everything. To attempt to defend a dying feudalism is to face not the risk, but the certainty, sooner or later, of losing—everything.

"Whether history will record Cuba's Fidel Castro as an earnest patriot or a fellow-traveling adventurer," writes our former Ambasador to India, Chester Bowles, "is anybody's guess. But one fact is already clear. His land-reform program * * * is dutiably in line Latin American sentiment."

It is perhaps natural that the powerful interests threatened by social and economic change in Cuba and elsewhere should try to stem the tide. But it is not well advised, and it would be a pity if their influence were to prevail in Washington.

THE FALLACY IN CUTTING THE SUGAR QUOTA

Talk of punishing Cuba by cutting the sugar quota is nonsense. Cuba is not merely the world's major sugar producer, but virtually the only sugar-producing country that does not consume the bulk of what it produces. Cuban sugar supplies the need of the entire eastern third of the United States, and it is a vital supply, price-supported not merely because it is in large measure U.S.-owned, but because it is indispensable, as has been demonstrated in two World Wars. To threaten economic sanctions against the Cuban Government is to invite retaliation: e.g., Cuba could easily double its sugar production and dump a vast and ruinous surplus on the world market in defiance of all existing marketing agreements.

Fidel Castro remains as much the symbol of revolution—and of hope—in Latin America at large as he was for Cuba during the long struggle in the mountains of Oriente. The same forces that produced the Cuban revolution are at play throughout the hemisphere; the same aspirations that kindled the imagination of the guajiros of the Sierra Maestra and the bank clerks of Havana in 1957 is stirring in the hearts of the cane cutters of Santo Domingo and the bank clerks of Lima in 1960. There is no doubt that the Cuban revolution has accelerated the revolutionary process greatly, and perhaps has given it a shape that it never had before. It was no coincidence, but a warning, that Panamanian rioters storming into the Panama Canal Zone in December should have adopted "Viva Fidel Castro" as their battle cry.

Former Ambassador Bowles, urging a realistic compromise with the inevitable, advises:

"We can adjust ourselves in advance to the certainty that reason will not always prevail, that injustices will almost surely occur, and that the short-term price paid for long-term stability will often appear exorbitant.

"Above all, let us not lose sight of the essential issue. The real choice in Latin America, as in Asia and Africa, is citizenship or serfdom, hope or despair, orderly political growth or bloody upheaval. Our failure to understand this choice, or to support the vital new elements which are striving to assert leadership, would be catastrophic."

What Bowles has to say is worth considering. The Congress, preparing to set the new sugar quota, might well think it over, and so might the State Department, before proceeding to implement the firmer policy toward Cuba that was announced only last week.

There's Gold in Those Mountains of Grain

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DOOLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I included a significant article by Columnist Dickson Preston, of the Scripps-Howard Newspaper Alliance, which emanated from Washington.

Mr. Preston points up one of the glaring deficiencies of our farm program; namely, the inordinately high cost of storage and the unconscionable profits made by those who are storing our surplus grains.

Senator SYMINGTON pointed out that if the cost of storing and handling Government grain, estimated at over a half-billions dollars for the current year, could be reduced by just 1 cent a bushel the result in savings to the taxpayer would amount to $25 million a year.

The article follows:

THERE'S GOLD IN THOSE MOUNTAINS OF GRAIN

(By Dickson Preston)

WASHINGTON, January 13.—Senator Stuart SYMINGTON, Democrat, of Missouri, shook his head in astonishment. In 30 years as industrialist, Government official and Senator, he said, he'd never heard of anything quite like it.

A parade of witnesses had been testifying, under oath, that their profits ranged from 69 to 167 percent a year simply for storing part of the mountains of grain acquired by the Government under the farm surplus program.

What's more, they have been granted special enticements—such as fast tax writeoffs and other concessions—to persuade them to enter this profitable business.

And many storage operators, it turns out, don't even risk their own capital. They borrow money from Uncle Sam (through the Small Business Administration), use it to build storage facilities, and then lease the space back to the Government.

All this while Governmet-owned bins, built to store grain at low cost, stand empty throughout the West.

Senator SYMINGTON was presiding at an agriculture subcommittee hearing called to find out whether the Agriculture Department is wasting the taxpayers' money by paying too much to store the gigantic grain surplus.

"We all have a concept of what a fair profit is," said the Senator, who made $1 million or so in the steel and electrical businesses before getting into politics. "These are the highest by far that I've ever seen. What we want to know is why?"

He pointed out that if the cost of storing and handling Government grain—estimated at $587 million for 1960—could be reduced by just 1 cent a bushel, the result would save taxpayers $25 million a year.

Senator SYMINGTON also read into the record an ad mailed to elevator operators last May by Hugo Blumstengel, a steel storage bin salesman of Kansas City.

"Are you passing up Uncle Sam's gravy train?" the ad asked, asserting that some dealers were getting back their original investment in 1 year and making fat profits after that. "There's gold in them there mountains of grain."

Evidence put before the committee showed Mr. Blumstengel's ad was no exaggeration. Most of the figures were verified by General Accounting Office audits.

Ivan Summa, manager of the Farmers Cooperative Grain Co. of Archer, Iowa, said his costs in the period auditcd by GAO were 11.2 cents a bushel, his Government payment 18.98 cents, his net profit 7.78 cents. Allowing for possible loss due to spoilage or shrinking, that figured out to 69 percent.

"That's a pretty good profit, isn't it?" Senator SYMINGTON asked. "The automobile industry figures its profit at about 5 percent, the airplane industry at 3 percent."

Food—The 1959 Yearbook of Agriculture

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mrs. BOLTON. Mr. Speaker, one of the finest Government publications I have seen in recent years was the 1959 Yearbook of Agriculture—"Food." The Department of Agriculture is to be congratulated on this fine achievement.

Recently one of my constituents, Mrs. Gerald Reinker, of South Euclid, Ohio, who received a copy of "Food," wrote to say how delighted she has been with the valuable information contained in this book. Under leave to extend my remarks, I would like to share Mrs. Reinker's letter with my colleagues:

SOUTH EUCLID, OHIO,
January 19, 1960.

Hon. FRANCES P. BOLTON,
House Office Building,
Washington, D.C.

DEAR MRS. BOLTON: Several months ago, in answer to my request, I received from you a copy of "1959 Yearbook of Agriculture, Food." I can't tell you how delighted I have been with the valuable information it contains. Although I haven't yet found the time to thoroughly read each section, I find myself referring to it so often that it has found a permanent and prominent place in my kitchen.

I think American women are becoming increasingly aware of the important role of good nutrition in relation to their family's health and well-being. This edition is an excellent handbook for those who, like myself, haven't the time for formal educational courses; but who, nevertheless, love our husbands and children enough to want the assurance that we are doing the best job possible of meeting their nutritional needs.

In particular, I find the comprehensive list of foods and their nutritional values a marvelous aid in preparing my menus. It is the first chart I have been able to find that includes foods less commonly served

as well as the more popular, and also evaluates the available nutrients in foods not only in terms of popular-sized portions, but also according to the manner of preparation (an important consideration).

My very sincerest thanks, Mrs. BOLTON, for your discerning taste in recommending this fine edition, and for forwarding me a copy. I should also like to thank you for the book on child care which arrived shortly after our second child was born. After 1 year, it looks considerably worn. It has been very much appreciated by both my husband and myself.

May I also extend my family's best wishes for a happy, healthy and prosperous New Year to you and your family.

Yours sincerely,

JANE REINKER,
Mrs. Gerald Reinker.

H.R. 755–3

EXTENSION OF REMARKS
OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. NELSEN. Mr. Speaker, this morning is was the pleasure of several Members of this Congress, including myself, to attend the 50th anniversary breakfast of the Boy Scouts of America, and there take part in ceremonies marking the golden jubilee of this youth movement which has meant so much to our Nation.

We were particularly impressed with the 50 young men, among them Robert Floyd Hoel, of Hutchinson, Minn.—Scouts all—who represented the 50 States of the Union. Certainly they epitomized the finest type of embryonic citizens. It is gratifying to know that our Nation can count of them as the leaders of tomorrow.

Though there were only 50 of these Scouts present, they represented an alumni of over 31 million men and boys who have been associated with the movement since its formation here in our Nation's Capital 50 years ago. They also represent, in a most admirable way, the 5,043,000 boys and men who are currently active in the programs of scouting.

It is significant to note that these large figures mean much more than cold statistics. They represent a concrete measurement of the effectiveness of our American way of doing things. Much credit must go to the 1,300,000 men and women who give dedicated service as volunteer leaders of this movement, and to the 3,500 men who have dedicated their lives to career service as Scout executives.

The Boy Scouts of America have a very dynamic program. Its Cub Scout program, its Boy Scout program, and its Explorer program give to boys the things they want—fun, adventure, and romance. But it gives to the Nation of the future new generations of young men trained in the finest precepts of citizenship. This movement has a program with a purpose.

When the movement got underway it was dedicated to training boys in citizenship, building citizenship, developing self-reliance, and forming good character. It has done this, and done it effectively.

Through its virile and appealing program built around the lore of scouting, with its rich outdoor activities, it exposes boys to the highest type of men as scoutmasters and leaders. And as it goes about this program involvement, it exposes these boys, and their leaders, to one of the finest codes of ethics ever developed—the Scout oath. I would have that oath repeated here for inclusion in this RECORD, not only for what it means to growing boys, but for what it means as a guide for adults in their performance of day-to-day duties in business and Government:

On my honor, I will do my best; to do my duty to God and my country; to obey the Scout law; to help other people at all times; and to keep myself physically strong, mentally awake, and morally straight.

The Honorable Speaker SAM RAYBURN, along with Congressman CARL VINSON and Senator CARL HAYDEN were in the 64th Congress which granted a charter to the Boy Scouts of America in 1916. Mr. RAYBURN wrote of the event in the February issue of Scouting magazine. As a tribute to Scouting I would ask that the article be inserted in the CONGRESSIONAL RECORD.

The article follows:

H.R. 755–3

(By the Honorable SAM RAYBURN, Speaker, House of Representatives)

The summer of 1916 was a hectic time for the U.S. Government.

South of our border an outlaw named Pancho Villa caused armed clashes to occur. Submarine warfare in the Atlantic Ocean threatened our neutrality, and President Woodrow Wilson has demanded that Germany abandon this practice.

The 64th Congress was hurriedly enacting emergency defense legislation. On June 3, the National Defense Act increased the size of the Regular Army to 186,000 men, provided for a federalized National Guard of 424,800, established civilian training camps, and Reserve Officers' Training Corps at colleges and universities, and authorized the purchase of maintenance of airships.

Domestic legislation under consideration included establishment of the National Park Service; a bill providing a standard 8-hour day for most railroad workers; a $5 million Federal good roads bill; the Farm Loan Act, creating a land bank system for loans to farmers; a Child Labor Act; a new Revenue Act that would double the normal rate of income tax.

Congress would soon pass the Jones Act that guaranteed Philippine independence when the islands demonstrated ability to govern themselves.

This busy 64th Congress also found time to pass a bill known as H.R. 755–3.

SIGNED WITH CEREMONY

On June 15, 1916, President Wilson, who was nominated the next day for a second term, approved H.R. 755–3. This bill granted a Federal charter to the Boy Scouts of America, thereby giving a legal foundation for Scouting as a permanent program for boys. Here was protection that could be secured by no other means.

In 1916 it was rare for the President to make a ceremony of signing bills. However, Woodrow Wilson had a great interest in the Scouting movement and was its honorary president. He made an exception for H.R. 755–3 and signed the bill, surrounded by a group of Eagle Scouts and officers and members of the National Council, Boy Scouts of America.

The President presented the pen he had used to Colin Livingstone, national council president. Besides Mr. Livingstone, Paul Sieman, Washington attorney for the Boy Scouts of America, and scores of other prominent citizens had sought this legislation for years.

TWO YEARS OF SPADEWORK

The bill for Federal incorporation had been introduced in the House in 1914 by Representative Charles C. Carlin of Virginia and in 1915 in the Senate by Senator John K. Shields of Tennessee.

The House Judiciary Committee had made an exhaustive analysis of the Boy Scouts of America, as well as other organizations of a similar character. The committee had reported the bill favorably to the House on February 7, 1916, where it had been passed by unanimous consent. The Senate had approved it in the same manner and it then went to the President for signature.

PRESTIGE PLUS PROTECTION

Those familiar with legislation by our Congress know how difficult it is to secure Federal incorporation. That this bill passed in both House and Senate without a dissenting vote during a period when demands on our lawmakers were greater than ever before is significant of the high regard our National Government had for the Boy Scout movement.

The report of the House Judiciary Committee shows that Congress fully appreciated Scouting's value and recognized that its development and promise of usefulness to the future of the country warranted Federal protection.

H.R. 755–3 gives protection to the Boy Scouts of America from the claims of organizations having in their programs none of the features that distinguishes Scouting from all other programs for boys. It also prevents the use of the words "Boy Scouts," without authorization, by persons or concerns who may endeavor to commercialize on the Scout-created interest of boys.

The law also protects the uniforms and emblems of the movement. Some imitations of Scout insignia had appeared, and the Federal law prevented further imitations from destroying the meaning of the Scout uniform and emblems.

RESPONSIBILITY REQUIRED

The act charged the incorporators with the responsibility of drafting a constitution and bylaws to make the provisions of the new law effective. It also required the Boy Scouts of America to submit an annual report to Congress. On February 26, 1917, a National Constitution and bylaws was adopted, covering the fundamentals of Scouting and definitely stating its principles, policies, and methods, and providing for its administration in a democratic and businesslike manner.

Thus, the 64th Congress helped lay the foundations for the Boy Scout movement in our country—foundations so firm as to guarantee its permanency as a potential factor for the development of America's citizens.

I was a Member of that 64th Congress, serving my 2d term as representative of the 4th Congressional District of Texas, an office I still hold. The 64th Congress included two other Members of the current 86th Congress—CARL HAYDEN, in 1916 a Representative from Arizona and now Senator from that State, serving as President pro tempore of the Senate, and chairman of the powerful Senate Committee on Appropriations; and CARL VINSON, in 1916 serving as a Repre-

sentative from Georgia, holds that office and is chairman of the great Committee on Armed Services in the House of Representatives.

My fellow Congressmen and I are indeed proud of the part we had in laying Scouting's foundation. The results of the bill known as H.R. 755–3 will certainly continue to bless our Nation with outstanding citizens for generations to come.

In section 3 of that bill these words appear:

"That the purpose of this corporation shall be to promote, through organization and cooperation with other agencies, the ability of boys to do things for themselves and others, to train them in Scoutcraft, and to teach them patriotism, courage, self-reliance, and kindred virtues, using the methods which are now in common use by Boy Scouts."

As the Boy Scouts of America celebrate its 50th birthday, let me remind you that the purpose for which the charter was granted continues as your vital service to our beloved America.

A father takes particular pride in successful accomplishments of his son, and it is with that feeling that we recognize the important things that Scouting has done, not only since the Federal charter was granted but in its whole life span of 50 years.

The Scout movement now has an active membership of over 5 million boys and men of all races and creeds, and an alumni consisting of over 31 million. With 130,000 Scouting units sponsored by 83,000 local churches, schools, civic bodies, farm organizations and citizens groups, this movement fully justifies the support of this Congress and the citizenry of an appreciative Nation.

Freedom of Expression

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. MILLER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of the House of Representatives a bill I introduced today to amend the Internal Revenue Code of 1954 so as to provide that lawful expenditures for legislative purposes shall be allowed as deductions from gross income.

The Internal Revenue Service recently published a regulation which attempts to define the type of "ordinary and necessary" business expense that may be deductible for Federal tax purposes when such expenses involve so-called legislative activities. This regulation, which was published on December 29, 1959, holds that business expenses are not a justified tax expense if for "lobbying purposes, or the promotion or defeat of legislation, for political campaign purposes (including the support of or opposition to any candidate for public office), or for carrying on propaganda (including advertising) relating to any of the foregoing purposes."

These broad, ambiguous terms are not defined in the regulation and therefore there are no guidelines either for the Government or for affected taxpayers to determine what type of activities in this area may be covered. Because of these ambiguities, there is widespread concern that such administrative interpretation may have the effect of inhibiting freedom of expression of views on matters of government.

With the ever expanding impact of government activities, at all levels of government, in the daily lives of our citizens, any action that may curtail the freedom of expression of views on such matters should be examined very carefully. Our Constitution expressly guarantees the rights of free speech and a free press and the right to petition the Congress. The tax laws should not be invoked as an indirect means of curtailing any of these basic freedoms of expression.

The Congress should immediately undertake a review of the problems raised by this regulation for it appears that the only appropriate clarification can come through congressional action. Any action of the Government that affects a person's business or right to do business should be a permissible tax expense. Congress should express this philosophy in clarifying legislation that makes it absolutely clear that it is the "sharply defined national policy" to encourage and not to repress freedom of expression.

Sewer Problem Acute in Five Area Villages

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Waukegan (Ill.) News-Sun of October 21, 1959:

SEWER PROBLEM ACUTE IN FIVE AREA VILLAGES

(By Sig Gissler)

EDITOR'S NOTE.—Water pollution has reached alarming proportions in the United States. Here is the third in a series of articles examining the interlocked pollution-water supply problem of the national regional and local level.)

Methods of handling sewage in Lake County range from the good to the ghastly.

Some municipalities are served by modern sewage collection networks and treatment plants. Some aren't.

Of special concern are the roughly 140,000 residents (about half the county's population) who rely on individual septic tanks—hundreds of which are faulty, odor-producing and a menace to health.

In some areas of the county, filth-infested outhouses are in use.

A preliminary study by the Lake County Regional Planning Commission shows that of the county's 36 municipalities five have neither a central sewer or water system.

They are Indian Creek, Island Lake, Kildeer, Long Grove, and Barrington Hills.

PARTIALLY SERVED

But this is only part of the story. Many other municipalities are only partially served by central water and sewer facilities.

The Round Lake Sanitary District is a case study in the vexing problem of domestic waste disposal that is clouding life in suburbia from coast to coast.

The district—comprised of Round Lake, Round Lake Beach, Round Lake Park, Hainesville, and Indian Hill—has had a rocky financial history dating almost to its inception in 1946.

In recent months, two bond issues to pay for vast improvement of the district's treatment plant were turned down at the polls by lopsided majorities.

These election setbacks forced the district to reject a Round Lake Beach application to connect its new sewer lines to the already overloaded disposal plant.

DISTRICT SUED

Round Lake Beach immediately sued the district, charging that "everything inside our village is becoming saturated with human waste."

The circuit court ruled in favor of Round Lake Beach. Since it was a court ruling, the district is able to legally issue—without a referendum—bonds sufficient to abate the nuisance.

While this may solve Round Lake Beach's problem—at least temporarily—the overall pollution problem in that area of the county is far from solved.

The reason is that the district's plant is operating at only 68 percent efficiency. Under normal circumstances this wouldn't be too bad. However, the plant's treated sewage ends up in the Chain O' Lakes.

"A conventional plant is not good enough when the effluent goes into recreational waters," explains John Morris, the Lake County Health Department chief sanitary engineer.

ECONOMIC IMPACT

Contamination of the Chain O' Lakes, if it gets out of hand, could have a tremendously adverse economic impact as well as pose a health danger.

The Chain O' Lakes is a resort area. Its annual business runs into millions of dollars. But it must have clean water to prosper.

Consequently, unbridled pollution would severely dislocate the resort economy.

Not all is black in the area, however. The village of Fox Lake, for instance, is ready to start work on a modern treatment plant.

In addition, the county now has an ordinance requiring that all toilets must be sealed on cruisers and other small craft using Lake County lakes. Enforcement is not yet complete, but it's getting better.

To what extent is the county's health in jeopardy?

The new Lake County Health Department has not been in existence long enough to do a definitive study, but certain facts seem to be fairly well established.

Preliminary testing of streams and lakes reveals that the county's water (which constitutes about 5 percent of the county's area) does not generally show an alarming level of pollution.

TAKES TIME

"But we don't want to jump to conclusions," cautions Dr. Arthur Baker, department director. "It takes time to discover a trend one way or the other."

Dr. Baker said two or three bodies of water did show a higher level of contamination "than there should have been."

The Des Plaines River, for example, shows indications of dangerous contamination in some spots.

The county's yardstick of pollution is the traditional "coliform count." A high count

indicates the presence of organisms which could cause diseases, such as typhoid fever.

The trouble is that coliform count is a crude indicator, only one of many factors that must be considered in determining harmful levels of pollution.

It is analogous to our time honored economic barometers, such as the auto industry. If auto sales drop, we worry. But it doesn't necessarily mean that a depression is upon us.

Likewise, a high coliform count does not necessarily mean a typhoid epidemic is imminent.

Have any illnesses been traced directly to pollution?

TWO TYPHOID CASES

There were two cases of typhoid this year. But neither could be linked to pollution, Dr. Baker said.

However, there have been some virus ailments and one limited outbreak of dysentery which the department feels could have been avoided if better sewage conditions existed.

Hence, Dr. Baker prefers to view the county's pollution problem as a very real potential threat. Whether the hazard intensifies will depend greatly on how the county reacts to disposal problems in the future.

One of the biggest future dangers is the faulty septic tank. As of now, the health department is only partly satisfied with the way this hazard is being attacked.

Let's Be Generous

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial on H.R. 2412, to grant service connection to all veterans of 1898–1902, which appeared in the National Tribune-Stars and Stripes on February 4, 1960:

LET'S BE GENEROUS

On January 25 three representatives of the United Spanish War Veterans appeared in behalf of H.R. 2412, a bill which would grant service connection to all veterans of 1898–1902 in order to give them the same priority for hospitalization as is given to the service-connected veterans of later wars.

H.R. 2412 was introduced last year by Representative BARRATT O'HARA of Illinois, one of the three Representatives of the Spanish-American War referred to and the last remaining veteran of those campaigns now in the Congress of the United States.

They offered their reasons as to why this legislation should be enacted. In view of the circumstances under which they served, we came to the conclusion that these reasons were adequate.

The other two representatives of the United Spanish War Veterans were Judge John White, a past commander in chief of the USWV from Texas, and John U. Shroyer, of Pennsylvania, also a past head of the USWV. Shroyer is chairman of the USWV National Committee on Legislation and Its Administration, and Judge White is vice chairman. As they were testifying, their present commander in chief, W. Ross Duke, was dying at his home in Wichita Falls, Tex.

Judge White spoke first and he declared that, while there were still many veterans of the Spanish-American War, the Boxer Rebellion, and the Philippine Insurrection who felt that their financial condition made it possible to seek private treatment or hospitalization, there were thousands of others who were unable to meet the financial need of medical or hospital care and that these men were left to wait assignment to a Veterans' Administration hospital until beds were available under the present law and that while awaiting such hospital care they died. Judge White suggested that the delay of 1 hour might mean the difference between life and death.

Chairman Shroyer dealt with the practical side on the need for the enactment of H.R. 2412 and stated to the House Committee on Veterans' Affairs which was holding the hearings on the bill that the suggestion that the passage of the measure might set up a precedent for the veterans of future wars was merely theoretical and that it might be well to meet each situation as it arose. He pointed out the fact that when a bonus for veterans of World War I was first proposed there was an outcry against the possible cost and the declaration by those more interested in tax payments than gratitude that the passage of such a bill would bankrupt the country.

Chairman Shroyer continued to say that the passage of the World War I bonus did not bankrupt the country but that, rather, the country had gone on to higher peaks of prosperity.

As was to be expected, the representatives of the Veterans' Administration who appeared before the House Committee stated bluntly that the VA—that means the present national administration—opposed the bill.

Also, as was to be expected, they brought up the question of a possible precedent being established. They offered figures showing the possible hospital need by 1970 as far as World War I veterans was concerned. Their presentation was purely statistical—nothing humanitarian—merely cold figures dealing only with costs.

In his discussion of the need for care under H.R. 2412 and the cost of such care, Chairman Shroyer of the USWV presented figures which he had received from the Veterans' Administration on the very morning of his appearance before the House committee, showing that there were some 39,000 veterans of the Spanish-American War now on the pension rolls.

In its presentation of statistics the Veterans' Administration representative disagreed with this figure—the VA's most recent figure— and stated that there were many more Spanish War veterans now alive. This we do not dispute but undoubtedly the VA is taking into consideration in this estimate the veterans of the Spanish-American War who remained in service and were eventually retired. This group would not need consideration under H.R. 2412 as their retirement benefits grant them hospitalization in Army and Naval Hospitals, as the case may be.

As we have written earlier in this editorial Judge White explained how a delay of an hour in a veteran's hospitalization might mean the difference between life and death. He was asked by a member of the committee just how a difference of an hour might be important. The answer is obvious. Fifteen minutes of appropriate treatment might save a man's life. Further delay might mean death.

But there is more to it than this question of just 1 hour before hospital care can be rendered. In its discussion of the manner in which the VA takes care of the Spanish War veterans the VA representative discussed a 3-month survey of applications for hospital care made by such veterans. The figures showed that in this period approximately only 3 percent of the applicants were made to wait an appreciable time before they were hospitalized.

Well, from our experience, the VA must have chosen the best 3 months in the lives of the remaining Spanish War veterans. Our experience over many years is much to the contrary. Almost every week we receive letters saying that a Spanish-American War veteran had applied for needed hospitalization but was told he must await his turn until a bed was found available. During this waiting time extending for weeks and sometimes months, the veteran died. These are not figures but straightforward declarations from those who lost their loved ones while waiting for that available bed.

The Economy Act of March 20, 1933, cut off pensions from practically all veterans of the Spanish-American War. In August 1935 these benefits were restored with a special message from President Franklin D. Roosevelt, approving the bill and pointing out the fact that due to the conditions under which this group served they were in a distinct class and therefore entitled to generous consideration.

Congress later, recognizing the situation under which these men served, granted them service connection for all disabilities for outpatient treatment. If this action was wise, and we feel certain it was, then we see no reason why it should not be extended to hospitalization, thus affording immediate care to our remaining survivors of a long, bloody but fruitful war insofar as the United States is concerned.

Approximately a year ago, we discussed the reasons why H.R. 2412 should be enacted into law. We described the hardships which these men suffered—their lack of proper food or medical care and the failure to maintain records of the diseases or injuries they incurred during the bitter tropical campaigns.

Now we recall the last century but thinly and we are certain that most of the members of the House Committee on Veterans Affairs are equally unfamiliar with the hardships these men suffered, but we do recall the embalmed beef scandals and the scarecrows of men who returned from the Cuban campaign.

We are firmly convinced that despite administration opposition to H.R. 2412 a sympathetic and understanding Congress will see to it that these survivors of the war which, as a matter of fact, put us on the map in world affairs, will be granted this last piece of relief as is seemly from a grateful people.

The Connally Amendment—World Court

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, I wish to present herewith a copy of the resolution adopted by the board of governors of the Louisiana Society, Sons of the American Revolution, February 1960, in opposition to Senate Resolution 94, calling for the repeal of the Connally amendment. I feel the members of this organization represent those vitally interested in the preservation of our country and I urge consideration of the resolution. It is as follows:

At a meeting of the board of governors of the Louisiana Society, Sons of the American Revolution, held on the 3d day of February, 1960, the following resolution was unanimously adopted:

"Whereas the International Court of Justice, referred to as the World Court, was

created by charter of the United Nations as amended; and

"Whereas the charter and statute have been approved by the U.S. Senate, and executed as a treaty, which instrument is now the supreme law of the land; and

"Whereas after the Senate ratified the United Nations Charter, there was much agitation from internationalists to get out Nation under the compulsory jurisdiction of the World Court; and

"Whereas Senator WAYNE MORSE introduced a resolution in the U.S. Senate in 1945, a similar resolution being introduced in the Congress by then Congressman Christian Herter (now Secretary of State), in December 1945; and

"Whereas the Morse resolution was adopted on August 2, 1945, with an amendment thereto by Senator Connally, providing that the United States would retain authority to determine which matters concerning the United States of America, are within its sole and national jurisdiction; and

"Whereas Senator HUMPHREY has introduced, in the Senate, Senate Resolution 94 to repeal the Connally amendment; and

"Whereas the World Court is composed of 14 judges, only one being from the United States and two from Communist countries, one from Russia, and one from Poland, who constitute the members of that Court, along with the other 11: Now, therefore, be it

"Resolved, That the Louisiana Society, Sons of the American Revolution go on record opposing the adoption of Senate Resolution 94, in that it would scrap our State and National sovereignty and place the United States of America under a world government, in which one hundred and seventy million Americans would virtually have no control, and will automatically relegate the Constitution of the United States of America to second place, giving to the World Court exclusive authority to determine any matter effecting the rights of citizens, and the Government of the United States of America; and be it further

"Resolved, That all loyal Americans be requested to express their views to their respective Senators and Representatives; and be it further

"Resolved, That a copy of this resolution be sent to the President of the United States, Senators ELLENDER and LONG of Louisiana; all Louisiana Congressmen; the National Society, Sons of the American Revolution; the National Society, Daughters of the American Revolution; the press, radio, and television stations of this city.

"S. O. LANDRY."

Senator Lyndon Johnson Gives Leadership to the Nation

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD two articles pertaining to Senator LYNDON JOHNSON. One of these is a brief article by the noted columnist Drew Pearson, which appeared in the New York Mirror on February 5, 1960; the other, an article by Alan L. Otten, published on the same date in the Wall Street Journal.

On a previous occasion I had stated that "Senator JOHNSON should not be stigmatized as carrying the banner of any particular State. When he speaks, he speaks for and on behalf of our great Nation." As majority leader of the Senate he attends to his arduous duties in that greatest of all deliberative bodies, often extending over many long hours every day.

Senator LYNDON JOHNSON has no time for long and extensive trips which would take him away from his duties in the Senate and jeopardize the flow of important legislation. He stays close to the grindstone to guide such legislation, particularly at this critical juncture in our Nation's history. Only occasionally is he able to get away for a few days to address an important gathering, and that is usually done over the weekend. His duties in the Senate in behalf of all the people come first, regardless of what his personal aspirations may be. This is a mark of true and responsible leadership.

The two articles cited above read as follows:

[From the New York Mirror, Feb. 5, 1960]

SENATE DUTIES COME FIRST WITH LYNDON

(By Drew Pearson)

WASHINGTON, February 4.—At Albuquerque, N. Mex., today, Senator LYNDON JOHNSON, of Texas, is expected to make a qualified announcement of his availability for the Democratic nomination.

Though most people consider JOHNSON a candidate, inside fact is that even to his close friend, Speaker SAM RAYBURN, LYNDON has not confided his definite intentions. Nor has he to his good friend, former Senator Earle Clements, of Kentucky, who already has pledged about 400 delegates for the tall Texan.

LYNDON's predicament is that if he becomes a candidate he can't very well remain in Washington to handle his duties as Senate majority leader. And, whether you agree with JOHNSON or not, this is something he takes very seriously. He takes pride in the job and works at it about 18 hours a day.

If he becomes an announced candidate he'll have to leave the exacting grind of the Senate to make a series of speeches all over the country. Most people don't realize it, but Senator JACK KENNEDY, of Massachusetts, is almost never in the Senate any more, and won't be until after the presidential primaries. JOHNSON doesn't want to be in a similar position. That's why only a qualified hat will be tossed in the ring.

[From the Wall Street Journal, Feb. 5, 1960]

JOHNSON PRESSES DRIVE FOR NATIONAL BACKING IN PRESIDENTIAL RACE—HE OPENS SPEAKING TOUR OF WEST, NORTH TODAY, PUSHES TOUGHER CIVIL RIGHTS LAW—LABOR, ADA HURDLES HIGH

(By Alan L. Otten)

WASHINGTON.—During the next 10 days LYNDON JOHNSON will be launching his first big drive to dash out of Dixie, on a trail he hopes will lead to the White House.

Today in Albuquerque the Senate majority leader will make a big I-know-the-problems-of-the-West oration, an open bid for support of politicos gathered at the Western States Democratic conference. He'll follow this quickly with speeches in Indianapolis and other cities.

A week from Monday the Texas will summon up for Senate debate—and probable eventual passage—a new civil rights bill, in a major attempt to get northern liberal backing.

Thus will Mr. JOHNSON attempt to break out of the southern type casting that is the major barrier between him and the Democratic nomination. Most observers don't think he'll be able to hurdle it; but they agree that if any southerner can do it any time in the next decade, Mr. JOHNSON is the one.

"Do I think he'll be nominated?" one New Dealing House Democratic leader asks rhetorically. "No. Do I think he might be? I sure do."

OUT TO BE THE KING

Top Democrats and Republicans today are taking LYNDON far more seriously than even a few weeks ago. Originally, his movements in the direction of the Los Angeles convention this July were interpreted as an attempt to amass enough votes to have a decisive voice in the choice of the nominee and the party platform. Today politicians unquestioningly take for granted he is aiming for top spot himself. "He's out to be the king, not the kingmaker," says one party official.

Barring some unexpected development, Mr. JOHNSON will go to the Los Angeles convention with either the largest or second largest bloc of first ballot votes. He'll have a minimum of 400 first-ballot votes out of the 1,521 total, and may go considerably higher. "We'll be over 500 on the second ballot, no matter how the primaries go," a Johnson lieutenant says confidently. Only Senator JOHN F. KENNEDY, of Massachusetts, could do better in early balloting.

But the guaranteed bloc of Johnson delegates underlines his problem: Practically every one of them comes from the South and such border States as Oklahoma and Kentucky. This makes him not merely a regional candidate; it makes him the candidate of a region whose views are anathema to crusading New Dealers in New York, California, Michigan, Wisconsin, Pennsylvania, Illinois and other States with big blocs of convention delegates.

"I can run happily and safely with any of the men being mentioned for the nomination except LYNDON," says one Northern Democratic Senator up for reelection. He and many other northern and far western Democrats fear that Negroes will instinctively oppose JOHNSON as a southerner, that union men will automatically bolt him as a conservative on labor matters, that liberals generally will immediately recall his votes for legislation favoring oil and gas interests.

FLIRTATION TO COURTSHIP

Hence the importance to JOHNSON of winning support outside the South. Hence JOHNSON's quiet wooing in recent weeks of northern, western, and midwestern Democratic leaders—a flirtation that now will become full-scale courtship. What he would like to do is put together—as he frequently has in the Senate—a southern-western Democratic coalition, with just enough northern and midwestern support to give his drive a truly national flavor.

Mr. JOHNSON already has some surprising non-southern individual backers. They include, naturally enough, a good many Senators—relative liberals such as MANSFIELD, of Montana, ANDERSON, of New Mexico, and RANDOLPH, of West Virginia, and relative conservatives such as FREAR, of Delaware, HARTKE, of Indiana, and DODD, of Connecticut. A sprinkling of northern House Members such as ROONEY and ANFUSO of New York, BARR, of Indiana, and BREEDING, of Kansas, have spoken out for him, and Harlem's ADAM CLAYTON POWELL, though favoring Mr. SYMINGTON or Mr. HUMPHREY, calls the majority leader "our strongest possible candidate." Former Secretary of State Dean Acheson has helped out on legislative and speechwriting chores, and former New York Governor Averell Harriman has said kind words. Comparatively few delegate votes flow from this collection of names, but JOHNSON aids cite them as evidence that northerners and westerners can be wooed and won.

At Albuquerque, where other senatorial aspirants for the White House will follow him

to the speaking stand like so many cattle up for auction, Mr. JOHNSON will present himself not as a southerner but as a westerner, who has supported every western resource development project and who helped put through the tough Hells Canyon Dam building bill in the face of heavy administration opposition. From Albuquerque, he'll fly to speak tomorrow night in a Midwest city, Indianapolis. Sunday he will go to Nashville to try nailing down the Tennessee delegation in a private talk with Governor Ellington. During the next 6 weeks, he'll make speeches in West Virginia, Oregon, California, Nevada, Idaho, and Utah.

IMPORTANCE OF CIVIL RIGHTS

But Mr. JOHNSON's attempt to break out of the southern stereotype and to win over liberal support depends less on travel and talk than on his backing of a strong civil rights bill. In recent forays into Chicago and New York, he stressed heavily his role in passing the 1957 civil rights measure. Now he'll follow with a 1960 model. This, together with prospective Senate approval of Federal aid to education, minimum wage expansion, social security liberalization, and other welfare measures will be strong selling points to liberal audiences, JOHNSON strategists state.

If he goes too far, especially in the civil rights field, the Senator could alienate his southern supporters. This is a risk he believes he must take.

The southern barrier has been insuperable in the past. Why does anyone think Mr. JOHNSON can overcome it now?

Largely because of the man's own character and his record in the Senate. During the past 6 years, he and House Speaker RAYBURN, a fellow-Texan and Mr. JOHNSON's prime booster for the Presidency, have put through a legislative program that, while far short of many Democrats' desires, has been impressive. The two Texans claim that it was their course, midway between the Eisenhower administration with the extreme liberal Democratic wing, that brought about the Democratic congressional victories in 1954, 1956, and 1958.

HE TOWERS OVER EVERYONE

"I don't know whether we can nominate him," says one Arkansas Democrat, "but he's the only man we've got that can win. He towers over everyone else in the party."

Most Washington observers concede Mr. JOHNSON to be a tireless driver, an adroit parliamentarian, an outstanding horse-trader, an expert maneuverer. He has played the Senate like a musical instrument, frequently putting through bills that no one thought could be passed and blocking others that looked like sure things. "Start with 450 convention votes and add his maneuvering ability, and there's no telling where he can go," one Democratic critic concedes.

Like most candidates, Mr. JOHNSON tends to change his political complexion somewhat to suit his audiences. At northern liberal gatherings he stresses that he was an ardent admirer of Roosevelt, attacks Wall Street domination of the Republican Party, calls for increased spending on space or defense or resource development or farm programs. Before a chamber of commerce meeting, he'll talk about the need for meeting the Russian challenge as a united nation, free from partisanship. Most often, he pictures himself as a middle-of-the-roader; he'll couple in one speech a call for more spending on various projects with a pledge to cut the administration's budget and pay off part of the debt.

Leader LYNDON has spent considerable time of late cultivating such old party professionals as Governor Lawrence, of Pennsylvania; Mayor Daley, of Chicago; New York Tammany boss De Sapio. "LYNDON gets along well with the pros," an aide comments. "They recognize him as one of them; they know he talks their language, and would keep on talking it once he got in the White House."

The Johnson forces intend to use all the time-honored methods of lining up convention delegates. The vice-presidential nomination has been discreetly dangled before California Governor Brown, New Jersey Governor Meyner, New York City Mayor Wagner and others who, for religious, geographical or other reasons, can find little hope for themselves in the Kennedy camp.

IF JACK SLIPS

Much of the Johnson strategy is tied to hope that Senator KENNEDY will suffer defeat at the hands of Senator HUMPHREY in the Wisconsin primary. "If JACK slips in the primaries, there will be no stopping LYNDON," declares one lieutenant. Yet the Johnson forces also talk longingly about a possible Johnson-Kennedy ticket. Declares one, his eyes lighting up: "That would put together the old coalition of F.D.R.—the South, the West, and the Catholics in the big cities of the North."

If the plusses are substantial, so, too, are the minuses. Mr. JOHNSON may try hard to break the southern image, but how well will he succeed? Many northern and western political leaders, even those sympathetic to Mr. JOHNSON, may well decide their own futures if their own States forbid taking a chance on him.

This will particularly be true in States with large Negro voting blocs. More northern and western Democrats are likely to oppose him as too conservative on a wide variety of domestic issues. Mr. JOHNSON's aides claim his votes on labor bills are as liberal as those of Senators SYMINGTON or KENNEDY, but labor leaders regard him as far less acceptable. Unions have been playing up a letter he wrote last summer stressing his past votes for strong regulatory legislation against improper labor practices. The United Mine Workers Journal headlined a story: "Senate Boss JOHNSON Goes on the (Anti-Labor) Record."

While some Democrats saw virtue in Mr. JOHNSON's efforts to compromise with the Eisenhower administration on airports, housing and many other programs in the last few years, many others saw it as betrayal of Congressional election victories. One northerner caustically says LYNDON will go down in history as "the great homogenizer."

The Americans for Democratic Action blasts the Johnson-Rayburn leadership as sterile. While Senators KENNEDY, SYMINGTON, and HUMPHREY scored 100 percent on the A.D.A. voting chart for 1959 Mr. JOHNSON scored only 58 percent.

"A.D.A.-ers, union officials and Negro leaders may not have the votes to put a candidate across at the convention," says one Democratic lawmaker, "but they sure have the votes to block a man."

But even those opposed to Mr. JOHNSON are now taking him very seriously. "I've underestimated this guy for the past 20 years," says one old opponent. "I'm not making the same mistake this time."

Resolution by General Court of Massachusetts on World War I Pensions

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution memorializing Congress to grant pensions to World War I veterans comparable to those granted to veterans of wars prior to World War I:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION GRANTING TO VETERANS OF WORLD WAR I PENSIONS COMPARABLE TO GRANTS TO VETERANS OF AMERICAN WARS PRIOR TO WORLD WAR I

Whereas it has been the national policy of the United States to grant assistance to its war veterans in their declining years by a pension, all in consideration of their military services in defense of our country; and

Whereas there has been no general pension granted to Veterans of World War I by the United States; and

Whereas the United States has been and is aiding many foreign countries in restoring their economy; Therefore be it

Resolved, That the General Court of Massachusetts hereby urges the Congress of the United States to enact legislation granting a pension to Veterans of World War I comparable to grants to Veterans of American wars prior to World War I; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth, to the President of the United States, to the Presiding Officer of each branch of Congress, to the Members thereof from this Commonwealth, and to the members of the Veterans' Affairs Committee in the House of Representatives of the United States.

House of Representatives, adopted, January 15, 1960.

LAWRENCE R. GROVE,
Clerk.

In Senate, adopted in concurrence, January 28, 1960.

IRVING N. HAYDEN,
Clerk.

Attest:

JOSEPH D. WARD,
Secretary of the Commonwealth.

Carlo Bianchi and Company Versus the United States

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. BOW. Mr. Speaker, I was disturbed when I read in the CONGRESSIONAL RECORD the extension of remarks of my colleague from New York [Mr. SANTANGELO]. I made inquiry of the Department of Justice concerning these charges and have received the following reply:

DEPARTMENT OF JUSTICE,
Washington, D.C., February 5, 1960.

Hon. FRANK T. BOW,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BOW: In reply to your inquiry regarding the statement of Mr. SANTANGELO, of New York, contained in the CONGRESSIONAL RECORD for Wednesday, January 27, 1960, at page 1293, I am pleased to submit the following comments:

In view of the fact that Mr. SANTANGELO's statement criticizes the Department of Justice for its handling of the case of *Carlo Bianchi and Company* v. *The United States*, Court of Claims Docket No. 406-54, I believe it appropriate to call attention to some

major misstatements of fact contained in his statement.

Mr. SANTANGELO's assertions that, after the Government was held liable in this case by the Court of Claims, the court will not now permit the Department to introduce any testimony with respect to damages, that the Government has been defaulted on the issue of damages and that as a consequence the United States has been held liable in the amount of $680,066, were not correct.

The court has not ruled that the Government may not submit any testimony on damages, has not defaulted the Government, and has not held it liable for $680,066 or any other amount. The fact is that the Government attorney handling this case is presently on the West coast preparatory to offering before the Commissioner at a scheduled hearing commencing February 8, in San Jose, Calif., the testimony of one of the Government's most important witnesses, the resident engineer on the project.

A misunderstanding did arise between the Commissioner and the Government attorney regarding the time and place of presenting the Government's evidence and the court did deny a motion of the Government for leave to submit additional testimony on the basis of the situation then existing. However, in the event the Department of Justice concludes, after the taking of testimony later this month in California, that the Government's interest will require additional proof, it proposes to apply to the court at that time for leave to do so and we have no reason to believe that, in the event of such a reasonable application, the court will not permit the Government to present additional testimony on the issue of damages.

I have confidence in the competence and industry of the trial attorney handling this case who, under difficult circumstances with a heavy caseload, has handled an extremely complex and involved matter in an able manner and I cannot avoid the conclusion that Mr. SANTANGELO's remarks criticizing this lawyer were unjust.

For your information, Mr. SANTANGELO was informed of these facts in my letter to him of February 3, 1960.

Sincerely,

GEORGE COCHRAN DOUB,
Assistant Attorney General.

Are the People So Dumb?

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BOSCH. Mr. Speaker, the following article by David Lawrence, which appears in the U.S. News & World Report of February 15, 1960, is respectfully called to the attention of my colleagues. It contains some very enlightening comments worthy of our serious consideration at this time and in the days ahead:

ARE THE PEOPLE SO DUMB?

(By David Lawrence)

Are the current speeches of some of the would-be presidential candidates an indication of how they size up the intelligence of the electorate?

Perhaps they are following the advice of the late Harry Hopkins of New Deal fame when he said: "The people are too damn dumb to understand."

Judging by the headlines, several of the candidates and their supporters in Congress are portraying America as helpless and without leadership.

Presumably we are already licked by the Soviet Union—in science, in interplanetary travel, in education, in rocketry, in missiles, and in general prestige throughout the world.

Presumably we must spend more billions for defense, more billions for schools and education, more billions for housing, and more billions for "social needs."

Presumably the people aren't concerned at all about inflation and do not want to hear mention of such things as balancing the Federal budget or paying off the national debt.

We read political speeches that talk of our poverty amidst plenty or of our lack of economic growth.

The cry is for something called positive leadership and for what are termed "bold and imaginative ideas." The call is for an end to budgetary considerations in making national or international policy.

Some of these illusions stem from the isolated strata in which the modern intellectual travels. He worships at the altar of theory and abstraction. To him, for example, a Communist who conspires to overthrow our Government is just a man with a political belief different from our own.

Other illusions cherished by some of the political candidates are that the American people are lazy-minded, that they read newspapers superficially—mostly headlines—and don't keep up with what's going on. Much of the political strategy seems to be based on the theory that the people are easily aroused to vote against an administration just because it doesn't spend money for pet projects envisaged by the spenders.

Then there are other candidates who insist that America is losing her leadership in the world and that this can best be remedied by giving someone in the opposite party a chance to lead the world. What they seem to have quickly forgotten is that cheering crowds, unprecedented in numbers, greeted the President on his recent trip to Europe, Asia, and Africa—everywhere Mr. Eisenhower was acclaimed as the champion of American freedom and democracy.

Yet we are told that American prestige is at a low ebb and that we are not winning friends throughout the world.

Lately the politicians have turned to another alleged weakness. They imply that the United States is about to be destroyed by enemy missiles—unless more and more billions are spent for defense. Or else it is asserted that, no matter what America does, it can't catch up with the Russians because they have a big lead.

The average man is expected to believe that his high wages, his comforts—his high standard of living—are a sign of softness, and that he must somehow deny himself all such things, pay higher taxes, and give the spenders a chance to spend more billions.

This isn't an alluring prospect for the voters, but some of the political liberals imply that even if the American does enjoy a species of contentment he now must be persuaded to give it up and accept a life of hardship and heavier taxation.

How will the voter size up the political candidates of 1960?

Is the average voter actually as much concerned as he is supposed to be with a photogenic smile or a new kind of haircut, or with the hand-shaking or baby-kissing propensities of the candidates?

What the voters basically want to find out is whether a candidate has integrity, and whether he has commonsense plus courage.

The mere avowal by a candidate that he wishes to be President may satisfy his own ego, but it doesn't necessarily mean he has the judgment and the ability to deal objectively and sensibly with the vital questions that will surely confront the next President of the United States.

A candidate's record is important, but it isn't always indicative of what he will do if given full responsibility to direct the destiny of the Nation.

A candidate is still a symbol of party government.

The American people, for the most part, judge a political party by its performance, and if it has been reasonably successful it is continued in power. If it has made a mess in Washington, the administration is ousted from power.

But, in the final analysis, the people have sense enough to decide whether they are being led into war or whether they are being led along the paths of peace and toward a steadily improving economic life. Most voters aren't as dumb as the politicians think.

The "Big Spender" Myth Exploded

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. LEVERING. Mr. Speaker, despite the fact that Congress in the last session cut the President's spending requests by some $2 billion, many partisans and propagandists seeking political gain have deliberately or in ignorance, misrepresented the facts concerning the expenditures of taxpayers' money by calling Members of Congress reckless spenders.

It appears that many of our people are unaware of the fact that Congress has nothing to do with the preparation of the budget, a function wholly within the executive department; that Congress has no authority to spend, but can only authorize expenditures; that only the President can spend or withhold funds authorized by the Congress.

Mr. Speaker, I voted to cut the President's budget in an effort to balance expenditures with income, believing that the Congress should authorize what is absolutely necessary for our Nation's protection and survival, but that we should not authorize or spend 1 red cent for waste or extravagance.

Mr. Speaker, under previous leave, I include the following tables from the last page of the CONGRESSIONAL RECORD of September 15, 1959. These figures compiled or verified by the Bureau of the Budget show cuts by Congress of the President's request for appropriation and new obligational authority known as back-door spending by a total of $2,580,410,093.

Bills providing appropriations and other new obligational authority, 86th Cong., 1st sess.

TABLE I. APPROPRIATION BILLS

Bill No.	Title	House					Senate					Amount agreed to by conferees	Increase or decrease compared to President's budget estimates to date	Date approved by President	Public Law No.

The Late Honorable David M. Hall

SPEECH
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. MOELLER. Mr. Speaker, I join with my colleagues in the House in paying tribute to the memory of the late Honorable DAVID MCKEE HALL whose recent untimely death deprived this House and our country of the services of a devoted and outstanding public servant. I felt a particularly close relationship to DAVID HALL because he and I came to Congress together as new Members at the beginning of the first session of the 86th Congress and were assigned together to the new Committee on Science and Astronautics. From that common bond I came to know him as a man of unusual attainments and great courage. In the work of our Committee he proved himself to be a keen student, an industrious and able worker, and the possessor of a sound analytic judgment which enabled him to cut to the heart of a matter and to emerge with a reasoned decision on any of the complex problems with which we were presented.

The fortitude he had shown throughout his life from the time he was stricken with the crippling ailment which eventually resulted in his passing from us showed clearly in his all too short career as a Member of this House. He was a man of indomitable courage and strong conviction. It took such a man to surmount his great physical handicap and to become the educated statesman and wonderful husband and father that he was. Those traits were the hallmark of his short tenure as the Representative of the 12th Congressional District of North Carolina. I had occasion to observe many times that even though DAVID HALL might stand alone in his convictions on a particular issue that fact did not deter him. Once having reached such a conviction on the basis of his moral and intellectual judgments, he was able to withstand the pressures exerted by other forces and to stand firm for what he believed to be the right. Although his voice might be the only one raised to voice a "nay" on some issue before us, that "nay" was clearly heard and carried with it the assurance that he had not been distracted from his duty as he saw it.

Withall, DAVE HALL was a warmly human and a lovable man. His keen sense of humor and his engaging personality endeared him to all of us who had the good fortune to work with him and to know him as a friend. His leavening presence on our committee will be sorely missed. His unique courage will not soon be equaled in our midst. His indomitable spirit will never find a replacement among us.

Mr. Speaker, I know that even more than we mourn DAVID HALL'S passing here, his lovely wife and daughters and his many friends at home in North Carolina will share the sweet sorrow of his memory. Mrs. Moeller and I extend our hearts and our prayers to them in the sure knowledge that the overpowering love of the Almighty Father of us all will bring them the solace they need and the courage to carry on in the unwavering pattern that he set for them.

The CED Report on Education

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. UDALL. Mr. Speaker, Ralph McGill, the forceful and erudite editor of the Atlanta Constitution, has observed that for the first time in the Nation's history, Federal aid to education has been endorsed by a national organization representing spokesmen of business and industry.

He referred, in a recent syndicated column, to the Committee for Economic Development, which has just published the results of its carefully documented study of educational needs entitled "We Can Have Better Schools." We would do well, Mr. Speaker, to study the recommendation of the CED.

Mr. McGill's comments follow:

For the first time in the Nation's history, we have a major endorsement of Federal aid to education by a national organization representing the top corporations of business and industry.

The CED (Committee for Economic Development) has published a carefully documented study of the Nation's educational needs, and recommendations, titled, "We Can Have Better Schools." The CED is composed of 180 men, most of them representing large corporations and universities.

Chief among their recommendations is Federal aid in low-income States and a drastic reform of the school district system. There are 45,000 local school districts, a majority of which are "much too small to provide good schools at all or to provid any kind of schools effectively." The report recommends reduction to 10,000 districts, none serving less than 2,000 pupils.

This report, which is historically significant in that corporate business formally reveals not merely its findings of the desperate educational plight of the Nation and the great waste of young talent in inadequate schools, but its grave concern. State boards especially should find it interesting.

The urgent recommendation that $600 million in Federal aid be spent in the low-income States certainly should interest both parents and educators.

Mississippi is at the bottom of all percentage findings in the low-income States. There are altogether 12 States which are well below national standards. Four are nonsouthern. The Deep South States of South Carolina, Mississippi, Alabama, and Georgia are included.

The report serves to spotlight the problem of the States where the Court decision against discrimination is at issue. Georgia presently is nearest to a moment of truth in this category.

It is possible to have almost any kind of education. It is up to the people in political power.

In Virginia one county, Prince Edward County, has abolished its public schools and set up private classes in churches and private buildings. It is at best a sort of "half-loaf" schooling for its white pupils, a mere 1,500. It cannot expect to be fully accredited. Nor is there any claim that its graduates will be able to enter first-rate engineering or professional schools. It is properly described as a half-loaf and this is what the parents there have chosen rather than accept a pupil placement law. This is a legal choice. The effect on this generation of children and on the community itself will not be possible to evaluate for years to come. How long the community can bear the financial strain is also something for the future. But this presently is the sort of education they offer their children.

In other States small school districts seek to maintain high schools for handfuls of pupils. They offer, too, a half-loaf opportunity. A legislative committee in Georgia, for example, recently reported, after months of study, that entrance work at the State's technical institute and the university was already "beyond" a dismaying number of graduates of inferior high schools. This is a story which fits other States as well.

CED's research reaffirms this fact. Maine, for example, has a problem of small, rural high schools which are offering a "half-loaf" to their children. So do the two Dakotas. But the greatest need is in the South.

Under the CED plan for low-income States, Federal aid would be granted on a basis of the State's average income per student so as to prevent a State from collecting Federal aid by permitting its own effort to support schools from dropping below its ability to pay. (The full report is available at $2, and the summary at 50 cents, through CED, 711 Fifth Avenue, New York 22).

We can give our children half- or full-loaf opportunity.

Letter to the New York Times

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include herewith a letter I have today written to the editor of the New York Times, commenting on an editorial which appeared in that paper today.

The letter follows, and is, I believe, self-explanatory:

FEBRUARY 8, 1960.

The EDITOR, THE NEW YORK TIMES,
New York, N.Y.

DEAR SIR: Relative to your editorial in this morning's Times, entitled "A Call for Greatness," I should like to make the following comments.

Nothing I say herein is intended to criticize Dr. Wriston, who has on other occasions rendered substantially worthwhile service to our country. Nevertheless, I cannot help but think what a great pity it is that after 8 years of President Eisenhower—with full access to all the intelligence data available—we now need a commission to determine our national goals.

If this truly be a call for greatness to a resolute people it does not speak well for what has happened during this administration.

Is it possible that we still do not know enough about discrimination in certain areas of our country so that we cannot cope with

the problem without the help of a new commission? Is it possible that after the many commissions already established and the volumes written on our failure in the educational field that this vital problem must be reexplored by another commission? Is it possible that the Committee of which Vice President NIXON is chairman is unable or unequipped to cope with the problem of the economic power of our Nation? It is a source of wonder to me what we have been doing these past 8 years during which time we have had more commissions than in any other period of our history. Is it possible at this stage of our development we still do not know what our goals are to accomplish a better and still greater America? Is it possible that your editorial indicates that we still do not have a sense of purpose and a sense of direction, or that we do not have enlightened and vigorous political leadership?

More importantly, if this Commission finds as it must that there is a great need in all the fields that you mention, is it possible to divorce the administration from its transcending marriage to the balanced budget? Frankly, I doubt that there is any need for this Commission at this time because if we begin from the inflexible premise that we must balance our books, we can never accomplish any of these goals, and certainly can never answer this call for greatness.

Sincerely yours,

A Review of the Downfall of the U.S. Dollar

EXTENSION OF REMARKS
OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. MOULDER. Mr. Speaker, Donald M. Johnson, of Jefferson City, Mo., mailed to me his statement reviewing the dollar values during the past 30 years. His statement is one of the most interesting and informative discussions on this subject I have ever read. For the benefit and information of all Members of Congress, I am having his words printed in the RECORD, as follows:

DOLLAR DOUBLETALK

As we become more and more conditioned to the use of controlled currency as a coinage for the Nation, we hear less about the old gold standard. The idea of a firm footing for money seems too old fashioned when our real concern is with its daily useful buying power. The index figures, as set up in Washington, retain a fixed relationship to the gold standard and it seems that we are prone to indulge in doubletalk for expedient reasons. Perhaps it is because we do not see that relationship readily, or it may be that the facts come to us in small bits and need consolidating. For the moment, lets use a gold base line for comparisons. What has really happend to our money?

A CHRONOLOGICAL REVIEW

The period of 1927–29 might be called the setting of the stage for the depression. Benefit of hindsight permits us to realize that the availability of money is perhaps more important than any system of designating its value. Unsound fiscal manipulations, and their subsequent readjustments, affect availability. However, quick change in dollar value can be used to make room for more money. This brings relief without cure.

The period of 1929–39, devoted to experimental adjustment of the value of the dollar, established some fiscal policies for control of manipulation. These were hidden gains, lost in the dramatics of dollar devaluation by 40 percent, which was the tool for dissolving the depression, to most of us. The introduction of the 1939–40 index figure simply provided a convenient yardstick for new economic planning.

The period of 1939–49, devoted to the adherence to the 1940 index and the policies of which it was a part, resulted in a further devaluation of the dollar by another 40 percent. While this necessitated the establishment of the 1949–50 index figure, a realization was also developed that this was no cure.

The period of 1949–59 was, therefore, devoted to a more considered control of economics. This resulted in a reduction in the rate of depreciation to 18 percent for this like period. We thus postponed the need for a new index figure, while retaining the same economic plan.

A BASELINE PICTURE OF IT ALL

The 1929 dollar became a 60-cent dollar.

The 1939 dollar became a 36-cent dollar.

The 1949 dollar became a 29-cent dollar.

The 1959 dollar could now become the "little buck" of 1969 at a value of only 24 cents if we can hold to the 18 percent rate of depreciation. If the old system of 40 percent depreciation had continued, we would now have a 22-cent dollar which we could expect to be worth 14 cents in 1969.

What does this mean mean to the tax dollar, the pension dollar, or to the salary dollar? It means exactly what you would expect. It now takes just about $4 to do what $1 did in 1929. This is the basic fact that lies behind increased benefits under OASI, demands for increased pay patterns and the failure of faith in savings accounts.

HOW ABOUT YOU AND ME?

If you have been working for the past 30 years, and have been fortunate enough to have increased your salary by 400 percent, you can break even in terms of buying power. If you have been working for the past 20 years, you've probably started at a higher salary and need only a 300 percent increase to break even. Those of you who have worked for only the past 10 years are beginning to start to think about this problem.

These statements apply to salary only. If you are to cover the expanding tax picture as well, there is need to expand your pay gains even more. We expect more from Government services today and we get it. Government service employees have received some increases in pay, but not in proportion to the above percentages. Job for job, the chances are that he is well underpaid for what he does.

Unfortunately, fiscal manipulations have again entered the picture. This time the Government plays the role, in having to meet public interest rates. About all that can be said is that those in charge do not understand the role of money, and the part it should play in our economic system. You and I, we represent a large part of the cost of the things we buy, for the cost of our labor is a big piece of any price. Another large part of this price structure is the cost of financing the operations involved. Risk handling and percentage costs run far higher than the cost of raw materials.

This opens up thought on credit and deficit-spending. Can a retired person, on a fixed income of 10 years ago, indulge in these credit capers? Can you, on a fixed salary, spend more than you make? Obviously credit has its place, and it can be presumed that deficit-spending is a close cousin. However, it remains evident that a day of reckoning must come, for the Nation as well as the individual.

WHERE DO WE STAND?

The simple idea that we can continue to lop off 40 percent of the dollar at some indefinite periodic rate, simply because there is bound to be something left, has already reached the point of diminishing return. More than that, it has robbed us of recognition for a job well done and destroyed the rewards of a sincere sustained effort. What incentive is left for improving our abilities to do a better job? Look at us through the eyes of our younger people. They listen to us, true, but what do they see? One suspects that a pattern of life devoted to not quite breaking even has little appeal.

For many, the big debt has become the symbol of a fist full of money.

For many, credit buying is the way to spend and use, with a hope that a really cheap, or worthless, dollar will provide a way out.

For many, the manipulation of large and small credit deals takes more time than they spend working.

Can we honestly say that they are wrong?

Today we have an average salary of $5,137 which is supposed to do the work of $1,488 in 1929. Some are fortunate to have evolved an automatic escalator clause, which substitutes for basic value, and makes a form of coinage out of paper currency, for them. Others operate on a percentage basis which keeps them in step. Where do the rest of us stand?

The two graphs following these remarks, statistically prove that we might as well face the fact of our 29 cent dollar and realize what it is doing to us.

WHAT COMES NEXT?

The spree of throwing away our birthright is almost over. There is no answer in endorsing more and more minority sanctions, which achieve magnitude disruptive to the economy. The pernicious anemia of the earned dollar is in sharp contrast with the quick deal dollar.

Governmental sanction of minority organizational affiliation for favoritism is throwing off the restraint of arbitration. Governmental sanction of foreign industrial and economic competition is destroying even domestic markets. Yet the majority of our employees continue to be confronted with a depreciated dollar which destroys our hope of improving our status in life.

The remarks of Mr. John Winant clarify the obligation of Government without suggesting governmental substitutes:

"In positive terms, the security of a people is the sum of the arrangements set up by business, by government and by society, through which the things we cherish are safeguarded against hazards we, as individuals, can not control."

If we are to continue to believe in the essential integrity and importance of the individual, we will need leadership capable of recognizing our plight. Is it true that, "gregariousness is the refuge of the mediocre"? Is the competent individual to be entrapped by the mundane status of the mass action?

Far from pretending to have pat answers to these questions, I content myself with crystallization of the challenge. I am satisfied that the answer does not lie in rewriting the Bill of Rights, nor in further disposing of our American heritage.

A part of the answer lies in presenting adequate information to the public, not in dribs and drabs, but in solid articles. The Bureau of Labor has the information used in this review, and much more. Yet one is forced to glean it bit by bit from news clippings of unrelated dates. Since no composite evaluation can accompany such dispersal, one draws one's own conclusions, or ignores the matter. What were the national average salaries for the years past? How can one rationalize a "middle income hous-

ing project" having rents of $150 to $300 per month with the present average of $5,137 per year? Are the complete facts so bad that they must not be released?

Let us make a start toward facing the full facts.

Jobs for Older Workers

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. DENT. Mr. Speaker, of late there has been an increased interest aroused in the matter of jobs for older workers.

There are some of us who feel that the solution must be a combination of both social security advances as well as job placement programs.

It should be interesting to note the fine work being done in my home State of Pennsylvania by the Advisory Board on Problems of Older Workers.

This work is being carried out under the direction of William L. Batt, Jr., secretary of labor, and Harold W. Williams, executive director of the board.

They are working in direct contact with the office of Gov. David L. Lawrence.

I herewith submit the report of this board, dated February 1, 1960:

MORE JOBS FOUND FOR OLDER WORKERS IN 1959

A record number of job applicants who were 45 years of age or over were placed in employment through the Pennsylvania State Employment Service in 1959. A total of 54,467 older workers found jobs. The previous high was 52,782 in 1957. The statistics on older worker placements are for the 4 years beginning with 1956, when older worker legislation was first passed under the Leader administration. The two principal pieces of legislation passed by the general assembly were the Fair Employment Practices Act (which was passed late in 1955 and which makes discrimination in employment on account of age illegal) and the act establishing the Advisory Board on Problems of Older Workers, which went into effect in 1956. The figures follow:

Year	Total placements of applicants 45 and over	Percentage of total placements 45 and over
1959	54,467	20.6
1958	47,826	[1] 21.8
1957	52,782	20.0
1956	47,657	17.1

[1] The relatively higher percentage of placements in 1958 is probably due to an unusually large number of older worker placements made in Philadelphia in connection with an experimental pilot project.

The December 1959 index of older worker placements dropped to 46, down 6 points from 52 in November. However, the December index was the highest in 4 years. The comparisons follow:

Month:	*Index*
December 1959	46
December 1958	44
December 1957	43
December 1956	34

The average monthly index for 1959 was 50.5, compared to 58.3 in 1958, 48.8 in 1957, and 40.8 in 1956. It is interesting to note that the annual index for older worker placements in 1959 was 70, as compared to an average of 50.5 for the 12 months of 1959. Since the index compares the percentage of job applicants 45 years of age or over who were placed with the percentage of applicants under 45 years of age who were placed, the difference between the annual index of 70 and the average monthly index of 50.5 indicates that older workers do relatively better on an annual basis than they do on a monthly basis. This indication is supported by other information reporting that it takes longer to place older job applicants; thus, older applicants are in the files longer; and relatively more are placed in jobs in a 12-month period than in a 1-month period.

Older job applicants should take some encouragement from these figures. What they mean is that the picture is not quite as bad as the monthly figures indicate. They also mean that the longer the older job applicant keeps plugging at the business of finding a job, the better off he will be. Discouragement is one of the greatest enemies of the job seeker. It is important to keep looking. It may be more difficult for some older workers to find jobs; but it is often not impossible.

NO COMPLAINTS WHEN AGE LIMITS LIFTED, SAYS FEDERAL EXPERT

In recent testimony, Mr. O. Glenn Stahl, Director of the Bureau of Programs and Standards of the U.S. Civil Service Commission, indicated that many Federal personnel executives had originally been concerned at the removal of maximum age limits for employment in the Federal Government. These concerns proved groundless, even in hazardous or trainee-type jobs. Here is what Mr. Stahl says in a letter to the Advisory Board on Problems of Older Workers:

"What has been the impact of the provision of Federal law which prevents the imposition of an actual age limit for initial employment in the competitive civil service? There had been some concern particularly because we had age limits before, that we would need to continue to have maximum age limits imposed on jobs which were of an especially hazardous or arduous nature or for trainee-type jobs where you make a rather heavy investment in the individual with the expectation that he serve a full career.

"The interesting thing is, after 3 years of operation under no maximum age limits at all, that we have had no significant complaints from the agencies, no evidence of interference with their operations, by not being able to employ maximum age limits."

Public and private agencies alike which maintain that they must institute maximum age limits when hiring people because their jobs are unusually hazardous or arduous or because they only promote from within, should read Mr. Stahl's statement over several times. They are perpetrating a great injustice when they set a maximum age limit, and for no good reason at all.

Along these lines, Nation's Business for October 1959 reports that there is a marked shift away from hiring bias against men over age 40 or 45 in the executive manpower field. Top business is recognizing that a rigid policy based on chronological age alone often bars the most desirable person for the job.

FEBRUARY CALENDAR

February 1: Mrs. Marion E. Warner, regional director, will speak to the Richland Civic Club, Gibsonia, 1 p.m.

February 2: Harold W. Williams, executive director, will speak to the Soroptimist Club, Wilkes-Barre, Hotel Sterling, 6:30 p.m.

February 11: John H. Berkley, regional director, will speak to the Soroptimist Club, York, Yorktowne Hotel, 6:30 p.m.

February 18: Mrs. Warner will speak to the pensioners of local No. 1256, United Steelworkers of America, Duquesne, 2 p.m.

February 19: The Mayor's Advisory Committee on Older Workers will sponsor a group counseling session for older workers at the Bethlehem office, Bureau of Employment Security, 1 p.m.

February 23: Mr. Berkley will speak to the Soroptimist Club, Danville, Pine Barn Inn, 6:30 p.m.

February 24: The Berks County Council of Social Agencies will sponsor an employment panel for older workers at the Reading YMCA, 11 a.m.

February 26: The Mayor's Advisory Committee on Older Workers will sponsor an employment panel for older workers at the Bethlehem office, Bureau of Employment Security, 1 p.m.

February 29: Mrs. Warner will speak to the Retired Businessmen's Organization, Irene Kaufmann Settlement, Pittsburgh, 2 p.m.

LEGISLATIVE PROPOSALS ANALYZED

It may be helpful for those who are concerned with problems of older workers to understand the various types of legislation which affect older workers. The simplest form of legislation of this type is antidiscrimination legislation—making it unlawful to discriminate in employment on account of age. Pennsylvania has such a law. So do Massachusetts, New York, Connecticut, Oregon, Wisconsin, and Rhode Island. A bill has been introduced in the U.S. Senate (S. 1073) which would make employment discrimination on account of age a Federal offense.

Another type of legislative proposal deals with the creation of administrative agencies. Pennsylvania is one of the few States which has an advisory board on problems of older workers (some others have special divisions within the State employment service) and there are various State councils and commissions. A special Senate subcommittee (the McNamara Subcommittee on Problems of the Aged and Aging) is considering whether to recommend legislation establishing a Federal Bureau for Aging.

The appropriation of public funds to support direct services to older workers is another form of legislative action important to older workers. Most of this money is appropriated by the Congress and spent through the public employment services. However, at least two States, New York and California, have appropriated State funds to hire special employment counselors for jobless persons over 45 years of age. New York has had very good results with this program. The California experience is still too new for evaluation. A modest proposal for $40,000 a biennium for similar counselors in Pennsylvania was not reported out of committee in the State senate.

Some people have proposed that in addition to punishing employers who discriminate against older workers, we should reward those who hire older workers by giving them tax concessions. Senator HUBERT HUMPHREY has introduced a bill in the U.S. Senate which would allow an employer to take a full deduction in his income tax for the extra cost in fringe benefits incurred in hiring older workers. Many people interested in promoting employment for older workers object to legislation which is based on the belief that it is inherently more costly to hire an older worker.

There is another broad field of legislation dealing with retirement. Here one finds proposals for special tax credits for retired persons, changes in the earnings limitation to qualify for social security payments, and changes in the retirement age. There have also been various proposals to make sure that private pension plans do not make it more

difficult for older workers to get jobs. Among these are Governor Lawrence's proposal to require all private pension plans to tie their benefits into the public social security system, thereby making all plans portable and preserving the worker's credits as he moves from job to job. Other proposals include making it mandatory that private pension plans give a vested interest to the employee that he can take with him when he leaves or is laid off; and the issuance of a Government bond that matures when an individual dies or reaches age 65.

There will be considerable discussion of legislation affecting older persons in 1960 as Pennsylvania prepares for the 1961 White House Conference on Aging. Those who are interested in problems of the older worker should consider what legislation, if any, is pertinent at this time.

LIFE EXPECTANCY ESTIMATES FOR 1958

Here are the life expectancy estimates for 1958, recently released by the National Office of Vital Statistics of the Public Health Service:

Age:	*Life expectancy*
Birth	69.5
1	70.4
10	61.8
20	52.2
30	42.8
40	33.5
50	24.9
60	17.3
70	11.2
80	6.3

New York Times, January 12: "Prof. Ronald Turnbridge, Britain's leading expert on old-age research, said in a report made public today (January 9) that all political leaders should be forcibly retired in their early fifties."

Increase in Water Problem

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. LEVERING. Mr. Speaker, one of the great names in land and water conservation circles in the United States is Bryce C. Browning. He has served as secretary and treasurer of the Muskingum Watershed Conservancy District since its organization on June 3, 1933. He has been honored on numerous occasions by those who recognize that if we are to meet our obligations at home and abroad in the challenging days ahead, we must protect and preserve our natural resources from whence our wealth flows.

Under leave to extend my remarks in the RECORD, I include an article by Mr. Browning which appears in the February edition of the Ohio Farm Bureau News. I commend to my colleagues the cogent remarks of this outstanding authority:

RISE IN POPULATION WILL INCREASE WATER PROBLEM

(By Bryce C. Browning)

All authorities seem agreed that water is the most critical resource problem confronting America. They also agree that economic solutions may be impossible except as prompt action is taken. While Ohio's total annual rainfall, together with Lake Erie and the Ohio River, seems to place her in an enviable water position, serious shortages already have developed. With increases in population and per capita water use, additional and more critical ones must result. It is believed that one of the greatest of these needs will be for irrigation.

POPULATION INCREASE

According to present trends, Ohio's population will double within the next 40 years. Present records indicate that water use increases at double the population rate. On the basis of present knowledge such needs cannot be met, at prices the public can afford to pay, except as prompt action is taken. It will require major improvements in the efficiency of water use, construction of great distribution systems, and, in particular, the complete utilization of our wasted rainfall.

The saying, "We never miss the water 'til the well goes dry," is an ancient one. Its significance is far greater today. In ancient times, when the water supply went dry, it was possible to move to new lands with new water resources. But we have no new lands and the competition for the remaining ones is increasing at a tremendous rate. Those which are necessary for the storage and transportation of essential water supplies are rapidly being taken for costly developments of various kinds. Except as prompt action is taken, their values will become excessively high.

WATER IS PROBLEM

Throughout our country progressive States have recognized this water problem and are already in process of spending literally billions of dollars to provide solutions. States which fail to promptly follow their example may soon find themselves at a tremendous economic disadvantage. Ohio is fortunate in having had farsighted legislatures. Through authority previously granted, the Ohio division of water has already made good progress in determining Ohio's future water needs and resources. At the recent session additional bills were passed which should go far in providing a solution. I have been asked to offer comments concerning two of them. Because of necessary space limits they must be quite brief.

The first of these bills, S.B. No. 237, establishes a seven-member State water commission. The State directors of health, natural resources, and public works are ex officio members, with the four additional ones to be appointed by the Governor. These four are to represent public water supply, commerce and industry, agriculture, and recreation. The bill's primary purpose is the coordination of water programs, the development of water supply, flood control and flood zoning programs for all areas of the State, and to obtain the most beneficial use of our water resources.

FIRST IN NATION

In the light of existing information it seems probable that Ohio's future prosperity may be largely dependent upon the Commission's success in attaining these ends. As interested citizens, it is the responsibility of each of us to encourage Governor DiSalle to use great care in selecting the members of this commission, to insist that they fully recognize their responsibilities and, with this accomplished, to unite in support of their proposals.

The second bill, H.B. No. 673, amends the Ohio Conservancy Act. Passed in 1914, the Conservancy Act was the first such legislation in the United States. Ohio's greatest flood had occurred just a year earlier and its purpose was to permit citizens to organize on a watershed basis for the solving of their water problems. While its basic objective was flood control, the act also made specific reference to water conservation, irrigation and reclamation. It was considered a model at the time and has since been copied by most States and certain other countries. But it has had only slight change during the past 45 years.

The purpose of H.B. 673 is to modernize the Conservancy Act so as to better serve modern needs. It provides a more practical means of financing planning programs and for their coordination at State level. A primary change is one which encourages formation of small watershed districts. As a result of the passage by Congress of Public Law 566, commonly known as the Small Watershed Act, there has been a steadily increasing interest in such programs. Public Law 566 offers a means whereby the residents of small watersheds may solve their flood control problems, with the Federal Government assuming a major share of the cost. Where conditions are favorable, and such need exists, it also offers an opportunity to solve water supply problems at substantial savings to the affected citizens. However, there must be an authorized public agency to sponsor such projects and to assume legal responsibility for them. Under existing Ohio law a conservancy district seems best qualified for such a purpose.

JUDGE WILL HANDLE

The Conservancy Act, as originally written, provided for the creation and administration of sub-districts within the boundaries of larger ones. However, it required action by the full court on all matters affecting them. As amended, the majority of such matters may be handled by the Judge of the county directly affected and at substantial savings in cost.

Another important amendment concerns the so-called Official Plan of a District. Under the provisions of the original act the board of directors of a Conservancy District must present a complete plan for the accomplishment of the district's purposes. Because of changing needs and conditions this is not always practical. As amended, partial plans may be presented and additional ones added as necessity requires.

MUST DO IT NOW

If economically practical solutions to our water problems are to be found action must not be delayed. The two laws referred to will provide improved methods. But results will still be dependent upon an aroused public interest. We cannot afford to wait.

Pearl Harbor Attack Veterans Post 1 Support Federal Aid to Education Legislation Before Congress

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. BOLAND. Mr. Speaker, a group of World War II veterans, who were serving in the Army and Navy on the Island of Oahu, Hawaii, on the quiet but fateful Sunday morning of December 7, 1941, when the Japanese made a surprise air attack, have organized Post 1 of the Pearl Harbor Attack Veterans, Inc., in the Second Congressional District which I represent.

The avowed purpose of organizing the Pearl Harbor attack veterans post several years ago was so that these veterans of the opening day of World War II can preserve the memory of their buddies who died during the attack and to recall the horrible incidents that occurred as a result of the bombings at Honolulu,

Hickam Field, Schofield Barracks and Pearl Harbor.

Mr. Speaker, these Pearl Harbor veterans are also concerned about the United States winding up second best to Russia because of our education system. They so informed me in a letter today and I am happy to receive their views and to make them known to my colleagues in the House. I include this letter and resolution of the Pearl Harbor Attack Veterans with my remarks:

PEARL HARBOR ATTACK VETERANS,
February 6, 1960.

Representative EDWARD P. BOLAND,
U.S. House of Representatives,
Washington, D.C.

REPRESENTATIVE BOLAND: The Pearl Harbor Attack Veterans at their 18th reunion at Springfield, Mass., on Sunday, December 6, 1959, passed the following resolution:

"*Resolved*, That the Pearl Harbor Attack Veterans at their 18th reunion at Springfield, Mass., on Sunday, December 6, 1959, go on record as favoring a large increase in Federal aid to education including Federal grants for both school construction and teacher salary aid; and be it further

"*Resolved*, That this organization go on record as favoring passage of the amended Murray-Metcalf bill (H.R. 22) authorizing financing of education with appropriations to States of $25 annually for 4 years for each person aged 5 to 17."

We survivors of the worst military disaster ever inflicted on the United States are fearful of the consequences of our country winding up second best to Russia. The primary reason for our lagging behind Russia, we believe, is the poor support given to education by our Federal Government.

We urge you to support the $1,834 million public elementary bill containing funds for teachers' salaries and building construction passed by the U.S. Senate last Thursday night.

EDWARD F. BORUCKI,
Past Commander.

Mr. Speaker, the Pearl Harbor veteran who signed the letter, past Commander Edward F. Borucki, turned over the gavel of the post on Sunday, January 31, to the new commander, Leroy V. Lancaster.

Mr. Speaker, I further include in the Appendix with my remarks, a news story from the Springfield Daily News of February 1, concerning the new officers of the Pearl Harbor Attack Veterans, Post 1:

The men from this area who were at Pearl Harbor on the day of infamy, December 7, 1941, and who have formed Post 1, of the Pearl Harbor Attack Veterans, Inc., yesterday afternoon installed officers at the VFW home, Chicopee. The new commander is a former Navy aviation chief machinist mate with more than 23 years' service. He was stationed at Kaneohe Bay Naval Air Station on the island of Oahu, Hawaii, when the Japanese raided the base. He later participated in the Coral Sea and Guadalcanal battle and was awarded the Yangtze Patrol and Asiatic-Pacific Medals.

Retiring commander of the organization is Southampton School Committeeman Edward F. Borucki, a member of the Chicopee high school faculty and a former Navy chief petty officer.

Other officers seated were: Vice Commander, Tony J. Gregory, of West Springfield; adjutant, Joseph G. Gallant, Springfield; finance officer, Andrew F. Fitzhugh, Longmeadow; Charles Svensson, Springfield.

In addition, historian, Arthur H. Levesque, Springfield; sergeant at arms, Harry L. Chandler of Holyoke; executive committee members; Charles J. Lockhart of East Longmeadow, Victor Kamont, Jr., of South Hadley, and Mr. Borucki.

Frank E. Hayes of Northampton, William J. Lessard, Jr., of Roslindale, and Mr. Curylo are holdover executive committee members.

Six Catholic Bishops Plead for Dominicans in Prison

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. PORTER. Mr. Speaker, under previous leave, I am including a story from the New York Times for February 3, 1960, by Will Lissner telling of the protest made by the leading Catholic authorities in the Dominican Republic against the recent outrages of Dictator Trujillo against Dominican citizens:

The six Roman Catholic bishops of the Dominican Republic have intervened with Generalissimo Rafael Leonidas Trujillo, head of the country's regime, on behalf of the thousands of Dominican citizens imprisoned as revolutionary plotters.

This was disclosed in a joint pastoral letter the bishops had read last Sunday in all the Roman Catholic churches of the Republic. A copy of the letter was smuggled out of the country and brought to New York yesterday.

In their pastoral, the Bishops declared their solidarity with the many families bereaved by the arrests of their loved ones. They declared that Catholic Christianity must defend the rights of individuals, which, they said, came before the rights of any state.

Signers of the pastoral were Archbishop Ricardo, primate, who bears the historic title, Primate of the Americas; the Most Reverend Octavio A. Beras, coadjutor archbishop of Santo Domingo; and Bishops Francisco Panal of La Vega Real, Hugo E. Polanco of Santiago de los Caballeros, Juan Delix Pepen of La Altagarcia and Thomas E. Reilly of San Juan de la Maguana.

INDIVIDUAL RIGHTS DEFINED

An extensive section of the pastoral was devoted to asserting the rights of the individual derived from natural law, including the democratic rights of freedom of conscience, of the press, and of assembly. These rights do not exist in the Dominican Republic under the Trujillo regime.

To suppress these rights, the bishops warned, is a grave offense against God.

The pastoral says that before finishing the letter to the faithful, the bishops worked out a play for mutual understanding so that excesses might be avoided. They sent this, they said, to the highest authority in the land, meaning General Trujillo.

General Trujillo's reply was to suppress news of the issuance of the pastoral letter. The bishops said in the letter that they issued the pastoral so that the plan might be carried out as quickly as possible.

The outcome was not indicated, although the letter to General Trujillo was sent before last January 25, when the bishops dated the pastoral. That the bishops did not anticipate that their representation would be accepted at once was indicated in the pastoral's exhortation to the faithful to pray for the successful outcome of the representations.

The move indicated that the Roman Catholic Church was at the point of breaking with the Trujillo regime. Previously the church had kept aloof, since only in recent years had Generalissimo Trujillo returned to the practice of his faith.

FEW CLERGY RESPONDED

In 1958 the regime introduced the practice of making a public event of baptisms in church, with a member of the Trujillo family or of the Government acting as honorary sponsor of the baptized child.

Only a few clergy responded to the regime's overtures for religious support. As a whole the clergy, like most of the citizens, kept aloof from politics.

The pastoral served to confirm reports received by Dominican revolutionary organizations in New York of a serious uprising in the republic recently. As a result of the rising, thousands of Dominicans in business and the professions, including at least one priest and at least two seminarians, have been reported arrested.

The Government admitted making a small number of arrests, denied others, and said the cases against others had not made clear whether they were guilty of conspiracy. The pastoral letter, however, indicates that the fate of the thousands arrested is not known and that it is feared that many will die from torture.

Most Dominicans are at least nominally Roman Catholics. Church and state are separated, but the republic has a concordat with the Holy See guaranteeing freedom of worship. Several Protestant denominations maintain churches and missions and have thousands of members.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

Statement by Gov. John Patterson, of Alabama, on Civil Rights Legislation

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement by Gov. John Patterson, of Alabama, before the Rules and Administration Committee of the U.S. Senate, here in Washington, D.C., February 2, 1960.

I just wish all of the people in the Nation could know Gov. John Patterson, who is such a young man, but who has had so much experience and who is making such a fight to keep our way of life in our beloved Alabama and our Southland. Before the great people of Alabama elected John Patterson as Governor of the State, he was attorney general of the State. This great honor does not come to many men in this Nation, but he, John Patterson, is certainly doing his dead level best and he may make some mistakes, but it will be of the head, and not the heart. Personally, I have worked with him as hard as I could day and night, ever since the day the people of Alabama elected him Governor of our great State.

John Patterson is a human dynamo; he has a brilliant brain, an understanding heart and is doing everything in every way for the development of our State. We have had many great Governors, and I have worked with them all down through the years, but we have never had one that has given us more cooperation in the development of our great undeveloped State than John Patterson. He doesn't put it off for a lot of long conferences; he gives you a "yes" or "no" right now; and every one of the propositions I have put up to this great man have been accepted and we are working to carry them through. Right at the moment we are working on a tremendous plant that will manufacture all sorts of goods; and not only John Patterson, but his finance director, Charles Meriwether, his brother, Maurice Patterson, who is so much like John, Sam Engelhardt, State highway director, Bill Younger, director of conservation, and every one of them are working and cooperating with the entire Alabama delegation.

Later, after my friend, Gov. John Patterson, had made his speech before the Rules and Administration Committee in the Senate, my wife and I gave a luncheon in the Speaker's dining room on the House side. We had about 54 people, all that this room would hold; but they were such famous folks and such wonderful people, who had done so much good. We had Democrats and Republicans; and Senator HILL and Senator SPARKMAN both made wonderful talks, as well as each one of the Congressmen from every district in the State. We also had Dr. Wernher von Braun from the Redstone Arsenal and his Chief, Gen. Dan R. Ostrander; and I wish everybody could have been there to have heard some of the things, not only the Alabama delegation had to say about our State and our Nation and its development, but I wish you could have heard Dr. Von Braun and his Chief, General Ostrander; but best of all was the great talk that was made by our own Gov. John Patterson.

We didn't have the newspapermen there; there just wasn't room for them, but it's a pity we didn't, because I wish all of the people, especially in Alabama, could have heard the great talks that were made. And many other men made talks. The Honorable Homer Gruenther, Special Assistant at the White House, made a talk. Congressman THOR TOLLEFSON made a wonderful talk. He is a Republican from the State of Washington. He and his wife attended. Then we had Congressman THOMAS JOHNSON of Maryland, who is on my committee, and he, too, made a talk.

We had wonderful Mrs. Nathan Twining, and we had her make a little talk. General Twining was coming, but he had to go before a committee; but we have had him so many times in Alabama; and some day, if he should ever retire—and I hope he will stay here a long, long time—we hope to get him to retire in the First District of Alabama—the same as the great Gen. "Weary" Wilson of the Army Engineers is doing, who has helped us so much.

Well, it was a great day, and my only regret is that all of our people could not have enjoyed these wonderful, wonderful talks. Another thing, too, that will gladden the hearts of all of our people is that they have given us in our beloved State of Alabama $100 million to keep on working on the development of the great work we are doing at the Redstone Arsenal at Huntsville, Ala., the home of JOHN SPARKMAN and Congressman BOB JONES.

Well, I wish we could have had Gen. Dan Callahan, who has charge of our beautiful Brookley at Mobile, Ala., where the Government has invested a billion dollars and where the payrolls and the purchases made for this great installation amount to over $105 million a year.

Well, we thrilled and thrilled with all of the great men and wonderful women that attended this luncheon that was given by Ocllo and me.

Last but not least, we had our own Senator and Mrs. Roland Cooper, of Camden, Ala. Senator Cooper made a great speech for the development of the Alabama River and all of our rivers, where we have more navigable miles of streams than any State in the Union; and today we are having a meeting at our regular congressional luncheon that we have every Thursday in the House Dining Room, to go over the development, especially of the Millers Ferry project, that Senator Roland Cooper talked so wonderfully about. I think, of course, that the Alabama River, as well as the Coosa-Alabama, as well as the Warrior-Tombigbee and all of these rivers, should have been developed a hundred years ago, and they will be, because it is right, and right is might, and we will win in the end.

The statement follows:

STATEMENT OF GOV. JOHN PATTERSON OF ALABAMA, BEFORE THE RULES AND ADMINISTRATION COMMITTEE OF THE U.S. SENATE, WASHINGTON, D.C., FEBRUARY 2, 1960

Mr. Chairman and members of the Rules and Administration Committee of the Senate, my name is John Patterson and I am the Governor of the State of Alabama. I am presently serving a 4-year term which began January 19, 1959. Prior to that date I served as attorney general of Alabama from January 18, 1955, to January 19, 1959. I wish to thank you for the opportunity that you have given me to testify before you on this occasion.

I wish to voice my strong opposition to bills S. 2535, S. 2684, S. 2719, S. 2722, S. 2783 and S. 2814 now pending before your committee. These bills are far reaching in nature and seek to make radical changes in our basic laws. If these bills are enacted into law the implementation of such laws will lead to chaos and bitterness, and a further deterioration of the relations between the States and Federal Government. If these bills are enacted into law they could well lead to a breakdown of the election machinery in many States. I feel that I know the sentiment of the people of Alabama, and I know that the overwhelming majority of the citizens of my State are opposed to the passage of these bills. As Governor of the State, I feel it my duty to tell you the feeling of our people. The enactment of these bills will lead to grave consequences and these bills will not succeed in doing that which the authors of the bills intend.

S. 2535 seeks to establish an agency of Congress authorized to conduct elections and register voters in certain areas under certain conditions. This bill seeks to establish a Congressional Elections Commission for this purpose. Bills S. 2684, S. 2719, S. 2783 and S. 2814 are similar and provide that where a person's application to register to vote has been denied and such person believes himself to be qualified under State law, and believes that he has been denied registration because of race, religion, color or national origin, he may file a petition with the President, requesting that a "Federal registrar" be appointed for the district in which such person lives.

The bills further provide that when the President receives not less than nine petitions within 1 year from persons in the

same registration district, he shall refer such petitions to the Civil Rights Commission for investigation. If the Civil Rights Commission determines that such persons are being denied the right to vote solely because of their race, religion, color or national origin, the Commission shall certify such information to the President.

The President then, under these bills, would appoint a "Federal Registrar" for the district involved and the registrar would accept registration applications from all persons in the district who claim that they are being denied the right to vote because of race, religion, color, or national origin. If the "Federal Registrar" determines that the applicants are qualified under the State law he shall certify the names to the State election officials, and such persons would have the right to vote in any election where Federal officials are being elected. The bills place a fine and penitentiary sentence on any State official who does not abide by the decisions made by the "Federal Registrar."

S. 2535 is similar to the aforementioned bills in that it attempts to do the same thing except it provides for a Registration of Voters Commission instead of "Federal Registrars."

S. 2722 requires State officials to preserve all registration and voting records of all elections for a period of 5 years after the making of the record.

I know that the members of the committee are familiar with these bills; however, I have attempted to summarize them briefly for the purpose of showing that we are dealing here with something new in the way of legislation, and to further show what a radical departure this procedure is from any registration procedure that any State has ever had before.

The Constitution of the United States does not give Congress power to prescribe the qualifications of electors in the States. The Constitution leaves the setting of the qualifications of voters to the States. In my opinion these aforementioned bills now under consideration are clearly unconstitutional. They are an attempt by the Federal Government to set the qualifications of electors in the States and to put Federal officials actually in charge of elections in the States. Such action is a usurption of the powers of the States by the Federal Government and is a clear violation of the soverign rights of every State in the Union.

The sponsors of these bills are inferring that our State officials are violating their oaths of office. I resent this inference. I can truthfully say of my own personal knowledge that the officials of my State are obeying the law, doing a good job, and living up to their oaths of office. This type of legislation is an insult to the officials of every State in the Union and obviously is politically inspired.

The right to vote is conferred and safeguarded by each State constitution. The laws of Alabama setting out the qualifications for electors are fair, just, reasonable, and impartial.

Adequate remedies exist to protect each and every individual in his right to register and vote. No one can come before this committee and truthfully tell you that the laws of my State protecting the right to vote are not adequate. If a person in Alabama files an application with the board of registrars of his county that he be placed on the list of qualified voters and the board of registrars denies his application, the applicant has the right of appeal, without giving security for costs, within 30 days after such denial, by filing a petition in the circuit court at law or court of like jurisdiction held for the county in which he seeks to register. The petitioner must allege that he is a citizen of the United States, over the age of 21 years, has the qualifications as to residence prescribed in section 178 of the constitution of Alabama and is entitled to register to vote under the provisions of the constitution. The issues are tried in the court in the same manner and under the same rules as other cases are tried, and by a jury if the petitioner demands it. The circuit solicitor defends the action for the State. If the petitioner wins his case in the lower court, the State has no appeal and the petitioner's name goes on the qualified voter list forthwith. If he loses his case in the lower court, he can appeal to the supreme court within 30 days from the date of the judgment. If the petitioner loses his appeal in the State supreme court, he can appeal to the United States Supreme Court. A judgment in favor of the petitioner under our law entitles him to be registered as of the date of filing his original application with the board of registrars. This procedure is similar in all States and it is a proceeding whereby a person's rights are tested by the judiciary, which is as it should be. I submit to you that this is a full and adequate remedy for each and every individual who claims that he has been denied the right to register as a voter because of race, religion, color or national origin, or for any other reasons which he might think unconstitutional.

I can truthfully say that I cannot recall a single instance where a Negro has filed an appeal under our State statutes claiming that he had been illegally denied the right to register. Furthermore, I can truthfully state and since January 18, 1955, when I took office as attorney general, not a single Negro has taken an appeal under our statutes providing for appeals where boards of registrars have turned down applications to register.

How can anyone come in here and truthfully say to you that our laws are inadequate when none of the complaining Negroes have taken advantage of our statutes. How can anyone say that the State of Alabama has denied citizens the right to vote when they have not even tried to use the remedies which the State gives them to protect their rights. The mode by which they may obtain justice is clearly marked out by the State law. It is so plain and simple that any citizen may readily avail himself of it. Yet the few complaining persons have not done so. Why?

I feel that the real reason why the agitators, who are constantly bringing up this issue, have not resorted to our courts for relief, if they are entitled to such relief, is that the Federal courts have consistently held that class actions will not lie in cases testing the qualifications of persons to vote. The courts have consistently held that each individual case and each individual's qualifications to vote must rest upon the facts in each individual case and that, of course, is as it should be. The proponents of this type of legislation under consideration by this committee are not content to seek individual redress through the courts. That's too slow for them. What they seek is a procedure which circumvents the courts and sets up an administrative procedure whereby Negroes can be herded together and marched in battalion formation to the polling places under the watchful eyes of Federal registrars and Federal marshals to register and vote whether or not they can read and write, and whether or not they are qualified otherwise under State laws. The proponents of this legislation are not interested in a judicial determination of an individual's rights, but only in mass registration before the next election. We have not had anything in the South similar to Federal registrars as outlined in these bills since Federal troops occupied the South during reconstruction days.

I submit to you that the statutory procedures for testing a person's right to vote under our State law are full, adequate, and reasonable. This is the proper and orderly way for a person to have determined his right to vote if he feels that it has been illegally denied. Certainly, this committee, and this Congress, should require these complaining people to at least try to seek relief under the existing laws, which heretofore they have not done, before this committee or this Congress should resort to such a radical procedure as sending Federal registrars into the South to usurp the powers of our State officials and to usurp the powers of our courts. Make these complainants go to the courts for their relief. They have not done so and I submit to you if you make them, their rights will be promptly and adequately determined.

S. 2314, S. 2783, S. 2719, and S. 2684 provide for investigations to be made by the Civil Rights Commission in cases where individuals claim they have been denied the right to vote because of race, religion, color, or national origin. I wish to voice my strong objections again to the actions of the Civil Rights Commission, and I urge you not to extend the authority of that body. The recent actions of the Civil Rights Commission damaged race relations in the South and further injured the already strained relations between the States and Federal Government. The Commission failed to do anything constructive, but, on the contrary, further widened the breach existing between the races. It harassed and intimidated our State and local officials. Its actions have made it difficult for us to find responsible citizens who are willing to serve as members of boards of registrars.

The Commission attempted to sit in judgment over the manner in which our officials conducted their offices. It interfered with the operation of our courts. The Commission attempted to arrogate unto itself powers which it did not, and could not constitutionally possess. It claimed to be "a roving grand jury" with the powers of a common law grand jury, a position legally untenable. The Commission attempted to go on "fishing expeditions" in the records of judicial officers. It subpenaed our State officials to hearings at distant places from their homes and put them on the witness stand under spotlights and before batteries of nationwide television cameras. No room or seats were provided for counsel of the public officials and the Commission would not allow attorneys for the officials to make objections. The State officials were in effect placed on trial by the Commission and publicly harassed and intimidated. The Commission attempted to go far beyond its factfinding powers, and hearings were conducted in a circus-like arena and no semblance of due process was accorded our State officials.

It is inconceivable that persons trained in the law would be a party to conducting such hearings as were conducted by the Civil Rights Commission. The Commission accused our public officials of violating the law, but refused to divulge the names of their accusers or to advise them of the nature of the charges against them. The Commission refused to permit the State officials' counsel to properly represent them and refused to allow them to cross-examine the witnesses who appeared against them. In fact, the actions of the Civil Rights Commission were so reprehensible that it was enjoined from conducting any further hearings by the Federal court in Shreveport, La., until the constitutionality of their procedures could be tested by higher courts. The Commission came into the South ostensibly to seek facts but in reality it was seeking publicity and notoriety.

I take issue with the report filed before Congress by the Civil Rights Commission. The information in that report is biased and prejudiced and is not based upon proper investigation. A large portion of the re-

port of the Civil Rights Commission is in the form of editorials by the Commission's staff writers. The actions of the Civil Rights Commission in Alabama created ill will and hostility between the people of my State and the Federal Government. The Commission accomplished nothing but its actions seriously injured race relations in the South. I ask you not to favorably consider any more legislation which would enlarge the powers of the Civil Rights Commission. Such action would not be in the best interest of our Nation.

No public official cares to serve in public office when he is subjected to harassment and intimidation by agents of the Civil Rights Commission, or any agency for that matter. No person likes to accept an appointment as a member of a board of registrars when he knows that he will be immediately visited by Federal investigators and run the risk of immediate suit in Federal courts seeking injunctive relief and damages. Recently President Eisenhower stated that he was having difficulty finding persons willing to accept appointment to fill the vacancy on the Civil Rights Commission, for, as he said, people do not like to be harassed.

The Attorney General of the United States and the Civil Rights Commission have apparently declared open war upon all members of State boards of registrars and they are making it difficult for us to find people who are willing to serve in that capacity. In most States the members of boards of registrars do not receive much pay and they agree to serve usually as a public service. They cannot afford lawyers to defend them, nor can they afford to attend court or hearings in distant places which take them away from their work and families. No member of a board of registrars likes to have a Federal agent peering over his shoulder, passing upon everything that he does and threatening to take him to court with every act. If the actions of the Federal Government in this regard continue and if "Federal registrars" are sent into the South along with the Civil Rights Commission investigators to carry out the provisions of the aforementioned bills, it could well lead to a breakdown of all our election machinery. It will certainly lead to bitterness and misunderstanding and hostility between the State and Federal officials. The people will suffer the consequences. I can tell you that if it would be practically impossible to get people to serve as election officials if they are dictated to, threatened, and harassed by "Federal registrars" and Federal agents. It is plain to see that the so-called Federal registrar plan will result in utter failure and bring confusion and chaos to our electoral system.

Due to the action of the Civil Rights Commission, we have been unable to get responsible people to accept positions on the boards of registrars in Macon and Dallas Counties, Ala. I have appointed numerous persons to fill these positions and they have declined, stating that they do not feel that they should have to subject themselves to public intimidation and harassment by Federal agents. The responsibility for the breakdown of our registration machinery in these counties rests squarely at the doorstep of the Federal Government. I feel confident that we will be able to find someone to serve on these boards soon, if we can have some assurance from the Federal Government that we will be able to carry out our duties within the framework of our laws without harassment and intimidation.

In conclusion, I want to again voice my strong opposition to all the aforementioned bills. They are clearly unconstitutional. They invade an area which has always been left exclusively to the States. The States have adequate remedies for all persons to quickly and promptly test their right to vote.

S. 2722 requiring the preservation of voting and registration records for a period of 5 years is absolutely unnecessary and an invasion of the rights of the States. Alabama law, which is similar to that in all States, provides that when an applicant is registered to vote by the board of registrars, his name is placed on the voters' list, and this list, along with his application, is filed with the probate judge of the county and becomes a permanent public record. Of course, after a person is registered, he should have no grounds for complaining. In cases where the application is denied by the board of registrars our laws provide that the board of registrars must keep on file the application form until the time expires for the applicant to appeal under our statutes. This procedure gives full and adequate protection to all citizens regardless of who they are, if they would just avail themselves of the remedies now available.

The sending of Federal registrars or a Registration of Voters Commission into the South, or into any State, would cause animosity and hostility among the people and would result in a breakdown of our election machinery. Such action would cause further widening of the breach between the races and would worsen Federal-State relations. The citizens of the States would look upon these Federal agents as "carpetbag registrars," and that is truly what they would be.

Any extension of the powers of the Civil Rights Commission would do nothing to help the situation and would cause a further deterioration in race and Federal-State relations. Federal registration of voters in addition to being unconstitutional and unwarranted, would not work, would lead to grave consequences, and I think would be analagous to the sending of Federal troops into Little Rock or the acts of Federal troops in marching Negroes to the polls during reconstruction days.

The views which I have expressed about the Civil Rights Commission are not mine alone but are shared by almost every citizen of my State. As further proof of the Commission's questionable conduct, one can refer to the actions in the Federal courts involving the Civil Rights Commission in Terrell County, Ga.; Montgomery, Ala.; and Shreveport, La., where the Federal courts ruled against the Civil Rights Commission in every case.

In recent days the Attorney General of the United States has expressed himself as favoring a plan whereby the Federal courts would appoint so-called referees to register voters. This proposal is just as shocking as the Federal registrars proposal and just as unconstitutional and unworkable. I am equally opposed to the plan of the Attorney General. The Federal courts have already expressed their opposition to being used as boards of registrars. See *Darby* v. *Daniels*, decided November 6, 1958, in the U.S. District Court for the Southern District of Mississippi.

I would like to point out to the committee that the number of registered Negro voters in Alabama is steadily increasing. This is not due to action by the Civil Rights Commission or the Federal Government, but it is in spite of them. At present there are more than 70,000 registered Negro voters in Alabama. The number of registered Negro voters in Alabama has more than doubled since 1956. The number has increased more than 10 percent since the primary election of 1958. The Negro is making tremendous progress in Alabama. I ask you not to enact laws which would retard his progress. These aforementioned bills now pending before your committee would retard the Negroes' progress. Matters concerning race relations will never be solved by legislation, court decrees, injunctions, Federal troops and Federal registrars. It can only be solved through local people working together in a spirit of cooperation without outside interference and agitation.

We have on our books the necessary laws to protect every person's right to vote. They are State laws and State remedies and that is the way it should be. I ask you to leave it that way, and require these persons who complain that their rights have been violated to seek their redress in the proper and legal manner in the courts of our States. They have not done this in the past. They cannot tell you truthfully that our remedies are not full and adequate. So, before you resort to "carpetbag registrars" and Federal investigators, before you do harm to our people, before you do violence to our Federal system, before you resort to the tactics of grinding us under the heel of the Federal boot, and before you wreck our election machinery, make them at least try to test their rights in our State courts.

Address Broadcast by Hon. Alexander Wiley Over Station WIND, Chicago

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 9, 1960

Mr. WILEY. Mr. President, today the Nation is faced with complex challenges and divided opinions on how to meet the two major issues confronting us:

First, world peace; and, second, of promoting an ever stronger economy to provide better living for the people of this country.

In the face of conflicting viewpoints, both on the economic as well as the peace situation, the Congress has the particularly difficult task and grave responsibility of finding a correct course in these troubled times to provide for progress and promote security.

Recently I was privileged to comment over radio station WIND, Chicago, on the factors involved in these problems, as well as to humbly suggest some recommendations which I felt would make a contribution to providing better programs in these fields.

I ask unanimous consent to have the text of this address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS BY HON. ALEXANDER WILEY OVER RADIO STATION WIND, CHICAGO, ILL., JANUARY 31, 1960

Friends, today I would like to discuss with you two major challenges confronting our country: First, maintaining the peace; and, second, assuring progress in our domestic economy.

Although normally less closely related, world conditions now have actually created a real interdependence between these two challenges.

Why?

First, the strength of the economy may well determine our ability (1) to block the multipronged expansionist efforts by the

world conspiracy of communism, and (2) to promote peace.

INTERNATIONAL "CLIMATE" EFFECTS ON DOMESTIC ECONOMY

Conversely, the temperature of the cold war, now undergoing a temporary thaw, may well determine, to a substantial degree:

The cost of national security programs, estimated at $45.6 million in the 1961 budget;

The volume of manpower and resources required for national defense;

The amount of money available for consumer goods, homes, schools, business expansion, enjoyment of leisure time, and other domestic outlets for spending;

The burden on the American taxpayer and the outlook for national debt reduction and ultimate lessening of the taxload; and

The inflationary pressure, due, among other things, to high competition in the money market by Uncle Sam with private interests for funds to carry on defense and other programs.

ROLE OF UNCLE SAM IN ECONOMY

Briefly, this illustrates only a few of the ways in which peace and economic progress are closely intertwined. Now, what is the role of Uncle Sam in the economy?

In recent years the size of the Federal budget—and whether it will be balanced or unbalanced—has become more or less a symbol of stabilized or inflationary trends in monetary policy. The task of keeping outgo in line with income, however, is becoming increasingly difficult.

Why?

Harnessed by a vast volume of past obligations, the Federal budget has disproportionately little elbow room for adoption of new programs and meeting of new responsibilities required by our modern advancing times.

According to Budget Director Maurice H. Stans, for example, Uncle Sam has now accrued future obligations adding up to almost $750 billion. These include future c.o.d.'s for highways, housing, civil public works, shipbuilding subsidies, and others, amounting to about $98 billion; retirement benefits for military personnel and civil Government employees; costs of veterans' pensions or compensation programs; a public debt of $290 billion; $350 billion of future obligations for past services. If, however, no new programs are added in the next Congress, spending is expected to go up because of built-in increases in existing programs.

This gigantic mortgage—a portion of which comes due annually—will make it increasingly difficult to balance the budget in 1960, and in the years ahead.

Federal outlays, however, are not a complete loss to the taxpayer. According to estimates for fiscal year 1960, the money—for the most part—will flow back into the economy to purchase Government services, equipment, payrolls and other expenditures.

Nevertheless, the real wealth of the Nation—i.e., the major portion of the gross national product—still, as it should, depends upon private enterprise to produce the vast volume of goods and services required for our nearly 180 million people and to supply markets abroad.

WILL UNCLE SAM PAY BILLS AND REDUCE DEBT?

Now the question arises: Will the Nation be able to do as the President recommends—that is, pay its bills and reduce the national debt?

As you know, the spending budget for 1961 amounts to an estimated $79.8 billion. To meet expenditures, the Bureau of the Budget estimated on inflow of revenue of about $84 billion—resulting in a predicted surplus of about $4 billion.

However, there are serious questions—a great many "ifs"—involved in whether or not there will be a surplus. These include:

1. Can expenditures be held down to the essentials?

2. Will the inflow of revenues meet the expected $84 billion mark?

3. Will Congress increase taxes on highway and aviation fuels, and raise postal rates, as requested by the President?

4. Will it take the initiative in plugging tax loopholes, or conversely, take action that would open new ones.

5. In management of the public debt, too, the costs to Uncle Sam will be affected by whether or not Congress—as I believe it should—adjusts the interest ceiling on long-term U.S. bonds. The purpose would be to allow the Treasury to compete more favorably in the money market, thus getting longer-range loans at less cost rather than having to continue to raise money on a short-term basis at a higher interest rate.

For myself, I feel that Congress, which handles the purse strings, should attempt to put the Nation on a pay-as-you-go basis.

At this high tide in our economy—with production, employment, and income at record levels—we should, I believe, make every effort to put its economic house in order.

SIX-POINT PROGRAM FOR ECONOMY

In attempting to carry out an economically sound program, Uncle Sam, I believe, could well adhere to the six following steps:

1. Establish a priority system for approving programs supported by Federal funds—to assure outlays only for essential purposes;

2. Eliminate programs no longer necessary;

3. If a new spending appears to be essential, then attempt to find new ways of financing;

4. Reexamine our distribution of responsibility on the National, as well as State and local levels—to carry out a redistribution of such obligations, if this is possible;

5. Better correlate Government procurement—particularly in the military services—so that Federal agencies or the Armed Forces do not (a) compete with each other in the market and thus drive up prices; and (b) pay different costs for the same articles; and

6. Further streamline Government operations, eliminate unnecessary costs, waste, and duplication, and otherwise improve Government operations in order to lessen the burden on the American taxpayer. In other ways too, we must reduce costs, including putting into action additional meritorius recommendations by the Hoover Commission—which have already saved American taxpayers an estimated $10 billion.

NEEDED: ECONOMIC WATCHDOG ON MILITARY SPENDING

Particularly, we need to keep close tabs on spending for military purposes. Today, the outlays for national security programs amount to over one-half the Federal budget. In view of such high costs, the Defense Department has a particular responsibility to work toward careful stewardship of our citizens' investment in security. Among other things, this includes eliminating wasteful interservice rivalries that are costly, time consuming, in a critical era in which we do not have time to waste—and that are tremendously expensive.

Uncle Sam, too, must make a special effort toward unifying the procurement operations of the military services.

Currently, our Defense Establishment has about $150 billion invested in property, including real estate, buildings, weapons, and supplies. At the same time, the Department reportedly has about $26.7 billion in excess stocks.

In view of the fact that Uncle Sam recovers about only 2 percent of the cost on the $6-to-$10 billion worth of excess stocks disposed of annually, it is particularly important that efforts be made to keep stockpiling down to essentials.

RISE IN COSTS OF DEFENSE

Unfortunately, the international threat of communism promises greater, rather than less, defense costs for the future.

The changing patterns for defense itself—particularly for high-cost missiles, rockets, space vehicles with military potential, and expanding research—also will be costly. This is likely to result in higher—rather than lower—outlays for a missile-atomic-space defense.

In view of these factors, further efforts to unify the services to provide the Nation with a better coordinated, nonduplicating system are absolutely essential. This can be accomplished, I believe, for the overall good of our security program—without sacrificing the significant contribution which each of the respective services is now making.

The American citizen—I am confident—is willing to pay whatever costs are necessary to provide us with an adequate defense. However, the taxpayer must get his money's worth in defense.

The Defense Department must make an effort to spend its appropriations wisely. If this is not done, Congress will find it necessary to set up an "economic watchdog" to do the job.

BATTLE AGAINST INFLATION

Unfortunately, the spectre of inflation, also, still hovers over the economy—threatening to further reduce the purchasing power of our incomes as well as to devaluate savings, investment in bonds and insurance policies, and otherwise undermine the economy.

What can be done about it?

Uncle Sam, I believe, should lead the anti-inflation fight by adopting sound economic principles in determining the scope of Federal programs and designing spending policies. Management and labor—as well as the general public—must also discipline themselves to policies that will prevent—not support—inflationary pressures.

In a free society, government, I believe, can make its best contribution to economic growth by fostering conditions—as the President has pointed out—that encourage and reinforce the efforts of individuals and private groups to improve their circumstances, and promote progress.

This includes: preserving a free, competitive climate; maintaining a stable currency; attempting to minimize fluctuations in employment; developing human and natural resources; enhancing personal security of our people; providing for a sound national defense.

At the same time, States and local communities should reevaluate, and as possible, enlarge their roles in sharing the obligations for public interest and public service programs.

CONCLUSION

This, then, is a brief look at some of the major factors affecting our domestic progress and security, as well as our ability to cope with problems on the international front.

Again, I stress: The Nation must maintain a sound, forward-moving economy—if we are to cope successfully, not only with our problems at home, but with the threat of international communism.

However, I am confident that—as has been traditionally true—our citizens stand ready and willing to dedicate the necessary resources and manpower to promote progress and insure our security.

At the same time, we in Congress recognize our responsibility to you—as citizens and taxpayers—as well as to the future of our country—to do all possible to: assure a strong defense; maintain a sound, forward-moving economy; and promote peace in the world—without which all efforts to improve the domestic life of our citizens would, in the event of a missile-nuclear war—be in vain.

Now, I want to express my gratitude for the opportunity to discuss these aspects of the challenges confronting us with you.

Thank you very much.

Col. Bryce H. Harlow Minuteman of 1960

EXTENSION OF REMARKS

OF

HON. CARL VINSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include therein an address delivered by Col. Bryce N. Harlow, Deputy Assistant to the President, at the midwinter banquet of the Reserve Officers Association of the United States upon the designation of Colonel Harlow as "Minuteman of 1960" on Friday evening, February 5, 1960, at the Sheraton Park Hotel in Washington, D.C.

Mr. Speaker, every Member of Congress is acquainted with Colonel Harlow, but I take a great deal of pride in saying that I consider him to be a close personal friend.

Bryce came to the Congress as secretary to Congressman Disney, of Oklahoma, 20 years ago.

In World War II he became a member of General Persons' staff and was well known to Gen. George Marshall.

Wherever he went—in the Congress, in the Pentagon, or in the Army—his ability became the hallmark of his fame.

In January of 1947, Bryce became a member of the professional staff of the newly formed Armed Services Committee. It was as a member of the staff of the House Committee on Armed Services that I first came to know, respect, and develop a deep affection for Bryce Harlow; and my opinion of his ability, his brilliance, his incisiveness, and his outstanding congeniality is shared by the other members of the committee and the staff.

In December of 1950 Bryce became chief clerk of the Committee on Armed Services and he remained in that position until the fall of 1951 when he resigned from the committee to return to his father's publishing business in Oklahoma.

But the long arm of the Government reached out in 1953 when President Eisenhower was inaugurated and Bryce then became an assistant to General Persons at the White House. Again, he so demonstrated his outstanding ability in the service of his country that he has now risen to the important position of Deputy Assistant to the President.

Col. Bryce Harlow, in my opinion, is one of the outstanding men in Government today. I would even go so far as to say that he is one of the most outstanding men of the last two decades. Those of us who know and admire Bryce were proud to learn of the honor bestowed upon him by the Reserve Officers Association.

The address follows:

Colonel Richardson, distinguished guests, ladies, and gentlemen, I am sure that in future years, as in the past, this fine award will go to individuals far more deserving. But I earnestly say this to you: Never will this Minuteman Award be appreciated more than it is tonight.

For I know it reflects the esteem of our finest citizens—those who sacrifice freely, in peacetime as well as in crisis, in order to help assure the safety of our Nation.

I realize that this award also stands for unwavering support of military preparedness. That the good citizen should prepare himself to come swiftly to his country's defense—that our Nation's sword and shield must be kept strong—are concepts that ROA has supported unfailingly, year after year.

So, Colonel Richardson, understanding the symbolism intended by this ceremony tonight, and remembering the distinction of your Minutemen of previous years, I feel at once humble, and deeply proud, to receive this honor. I sincerely hope to be worthy of the fine thoughts it is intended to convey.

I confess to having approached this speaking assignment with some personal misgiving. In this city, from now until November, anyone who dares to raise his voice will likely regret it. The quadrennial political orgy is hard upon us. Any utterance is fair game.

Also, I have troubled over our uniformed personnel. These are, for them, tense and worrisome days. In this season they must apprehensively cluster about committee launching pads, with their congressional ICBM's competitively raised. In all this world nothing is as nerve racking as the appropriations countdown.

Incidentally, I have noted over the years that to military budget officers ICBM means one of two things—either "I'm Clobbered by MAHON" or "Increases Can Be Manipulated."

In these delicate situations, I do have some reassurance. Here in Washington we resort on occasion to what we gamefully call bipartisanship, which, to the political cynic, means, "My party won't tell on yours, if yours won't tell on mine." Already we see its 1960 version shaping up, and I shall report this surreptitiously gathered information to you without juggling my intelligence data.

No doubt about it: In each party the warring wings show signs of closing the gap. We cannot yet be certain of their capabilities but we can divine their intentions.

So already we begin to see a Republican bipartisanship which supports our defense programs, and one can discern a growing Democratic bipartisanship, critical of it all.

I, for one, still cling up to the old time nonpartisan bipartisanship. And to prove it, I want to make this clear: as regards the kind of military protection our country should have, I will bank proudly and confidently on one of the great commanders in all history—Dwight D. Eisenhower.

Now, my friends, most of us, I am sure, are already informed on the issues that mainly concern us today.

That for some time we have already lived, and that we must continue to live, in the immediate presence of deadly peril is known to us all. It is a period that calls for steady courage, unfaltering leadership, and strength of character. It calls for men who can face danger calmly, with the unruffled and steadfast spirit of our patriots of earlier years.

Our Nation has known danger many times before. In our acts, and in our talk, we must not shrink from it now.

Dangers we must face, yes, as have millions of Americans before us—but how fortunate we are in our generation, for we live in a dazzling transition. It is fascinating to live in a time when scientists and technologists contrive miracles so rapidly as to make the unbelievable commonplace. Daily we learn of marvels in instruments of war that are awesome in speed and power. But even as we are at once attracted and repelled by these terrible machines, we see exciting social and economic advances at home and throughout the world. And before us we see, within our reach, an era that can be resplendent beyond our dreams—if, and I must repeat if—if only man can have the wisdom to live with his fellow man, in good will and in peace.

We are fortunate, too, that ours is the most powerful and the richest nation on earth. But we realize how shrunken this planet has become, and how closely knit the human neighborhood. America is an oasis amid the hunger, poverty, and fear that afflict most of humanity. Most of us, I believe, realistically gage this situation and its opportunities, and its explosive potential as well. And so, together we cheer our President's assertion that America will always be willing to walk the extra mile with any nation, if in so doing we can bring one step nearer a brighter day for all mankind.

But as we so walk, we are aware that others in this world can be led to miscalculate our will and our might, and thus be tempted to attack us suddenly and violently. So it is that America must, and assuredly America will, remain powerful and poised. We shall be ever willing, of course, to negotiate, ever eager to forge a just peace, ever striving for trustworthy disarmament, but in the meantime we shall maintain a force that is plainly irresistible. Some across the seas may continue to belittle America's strength in their effort to dominate others, but they do not fool themselves. It is for us to see that this strength of our always warrants their full respect.

So fateful are the consequences of a miscalculation of the power of America—so swift and so deadly are modern weapons—so irretrievable a decision to resort to their use—that I believe each of us henceforth has the patriotic duty to speak responsibly and to speak prudently of the quality and character of our defenses. Henceforth Americans live in constant danger; we must speak and we must act accordingly.

No responsible person discounts the military strength of the Soviet Union and its undeniable potentialities. We have to recognize it, and grasp its magnitude, if we are fully to appreciate the urgency of our own defense efforts.

But respectful and wary as we are of Soviet power, we certainly do not need to apologize for our own. Our strength, for today and tomorrow, is truly enormous.

In view of our military and civilian leaders best situated to advise us knowledgeably and objectively, our defensive forces hold the power of annihilation over any aggressor on the face of the earth. We can measure their scope to some degree by the huge sums invested in them. To build and maintain our almost incalculable power, we have, since World War II, paid more than $450 billion—some $20,000 for each man, woman, and child in our country. Yes, burdensome it is, but this mighty force is our sentinel of peace. It has preserved our liberty. It has, in recent years, halted major aggression dead in its tracks.

I am not fearful that we have, or that we will, let down this guard, in fact or realtively. As to this, the American people have proved they are steady and firm. Responding to their will the Congress has time and time again since World War II rejected its prewar tradition of severely reducing appropriations for defense. In these past 14 years the amounts requested for defense have been collectively cut by less than 3 percent. Clearly, whatever is required for our Nation's strength will be given unhesitatingly by the American people.

Of course, some among us seem to see our country in a less favorable light. They see an American people sunk in complacency and sloth—our only adult interest self-indulgence, and our youth comparatively illiterate and morally degenerate. To these unhappy people, we seem doomed to wallow in increasing stupidity and fat until at last, we shall fall easy prey to the Spartan sons of atheistic communism.

Personally, I consider this despairing refrain to be a vote of no confidence in the people of America. It reminds me of the mournful fellow who sadly summed up life like this, "When you're born, you're soon to die."

Obviously our free society is far from perfect, and we should, and we do, struggle hard and constantly to improve it. But there is such a thing as becoming so obsessed with shortcomings as to lose all perspective.

I contend that any nation that will carry the domestic tax burdens which the American people have accepted uncomplainingly since World War II, at the same time buttressing about two-thirds of the entire world, can hardly be a nation of incompetents, ignoramuses, and indigents.

I would add that any nation that has generated and is maintaining an economic strength unmatched on earth is bound to be a nation hard at work, resourceful, and vigorous, and worthy of its finest traditions.

Such matters may seem only distantly related to our main interest tonight—the Nation's defense. But it is important that we remember what a nation's strength really is. It is far more than soldiers, missiles, or ships. Essential these are, but the force of every country consists of a combination of strengths—of social, economic, intellectual and spiritual energies and resources, as well as military power.

It is well that we also remember what our military strength is really for. Not simply survival justifies our defenses; they are to help defend our cherished liberty and ideals as well as our lives. There must be, therefore, a balance in all that we do. How unspeakably tragic it would be should we destroy our own freedom in an overzealous effort to defend it.

In saying this, I do not ignore the allegations being made by some that our defenses are too weak to meet present or future threats, or else are unbalanced, too rigid, or inefficiently organized. And, of course, one occasionally hears that the dollar, not defense, has become our reliance. This seems to imply that the various nonmilitary strengths I have mentioned, which in fact undergird our defenses, are something separate and distinct from the Nation's security. I cannot agree that the stability of our currency, the vigor of our economy, the spirit of our citizenry, and cost consciousness in the Pentagon are sworn enemies of our Nation's strength.

I know it to be a fact that most contentions of this kind are sincerely made by conscientious public servants who are devoted to our country's good. I know too, that our separate Armed Forces have separate and deeply held views respecting their own and their sister services' needs. But I recognize also that with an intensity that seems to vary a bit with the calendar, such allegations have ricocheted around Washington throughout a good part of the two decades I have been here. Curiously, however, despite the vigor with which such sentiments have been expressed over the years, only three times since World War II has a President's defense budget been increased by the Congress, and these three increases all together total only $1.7 billion. During the other 11 years, instead of the combined budget requests being raised, they were cut by more than $15 billion. In these matters, there seems on occasion to be an agonizing reappraisal between allegation and action.

Let me softly add, by the way, that it is intriguing how our defenses seem always frighteningly to shrivel around appropriation time each year, and it is appalling how they appear to disintegrate in the late spring of even-numbered years.

Of course, it is pointless to expect perfect safety from our defenses. It doesn't exist, and it never will. Anything less than complete mobilization requires us deliberately to accept calculated risks. This means that the size and character of our defense structure will always be arguable.

Nor is it reasonable for us to expect our military leaders always to see eye-to-eye on major security programs and policies, or to delight in every decision of the Secretary of Defense, the Commander in Chief, or the Congress. In fact, were our military leaders always to agree, I would then truly cry out, "God save the Republic." And were both ends of Constitution Avenue forever in accord on what our defenses should be, we would indeed have caused to fear the future.

One question, it seems to me, might help clarify some of this:

Where today is our leader, military or civilian, who would choose for the American people the Soviet strength complex of today or tomorrow in preference to our own?

I know of none.

It has been said: "Nations that refuse to learn from history are condemned to repeat it."

From two global wars and far-off Korea, we have at last, I believe, learned from history, and all the world is the safer for it. I would even say—with a weather eye cocked toward recent events at the Capitol—that there is still a bare possibility that the Congress this year won't cut the defense appropriation request. I risk that prediction, even though the post-World War II record denies it, because I am so deeply convinced of the alert readiness and determination of the American people.

And among our people that "alert readiness and determination" especially describes our Reserves, and I gladly say that their importance is valued more highly today than ever before. Only 7 years ago, in the Armed Forces Reserve Act, the Congress spelled out the authority so long needed, and the purposes so long desired, by all Reserves. Just 4 years ago came another epochal law making possible a surging growth in the manning of Reserve units. This current Congress, in its first session, helped still more by extending vital legislation about to expire.

And we have seen spectacular results.

By last July the Reserves had grown to almost 4.4 million, the Ready Reserve to 2.9 million, and the paid strength to well over a million.

But more important by far than these numbers has been the driving emphasis constantly placed upon Reserve readiness. More than 95 percent of the present Ready Reserve is now basically trained. This is truly a magnificent achievement. Many here tonight, in and out of government, deserve our thanks for having worked long and hard to bring this about.

The results in efficiency and military competence have been exhilarating for the Reserves and highly significant for our country. Today our civilian-soldiers are even assuming active operational assignments. The Air Guard, for example, provides fighter interceptor crews and aircraft on a runway alert status. The Naval Reserve adds to our active antisubmarine capability both in ships and aircraft. Seven missile battalions of the National Guard are in operational control of Nike sites.

The fact that this association has vigorously supported advances such as these, legislatively as well as in the executive branch, all of us know full well. For this I join many present in a hearty congratulations to this association. Not simply have you advanced the interests of Reserves; more importantly, you have held true to the greater purpose of helping to keep America's total defenses up to snuff.

And now, ladies and gentlemen, I repeat my conviction that all of us, civilians, Regulars and Reserves alike, will continue keeping our America adequately strong, while persisting in the building of a just peace. As we do so, I suggest that we might benefit by recalling on occasion a statement by a great leader of long ago.

Behind the chair of the Speaker of the House of Representatives are inscribed these words of Daniel Webster:

"Let us develop the resources of our land, call forth its powers, build up its institutions, provide for its great interests—and see whether we also in our day and generation may not perform something worthy to be remembered."

There, ladies and gentlemen, is our challenge in our time. It is for us eagerly and gladly to accept it.

There, too, is a rightful claim upon us by our children who, like us, want an America that is proud and strong, and like us, want to live their lives in freedom.

Report From Germany—Dr. Julius Mark

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. JAVITS. Mr. President, more than the usual amount of interest may be attached to this firsthand report on West Germany in the light of the recent rash of anti-Semitic incidents. It was delivered as a sermon by Dr. Julius Mark, senior rabbi of Temple Emanuel in New York City on the basis of his visit early in January to conduct several convocations for military personnel at the invitation of the Chief of Chaplains of the Army. I ask unanimous consent that Dr. Mark's "Report From Germany," be printed in the Appendix of the RECORD.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

REPORT FROM GERMANY

(By Dr. Julius Mark, senior rabbi of Temple Emanu-El)

Nestled in an enchanting valley in the Bavarian Alps lies the quaint and charming village of Berchtesgaden, a favorite German round-the-year resort area.

Great mountain peaks, completely covered with snow during the winter and lush with multicolored flowers and vegetation during the rest of the year, endow this locality with a picturesqueness that is exalting and a beauty that is breathtaking. As one views the unbelievable scenic splendors which greet him from every direction there surges up within his soul the inspiring accents of the psalmist: "I lift up mine eyes unto the mountains, from whence shall my help come? My help cometh from the Lord Who made heaven and earth." And also the other utterance that has rung down through the centuries: "The heavens declare the glory of God and the firmament showeth His handiwork."

But then, as one recalls the depths to which man's inhumanity toward his fellow man descended in this very place, the glorious beauty of which defies description, another quotation comes to mind—this one from a great English hymnologist and poet, Reginald Heber: "Though every prospect pleases—only man is vile."

For it was the Obersalzberg area of the Berchtesgaden district that the infamous Hitler chose for his official residence. Here, too, were located the homes of his trusted lieutenants—Goering, Goebbels, Bormann. It was in Hitler's home, called the Berghof, where the diabolical plots for mass murder were hatched. In September 1938, Chamberlain, Daladier, and Mussolini joined Hitler in discussion at the Berghof resulting in the shameful Munich Treaty which caused the English Prime Minister, umbrella and all, joyfully to hail "peace in our time." Nearby is the former Platterhof Hotel, which was reserved for Hitler's VIP's, and high above at the very top of the Obersalzberg, visible for miles around but inaccessible during the winter months, is his "Eagle's Nest," where he repaired from time to time to enjoy the scenery and to plan his unspeakable atrocities.

On April 25, 1945, Allied bombers partially destroyed the entire Obersalzberg area. The Berghof was only slightly damaged, but the SS guards, to prevent its falling into the hands of the oncoming Allied armies, blew it up and set it on fire. The Platterhof Hotel, which had been severly damaged, was restored by the American troops and renamed the General Walker Hotel. At the present time this beautiful hotel is used by our military personnel for recreation and religious retreats. I could not help but be conscious of the irony of my occupying a suite in this hotel which at one time had been reserved for Hitler's most important guests.

I confess to having experienced mixed feelings when I was invited by the Department of Defense, through the Chief of Chaplains of the Army and upon nomination of the Chaplaincy Commission of the National Jewish Welfare Board, to conduct two convocations and a chaplains' retreat in the General Walker Hotel in Berchtesgaden. I had visited Germany four times before the outbreak of World War II, but had made up my mind, as have a great many others, that I would never again set foot on soil that had absorbed the blood of millions of innocent human beings, Christians as well as Jews. My military training, however, reminded me that an invitation from a high official in the Armed Forces must be regarded almost as an order and should not be lightly considered. Besides, having had a similar experience in Japan and the Far East 4 years ago, I knew that I could render some slight service to the military personnel of the Jewish faith stationed far from home. The strange and eerie feelings, however, remained with me during the entire 2 weeks that I spent in Germany.

It was my privilege to conduct meetings or Torah convocations, as they are called, for nearly 600 soldiers and airmen, some of them accompanied by their wives and children, who were present during one or the other of the weekends of January 7–11 or January 14–18. The hotel accommodates only 300, however. Therefore, half of these 600 attended the first convocation and the other half the second. On January 12 and 13, I met with the 12 Jewish chaplains who were present. One of these 12, by the way, is an English chaplain attached to the British Army of the Rhine, and another a French chaplain who serves the French forces in Germany. The other 10 were young American rabbis, Orthodox, Conservative, Reform, who are serving their country in uniform with great distinction.

I suggested as the theme for the convocations "Judaism—Past, Present, Future." Each morning, from 9:30 to 12 noon, those present were divided into three workshops or discussion groups, each under the guidance of two chaplains. One of the workshops considered, "Judaism in Europe," another "Judaism in Israel" and the third "Judaism in America." The ladies had one of their own, "Judaism in the Home," which was conducted by two of the chaplains' wives. The afternoons were free for recreation and tours to points of interest and in the evenings the entire group gathered for plenary sessions when I was scheduled to deliver an address. Sabbath worship, at which I was invited to preach, was held on Friday evening and Saturday morning. And on the final evening, in addition to the address that I delivered, brief reports were made by the leaders of the workshops.

The 2 or 3 days between the convocations, I spent with the chaplains, leading discussions on homiletics, preaching and problems of the chaplaincy.

The concern which the Defense Department of the United States has for the spiritual well-being of our men in uniform is quite without parallel anywhere in the world. Catholic, Protestant and Jewish clergymen are invited each year to conduct convocations and religious retreats for the personnel of their own faith. I dare say that the upsurge of religious interest, under youthful guidance mind you, which is discernible among all religious denominations, has resulted to a large extent, so I believe, from the contacts which young men in uniform have made with chaplains and with civilian clergymen provided by the Defense Department. The thrill which I experienced when I witnessed the tremendous interest which our young men seem to have in spiritual matters is shared by all the others who have served as retreat masters. My pride in America is always heightened and strengthened when I think of the sincere desire of our Military Establishment to satisfy the spiritual needs of men of all faiths, when I think of the chaplains—Catholic, Protestant, Jewish—who are serving their God and country with unselfish dedication, and when I think of the American soldier who is learning to live in understanding and fellowship with his fellow American of another faith.

This pride in America becomes particularly meaningful to me when contrasted with the completely un-American and indecent eruption of swastikas painted on synagogues, churches and schools throughout the world. The contrast to me is frightening, just as frightening as is the contrast between a wealthy, greathearted, God-fearing America on the one hand and a period of unparalleled juvenile delinquency, crime and corruption in the high places on the other.

Since my return home I have frequently been asked whether I saw any evidences of anti-Semitism or Neonazism during my visit in Germany. My answer has always been in the negative, of course. I read the German newspapers and there saw only expressions of condemnation of these outrageous sign painters on the part of government officials and leaders of church, business and educational circles. I wonder, however, whether denunciation and censure and the punishment of the guilty when apprehended are really enough.

I came away from Germany with the feeling that the German people would simply like to forget the entire Nazi era with its anti-Semitism and other foul hatreds. They would like to sweep it all under a carpet and hope that somehow it will go away. In Wiesbaden I visited an attractive little park near the middle of the city. I was advised that the principal synagogue in Wiesbaden had stood there and was destroyed by the Nazis. Since there was another smaller synagogue in existence there and the tiny Jewish community residing in Wiesbaden no longer requires this large one, the city authorities suggested that a park to serve as a memorial with a sign indicating that a synagogue had once been located on this spot be established. The Jewish community officials agreed. The park has been constructed, but no sign has ever been erected. It is simply a park, and not a memorial.

I visited the Dachau extermination camp and was sickened by the gruesome sights of the crematoria, the gas chamber, the mass graves where the ashes of tens of thousands of Christians as well as Jews had been buried. I assure you, my friends, that as I walked through that place there wasn't the least desire for revenge in my heart. There was only pity—pity over man's bestiality and the silent prayer that it might never happen again. I was advised by the American officer in charge who was showing me around that the Germans would like to acquire the camp and raze it to the ground with bulldozers so that it will all be quickly forgotten. They want to forget.

We, too, in fact, the entire civilized world, would like to forget. But certain things must be remembered—they must be remembered as a warning that they shall never, never happen again.

The German passion to forget is evidenced in its education of the young. In many schools German history ends with 1870 or 1914. The Nazi period is simply glossed over, with a few paragraphs—at the most a page devoted to it. Hitler? Many a young German child will answer: "Oh, Hitler was the man who built the autobahnen or superhighways and he was the man who solved the unemployment problem—everybody had a job." Now this, of course, is poor history. It is worse psychology. The German child should be taught the truth, namely, that Hitler and his cohorts were beasts in human form, who not only murdered 6 million Jews and many more millions of Russians, Poles, Catholics, and others in cold blood, and who not only brought on the suffering of World War II, but was responsible for the disaster that came to their own country. Of all people, they, the Germans, should remember Hitler and vow that such a creature must never again be entrusted with the power to kill, destroy, and annihilate. That Germans should be horrified when they witness the movie "The Diary of Anne Frank" is only to be expected—who isn't horrified?—but to have many of them declare after witnessing it: "But I don't believe it. It didn't happen. It couldn't have happened in our civilized Germany." I say that is evidence of their need for proper education.

I believe that it is also a fact that our own educational system here in America requires perhaps a bit of revision. Our teachers might be encouraged to discuss with their children in the classroom nazism and the evils that it let loose upon the world. They might remind their pupils that the swastika, which has appeared recently and about which the children read in their newspapers and hear over their radio and see on television, is a symbol of hatred not only for the Jew but for all human beings who believe in God, in freedom, in decency. It is as much the enemy of Christianity as it is of Judaism. Because of its association with oppression and human suffering, its painting in public places thus is more than a childish prank. It is a reminder of everything that is mean and evil and diabolical in the world.

It will not, to be sure, be easy to introduce teachings which relate the truth about nazism in the German public schools, since it must be remembered that most teachers in those schools had themselves been asso-

ciated with the Nazi Party. Naturally, they would suffer great embarrassment—quite a number of them already have—when asked by their pupils: "And what were you doing when all this was going on?" And then there is resistance among the parents who, out of a sense of guilt or shame or what-not, would prefer that their children remain uninformed. But it will have to be done—the truth will have to be presented if nazism and anti-Semitism are to be uprooted and a truly democratic way of life is to develop in Germany.

There is another problem which should be resolved, namely, that of former Nazis occupying high positions in the present German Government. Chancellor Adenauer has castigated anti-Semitism with vigor and with forthrightness. And I believe that he is, without question, sincere in his protestations. At the same time, however, it is shocking to realize that his right-hand man, Hans Globke, wrote the official commentaries on the Nazi race laws, that Gerhard Schroeder, his Minister of Interior, who has charge of all the police, is a former storm trooper, that Theodore Oberlander, his Minister of Refugees, is a former SS captain detailed to the viciously anti-Semitic Vlanov army of pro-Nazi Ukranians, and that Fritz Schaeffer, his Minister of Justice, has authorized large pensions to ex-Nazis but has attacked the program of restitution for the victims of Nazism. It is possible, of course, that they have convinced Adenauer of their having been completely de-Nazified and of their loyalty to Germany's democratic government, but so long as they occupy their present positions of prominence and importance, they will continue to serve as symbols of Nazi frightfulness.

In modern Germany anti-Semitism is a crime. It is punishable by a stiff prison sentence and heavy fines. It is evident, however, that laws are not enough. There must be a change down deep in the souls of the people. And that change will not be affected by ignoring the facts through a conspiracy of silence.

I have been asked whether I believe that anti-Semitism in its most virulent form will return to Germany. My answer is that for the present, "No." The conditions which prevailed in the post-World War I period are not present today. The country is prosperous. The German currency is, as you know, the soundest in the world. There seems to be no leader on the horizon with the particular qualities of a Hitler, who combined in his personality genius, mind you, genius, and savagery.

On the other hand, if another depression comes—if there is unemployment and hunger in the land and if the currency loses its value as was the case after World War I, who can tell? Even the pitiful remnant of 30,000 Jews compared to more than 600,000 before Hitler came into power and most of them old, many of them sick, subsisting on charity, with not a single Jew occupying a position of prominence, even that fact will not deter a vicious anti-Semite from crying: "Die Juden sind Unser Unglueck." A prosperous Germany economically, but not too strong militarily, is the best hope for freedom and democracy in Central Europe. Germany must be placed in the position prophesized for Egypt by the prophet Ezekiel. Yes, let it be restored, but not as a mighty power—but as an ordinary power, perhaps as a weak power, so that never again will she be in the position to threaten the peace of the world.

I came away from Germany with one prayer in my heart, "God bless America." God bless America for her dedication to the advancement of individual liberty and for her devotion to the establishment of peace firmly founded upon justice in the world. And let America, too, bless God for the blessings, both material and spiritual, He has vouchsafed to her citizens. May we be worthy of this glorious heritage and dedicate ourselves anew in service to our God, to our country, and to humanity.

Amen.

The Constitutional Crisis

EXTENSION OF REMARKS

OF

HON. DALE ALFORD

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. ALFORD. Mr. Speaker, on leave to extend my remarks in the Appendix of the RECORD I include letters written to the editor of the Richmond Times-Dispatch. Since it is the opinion of millions of Americans today that the real crisis facing the Nation is a constitutional crisis, I urge all Members of Congress to consider seriously the subject matter contained in these timely letters written in defense of one of the really great living Americans; an outstanding authority on constitutional law; a native of Virginia; a successful businessman of the western United States; a direct descendant of Attorney General Charles Lee in the Cabinets of Washington and Adams. I refer to the Honorable John Janney.

The letters are as follows:

ARLINGTON, VA., *January 31, 1960.*

To the EDITOR,
The Richmond Times-Dispatch,
Richmond, Va.

It is difficult to decide whether "lawyer" Geo. E. Allen's attack on John Janney (VOP Jan. 23) is more notable for the ignorance it displays or its audacity.

The ignorance is apparent from the complete lack of understanding of Mr. Janney's proposal, which he declares is "following the Communist line." The name John Janney certainly needs no defense in Virginia from such attacks as Mr. Allen's but when a "lawyer" asserts misstatements of both law and fact with such boldness in the public press, he should be called to time.

Mr. Allen's assertion that Virginia legislation denying the Supreme Court its usurped power to legislate in Virginia is nullification displays either an inability or an unwillingness to state the question or constitutional law squarely. It is not a question of Virginia seeking to overturn the Constitution. It is a question of Virginia seeking to enforce the Constitution against the depredations of centralist usurpation. Mr. Janney's proposal that the State take measures to enforce the Constitution is not a new one. In 1821 Thomas Jefferson wrote in his letter to Archibald Thweat:

"The judiciary branch is the instrument which, working like gravity, without intermission, is to press us at last into one consolidated mass * * *. If Congress fails to shield the States from dangers so palpable and so imminent, the States must shield themselves."

This is precisely what Mr. Janney's proposal would do—use the State's orderly legislative powers to shield the State from the arrogations of the Federal usurpers. These legislative powers are placed explicitly and unreservedly by both the Virginia and Federal Constitutions in the hands of the General Assembly.

Mr. Allen's absurd statement that the only way in which the Supreme Court can be reversed, is by an amendment to the Constitution reveals less of his understanding of the law than it does of his politics. Jefferson gives the lie to this fatuous contention by his reference to the measures Congress can take to allay the pretensions of the Supreme Court. A further rebuttal of this contention is contained in the statement of Gen. Merritt Curtis, General Counsel of the Defenders of the American Constitution before the Senate Subcommittee on Constitutional Amendments:

"If the Supreme Court can, with complete impunity, disregard the clear mandate of article I, section 1, of the Constitution; if the Court can, with equal impunity, ignore the express language of article II, section 1, of the Constitution; if they can do the same with article III, section 2; if they can hold office, as at present, without being duly sworn as required by article VI of the Constitution; if they can ignore the express language of the VII, IX, and X amendments; and if they can do all this, who is to say to them 'nay' if they chance upon some new provision of the Constitution that may not be in accord with the philosophy of the current sociologists and the psychologists who have now been accepted by the Court as 'modern authority.' They may apply their newly instituted rule for testing constitutionality, that is to say, whether a law or practice, is, in the opinion of the judges, outmoded. If the Supreme Court can trample under foot the existing Constitution, what restraint will there be upon them to make short work of any new amendatory provisions?"

Pretending, as Mr. Allen does, that the General Assembly is powerless to protect Virginia from the indignities of Federal usurpers is a disservice to the constitutional liberties of freemen.

Sincerely,

T. DAVID HORTON.

[From the Richmond (Va.) Times-Dispatch, Feb. 7, 1960]

VOICE OF THE PEOPLE—CURB ON HIGH COURT'S "LAWMAKING" URGED

It appears that Mr. George E. Allen (VOP, January 28) would have us sit idly by and permit the Supreme Court to become the American counterpart of the Russian Politburo.

First, Mr. Allen ignores the fact that when any agency of the Federal Government, including the Supreme Court, exceeds its authority, its acts are ultra vires and should be declared null and void. The Supreme Court attempted to exercise legislative powers. Its role is limited to judicial power. This is a limit fixed by the Constitution. When decisions of the members of the Court are null and void, they have acted in their individual capacity and not as a court. As a court they do not have the authority to enter a decision based on the exercise of legislative powers. The Court is not authorized to make law; being limited to judicial powers the Court is required to apply the law as fixed by lawmaking agencies.

The members of the Supreme Court refused to limit their acts to judicial power. When they refused to be limited by the intent of the parties to the contract they did not limit their acts to what the Court is authorized to do under the Constitution. So what we are dealing with is not an action of the Court but an unauthorized action by the members of the Court. If the decision was void and not an act of the Court, what is there to nullify?

Since the law is left in this state of confusion, what Mr. John Janney advocates is an act of the legislature clarifying the law. The law is still what it was before the mem-

bers of the Court attempted to change it, but it has been confused by their unauthorized acts and needs to be clarified by an act of the legislature.

Second. Mr. Allen confuses the Constitution with an invalid action of the members of the Supreme Court.

Third. Mr. Allen states that "it is the duty of the Court to say what the law is." He confuses this with the lack of authority of the Court to make law. It is true that "the Constitution of the United States is superior to any ordinary act of the legislature," but Mr. Allen confuses this fact with the fact that the legislature is a part of the Government that created the Court, fixed their power, and orders their selection and appointment, and it is superior to an unauthorized act of the members of the Supreme Court.

Fourth. Mr. Allen says, in effect, that the members of the Supreme Court are the final arbiters of their authority. This puts them in the role of a tyrannical dictator. It should be pointed out that when the Court acts within the authorized bounds of its authority, this State is bound by its acts. However, the framers of the Constitution reserved to this State the right to be the arbiter of whether it will be bound by an unauthorized act of the members of the Court.

Fifth, Mr. Allen urges amending the Constitution rather than exercise existing rights of the State to enforce the Constitution. If the members of the Court refuse to be bound by the Constitution, as it is, does Mr. Allen believe they would be bound by it if it should be amended? Why amend what is now a perfect document?

What Mr. Janney advocated was taking a legal position by the State, and the legislature is the only authorized body to take this position for the State.

LUCAS D. PHILLIPS,
Member, House of Delegates.

RICHMOND.

[From the Richmond (Va.) Times-Dispatch, Feb. 9, 1960]

VOICE OF THE PEOPLE—JANNEY IDENTIFIED, HIS PROPOSAL PRAISED

I picked up a recent issue of your paper (January 28) which carried a letter signed by Mr. George E. Allen and which you titled, "New Court Proposal Assailed by Lawyer."

The letter had to do with the Warren court and its decisions as they affect Virginia. In effect, the writer was against a proposal made by Mr. John Janney. As I get it, Mr. Janney thinks that when the Supreme Court makes a decision which is outside, or beyond, its authority, it is no decision of the Court at all, just an opinion of nine old men who happen to be members of the Court. Mr. Allen says this isn't so.

Suppose the Court did make a legislative rather than a judicial decision, what does Mr. Allen propose to do about it? Simple. Mr. Allen would amend the Constitution.

What good would it do? The Constitution already says these people are to render judicial (and not legislative) opinions. That being so, what is to stop them from ignoring an amendment?

The answer, as Mr. Janney says, is to be found in the sovereign States. The States are the principals to the contract we call our Constitution, not the Supreme Court. That is but the agent. Let Lawyer Allen study his law on contracts.

I would suggest that Mr. Allen pay a visit to our capitol there in Richmond. Have him go to the hallowed hall that housed our delegates long before the new addition was built.

On its wall, just to the right of the speaker's rostrum, Mr. Allen will find a plaque. On it he will find an inscription which reads (as I remember) "In memory of John Janney, president, Virginia convention, 1861."

It was a descendant of this John Janney who makes the recent plea to Virginians. I will add—as today's John Janney is too modest to add—it was also a descendant of Charles Lee, first Attorney General of the United States and Revolutionary War hero.

That, Mr. Allen, is the John Janney who spoke so eloquently for the rights of the States, for the right of his beloved Virginia. And because he is, to the tips of his eloquent toes, a first-water Virginian he hid his family behind a modesty that only spells his greatness.

Indeed the Supreme Court has overstepped itself. And, God willing, our legislators will rise in wrath and tell it so, the Earl of Warren and his whole retinue.

As for me, I'm sick of them.

MARGARET WALD.

NORTH ARLINGTON.

Statement by Movers Committee for Equitable Distribution of Government Traffic

---

EXTENSION OF REMARKS
OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 4, 1960

Mr. DIRKSEN. Mr. President, on February 4, I requested the printing in the Appendix of the RECORD of a statement from the Movers Committee for Equitable Distribution of Government Traffic. The statement relates to a matter which I had in process with the Defense Department. Although the matter has been adjudicated, I still believe that the statement should be printed in the RECORD.

However, the statement is in excess of the allowable amount, under the rule. Therefore, I ask unanimous consent that, notwithstanding that fact, the statement be printed in the Appendix of the RECORD.

The ACTING PRESIDENT pro tempore. Is there objection?

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MOVERS COMMITTEE FOR EQUITABLE DISTRIBUTION OF GOVERNMENT TRAFFIC SUBMITTED BY RUSSELL E. GARRETT, AS CHAIRMAN, AND HERBERT BURSTEIN, AS COUNSEL

My name is Russell E. Garrett. I am an officer of the John F. Ivory Storage Co., Inc., of Detroit, Mich. I have spent most of my adult life in the moving industry. For a period of 4 years I held the office of president of the Movers Conference of America.

I am now the chairman of the Movers Committee for Equitable Distribution of Government Traffic. I appear here today on behalf of that organization to discuss your recent directive 4500.26. I reflect, therefore, not my personal views only but the sentiments of hundreds of movers throughout the United States.

At the outset, I want to express my appreciation to you, Mr. Chairman, for allowing me the time to make this statement. I shall try to be brief and I shall try to avoid repetition of facts previously submitted to the Department of Defense by the organization I represent and by hundreds of individual moving companies who are opposed to your directive 4500.26.

I trust that the object of this meeting is to engage in a friendly and fruitful exchange of ideas. To achieve this end, I shall try to synthesize the sentiments and the thinking of hundreds of representative movers located throughout the United States.

It seems to me that there are significant areas of agreement between the proponents and opponents of directive 4500.26. If we begin by defining these, we can then isolate the areas of disagreement and proceed to resolve or reconcile our differences.

We are all agreed, I am sure, that it is the responsibility of the moving industry and the military services to do everything possible to accomplish the satisfactory shipment and storage of household goods for military and civilian personnel when transportation is procured and arranged for by an agency of the Department of Defense.

We are all agreed, I am certain, that the best interests of the Government must be served at all times.

We are all agreed, I am certain, that the household goods industry must enjoy a reasonable profit in the performance of service for the Government.

We are all agreed that a sound and healthy household goods moving industry is important to the national economy and to the national defense.

We are all agreed that when a mover fails to provide satisfactory service and fails to protect the owner's goods or otherwise fails to meet his needs, that mover has failed to discharge his responsibility.

We are all agreed that if the Government does not receive a full measure of service for each tax dollar it spends, the purposes of the national program are frustrated.

We are all agreed that everything reasonable and appropriate must be done to eliminate abuses no matter what their source or nature.

I think we are all agreed that the Government must treat equitably with all persons who provide it with goods or services. Surely, no one in the Department of Defense favors a system of inequitable rotation. Indeed, equitable rotation is a practice normally followed in all other branches of Government transportation.

Finally, we are all agreed that the national transportation policy of the United States, which is designed to promote and preserve a sound transportation system, must be a guidepost for the moving industry and the Government alike. Policies which threaten to subvert the national transportation policy must be exposed and rejected.

The areas of agreement which I have marked out are, essentially, the goals to which we must direct our efforts. The route we travel to reach these goals becomes, therefore, a matter of the gravest concern and urgency. It is here that the overwhelming majority of responsible movers find themselves in sharp conflict with the Department of Defense.

Simply stated, we of the Movers Committee believe that Defense Directive 4500.26 is poorly conceived, will operate inequitably and, in the final analysis, will frustrate the overall purposes to which we are both dedicated.

The Department of Defense has electd to revise a policy of long standing—a policy which, in the main, has worked efficiently, fairly, equitably and effectively.

The rationale for the new defense directive, as stated by the Department of Defense in its public announcement of December 8, 1959, is to assure quality of service. Indeed, your Department stated:

"The most significant policy change is the emphasis placed on quality of service rendered by the carrier."

I say most respectfully that this statement is an unwarranted and unsupported confession of failure and ineptitude by the Department of Defense.

It assumes, without supporting evidence, that the policy of equitable rotation has failed. It assumes, without an iota of supporting evidence, that the new directive will succeed.

It assumes, contrary to your own findings, that the change in policy will work a miracle in building servicemen's morale.

We respectfully submit that all of these assumptions are wrong and neither semantics nor half-baked statistics will establish the validity of your assumptions.

We submit, further, that the new defense directive, camouflaged as a technique for improving quality of service will set in motion forces which once unleashed can never be recalled.

I do not know whether you gentlemen have read "On the Beach" or seen the recent movie. I am certain, however, that you are familiar with the theme of the story. You will recall that the entire world was obliterated as a consequence of an atomic war. In one small pocket of the world, Melbourne, a handful of persons survived and were awaiting inevitable death. A scientist who had been involved in the development of atomic power was queried as to the cause and the origin of the war. As I recall it, he stated that someone, acting on a false assumption, pressed a button and unleashed an atomic war. Once that had been done the forces of destruction could no longer be restrained.

I respectfully suggest that the Department of Defense has pressed a button and has set in motion a program so dangerous in concept and so catastrophic in its consequences, that unless reconsidered or revised, there will be no possibility of repairing the damage which it must inescapably work. Among other things, this action will initiate rate wars and destructive rate practices. You may properly inquire why we make these charges and how we can prove them. Permit me to set forth some basic and elementary facts in a categorical form:

1. There are now some 2,300 movers who hold ctdtificates issued by the Interstate Commerce Commission. These carriers have been found fit, willing and able, by an expert administrative agency, to provide household goods moving service. Surely your department does not propose to preempt the role and jurisdiction of the Interstate Commerce Commission. The Commission is vitally concerned with a sound and stable regulated motor carrier industry, all to the end that the National Transportation Policy will be advanced. If you withdraw their sources of revenue, you threaten the survival of thousands of carriers.

The trend toward bigness in business has had an impact in our industry. The number of truly independent motor carriers consistently shrinks. More and more, the field is dominated by a handful of moving organizations. At this date there are four carrier organizations which collectively control more than 50 percent of all interstate moving business in the United States.

The Big Four have reached the position of dominance because of two primary factors:

(a) First, the unrestrained proliferation of agencies in every town, hamlet, village and city. These at times, have included such fine examples of movers as drug store owners, real estate agents, apartment house superintendents and the like.

(b) Second, expensive and extensive advertising and sales promotion campaigns. As a consequence, the four major carriers now enjoy well over 50 percent of the almost $300 million of annual military moving business.

3. All of the rest of the moving business in the United States, less than 50 percent, is divided among the remaining movers.

4. The Big Four have not been able to dominate all or a greater percentage of the military moving business because of the sound policy of equitable rotation. But they have never stopped trying. Let's examine some of the techniques they use and with which they apparently succeeded.

We all know that advertising experts have learned the art of semantics, the use of catch words, the skillful application of slogans, the trick of smear by innuendo. They have apparently succeeded in persuading a small segment of personnel in the Government that every mover outside the charmed circle of Four are fly-by-nights. This is a catchy phrase. Who, conceivably, would want his household goods possessions moved by a fly-by-night?

Implicit in your directive and in your emphasis on quality is the implication that quality service can only be provided by large organizations. The fact is that the contrary is true. Let's examine the so-called fly-by-nights who are opposed to your directive.

Included among the hundreds of movers represented by our committee are companies which have been established since 1886. Many of them have been carried on by several generations of the same family. These companies have made large investments in terminal facilities, storage warehouses, and motor-vehicle equipment. They employ thousands of drivers, helpers, and office personnel; they are a source of business to thousands of related enterprises. They contribute millions upon millions of dollars in taxes to the State and Federal Governments. Thirty-one other carriers exclusive of the Big Four, who are, in the main, represented by this committee, accounted for approximately $125 million of household goods transportation business in 1958; surely, these people are not fly-by-nights. The remaining 1,900 carriers are small but sound, stable, and respected businessmen. They are not and cannot be called fly-by-nights.

You know, as we do, that household goods transportation service is unique. The Interstate Commerce Commission has characterized it as call and demand service. One of its distinguishing features is its highly personal character. As a consequence, the small mover has traditionally provided the highest kind of personalized high-quality service. The small carrier gives his customers personal effort, interest, and attention which is not and cannot be duplicated by giant carriers acting through a multiplicity of agents.

Unless the Department of Defense has concluded that there is no room for the small carrier, then there is no justification for its present directive. The fact of the matter is that the independent mover has contributed a lifetime of personal effort and his personal fortune, the future of his family, and his personal security to his business. Is he the fly-by-night to which reference has been made? Of course not. If there are any fly-by-nights, they certainly include some agents of large carriers who masquerade under the symbols and trade marks of the system carrier and who secure business on the strength of fancy advertising representations and ingenious promotional devices.

It is not unrealistic to suggest that your new program will, in fact, encourage fly-by-nights because it will destroy sound, though small movers. Literally hundreds of small movers who have been in business as far back as 1912 depend upon a fair share of military business for the continuance of their business. Many of these companies were persuaded to make substantial investments in equipment and facilities and to incur heavy debts in reliance upon the system of equitable rotation. In some instances military business constitutes as much as 70 percent of the business handled by these companies. When one considers that the small business provides direct employment to thousands of workers and that literally millions of people depend upon them for their continued livelihood, the threat posed by this change in policy is so grave as to warrant your earnest reconsideration.

Is there anyone who believes that it is equitable for four large movers who constitute two-tenths of 1 percent of all the carriers and who now receive 50 percent of military business to be given all or a substantial part of the remaining 50 percent now shared by more than 99 percent of the industry? Nevertheless, this is the inevitable and inescapable result of your program.

Let me say now, that we are not only opposed to your new directive, but we are equally shocked by the course of events which led to the revision of your policy and the adoption of Defensive Directive 4500.26.

I think it would be helpful if we reviewed a little history so that we may have a proper perspective of the problem.

As you know, the rotation system for distributing shipments of household goods for members of the uniformed services was prescribed by section 303(c) of the Career Compensation Act. This section made it possible for the Department of Defense to eliminate reliance upon the invitation-to-bid system. The Department of Defense then issued Directive 4500.13 dated March 15, 1955, which provided in substance and essence that shipments would be distributed, on an equitable basis, among those qualified carriers who accorded the lowest overall cost to the Government. The exact language reads, in part, as follows:

"DISTRIBUTION OF TRAFFIC

"(a) Subject to the conditions previously set forth, traffic will be equitably distributed among those qualified carriers affording the lowest overall cost to the Government. Each _____ officer will maintain a list of qualified carriers as well as records indicating the distribution of traffic. Records of traffic distribution will be maintained according to tonnage or total revenue, including all charges (except storage in transit) accruing in connection with the shipments, by destination State or oversea area."

This program won general industry acceptance and support. There is not an iota of evidence that it failed to meet the overall objectives of the law and the regulations. It had one other virtue which the new directive now seeks to eliminate, namely, publicity. Anyone could tell how much business was awarded to each carrier. American tax dollars were being spent and the public had the right to know who received those dollars and for what services. For some inexplicable and indefensible reason a program has been initiated to destroy this equitable arrangement. Some time ago, an insidious form of propaganda was generated. Rotation became the target for skillful articles and editorials. Unofficial publications such as the Military Times and the Department of Defense Register carried articles intended to convey the impression that the Department of Defense was dissatisfied with the rotation system and that legislative support was being sought to eliminate it. While it is true that these publications are unofficial, they carried an authoritative stamp and many people accepted them as reflecting official Department of Defense policy. We protested against these articles. On September 11, 1959, Acting Assistant Secretary of Defense Le Boutellier informed us that he regretted that the articles had been misleading. We concur. The articles were misleading and seem to have been deliberately designed to mislead. And this was but part of a plan to create a climate of opinion favorable to the program now instituted by the Department of Defense.

What is particularly shocking is the manner in which the new directive was established. What was done is diametrically

different from the practice which had been observed in the past.

On August 28, 1958, there was a joint military-van industry meeting at St. Louis, Mo. Representatives of the Department of Defense affirmed that household goods would be distributed on an equitable tonnage or revenue basis. It was also announced that a new regulation to be known as chapter 217 of Military Traffic Management Agency Regulations was to be issued. Between January and April 1959, chapter 217 of Military Traffic Management Agency Regulations was submitted to Secretary of Defense McElroy. This embodied the results of a 1-year study and retained the principle of equitable distribution of household goods traffic. But chapter 217 was never put into effect.

On April 13, 1959, the military affairs committee of industry was present at a meeting in Washington, D.C., with representatives of the Department of Defense to discuss minor revisions in directives, then in effect. Even while this meeting was taking place, unknown to the rest of the industry, representatives of the big four, accompanied by Senator BRIDGES of New Hampshire, visited with Secretary of Defense McElroy at the Pentagon and submitted their proposals to eliminate the very directive which was under discussion. Shortly thereafter, in May 1959, the Department of Defense announced that it would review the effectiveness of its current policies and recommended changes, should any be found necessary.

On May 15, 1959, Aero Mayflower distributed a circular letter to all their agents which, by strange coincidence, virtually predicted the nature of Directive 4500.26. The big pitch was that military shippers would be permitted to select their movers. I have here an interesting advertisement emphasizing the same theme.

Then on June 4, 1959, Aero Mayflower distributed another letter to its agents. If the contents of this second letter are accurate it raises serious questions of propriety. In June 1959 the Department of Defense had indicated no intention to change the program of equitable distribution. The Mayflower letter of June 4 contains the following significant language:

"Since this decision has been made while Secretary McElroy has been out of the country with Secretary of State Christian Herter, and since this decision is not in accordance with the understanding we had at a meeting with the Secretary on April 13, this is also to advise you that no further action in this matter should be taken on your part until the return to this country of Secretary McElroy and us."

On August 23, not having been consulted, this committee communicated in writing with Senator BRIDGES requesting an equal opportunity to meet with him and Secretary McElroy. No acknowledgment or response to this written request was received from Senator BRIDGES, although the Senator was in Washington and the Congress was in session. Alarmed at the course of events, movers throughout the country communicated with the Department of Defense and with their Senators and Representatives. The Department of Defense consistently advised Congressmen that any contemplated policy change would be discussed with the industry prior to adoption. As late as October 1, 1959, this representation was made to various Congressmen.

On October 6, 1959, on 3 hours' advance notice, this committee and representatives of several other organizations were informed that they were to attend a meeting at the Department of Defense. There we were advised to submit a list of 12 to 25 representatives who would be invited to appear during the week of October 18, or shortly thereafter, at a meeting at which Secretary McElroy would announce his findings concerning rotation. Mr. Dunleavy, assistant to Secretary McElroy, requested that the representative list be submitted to the Department of Defense by October 14. A list was furnished by us, but no meeting was ever held. Instead, on December 8, 1959, without advance notice and without discussion, the Department of Defense issued its press release outlining the policy under DOD 4500.26 which was issued the same date.

There is one other fact I call to your attention. Going back to the proposal originally filed by the Big Four with the Department of Defense on April 13, 1959, we requested an opportunity to examine this proposal so that we could study it and prepare our reply. We were informed by DOD that this information would not be made available to us.

Oh yes, I am certain that the Department of Defense will contend that they discussed the new proposed changes with our group in August of 1959. Actually, this consisted only of an abbreviated discussion with subordinate officials of the Department.

The Department of Defense subsequently assured many Members of Congress their findings and recommendations would be discussed with the industry and its representatives prior to adoption. This was never done and I charge that there was never an intention to do so.

If we overlook these events and proceed to a review of the present directive I think that we must conclude that its effect, if not purpose and objective, is to enhance the position of the Big Four and to extend their dominance of our industry. I should like to discuss certain aspects of the new directive.

You point out in your public announcement that the policy change is intended to place emphasis on quality of service and suggest that in the past rotation was accomplished without regard to quality of service.

We contend that this is incorrect. Quality of service was always recognized and was a factor in the rotation of traffic among qualified carriers. The installations exercised the power of suspensions and did impose penalties. Indeed, even suspensions were equitably distributed. The big four and the smaller movers alike were penalized on occasions. This is made clear by the provisions of DOD 4500.13 and household goods service tenders. Indeed, the November 1959 findings of your group on page 5, states that 85 of 86 transportation officers rated moving service under the existing directive as satisfactory or better. It would seem to us that the dissent of one transportation officer out of 86 hardly justifies a revolutionary change in policy. We emphasize additionally that transportation officers did impose a quality of service requirement. Here, too, in your own findings on page 14, you pointed to the fact that carriers who failed to provide satisfactory service were removed from the qualified list in 262 instances by 61 installations, during fiscal year 1959. Suspension periods averaged 46 days. In 90 percent of the cases suspension was followed by improvement of service. We challenge the Department to point up a like record of achievement in any other field in which private business provides service to the Government.

Your report continues to say that under the new policies traffic will be distributed among qualified lowest cost originating carriers and that primary consideration will be given to quality of service. While lipservice is given to the concept of equal opportunity to compete for traffic, and you recognize the need for a sufficient number of carriers to assure adequate service in peak traffic periods, you overlook a certain basic fact. To begin with, your previous policy did assure quality of service and the results prove it. But I daresay that your present method, unlike the previous policy will not assure adequate facilities. You cannot expect carriers to make investments in equipment and facilities which must be amortized on an annual basis when their likely participation is limited to the scrapings which accumulate in the 3-month peak period. When the bulk of the business gravitates to the big four, you cannot expect other carriers to fill the gap when large volume of traffic causes them to impose embargoes.

At the Government table there must be an equitable distribution of the food. You cannot give us only the crumbs. You cannot assign the granary to the Big Four and leave us with only one loaf of bread. You may consider that it is equitable to slice that single loaf among some 2,000 carriers. It is true that each one will have a slice but it will be so thin that everyone will starve.

You then go on to point out that the transportation officer will continue to select the carrier but that the transportation officer will consider the owner's request for the use of a carrier and will honor the owner's veto if based on previous unsatisfactory performance. There is nothing new in this provision. This procedure is being followed under the existing directive. You confirm this in your November 1958 findings where you say that 23 percent of the 337 military personnel who commented on the subject reported that in 72 percent of the cases the requested carrier was utilized. Remember that military personnel, unlike the usual householder, does not have established relationships in the community with local businessmen. When you consider that 72 percent of the requests by owners were honored you must acknowledge that this is a convincing demonstration that the old poicy accomplished what the new policy; purports to do. Bear in mind, too, that under your own findings you reported that 54 percent of the 83 transportation officers opposed a change in policy which would make owner's selection of the carrier the dominant factor. The basis for their opposition was the lack of information on the part of the owner regarding carrier service and their recognition that carriers would actively and aggressively solicit business thereby divesting transportation officers of control over the program. What present urgency is there for a change when 86 out of 87 transportation officers expressed satisfaction with current moving services? Who can dispute the fact that a transportation officer experienced in this field is best equipped to control and handle the movement of household goods, within the framework of equitable rotation? If he is not, then the Department of Defense has made a confession of failure.

As for owner's choice, your regulation does not make it mandatory. But even if great weight is accorded to owner's choice, why and how is this incompatible with a fair and equitable system of rotation among carriers who have been certificated by the Interstate Commerce Commission? Remember too, that you must consider not only owner's choice but weigh the fact that you are spending money that belongs to all the people and that the expenditure of this money must be consistent with other major objectives. Weigh the fact that when you spend public funds, you must satisfy a public need. And the public needs a sound and stable transportation system. If all owners select one mover and all other movers were cut off, you would be deprived of service and the national transportation policy would be subverted by the destruction of thousands of carriers who depend upon and are entitled to a fair share of Government business.

You then propose to add a requirement that carriers have satisfactory terminal facilities near the shipping activity or point of origin in all instances and at destination where shipments may require storage. We

find nothing in the history of the previous policy which suggests that storage facilities have not been made available when required.

From time immemorial carriers have always been able to arrange with other members of the industry for the use of terminal facilities.

No directive should be issued which encourages changes in this time-honored procedure.

Finally, you criticize the old policy regarding suspensions on the ground that suspension procedures vary from installation to installation and you suggest that the new policy makes it mandatory that suspensions be invoked.

To begin with, suspensions have been imposed against carriers, irrespective of size, under the present directive. Surely, a uniform program can be established within the framework of DOD Directive 4500.13, with the cooperation of our industry which will take into account the factor of human error, the character of household goods transportation and generally accepted standards of performance. This objective can be achieved without the wholesale revision which you propose. As a matter of fact, a standard suspension guide was being promulgated during a meeting with your department at the time the proposal was made by the Big Four carriers. Surely, if a blemish requires a scalpel, you should not wield a machete.

We respectfully submit, as we said at the outset, that your program is poorly conceived and will have dire effects. We oppose the program for all of the reasons we have stated. We point out to you that by reason of size, aggregate wealth, the power of advertising and promotion, the Big Four will secure an even more disproportionate share of military business than they previously enjoyed. When you realize that the moving industry is dependent, on the average, to the extent of 50 percent on military business and that the margin of profit in this industry is extremely narrow, the withdrawal of a portion of the business now enjoyed by responsible and respectable carriers will spell bankruptcy for many of them. Most of these carriers have heavy debt commitments incurred in order to meet their obligations under your previous policy. You are abandoning them. You are throwing them to the wolves. You are depriving them of a fair opportunity to survive and to continue to serve the American public.

The foregoing statement was unanimously approved at a meeting January 10, 1960, by the following members of the policy committee of the Movers Committee for Equitable Distribution of Government Traffic: American Red Ball Transit Co., Airline Vans, Inc., Neptune Storage & Van Co., Ace Van & Storage Co., United Moving & Storage, W. Evers & Son Storage, Inc., Carroll the Mover, Burgess Movers, Shawmut Van Lines, Inc., Seaboard Van Lines, Atlas Van Lines, Inc., Trans-American Van Service, Community & Johnson Corp., Hood-Garrison Van Lines, Burnham Van Service, King Van Lines, Inc., Von Der Ahe Van Lines, Inc., Security Storage & Van Co., Inc., National Van Lines, Inc., Trans-Ocean Van Service, Weathers Bros. Transfer & Storage, Inc., Shamrock Van Lines, John F. Ivory Storage, Washburn Storage Co., Republic Van Lines, Dean Van Lines, Suddath Moving & Storage, Paxton Van Lines, Inc., Pryor Brown Transfer Co., Acme Moving & Storage Corp., M&WAA, Global Van Lines, Inc., Delcher Bros. Storage Co., Inc., U.S. Van Lines, Inc., Engel Brothers Moving & Storage Co., Ford Van Lines, Inc., Newlon's Transfer & Storage, Consolidated Freightways, Inc.

The Deterioration of the Railroads—Will the Bell Toll?

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. VAN ZANDT. Mr. Speaker, during July and August of the 1st session of the 86th Congress, a special subcommittee of the House Committee on Armed Services, under the chairmanship of the Honorable PAUL J. KILDAY, conducted hearings into the adequacy of transportation systems in support of the national defense effort in event of mobilization. At this time I ask unanimous consent that excerpts from the report of that subcommittee, dated October 10, 1959, be printed in the RECORD at the conclusion of my remarks.

The widespread concern in Government and civilian life over the present status of our transportation systems is evidenced by the many statements relative there to which appeared in the CONGRESSIONAL RECORD in the session just concluded. That there is need for concern is unquestioned.

The continued physical and economic good health of the transportation industry is of paramount importance. Unless we have adequate transportation in all modes to sustain both our military activities and our civilian economy, in event of an emergency, we will be like unto a living body with a ruptured aorta—our life blood slowly but surely running out. Indeed, the bell will be tolling for us.

Since I had the privilege of serving as ranking minority member of that subcommittee, I am acutely aware of the material presented there reflecting the situation that confronts us. I must say that I am profoundly disturbed at the picture that emerged during these hearings. It was distinctly sobering to learn that, despite our tremendous advances in all fields of industrial endeavor, we would assuredly experience vital shortages in transportation if confronted with other than a very limited military engagement. In the event of nuclear attack, "we would make do with what we have left."

Mr. Speaker, while we have concentrated on providing ourselves with the niceties of pleasant living, we have disregarded the hard core of our transportation existence—the railroads.

It is all to the good to be able to fly from New York to San Francisco between mealtimes, but this capability cannot supply the wheat and corn for our tables, the ore for our steel mills, or the coal for our industrial processes. Even the trucking industry, which has made such great and admirable strides in those fields formerly almost exclusively served by the railroads, will be at a distinct disadvantage in time of emergency because of its far greater dependence on fuel, manpower, and rubber.

The private automobile, which now accounts for approximately 90 percent of intercity passenger-miles in the United States, has become like a third leg to the people of this country because of the flight to suburbia. But what is to become of those workers when tires and gasoline are in short supply? How will they get to their jobs in the mills, the factories, the food-processing plants, and the offices? Without them, our military machine and the flow of our bread of life grind to a halt. The bell will have begun to toll.

No one will allege, least of all those directly concerned with the operation of the railroads, that each mode of transportation does not have a place in the scheme of things. In peacetime each can be counted upon to serve in that field where its special talents can fill a special need. But in time of emergency when vital materials for operation can be expected to be in short supply, we will necessarily have to look to that mode of transportation which can best do the overall job in the most economical and efficient manner.

Past experience has taught us that we have historically looked to the railroads to handle the increased load. During World War II, railroads shouldered the burden of war-swollen traffic, transporting over 90 percent of all military freight traffic and 97 percent of all organized military passenger movements. Our wartime experiences in the field of combat, both in World War II and in Korea, vividly pointed up the astonishing durability and recuperability of a rail line; its resistance to disabling damage or destruction, and its ability to make a quick comeback to volume operation.

Although we have been blessed by not having to cope with war or war-damage within the continental United States, in the memory of living man, the recent developments in weapons delivery capacity make this a not unreasonable likelihood.

It behooves us, therefore, to know just where we stand on this most vital question. What is the present physical and economic health of the railroads? Will the railroad industry be able to accomplish the mission it will be called upon to accomplish and, if not, why not? The following excerpts from the aforementioned report provide answers reflecting a situation which, if allowed to continue, must, assuredly, be viewed as a prelude to the tolling of the bell:

EXCERPTS FROM THE REPORT OF THE SPECIAL SUBCOMMITTEE OF THE COMMITTEE ON ARMED SERVICES, HOUSE OF REPRESENTATIVES, ON THE ADEQUACY OF TRANSPORTATION SYSTEMS IN SUPPORT OF THE NATIONAL DEFENSE EFFORT IN EVENT OF MOBILIZATION, OCTOBER 10, 1959

Transportation is one of the tools required by civilized man to bring order out of chaos. It reaches into every phase and facet of our existence. Viewed from every standpoint, economic, political, and military, it is unquestionably the most important industry

in the world. You can no more operate a grocery store or a brewery than you can win a war without transportation. The more complex life becomes, the more indispensable are the things that make up our transportation systems.

The history of transportation is the history of adjustment to new situations that are constantly arising in a dynamic economy. Knowing its importance, one would expect that this great industry would be striding forward with giant steps to keep pace with all of the incredible achievements of our times. On the contrary, the picture that emerged from our hearings was one of a plethora of outdated and outmoded equipment, deferred maintenance, inadequate highways, depressed earnings, claims of unfair tax regulations, favored treatment of one mode over the other by subsidization, and the like, all of which reflected an unenviable state of suspended animation, detrimental to the economy and dangerous to the defense of the country.

Each mode of transportation had its complaints, both against competing modes and regulatory practices, and none presented the dynamic outlook and hope for the future that should prevail in this era of fantastic progress. The representatives of each of the modes of transportation devoted much time to indicating why theirs was the best, fastest, most economical in the use of fuel and manpower, and like reasons for indicating that each was the indispensable mode.

Despite the complete reliance of or economy and defense on all modes of transportation in varying degrees, no one deemed it necessary or desirable to concern himself with suggestions that might work to the benefit of all, economic and defensewise, through the cooperative actions of each mode, one with the other.

We do not wish to leave the impression that the fault is all with representatives of transportation. On the contrary, the Government bodies most concerned with the health and economic well-being of transportation showed all too little regard for this situation. They tended, rather, to view the present condition of transportation as adequate to perform the task it may be called upon to accomplish, with some possible soft spots. There was no indication of any new thinking in this field but rather an obvious dependence on past experiences for guidance.

All in all, it was a picture of obsolete equipment, 19th century economics and laws and antiquated thinking.

The railroad industry which at one time enjoyed a virtual monopoly in intercity commercial passenger transportation, has seen its position deteriorate in the past two decades from 67.8 percent in 1939 to about 31 percent in 1958 of the total for-hire transportation in this field.

As might be realized with a decline in the amount of passenger transportation there has been a similar decline in the means of such transportation; that is, pullmans, coaches and those items of railroad equipment necessary to a successful and efficient operation of long and short-haul passenger service.

Total ownership by class I railroads and the Pullman Co. of passenger carrying cars declined from 30,052 (seating capacity 2,163,744) in 1939 to 18,577 (seating capacity 1,226,082) in 1958. During this period there has been a similar decline in the appurtenances of passenger traffic, such as dining, lounge, club and baggage cars and the like. Despite increases in such items as cars per train, passengers per car and train, miles per active locomotive-day, passenger train speed, car-miles per train hour, and car- and passenger-miles per train hour, all of which would be expected to induce an increase in the use of this mode of travel, nevertheless the decline has been steady and continuous. In the field of commutation traffic, however, the number of passengers in 1958 was slightly more than in 1939.

No consideration of the capability of the railroads to transport passengers would be complete without a review of the condition of its equipment. Poor condition thereof would, admittedly, limit its capability.

According to data supplied to the committee, the average age of passengers cars, owned or leased by class I railroads and the Pullman Co. as of January 1, 1958, was 28½ years; more than 53 percent are over 30 years of age and only about 15 percent were purchased within the past 10 years.

With the retirement of passenger cars greatly exceeding installations of new equipment in ever increasing numbers and the total in need of repairs decreasing only slightly (from 9 percent of cars owned in 1939 to 8.1 percent in 1958), the ability of railroads to handle a substantial number of additional passengers is highly questionable.

As in the passenger field, the railroad industry portion of the total intercity ton-miles in the United States, has declined from 62.4 percent in 1939 to slightly over 45 percent in 1958. This loss has been accounted for by an increase in the percentage, of the total ton-miles, of the motor trucks and oil pipelines, which in the same period have almost doubled their aggregate percentage participation.

Despite this decline in railroad freight ton-mile haulage, the total number of freight cars of all class I railroads has not varied drastically in the past two decades. In fact, there has been a general upward trend, especially since 1950, in aggregate and average tonnage capacities. The retirement of old cars, the rebuilding and modernization of old cars, and installations of new ones, while it has varied from year to year due to changes in traffic and earnings, has not materially affected the total number of cars on hand. The percentage of cars in need of repairs, which as of December 31, 1958, was 7.1 percent, while higher than in any other year since the beginning of World War II, is considerably lower than the 12.8 percent which were in need of repair in 1939. The average of all freight cars is 18.9 years.

Due to the fact that shipments by rail of many commodities are seasonal, there exists during the year periods of surplus and shortages in cars. Here again, there has been a great variance from year to year but the amount of variance, in recent years, has been much less than existed at the start of World War II.

All of the above factors are considered vital to the existence of a transportation system in being which will be able to support the demands placed upon it.

From a system that was almost wholly operated by steampower, the railroads have, in the past two decades, converted almost 100 percent to diesel engines. From a total of 42,511 units of motive power in 1939, there has been a decline to 29,560 in 1958. However, the greater efficiency of this new type of power is reflected in the fact that the active freight locomotive average daily mileage increased from 104 miles per day in 1939 to 141.6 miles per day in 1958. In addition, the net ton-miles per train-hour, one measure of efficiency of railroad haulage, has increased slightly more than 100 percent since 1939.

According to statistics furnished the committee by the Pennsylvania Railroad, the past two decades has witnessed a decline in miles of road and miles of track as well as the number of train-miles operated per mile of track. This is accounted for by a program of road abandonment, undertaken by the railroads to ease their financial plight, which, in the period since World War II, has averaged about 600 miles of road abandoned per year.

Utilization of main-line track in recent normal years has averaged about 75 percent of the peak utilization in 1944 and on some rail lines is considerably less.

The hidden factor, as in the case of rolling stock, is that of deferred maintenance, a program which exists on the railroads because of their undesirable financial condition. If a program is initiated promptly to reduce this factor and to keep it current, road facilities will be adequate to handle an expanded amount of traffic.

Since World War II the railroads have increased the basic capacity of their line and terminals in a number of ways. They have increased the average weight of rails and the other elements which allow the carriage of heavier loads. They have installed additional miles of centralized traffic control and other systems which enable trains to move more frequently and with less interruption over a given line. They have built or modernized classification and terminal yards, permitting trains to be assembled and classified in greater volume and at faster rates. All of these basic improvements allow for heavier and longer trains which can run, if necessary, at more frequent intervals. The result has been a large increase in basic plant capacity over that of World War II or any previous period.

However, the railroad industry has not shared proportionately in the Nation's general economic growth and prosperity during the postwar years.

The railroad share of the total of public and private intercity ton-miles has declined steadily year by year, dropping from 67 percent in 1945 to 45 percent in 1958. Throughout the period, earnings have been uneven and relatively low.

Because of these low earnings, the railroads now are in a position quite different from that in which they found themselves in 1940. At that time, the railroad industry owned substantially more cars than they needed to cover prewar requirements. With that surplus and their unique ability to expand their capability without a proportionate increase in fuel, manpower, and equipment, the railroads were able to amass the record set by them in World War II. Today, the railroad industry does not have the reserve equipment necessary for such expansion despite new capital expenditures totaling more than $14 billion since the end of World War II.

CONCLUSIONS AND RECOMMENDATIONS

Recommendation No. 3

According to testimony received by the committee, the main reason for such shortages is financial. Many suggestions were offered for relief of this situation which should be given serious consideration. The main suggestions were as follows.

"(c) fully self-liquidating Federal equipment plan to lease rolling stock to the railroads; (d) change in law regarding agricultural commodities' exemption (either eliminate the law or make all carriers subject thereto); (e) change in depreciation allowance for rolling stock, equipment, and fixed facilities of the railroads; (f) establish provisions for a construction reserve; * * * (h) tax relief—Federal, State, and local."

Concerning these suggestions, the following recommendations are made:

"(c) This is in line with the provisions of H.R. 1365, introduced on January 7, 1959, which was referred to the Committee on Ways and Means. It is the recommendation of this committee that the Committee on Ways and Means give early consideration to H.R. 1365, acquaint itself with this report and the data developed in these hearings.

"(d), (e), (f) It is the recommendation of this committee that since these suggestions are within the jurisdiction of the House Committee on Interstate and Foreign Commerce, the committee and the Interstate

Commerce Commission, within the scope of the latter's authority, should give serious consideration thereto in line with the declaration of the national transportation plan of providing "* * * for fair and impartial regulation of all modes of transportation * * * to the end of developing, coordinating, and preserving a national transportation system by water, highway, and rail * * * adequate to meet the needs of the commerce of the United States, of the postal service, and of the national defense. * * *

"(h) This suggestion has considerable merit and potential for immediate financial relief within the transportation industry. This is particularly true in the case of the railroads, for that segment of the industry, except for the pipelines, is alone in providing and maintaining its own rights-of-way. The railroads also provide their own terminals and other fixed facilities as do some other segments of the transportation industry."

In all, these fertile areas for taxation by governments, Federal, State, and local, are taxed to the extent that the levies placed thereon have become an oppressive burden operating to the detriment of the railroad industry in particular and to the economy in general.

In hearings by the ICC beginning in March 1956 relative to the railroad passenger deficit, the matter of such taxation, as it affected the whole of the railroad industry, was fully explored. On May 25, 1959, a report was released by the ICC which contained in addition to others, the following recommendations:

"(1) That Federal tax laws be amended to encourage local and State tax relief, at least to the extent of disregarding State- and local-provided pretax net income for Federal tax purposes.

"(2) That State and local governments take such steps as may be required to effect a greater degree of equity in respect to tax burden on railroad property in relation to taxpayers generally and consistent with the desire of their communities for retention of commuter and other passenger train service."

The committee is in agreement with these suggestions and recommends prompt action by those having responsibility therefor.

Recommendation No. 5

It is obvious from the testimony received in these hearings that the policies of the Federal and State Governments in providing roads, air terminals, waterways developments, and other means of assistance to transportation, have operated to the advantage of those forms of transportation, which advantages are not available to the railroads.

It is noted that the House Committee on Interstate and Foreign Commerce has, by reason of its jurisdiction, a continuing interest in the national transportation situation. The contents of this report and data set forth in these hearings are recommended to the consideration of the House committee.

Small Business Would Be Helped by Preventing Below-Cost Sales

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. ROOSEVELT. Mr. Speaker, the gentleman from Texas [Mr. PATMAN] is to be heartily congratulated on the introduction of his bill, H.R. 10235 about which he spoke yesterday. It is a privilege to be able to join in this cause by introducing a companion measure.

At the outset it should be made clear that this bill is in no way a fair trade bill, but is designed primarily to halt a practice known as loss-leader sales.

Annual Legislative Questionnaire

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. WILSON. Mr. Speaker, last December I mailed 100,000 annual legislative questionnaires to registered voters in the 30th Congressional District of California. My staff of volunteers in San Diego has just completed a careful compilation of the thousands of replies we have received to date. Returns are approaching the 20,000 mark, which means we have obtained opinions of a substantial cross section of registered voters.

As a means of adding interest to the legislative questionnaire, I added a presidential preference poll. The related standings of Vice President NIXON at the top and Gov. Pat Brown at the bottom of voter preferences in the Democrat column is most significant.

Under unanimous consent, I include the legislative questionnaire as a portion of my remarks:

QUESTIONNAIRE

Do you believe:

1. The Eisenhower-Nixon-Khrushchev meetings have started a thaw in the cold war? Yes, 68 percent; no, 32 percent.

2. Our foreign aid (mutual security program) should be continued in its present form? Yes, 39 percent; no, 61 percent.

3. Foreign aid (mutual security program) should be increased? Yes, 17 percent; no, 83 percent.

4. Foreign aid (mutual security program) should be decreased? Yes, 64 percent; no, 36 percent.

5. The House of Representatives should continue the Un-American Activities Committee? Yes, 83 percent; no, 17 percent.

Do you favor:

6. Continuing foreign economic and technical aid to friendly underdeveloped countries? Yes, 85 percent; no, 15 percent.

7. The United States diplomatically recognizing Red China? Yes, 23 percent; no, 77 percent.

8. An income tax reduction at the risk of defense cuts? Yes, 18 percent; no, 82 percent.

9. Allowing parents to deduct from their income tax tuition paid on behalf of their children to institutions of higher learning? Yes, 59 percent; no, 41 percent.

10. Enactment of Federal legislation to tighten taxation of cooperatives? Yes, 79 percent; no, 21 percent.

Do you believe:

11. The Landrum-Griffin Labor Reform Act is just and fair to the rank and file? Yes, 79 percent; no, 21 percent.

Are you a union member? Yes, 21 percent; no, 79 percent.

12. The $1 Federal minimum hourly wage should be raised? Yes, 52 percent; no, 48 percent.

13. More federally administered programs should be turned back to the States? Yes, 73 percent; no, 27 percent.

14. That agricultural price supports should be reduced? Yes, 85 percent; no, 15 percent.

15. That agricultural price supports should be eliminated? Yes, 63 percent; no, 37 percent.

16. That postal rates should be increaesd again to allow the Post Office Department to operate in the black? Yes, 53 percent; no, 47 percent.

17. The limitation of $1,200 outside earnings a year for those receiving social security benefits should be raised? Yes, 78 percent; no, 32 percent.

Should we:

18. Give the President the right to veto or accept specific items in appropriation bills. (Now he has to accept all or nothing.) Yes, 87 percent; no, 17 percent.

19. Try to put a man in space before Russia, regardless of the cost? Yes, 19 percent; no, 81 percent.

20. Spend more money on defense? Yes, 47 percent; no, 53 percent.

Do you favor:

21. Federal aid to education rather than local taxation and administration. Yes, 35 percent; no, 65 percent.

22. Emergency Federal aid to schools in areas hit by impact of defense activity. Yes, 83 percent; no, 17 percent.

23. A national fair trade law? Yes, 52 percent; no, 48 percent.

24. Medical care for social security beneficiaries, to be financed by increased social security taxes? Yes, 56 percent; no, 44 percent.

25. GI educational benefits program for peacetime veterans? Yes, 32 percent; no, 68 percent.

If the 1960 presidential election were held today, whom would you vote for?

[Percent]

	Republican	Democrat	Independent
Richard Nixon	89.5	31	55.5
Nelson Rockefeller	6.0	8	22.0
Hubert Humphrey	----------	5	1.0
Lyndon Johnson	1.0	7	1.0
John Kennedy	1.5	20	10.0
Adlai Stevenson	1.0	18	9.5
Stuart Symington	1.0	7	1.0
Pat Brown	----------	4	----------

Health Services Study Commission

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. JAVITS. Mr. President, the Medical Society of the State of New York is one of the most important medical agencies in my State. It enjoys a membership of 25,000 physicians whom it keeps informed regularly by a monthly Newsletter. Its membership has been following the hearings on the problems of the aged with close attention. The society has voted approval and support for Senate Joint Resolution 43, which I have sponsored, providing for the establishment of a Health Services Study Commission. Under this bill, a commission would be established to study and

propose legislative and other solutions to deal with the health needs of our citizens, with particular emphasis on the needs of groups like the aged, unemployed, mentally diseased, and low-income families.

I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the society's Newsletter, dated January 15, which contains a report of the resolution adopted by the council of the society.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

At its December 17 meeting the council voted approval and support of Senate Joint Resolution 43, introduced by Senator JACOB JAVITS, which would establish a Health Services Study Commission to determine the needs of citizens with special attention to certain groups, for example, the aged; and that the Senator be so informed. Voted also that a copy of the council's action be sent to the AMA.

Defender of the Shores—Arleigh Albert Burke

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. ANDERSEN of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD I am including an article published in the New York Times, Tuesday, February 9, 1960, entitled "Defender of the Shores," a tribute to the Chief of Naval Operations Adm. Arleigh Albert Burke. Admiral Burke is a man whose training, background, and devotion to the defense of our Nation calls for the most serious consideration to be given his counsel.

We look to men like Admiral Burke to conduct our defense in time of war, and in the interests of peace we should weigh carefully their recommendations. The views of Admiral Burke have been laid before us, and it will be helpful to our appreciation of his advice to recall his great record as set forth in the following article:

DEFENDER OF THE SHORES
(By Arleigh Albert Burke)

The Navy's needs and policies are being defended before Congress by a no-nonsense officer whose reputation for fast and decisive action has spread far outside service circles.

Admiral Arleigh Albert Burke once answered, when asked what the difference was between a good naval officer and a poor one: "About 10 seconds." The reply helps to show why he won the nickname in World War II of "31-Knot Burke." Word went through the Navy that whenever he was ordered into action with his squadron of destroyers, the confirmation came back: "Coming in at 31 knots"—a bit better than the rated top speed for most destroyers of the day.

His zest for action and his zeal for the Navy have marked his whole career. Captain Burke's name was stricken from the 1949 promotion list because he was suspected of having leaked information to the press in the bitter propaganda battle between the Navy and the Air Force. It was restored, as a result of general criticism; and there never has been evidence that he had gone beyond legitimate defense of the Navy position.

Captain Burke was made rear admiral, and in 1955 President Eisenhower reached over the heads of 91 officers senior to him to make him Chief of Naval Operations, a four-star admiral.

Since then he has zealously pressed for the Navy's needs. In testimony yesterday he told a Senate subcommittee that the Navy planned to seek funds for six more Polaris submarines.

He is a husky 5 feet 11 inches and 200 pounds. His eyes are still bright blue, though his sandy blond hair is greying. His manner is calm and his voice soft.

When the admiral is not working, he likes to relax with his pipe and read. But his reputation in Washington is for working nearly all the time, with a spell in his Pentagon office even on Sundays.

BORN IN COLORADO

Arleigh Burke was born on a farm near Boulder, Colo., on October 19, 1901, the eldest of six children. The family is not Irish, but a simplification of his Swedish grandfather's name, Bjorkegren, which Americans found a little hard to handle.

He entered the U.S. Naval Academy in the class of 1923. Contemporaries there have reported that Midshipman Burke was known as Billie (in tribute to the actress). They said he was noted for his capacity for vanilla ice cream and hotdogs. Even today, he is said to be unusually addicted to hotdogs as a lunch at his desk on busy days.

He was graduated number 70 in a class of 414, and the day after graduation married Roberta Gorsuch, whom he had courted for 4 years.

He received a master's degree in chemical engineering at the University of Michigan and when World War II started, he was on duty at the Naval Gun Factory in Washington. His urgent pleas for combat duty got him first a sharp reprimand from his chief and then command of a destroyer division.

Destroyers were his love, and in them he made a brilliant reputation. Apart from "31-Knot Burke," he was known as "king of the cans" (can being naval slang for a destroyer).

By the end of the war, he had won every decoration for valor that the Navy could give except the Medal of Honor.

SERVED WITH MITSCHER

As Commodore Burke, he ended the war on the staff of Adm. Marc A. Mitscher, commanding Carrier Division 3 and, in 1946, as Captain Burke he was one of those assigned to make an exhaustive, top-secret study of the potentials of modern war—what might be developed and how.

During the Korean war, he saw sea duty again as commander of a cruiser division and then played a prominent part in the cease-fire negotiations.

He was a rear admiral and commander of destroyers in the Atlantic when the President picked him for the Navy's No. 1 job. He was deluged with letters from both enlisted men and officers hailing the choice.

What's Fair in Campaign War?

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Evening Star of February 1, by David Lawrence. With his usual discernment, Mr. Lawrence comments upon political ethics.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S FAIR IN CAMPAIGN WAR?—DEMOCRATS HIT FOR ATTACKING SPEECHES BY DEFENSE CHIEFS AT GOP DINNERS
(By David Lawrence)

Is the Democratic Party to continue to attack the Republican administration on the subject of defense policies, missiles, and outer space problems while urging that the Republican Party be deprived, in effect, of an opportunity to make authoritative replies?

This question is asked because of the nature of certain statements which have all the earmarks of having been prepared by the Democratic publicity experts, though issued in behalf of two Democratic Senators. One statement says that the appearance of top Defense Department civilian officials as speakers at a Republican fundraising dinner was "unethical and beneath the dignity of this administration." Another Senator is quoted as accusing the administration of a "callous disregard of even the most elementary proprieties," and his statement adds:

"In view of the 40-odd billions of defense contracts to be let to our big businessmen by the officials of the Department of Defense, it is not surprising that in one evening the Republican Party should be able to collect $7 million for the next campaign. * * * In due course * * * many more millions are to be expected. This is just the initial downpayment to get the ball rolling."

The implication is that only defense contractors attended the $100-a-plate dinners in 82 cities last week, which, of course, is not true, since a total of more than 100,000 people were there.

For several months now Democratic Senators and Representatives have been getting headlines by crying out that the United States is weak in defense and that there is a dangerous gap between this country's Armed Forces and the Soviet Union's. This issue now reached into the political campaign.

So the other night the Republicans decided to make reply. They lined up their top civilian officials from the Defense Department to speak at a coast-to-coast dinner over closed-circuit television. The persons in the audiences were for the most part the influential Republicans who are expected to debate with the opposition at the grassroots every issue of the coming campaign. No better opportunity for the Republican administration to tell its story to its own supporters could have been devised. Yet when the Republicans publicly endeavor to give authoritative information direct from the administration officials in the Defense Department, they are immediately accused of being unethical.

It may be questioned just what is ethical or unethical about dragging the defense problem into politics, and who, after all, started the partisan treatment of the defense problem? It might also be asked if any of the Democrats have received inspiration, financial or otherwise, from those defense contractors who either want bigger appropriations or are resentful because some of their contracts have been canceled. One thing is certain, the beneficiaries of defense work are by no means confined to one party.

It would be much better, of course, if the Defense Department were kept out of politics altogether, but such a rule should apply to both parties. It will be recalled that in the presidential campaign of 1948, the late James Forrestal, Secretary of Defense, was insistent that the Defense Department keep out of the campaign. While President Truman concurred at the time, the resentment produced

among Democratic Party leaders was such that it contributed to the effectiveness of the cabal that set out after the election to force Mr. Forrestal from his post.

It will be recalled also that, in one campaign in which the late Franklin D. Roosevelt was a candidate for Vice President, there was sent out over his signature a circular letter soliciting campaign funds from defense contractors who had benefited by projects in World War I, when he was Assistant Secretary of the Navy.

If the campaign records are researched, moreover, it will be found that contributions from individuals working for companies that have defense contracts are not out of proportion to those from individuals employed by companies in other lines of business.

If those groups benefiting from governmental funds or legislation are to be estopped from contributing to presidential campaigns, then the Democratic Party might be the greater loser. Many millions of dollars are collected by the Democrats from labor-union members and blocs which are putting pressure on Government for favorable legislation and appropriations.

Some of the most outspoken critics of the administration in Congress have received large sums in their election campaigns from such sources, and one has yet to hear any criticism from Republicans declaring it unethical for leading Democrats in Congress to be addfessing the conventions and local meetings of these organizations or pressure groups. Nor have former officials of the Defense Department, who held office under the Democratic administration, hesitated to make speeches at fundraising dinners where presumably there are those present who might benefit financially if a Democratic administration is elected next November.

Fair play would seem to require that defense contractors not be singled out as any more unethical if they attend dinners given by political parties than are other businessmen. To imply that the total sums received from everybody who bought a ticket to a fundraising dinner given by the Republicans is "an initial downpayment" from defense contractors and doesn't mean the same thing when contributed on the Democratic side is a bit of rationalization that doesn't sound like fairplay.

Layers of Fat in the Defense Budget

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. McCORMACK. Mr. Speaker, under leave to revise and extend my remarks I place herewith in the RECORD an editorial from the Washington Evening Star of February 4, 1960, entitled "Fat in the Defense Budget."

This editorial deals with important hearings held b ythe Joint Economic Committee on January 28, 29, and 30, 1960, on the subject of "Impact of Defense Procurement on the Economy." This is a most important subject for investigation by that committee when one considers the extent of the Department of Defense procurement expenditures.

According to a recent report of the Attorney General the armed services procurement actions from 1950 to 1959 totaled some 38 million separate transactions having a volume of $228.4 billion.

According to the same report expenditures for fiscal 1959 excluding certain important elements amounted to $22.873 billion.

We find also, Mr. Speaker, that—

First, the current rate of defense expenditures is $45.7 billion or 58 percent of the total Government expenditures—or about 10 percent of our gross national product.

Second, according to the Attorney General 86.4 percent of military procurement by volume was by negotiated contracts in fiscal 1959.

Third, the percentage of the riskless cost-reimbursement type contracts have increased by volume from 12.7 percent in 1951 during the Korean conflict to 40.9 percent in fiscal 1959.

Fourth, the 100 largest defense contractors received 61.2 percent of the contracts by dollar volume during fiscal 1951.

Fifth, the 100 largest received 73.8 percent of the business for fiscal 1959.

Sixth, the 10 largest received 37 percent of the business during fiscal 1959. They are General Dynamics Corp., Boeing Airplane Co., North American Aviation, Inc., General Electric Co., Lockheed Aircraft Corp., Douglas Aircraft Co., United Aircraft Corp., Martin Co., Hughes Aircraft Co., American Telephone & Telegraph Co.

Seventh, the Department of Defense supply systems contained $26.7 billion worth of surplus, excess, and long supply of personal property as of June 30, 1958. This is 76 percent more than our imports of merchandise of $15.2 billion for calendar 1959; 52 percent more than our total exports of merchandise for calendar year 1959 which was $17.6 billion.

Eighth, the estimated surplus disposal program for the Department of Defense for the current fiscal year will amount to approximately $10 billion or twice the average annual rate for the War Assets Administration during the period 1944–49.

Ninth, despite the O'Mahoney Act of 1952 and the McCormack-Curtis Act of 1958 which give the Secretary of Defense broad authority to integrate supply systems, the surface of the problem has merely been scratched to date.

Mr. Speaker, this is a most serious matter which many Members of the Congress, the Hoover Commission, and others have brought to the attention of the public for many years. As I stated in a letter to Secretary Wilson on October 24, 1955—the integration of common supply and service activities in the Department of Defense would yield sufficient funds to procure many things needed for the national welfare such as education, health, conservation, debt reductions, and even defense itself.

The editorial follows:

FAT IN THE DEFENSE BUDGET

Testimony before the Joint Economic Committee of Congress has made it clear that millions, or even billion, can be cut from the Nation's defense bill—without taking a dollar from funds earmarked for missiles or other military hardware. In fact, the money saved by elimination of budgetary fat might well be used to buy more military strength.

We refer to disclosures of continued wasteful duplication of services in the logistical field by the various Armed Forces. According to competent witnesses before the committee, the defense agencies have made little progress in eliminating duplication and overlapping of many supply and related services since the Hoover Commission called for centralization of procurement and supply activities. It has been estimated by members of the Hoover Commission that some $2 billion might be saved the taxpayers by centralization.

Controller General Joseph Campbell cited to the committee a number of glaring examples of blind buying and selling by military departments that, but for action by his office, would have cost the Government millions of dollars. "In one case," he said, "we found that during the same period one service had a long supply and excess of aircraft engines and accessory parts available for interservice use, while another service was placing orders for identical items." In another case the Army planned to buy helicopter parts from private industry, although the Air Force had more than $6 million worth of the same items left over from a reduced program.

One of the persuasive critics of military waste was Perry M. Shoemaker, railroad president and vice chairman of the Committee of Hoover Commission Task Force Members. He pointed out that although Congress has authorized the Defense Department to integrate supply functions, as recommended by the Hoover Commission, military officials seem reluctant to use the authority. Their only move so far, the committee was told, has been to set up a single-manager system for procurement of a few items used in common by the three services. Under this system one branch will purchase food or clothing or fuel or medical supplies for the other branches—but without information as to present stocks, usage rates, or other important details. Richard Newman, a staff member of the congressional committee, stressed that the particular service doing the buying cannot evaluate requests or take steps to redistribute excess stocks and reduce inventory investments.

Defense officials pointed to the single-manager system as proof of their concern over waste and their desire to cooperate in reducing overlapping of housekeeping activities. But Mr. Shoemaker and other witnesses declared that this was only a first step, a temporary expedient that is not a real substitute for a permanent centralization of purchasing and distribution functions in the Defense Department. And if, as the Hoover task force of outstanding businessmen and other specialists has asserted, billions of defense dollars are being wasted through uncoordinated procurement and supply management, it is time to put military buying on a businesslike basis and use the savings to build up our lagging weapons arsenal.

Amendment of National Defense Education Act of 1958

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Mr. John C. Lynn, expressing the views of the American Farm Bureau Federation in regard to S. 2929, to amend the National Defense Education Act of 1958 in order to repeal

certain provisions requiring affidavits of belief.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AMERICAN FARM BUREAU FEDERATION,
Washington, D.C., February 4, 1960.
The Honorable HARRY FLOOD BYRD,
U.S. Senate, Washington, D.C.

DEAR SENATOR BYRD: The American Farm Bureau Federation, representing the views of 1,602,117 member families in 49 States and Puerto Rico, is opposed to the passage of S. 2929 (KENNEDY, Democrat, of Massachusetts) which amends the National Defense Education Act by striking section 1001(f)(2), the provision requiring the disclaimer affidavit.

In considering this matter at our most recent annual meeting the voting delegates, representing the member State farm bureaus, developed the following policy:

"We favor the retention and enforcement of the requirements in the National Defense Education Act that recipients of Federal scholarships swear allegiance to the United States and file affidavits stating they do not belong to or support any organization intent on overthrowing the U.S. Government."

As you know, the American Farm Bureau opposed the passage of the National Defense Education Act on the grounds that it was unnecessary and that it would inject Federal control into our State and local educational programs. Farm Bureau favored the adoption of the Senate amendment that established the loyalty oath and disclaimer affidavit. We sincerely believe that this provision of the Defense Education Act is necessary and important since the stated purpose of this act is to strengthen our national defenses.

We are convinced that the support for the elimination of the disclaimer affidavit does not come from American college men and women, but comes instead from college administrators and professors. American men and women who are truly deserving of defense scholarships welcome the opportunity to not only take an oath of allegiance to support and defend the Constitution of the United States but also take pride in complying with the disclaimer affidavit requirement.

The contention that S. 2929, if adopted, would still require recipients to take the same oath requirement as Members of Congress, armed services, Government, etc., is true; however, it must be kept in mind that persons in military service, Government, etc., are required to answer, under oath, numerous questions relating to their personal views and associations with any and all subversive elements. If their answers indicate a friendliness toward subversive elements, there is little likelihood that such persons will be considered acceptable for service. We reject the contention of the proponents of S. 2929 that the standard oath requirement, with the elimination of the disclaimer affidavit, would be as effective in establishing loyalty to the U.S. Constitution as is the system used by the military and others sworn to protect the Constitution of the United States.

We see no reason why recipients of scholarships or payments under the National Defense Education Act should be exempt from the present disclaimer affidavit.

We believe that every loyal citizen should be ready and willing at any time to assert his loyalty to the United States and to answer freely and unreservedly any questions affecting such loyalty, and that only citizens who do so should be eligible to receive the benefits provided by the National Defense Education Act. We, therefore, recommend that S. 2929 be defeated.

Sincerely yours,

JOHN C. LYNN,
Legislative Director.

Address by Hon. Paul J. Kilday at the Launching of the U.S.S. "John King"

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. VINSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address by the Honorable PAUL J. KILDAY, Member of Congress, 20th District of Texas, at the launching of the U.S.S. *John King* at Bath, Maine, on January 30, 1960. Mrs. Paul Kilday, the very charming and gracious wife of our distinguished colleague, christened this new guided-missile destroyer.

I know of no Member of Congress held in greater esteem by his colleagues than PAUL KILDAY. Because of his outstanding ability and unusual foresight, I believe every Member of Congress will benefit by reading this short address delivered by Mr. Kilday at the launching of the U.S.S. *John King*.

ADDRESS OF PAUL J. KILDAY, MEMBER OF CONGRESS 20TH DISTRICT OF TEXAS, AT LAUNCHING OF U.S.S. "JOHN KING"

Our Military Establishment is in a period of transition. The development and introduction into our Armed Forces of rockets, missiles and nuclear power creates a new war potential.

Transition from convential weapons to new weapons is not new in our Military Establishment. Inevitably, the new weapon is spectacular when compared to older concepts. They capture the imagination of the people. Our people have always been willing to translate the effect of such new weapons into wishful thinking. Each new weapon produces the hope that any future war will be most destructive of our enemy and practically bloodless for our own forces. Of course, such a day will never come.

In each transition the service carrying it on has faced the necessity of continued operation and maintenance of the conventional while developing and procuring the new. This is always most costly. It is, therefore, necessary to resist the clamor to do away with the conventional, even before the new weapon is on hand and operational.

The advent of nuclear weapons and their delivery by unmanned intercontinental ballistic missiles (ICBM) and intermediate range ballistic missiles (ICBM) differs from prior transitions in two respects. First, they are more spectacular than anything which the mind could previously conceive; and, second, they are fantastically expensive.

Some military men, in pointing out the necessity for and the devastating effect of these ballistic missiles in an all-out nuclear war, have, unfortunately, led the people to believe that all conventional weapons are obsolete. Sometimes I fear that, in their enthusiasm, they have convinced themselves that such is the case.

Such an atmosphere has made the maintenance of a force in being more difficult. Talk of 20-minute war has tended to obscure the more likely eventuality of a limited as distinguished from all-out nuclear war. Not a limited war which could ignore all of the progress which has been made in rockets, missiles and atomic weapons, but a war utilizing all of these developments—a war in which rockets, missiles, and atomic weapons of limited destructive force and of tactical application would be used.

Today a new destroyer will be launched and in due time will be commissioned and become a part of our naval fleets. Such a launching is always a significant occasion and one in which ancient traditions are observed. However, the real significance of this day lies in the fact that the *John King* is a guided missile destroyer. It utilizes conventional guns and torpedoes, but also combines the use of missiles with tremendous surface-to-air range and rockets effective against submarines.

The *John King* is, therefore, the realistic balance of the old and the new. It is the realistic application of the family of weapons. It is another strong link in the chain of defense against assault from the air or the very real submarine menace.

The *John King* is evidence of sound planning for present and future potential dangers. We launch her with every best wish for a fair breeze on all the seas she may sail. We shall feel more secure because she rides the waves with her guns, torpedoes, rockets, missiles, and sonar, ever ready. Through her life our prayers go with her that none of her weapons will ever be fired in anger. We are confident, too, that her existence renders that possibility more remote.

The Favorite Story of Representative Joe L. Evins

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. GORE. Mr. President, the CONGRESSIONAL RECORD is mostly filled with serious matter. I must accept and I do accept my share of the responsibility for burdening the RECORD with serious subject matter, particularly since I spoke for about 3 hours yesterday on nuclear weapons policy. It has occurred to me that it might serve well to have printed in the RECORD an amusing anecdote reported by a great reporter, newspaperman, and gentleman, Elmer Hinton, whose home is in Portland, Tenn., in an article published in a recent issue of the Nashville Tennesseean. Perhaps a reading of this delightful article may lighten and brighten the day for those who here labor and for those who may read the CONGRESSIONAL RECORD. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FAVORITE STORY OF REPRESENTATIVE JOE L. EVINS

(By Elmer Hinton)

The favorite story of Representative JOE L. EVINS, of Smithville, is of an incident which he says brought him a newly-found humility.

The Fourth District Congressman had been in office a few years and was running for reelection. He figured he had a right good acquaintance with the voters of his district.

One day he was driving along the road when he picked up a hill farmer who wanted a ride into the county seat town.

Congressman EVINS told the old man he was a candidate for reelection to Congress.

"Aw, I know you," said the old farmer, flashing a toothless grin. "You air ALBERT GORE."

"No, I'm not ALBERT GORE," EVINS replied, "although we are neighbors and good friends."

"Uv course," the old farmer said. "I shoulda knowed all the time—you air Ross Bass."

Trying to be more direct, the Smithville lawmaker said:

"No, I'm Edgar Evins' son, of Smithville."

"Aw, now I know who you air," the hillman replied, "you air the feller what has them walkin' horses."

Again Congressman EVINS had to tell the old man he was mistaken, that he was thinking about his brother. With that explanation the grizzled farmer smiled with complete recognition.

"Well, bless my soul," he said, "I gotcha straight now. You air Judge Smartt's son-in-law."

Which he is.

The Future of the Mississippi Valley

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. EDMONDSON. Mr. Speaker, the Mississippi Valley Association, meeting Monday in St. Louis, heard its president, Mr. Donald O'Toole, give an excellent and highly informative report on "The Future of the Mississippi Valley," and this speech contained a wealth of information which should be of great interest to every American interested in the economic growth of this country.

Mr. O'Toole, after pointing up in positive terms our tremendous future needs for water and for water development in this country, stressed that our rate of construction for our waterways has been lagging badly. For example, he points out that "During the period 1950–58, national income increased 51 percent, population increased 16.6 percent, costs of construction increased 66 percent, and Federal appropriations for waterways improvements decreased 9.6 percent."

Mr. Speaker, in view of this Nation's tremendous population growth and in the light of our tremendous future requirements in every field of water resources development, we cannot, as Mr. O'Toole points out, afford to restrain such expenditures within limits that are related to virtually no growth in population or international responsibilities.

On the contrary, one of our most urgent needs is the acceleration of our water resources development projects at the greatest possible speed. For example, acceleration of the Arkansas River Basin development program, which is now under construction by the Army Corps of Engineers, would do at least three important things.

It would lower construction costs to the Federal Government by millions of dollars.

It would give great economic impetus to the entire Arkansas River Basin area, unlocking its storehouses of natural resources and providing new markets.

It would enable the Nation as a whole to reap more quickly, and inexpensively, the economic benefits which would accrue by completion of this project.

Mr. Speaker, because I believe Mr. O'Toole's significant speech will be of tremendous interest to Americans everywhere interested in the development of our water resources, I should like to insert this report in the RECORD at this point.

THE FUTURE OF THE MISSISSIPPI VALLEY

The Mississippi Valley is the richest valley in the entire world. A great natural basin, it takes up most of central United States—all the land between the western slopes of the Allegheny Mountains and the eastern slopes of the Rocky Mountains, except for the relatively small north central portion which drains into the Great Lakes.

Into this basin pour the rivulets, creeks, and streams which collect the surplus rain and snow falling on its vast land and mountain areas. Converging together into small rivers, then larger rivers, these waters finally form the great Ohio River, the rich Tennessee, the mighty Missouri, the long and wild Arkansas, and other great rivers—all finally converging into the Father of Waters—the Mississippi River.

The Mississippi Valley is the heart and core of the United States, the wealthiest Nation in the world. Here are found practically all of the resources that account for the wealth of our country.

Here are the oil wells of Texas, Oklahoma, and Louisiana; here are the coalfields of Illinois, Kentucky, Tennessee, West Virginia; here are the vast corn and wheat fields of Kansas, Nebraska, the Dakotas, Iowa, and Illinois; here are the cattle and hog ranges and feeding lots of Texas, Oklahoma, Iowa, and Illinois; here are such great industrial cities as Chicago, Detroit, Pittsburgh, and St. Louis, where we unite the iron ore of northern Michigan, Canada, and South America with coal from the Mississippi Valley; here are the international seaports of Chicago and New Orleans, from whence the enormous production of this great valley moves out to the markets of the world.

The Mississippi Valley is the reason for the preeminence of the United States in world affairs, and its sole hope for maintaining that preeminence. Competition between nations today is not just warfare—it begins with economic competition, and final victory is determined by economic superiority. World War II proved that.

Wars today are wars between great nations, not small countries. They begin many years before the first shots are fired, and their preparations are long and deep indeed.

Those who are most concerned with a nation's defense must make certain that all of its products—agricultural, mineral, and manufactured—can be produced, assembled, and delivered better and faster than any other nation. Thus can victory be best assured—a victory which looks so certain to a hostile nation that no war ever breaks out. The first step in national defense is industrial and economic superiority.

Men produce and deliver goods according to the forces which drive them. We in the United States have the three greatest stimuli to achievement of maximum efficiency in production and delivery—democracy, private ownership of property, and the profit motive. Democracy enables each man to determine for himself what he can do best, and to unite himself with others in striking for his goals. Private ownership of property enables man to acquire his own tools and his own land to use as he knows best to achieve his goals. The profit motive challenges him to produce and deliver at lowest possible costs, so that he may fully enjoy the rich rewards of his personal efforts.

These stimuli—democracy, private ownership of property, and the profit motive—operating in this great and rich valley, should enable us to outproduce and underprice any other productive area in the world, as to those products which are indigenous to our land and resources. When the resources of this valley are properly utilized, and midwestern man is fully and completely harnessed to them, then production results which effects great prosperity, before, it has to be used for military defense. The successful defense of our country—of any country—begins with the development of a strong productive economy which meets its tests in world markets. The ability to outproduce and undersell other nations in a production economy as vast and complex as ours contains the entire ability to discourage other nations from tampering with us.

Nature has provided us with the rich natural resources of the Mississippi Valley. She has even blessed us with plenty of rainfall—30 inches per year—to give us the water to bring them into production. There remain just these things for Mississippi Valley men to do in using these natural bounties:

To unite, so that each man or body of men can join with his fellows, in achieving maximum development of natural resources, and minimum damage to one another.

To bring under control the things that Nature gives us raw and untamed; a wild and flooding river is as inexcusably useless as a strong mustang which has not been brought to bridle.

To conserve so that maximum continuous usage may be enjoyed; a great river that gets the same amount of water every year, but is permitted to range from raging floods to stinking dry beds, is as unforgivable to modern man as an electric generating plant that provides electric light by day and doesn't operate at night.

We have the capacities to unite and control these bounties of Nature, and unite we must. Not only does the whole Mississippi Valley depend on us—so also does our beloved Nation. Indeed, so does the whole world. For the efficiency with which we harness these resources into production and delivery determines the safety and prosperity of our Nation, and the peace and prosperity of the world, which will live better and more economically because we deliver our products into world markets at lower costs.

Water is the great catalyst that is vitally necessary to all of our production, assembly, manufacture, and delivery operations. Without water, nothing—literally nothing—can be produced. Whole nations lie barren and poverty stricken if they do not have water. Nations which have plenty of water, controlled so that it is available when and where needed—these nations can have the rich blessedness that we have in the Mississippi Valley.

Water must not only irrigate crops—it must also float valuable minerals to surfaces, and wash away useless scale. Water carries ships and barges which assemble raw materials for cooking, for melding, for fusing. Water cools the hot coils of industry, so that manufacturing operations can be carried on, and water catalyzes in the production of every kind of material you use—your suit, your fountain pen, your wristwatch, your car, all of these require billions of gallons of water in their manufacture; without water, 12 months per year, factories cannot operate. Water again carrying ships and barges enables delivery of finished products at lowest possible delivery costs. Water finally slakes the thirsts of the men who live everywhere, and carries away their wastes.

The network of the Mississippi River system is wonderfully suited to the performance of all of these tasks for its valley.

Steadily, year-by-year, rain and snow waters running into the Mississippi River system, flush down the great valley.

During the year, there are wide variances—sometimes nature floods us, sometimes she stops rain and snow for months. But she has constructed our streams and valleys so that they can be plugged, so that the basins of their valleys can be filled with water when it pours down, and then eked out through dams during the rainless months that follow.

Up to relatively recent years, such controls have not been needed. Our population and national security did not demand such intense use of our river waters.

But now the triple threats of an enormously growing population, a huge industrial economy with a ravenous appetite for water and a hostile enemy nation of great resources—these three threats call for careful planning and maximum utilization of our rivers. Just how are we measuring up to these responsibilities?

In the 55 years between 1900 and 1955, our daily use of water increased from 40 billion gallons to over 262 billion gallons, or over 6½ times; in the next 20 years it will again increase 191 billion gallons to 453 billion gallons, or 11.3 times what it was in 1900. Our supply of water—from nature—is just what it was in 1900.

Obviously we are going to have to adopt and enforce every possible means of conserving water. For nature isn't going to give us any more than she always has. We must catch it, save it, eke it out, and clean all pollution out of it so that it may be used over and over again as it descends downstream.

Facilities to do all these things can be installed at costs fully justified by the many and complex benefits they produce. A dam which holds up the descent of floodwaters not only protects the cities and farms in the valley below—it provides recreation, hydraulic power, a controlled and dependable stream on which towboats and barges move. A sewage disposal plant not only disposes of a homely problem—it also contributes to regulation of river levels; it enables recreational use of the river; it makes possible factories alongside of it. The river valley which was once barely populated because of the wrecking damage of a wild river becomes, when the river is dammed and controlled, a rich area marked by lush farms, busy industries and a healthy people.

But we have not been building these river facilities, much though they are obviously going to be needed. During the period 1950–58, national income increased 51 percent, population increased 16.6 percent, costs of construction increased 66 percent, and Federal appropriations for waterways improvements decreased 9.6 percent. If we apply the increase in cost of construction (66 percent) to the budget for 1950, we develop a requirement of $1.8 billion for waterways appropriations for 1960; the actual amount appropriated is about $1 billion.

Our appropriations for waterways improvements have been consistently lagging behind increases in population, national income and costs of construction. In spite of positive and undeniable estimates of enormous requirements by 1975 when our population will be 200 million people—over 21 percent greater than in 1955—Congress and the administration have consistently restrained expenditures on waterways within limits that are related to virtually no growth in population or international responsibilities.

It is just like owning a large industry and refusing to let management spend any money on research and development or on new plant and machinery. If you own stock in such a company, you had better sell out, because it's going to lose out—it's going to fail.

We cannot let this happen. We who have assumed responsibility for this Mississippi Valley must—for the good of our Nation—prevail upon our Government to spend the funds necessary to give the Mississippi Valley the plant and machinery it must have. If we are to have the waterway facilities we must have by 1975, there must be a minimum of $1.8 billion per year invested by the Government between now and then.

And we don't mean spent. We are talking about money invested by the Government in the tools and buildings of production, not spent for things having no enduring value. The salary paid the mailman last month for delivering your mail has no value in the future; the money invested in a dam will make it possible for goods to be produced and delivered cheaper for years to come. The funds we seek will lower total costs of production including taxes; failure to invest them will raise total costs of production including taxes.

With our rivers under proper development comes the need for knowing and understanding our markets. Here we who make up the Mississippi Valley are going to have to educate ourselves considerably beyond our predecessors.

For our production must go to far distant markets. We must hit those markets with the products they want and need, in the sizes, shapes and colors they want. We must get them to understand what we can do, and to place their orders with us.

We have, it seems, eight major markets for our production: The Central United States—largely our own Mississippi Valley; the east coast of the United States; the west coast of the United States; Canada; South American; Europe; Asia; Africa.

If we are to get the most out of these markets, we must begin to think about them, and set up continuous contacts with them. Just letting sales happen is not the American way. No business is any good unless you have to go out and get it.

Somehow, some way, we should effect the organization of a master chamber of commerce for the entire Mississippi Valley. Such an organization, representing all of the individual chambers of commerce which are now members of the Mississippi Valley Association, should undertake the promotion of all of their products, services, and resources.

It is a natural follow-up to the job of organizing the development of the valley's water resources. The basic objective in developing them is maximum production at lowest costs. When that is achieved, markets must be developed and retained.

Another organization should be formed to take over the task, or perhaps a new activity of the Mississippi Valley Association can do the job. If another organization is formed, then a lot of things are going to be done twice, and a lot of valuable material and resources will be developed and maintained at double costs. In any event, we should get on with the task, we who have sought to develop these production-making water resources. We should assure ourselves of our markets.

The future ahead of the Mississippi Valley is busy. It is a future of hard work, of long hours of thinking, planning, arguing, and selling. And it is a future of great prosperity.

Soviet Russia-Red China Relations

EXTENSION OF REMARKS

OF

HON. FRANK J. LAUSCHE

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, February 9, 1960

Mr. LAUSCHE. Mr. President, there has been much discussion, and it currently continues, on the subject of the "Two Chinas" policy. Recently, I have had the pleasure of reading two articles on this subject, written by Dr. Carsun Chang, and which were published in the Chinese World daily newspaper of San Francisco, on November 28 and November 29, 1959.

Mr. President, in order that Dr. Chang's views on this extremely important subject may be made available for reading by all Members of Congress, and others interested, I ask unanimous consent that Dr. Chang's articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

DR. CARSUN CHANG GIVES VIEW ON POSSIBLE "TWO CHINAS" POLICY

We have recently had five instances indicating that the United States has been considering a policy which recognizes two Chinas.

These instances are:

1. A court verdict stating that Formosa is not a nation.

2. President Eisenhower's use of the term, "the Republic of Formosa."

3. The State Department's explanation that "Republic of Formosa" really means the Republic of China which has its capital in Formosa.

4. The report that Mr. Eisenhower asked Premier Khrushchev if the Soviet policy toward Germany was not inconsistent with its policy toward China. If Germany is divided into two parts, why cannot China likewise be divided? In this talk between Mr. Eisenhower and Mr. Khrushchev there appeared to be a foreshadowing of a kind of Republic of Formosa.

5. The Conlon Report—which was published as a study for the U.S. Senate—proposing that Communist China be admitted into the U.N. by a series of steps; that it be given diplomatic recognition; that the Nationalist China Government of Taiwan be changed to the Republic of Formosa.

IMPLICATIONS

The two Chinas policy means then that Communist China will be admitted into the U.N., that it will be given diplomatic recognition by the United States, that it will trade with the United States, that it will have cultural exchanges with the United States.

This brings up a series of exceedingly complex and important considerations. If Communist China is admitted into the U.N., the Republic of China on Formosa must relinquish its seat in the Security Council. It is assumed that Formosa will keep her seat in the General Assembly. The consequence of this with all that it entails, is that the Republic of China will no longer be the Republic of China. Regardless of what name it may bear, it will be the Republic of Formosa.

THREE ASPECTS

I shall discuss three aspects of this policy: 1. Nationalist China. 2. Communist China. 3. The United States.

1. Nationalist China, whose Government is now restricted to Formosa, considers herself to be the legitimate Government of China. The millions of Chinese who came to Taiwan with the Nationalist Party expect that this Government will someday regain the mainland, and that they then will be able to return to their homes. The 15 million anti-Communist Chinese now residing in other parts of the world also hope for a unified, free China. They therefore give their support to the Nationalist Government, rather than to a divided China.

On the day that the two Chinas policy is proclaimed, the people of Formosa and the Chinese throughout the world will lose all hope of a unified, free China. The millions of Chinese now residing abroad will see no way out except in their complete support

of the Communist Government. The stability of the Government of Formosa itself will become a question. It is doubtful that Chiang Kai-shek will agree to continue as President of the Republic of Formosa. The so-called Republic of Formosa, in short, seems to be a phenomenon of uncertainty, except in one respect: it will cause trouble in that area and elsewhere.

2. Communist China has declared many times that Formosa belongs to her, despite the legalistic view of the United States that no treaty is valid which assigns Formosa to China. Communist China is adamant in its claiming of Formosa, and it will continue to be so.

WARSAW TALKS

The U.S. Government has been negotiating with the Communist Ambassador to Poland, for 2 years now, in an effort at finding a formula which would permit of China's renunciation of the use of force to attain a solution to this problem. Nobody seems to know whether or not such a formula can be developed. And, even if it can, it will be worth only as much as the paper on which it is inscribed. At her convenience Communist China will denounce it—and, eventually, renounce it. The desire to keep Formosa in the hands of the United States with the consent of Communist China is quite unrealistic.

3. From the U.S. point of view, Formosa is a link in the U.S. chain of military defenses. She hopes to keep it. If she thinks to keep it as a kind of protectorate, either as a Republic of Formosa or as an area under military rule, it can mean only colonization, and this will make her very unpopular among the nations of Asia. It will give Communist China more reason than ever before to accuse the United States of imperialism.

Some may then ask, "If this policy of two Chinas is impracticable, what do you propose in its place?" My answer is that the problem of China should be solved in accordance with the principles of justice and decency, and not for reasons of expediency. The United States should declare to the world that the Republic of China is an independent and sovereign country, and that mainland China was seized by a small minority of men trained by the U.S.S.R. against the will and contrary to the welfare of the Chinese people, with the purpose of furthering the cause of communistic enslavement of the world. It should be declared also that the American people do not wish to impose their form of government on China, and that they do not think that any kind of dictatorship is desired or supported by the Chinese.

DEMOCRACY

China should be democratic and under the rule of a multiparty system of government. This is the system that offers safeguards of liberty and progress which are not offered by the one-party system. The nature of each party should be subjected always to the scrutiny of the people. When a party is no longer worthy of popular respect and trust, it should be outlawed. The status of any group as a government party or opposition party should be decided by free elections.

China's foreign policy should embody friendliness toward all nations and permit of no destructive alliance with any nation against any other. China's economy should be developed in cooperation with all countries qualified and able to give such cooperation.

Multiparty politics, cooperative development of material and nonmaterial resources, cultural exchanges, friendliness toward all countries—these are forces which can produce incalculably good results for China, and in the long run for the world, if they are permitted to operate.

If the United States declares such an enlightened and practicable policy toward Free China, the people of Formosa and the millions of Chinese now residing abroad will give their support—and so will the millions in China who are mindful of the common welfare.

RED OPPOSITION

If the Communist government of China opposes such an enlightened and practicable policy, it shows beyond doubt that it still adheres to totalitarianism, shows beyond doubt that it will continue practicing the doctrine which will eventually lead to war.

Let me explain why such a policy toward Free China must be declared. The question of China is a vital one for all the nations of the world. It cannot be settled by a policy of two Chinas. It can be settled only by change of the form of government in China. The dictatorship must be terminated and a democratic government must be instituted.

(By Dr. Carsun Chang)

As long as the government of the mainland is a dictatorship there will be no human rights and the will of the people will not be heeded. The government will squeeze from the people every iota of toil, wealth and power possible. In the process of doing this they will attain a tremendous industrial and military development. This will then be used to threaten the nations of Asia or will actually be used against them, as has even now been done with the present military and industrial machine of the Communist China dictatorship. Already we have had the Korean war, the Tibetan oppression and the Indian border dispute.

According to the Conlon Report China will be admitted into the U.N. and given diplomatic recognition. Admission and recognition of a country should be based on its friendliness, its stability, its willingness to cooperate for the good of all nations.

Once admission and recognition have been given it is difficult to withdraw them without causing a potentially or actually dangerous situation. It is very advantageous to the world that a peaceful and friendly China be created. A China other than this may do worse things than the U.S.S.R. ever has done.

Mao Tze-tung's hatred for capitalism and for what he terms "imperialistic" nations is much more virulent than was Lenin's. One of the reasons for Mao's hatred and desire for revenge against the West—a hatred and revengefulness that are much stronger than those of the members of the Soviet Government—is the West's policy of exploitation of China. Mao's cruelty surpasses that of Stalin and Khrushchev. This is something which should not be overlooked.

MARXIST CAMP

Let us consider the relationship between Communist China and the U.S.S.R. Ideologically China is in the Marxist camp and is allied by treaty with the U.S.S.R. It appears that at present Communist China will, in general, follow Soviet Russia's foreign policy. I may say that in matters of common interest they will proceed in similar fashion. In other matters, China will not follow Russia.

Khrushchev now pursues the policy of cold war with the United States. It does not help Communist China's position in the Far East. It is because of this that Communist China criticized Khrushchev's plan as not being practicable to Asia. After Khrushchev's visit to Peking, no communique expressing agreement was issued, and the Chinese Communist Party did not return the courtesy of the visit by attending the U.S.S.R.'s 42d anniversary celebration. In the past, Mao and Chou usually did not miss an opportunity to go to Moscow. This time they did.

Mao and Chou have not yet decided as to what China's attitude shall be toward Khrushchev's peace and disarmament policy. This and the foregoing facts add up to one thing: Communist China may listen to Khrushchev, but it remains its own master.

Even if Formosa were given, through Khrushchev's intermediation, to Communist China, the latter will demand more and more. One of its next demands would be that all U.S. forces be withdrawn from the Far East.

In her speech of October 19 Mrs. Roosevelt said that the only thing which would assure world disarmament would be a U.N. seat for Communist China. "We can't disarm and leave Red China with weapons of destruction," she declared. "If she is not a member of the U.N. we will have no way to enforce an arms ban." Communist China does not at present qualify as a U.N. member because she has aggressive troops in other countries," Mrs. Roosevelt asserted, "but the day she pulls her troops out and says she will be peaceful, we can do nothing but accept her into the U.N."

I would ask Mrs. Roosevelt: If Communist China is ideologically, economically, politically and technically dependent on the U.S.S.R., yet does not follow Khrushchev's advice, but puts obstacles in his way, how can a "two Chinas policy"—which has only a seat in the U.N. to offer—cause Communist China to become reconciled to the United States and to desire to enter the U.N.?

It is quite clear to me that this policy of two Chinas cannot be an inducement for Communist China, and that it will produce a great many troubles in Formosa and among the millions of oversea Chinese. On the surface this policy has the appearance of being an adequate solution, but in reality it cannot be.

Though the existence of Communist China is a fact, not a supposition, adopting a policy of two Chinas will not bring the right results: a policy which will not be accepted by the Chinese Communists, but which will produce bad reactions among the millions of Chinese overseas and in Formosa. Nor would it do any good to the U.S. or to international relations.

As a substitute for the two Chinas policy I propose that China should be reconstructed in accordance with the plan mentioned above.

Such a plan the United States may openly and frankly discuss with the U.S.S.R.

EXPANSIONISM

The expansionist policy of Communist China has caused Khrushchev much anxiety, and made him speak conciliatory words on the China-India border question. Khrushchev will strive to bring Communist China into line.

World peace is considerably dependent on the internal and foreign policies of Communist China. Khrushchev knows this. He knows also that the U.S.S.R. might gain its objectives in peace, and that it might lose all in war. In view of these facts, the American offer can be put before him with the assurance that the best policy for attaining peace and disarmament is the policy which will make China democratic in government and friendly toward all nations.

At the time this offer is being discussed, the United States can say: "We are desirous of peace among all nations. We have no inclination to injure China in any way. But, if we are to act in the interest of all nations and for the freedom of mankind, we cannot leave Formosa unprotected. We expect those who are now in control of Formosa to develop that land in accordance with the principles of democracy, and we will help them to do so. We welcome the cooperation of the Chinese people in this. Our future relationship with Formose will depend on the successful outcome of our offer."

As long as Communist China and the U.S.S.R. do not agree to such a plan, they attest that the Communist Party of China will adhere to its policy of Marxian procedures, dictatorship, violent expansion in south Asia, and world revolution. Then, knowing that Communist China will continue to be a threat, not just to Korea, India, South Vietnam, Laos, and Malaya, but to the entire world, the democratic nations will know what to expect, and will be prepared to deal with the eventualities.

As for one member of the Communist Party in China, Mao Tse-tung, he already has clearly declared his overwhelming ambition in a poem wherein he looked down on the Emperor Shih-Wang, who united China and abolished her feudal system. He evinces superiority also toward the Emperor Wu-Tih, of the Han dynasty, who extended China's territory to central Asia. Mao's ambition will not be stayed or circumvented by a policy of two Chinas. Nor can such a policy transform Communist China into a gentle and cooperative participant in the U.N. or in a disarmament conference.

Can Farmers Survive the Long Run?

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

CAN FARMERS SURVIVE THE LONG RUN?

Mr. Charles B. Shuman, president of the American Farm Bureau Federation, who spoke here Tuesday, thinks everyone in the Nation should be concerned about the farmer's bad economic situation.

"While other segments of the economy are prosperous, the farmer is caught in a price-cost squeeze," he declared.

This much is discernible fact and we know of no one who would dispute Mr. Shuman's thesis thus far. But when he adds "this condition has been brought about largely by Government price support programs which have encouraged excessive crop production and brought on price depressing surpluses," he has edged into debate.

Moreover, when Mr. Shuman gets down to specifics and suggests that the wheat surplus problem can be solved by the Farm Bureau's proposal "that wheat allotments be discontinued and price supports lowered so feed quality wheat will drop to $1.30 to $1.35 a bushel," he is laying himself wide open. This, of course, is a borrowed line from Mr. Ezra Taft Benson, Secretary of Agriculture, who tried the same thing with corn last year.

What happened? The price of corn went down all right, and with it the price of hogs, although the latter was at the lower arc of the so-called hog cycle, anyway, and prices doubtless would have dropped somewhat without regard to corn allotments and supports. This cost spiral continued, of course, and the immediate result has been tightening of that price-cost squeeze which Mr. Shuman correctly thinks so dangerous.

Beyond that, the removal of corn acreage allotments created the greatest corn surplus in history.

It is understood that Mr. Shuman and Mr. Benson offer a counterargument that in the long run things will work themselves out. Supply and demand ultimately will do it, they theorize. The question is: How long is the long run and how ultimate is ultimately?

When Mr. Benson took command, 7 long-run years ago, Democratic handling of this problem was said to be scandalous. Farm surpluses were terrific. They are far more tremendous today.

Another scandal was said to be the amount of money the Democrats were spending on agriculture programs. Mr. Benson has spent and is spending much, much more.

A Democratic idea for curtailing surpluses, the soil bank, was called reckless. Mr. Benson adopted it and administered it in such a manner that the rich got richer, the poor poorer and the surpluses grew with expenditures.

Under the Democrats, farmers were reasonably prosperous and received a larger share of the national income than they do today. The price-cost squeeze before Benson was a mild pressure compared with today's situation.

A valid question, then, is whether the farmers can survive the longrun experiments of Mr. Benson and the ultimate theories of the Farm Bureau Federation which, each year, has fewer farmers to federate.

Fifty Years of Welfare Work

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. WILEY. Mr. President, on February 15, the Community Welfare Council of Milwaukee, Wis., will celebrate its 50th anniversary.

The commemorative activities will include a pageant depicting the council's history of promoting constructive welfare program for this outstanding community.

In these times, when all too often individuals, organizations, and communities look to Uncle Sam to resolve their problems, the creative, voluntary, and humanitarian efforts by individuals and organizations at the community level to brighten the outlook of individuals and families, who otherwise are often forgotten, are most welcome and commendable.

Throughout the country, there are, of course, differing ideas on just what kind of welfare programs should be adopted to care for our people.

Despite these differing philosophies, however, we recognize that there is a real need and that it must be met.

Organized in the winter of 1909–10, the Milwaukee welfare group has undergone extensive changes during its 50-year lifetime.

Despite the problems involved in such an evolution, however, the council has grown tremendously. Today it has 154 members, 60 of which raise their operating funds through the annual Community Chest campaign.

Constructive in its work, the council today is considered a major planning body for dealing with problems of health, welfare, and recreation in the community.

Recently, the Milwaukee Journal published an article entitled "50 Years of Welfare Work To Be Noted," outlining the constructive work of the council.

It reflects real humanitarian efforts at the community level to brighten the outlook for the less fortunate among us, and I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIFTY YEARS OF WELFARE WORK TO BE NOTED

The Community Welfare Council will start celebrating its 50th anniversary February 15 at the Schroeder Hotel.

A musical pageant depicting highlights in the council's history will be presented. About 500 community leaders and welfare workers are expected to attend the luncheon meeting. Other anniversary events will be held throughout 1960.

It was in the winter of 1909–10 that Milwaukeeans organized the Central Council of Philanthropies with 46 member organizations to coordinate welfare activities. The late James K. Ilsley, president of the Marshall & Ilsley Bank, became the first president. The plans were based on recommendations of a survey made by Francis H. McLean, a social scientist with the Russell Sage Foundation, New York. The first federated fund drive, combining the financial appeals of several agencies, was held in 1916 with William C. White as chairman.

CHARTER MEMBERS INVITED

These men and others prominent in the early history will figure in the pageant, "A Half Century of Community Service." The original music for the show was written by Mrs. Marianne Graham, 1504 North Prospect Avenue, and the lyrics and script by Calhoun Cartwright, public relations director for the welfare council. Mrs. Lorrayne Kuban, 7343 Milwaukee Avenue, a lyric soprano, will sing, accompaning herself on her Irish harp. Mrs. Kuban appears frequently in concerts and directs the Wauwatosa Methodist Church choir. The narrator will be George Comte, general manager of WTMJ and WTMJ-TV, the Milwaukee Journal stations.

Special invitations to the meeting have gone to charter members. These include the heads of 33 organizations still operating and five living individual charter members. The latter are Edward T. Fairchild, Madison, retired chief justice of the Wisconsin supreme court; Mrs. George Lines, 2245 North Lake Drive; Attorney Erich C. Stern, 3332 North Shepard Avenue; Miss Marion G. Ogden, 2237 North Lake Drive, and John H. Leenhouts, 4853 North Cumberland Boulevard.

TWELVE AGENCIES CLOSED

Twelve agencies have closed their doors in the half century. These include the University Settlement, Wisconsin Consumers' League, Wisconsin Aid Society for the Blind, Infants Fresh Air Pavilion, Milwaukee Society of Sanitary and Moral Education, Milwaukee Society for Care of the Sick, Federation of Civic Societies, Milwaukee Maternity Hospital, Sanitary and Benevolent Society, Mission Kindergarten, Provident Loan Association and Chamber of Commerce (a grain exchange).

TWO COMBINED IN 1949

Several name changes have attended the growth of the original Central Council of Philanthropies. It was known in the thirties as the Council of Social Agencies and the fundraising drive was a separate organization known as the Milwaukee County Community Fund.

In 1949, the two were combined into the Community Welfare Council of Milwaukee County. Last year, the name was changed

to the Greater Milwaukee Community Welfare Council.

The council today has 154 member agencies, 60 of which raise their operating funds through the annual Community Chest campaign. The council is the area's major planning body for problems of health, welfare, and recreation.

Secretary Mitchell Charts a Blueprint for America

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. CANFIELD. Mr. Speaker, members of the Paterson (N.J.) Rotary Club and their friends will long remember a remarkable address delivered at a special luncheon of the club last Thursday, at Paterson's Alexander Hamilton Hotel, by Secretary of Labor James P. Mitchell. The Paterson Evening News, which carried the full content of the Secretary's address, also ran the following lead editorial, captioned "Secretary Mitchell Charts a Blueprint for America":

SECRETARY MITCHELL CHARTS A BLUEPRINT FOR AMERICA

What lies ahead for America in the 10 explosive years to come?

Secretary of Labor James P. Mitchell, Jerseyman in President Eisenhower's Cabinet, laid it on the line for some 400 members of Paterson Rotary and their friends yesterday.

Tremendous opportunity, burgeoning population, expansive job opportunities and allied accruals.

But there must be teamwork among Americans, the Secretary told an intensively interested audience. Capital and labor, working together, should strive for the profits in their own ways, but always with an eye to the most important third party, the American public.

At every conference table, when a Mr. Blough, head of United States Steel, and a Mr. MacDonald, head of the Steelworkers Union, sit down together, there must be a third chair, the Secretary warned. This is the seat for the public, which gives them their powers and finding itself abused, can just as easily strip them of it.

There is no easy way to achievement, Mr. Mitchell warned Americans. Beating a path to Washington is not the answer, because there must be initiative on the home front lest in relying on the national capital, the great source of the country's strength be dried up.

The Federal Government must at the same time take a hand in the next 10 years in advancing the Nation's progress. There must be greater opportunity for education, for instance, to meet the impact of the millions of young folks who will seek higher education and who will be born of the tremendous birthrate of the early forties.

Millions will want to go to schools for higher education, he said, and opportunity must be provided for them. Other millions should be converted into skilled labor, efficient technicians and the like. For these, too, there must be ample training facilities if this country is to maintain the pace of competition with the world.

Secretary Mitchell could not have been aware of past discussions of a Passaic county vocational school when he spoke, and yet his pointed remarks on the subject of expanded opportunity for crafts training were thoroughly applicable locally.

There has been discussion for several years of such vocational facilities on a county basis, and indeed, in the light of Forward Paterson's executive council espousal of a regional mayors' organization, it would seem this would be an ideal subject for the municipal chief executives' later consideration.

Secretary Mitchell's exposition of the national scene was a scholarly presentation, given without forensics and without emotion but solid and portentous. It was an effective blueprint for the Nation.

Will capital and labor, will the public, pay heed? Time will tell, but the clock runs fast.

Incidentally, Paterson Rotary Club has been performing a fine public function in recent months in its presentation of leading figures on the local, State, and National scene at its weekly meetings.

As a result, the club has come to be a forum for information on a variety of subjects which have been both edifying and enlightening, and for this, its officers merit a public bow of appreciation.

President Albert M. Reilly and Program Chairman Dr. Earl M. Warren have been rendering a public service in this programing, in which Secretary Mitchell's appearance is but one facet of a brilliant constellation.

Resolutions of Certain Organizations in State of Kansas

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two resolutions which have come to me.

One resolution is from the Sumner County Farmers Union of my State and relates to the restoration of the barter provision to Public Law 480.

The other resolution is from the Saline County Medical Society of Salina, Kans., relative to the Forand bill, H.R. 4700.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

SUMNER COUNTY FARMERS UNION,
Wellington, Kans., February 5, 1960.

Hon. Senator ANDREW SCHOEPPEL,
Senate Office Building,
Washington, D.C.:

Whereas we need to use every means we can to get food to less fortunate people, and the people wishing to pay in some way for the food, we believe it will be a great help to be able to trade our food for their products, in cases that do not disturb our industry and economy;

Whereas we believe that a program of exchange where possible, will build better relationships and good will as well as securing some materials which we do not have: Now, therefore be it

Resolved, That we ask you to do what you can to have the barter provision, again, be made a part of Public Law 480; be it further

Resolved, That a copy of this resolution be sent to Congressman BREEDING, Senators SCHOEPPEL and CARLSON.

The foregoing resolution was adopted by unanimous vote of members attending our Sumner County Farmers Union quarterly convention at Wellington, Kans., on February 1, 1960.

A. M. WEBER, *Vice President.*
Mrs. VELMA HOLLINGSWORTH,
Secretary.
WELLINGTON, SUMNER COUNTY, KANS.

SALINE COUNTY MEDICAL SOCIETY,
Salina, Kans.

RESOLUTION OF SALINE COUNTY MEDICAL SOCIETY

At a meeting of the Saline County Medical Society January 28, 1960, the society voted unanimously to oppose the Forand bill. The reasons for this opposition are as follows:

1. This bill is basically a step toward the socialization of medicine and with greater Government control with the subsequent loss of free individual enterprise, the practice of medicine with its now high standards would soon degenerate to an alarming degree.

2. There would be an increase in the social security taxes within the near future to as much as 10 percent.

3. That by recent survey, it was found that individuals over 65, by and large, are able to handle their medical bills adequately.

4. Because of voluntary commercial insurance plans can do a better job at less cost.

The medical society feels that this is part of a plan to expand the socialization of our economy by piecemeal absorption of individual responsibility.

Abraham Lincoln

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. SCHWENGEL. Mr. Speaker, for almost a century dedicated public spirited men have devoted themselves to the collecting of material relating to the great American patriots, North and South, who participated in the fratricidal conflict of the sixties which divided our country and yet, in some mystical manner, has become the one common experience which unites and makes us a greater and stronger Nation.

Foremost among these collectors have been the devotees of Lincolniana who, by assembling and by making available for future generations every outstanding book or pamphlet relating to the life and times of our 16th President, have made the great writings of Carl Sandburg, Allan Nevins, and Bruce Catton, among others, possible. One of the leading collectors of our generation is Carl Haverlin of New York and California, who for more than 35 years has devoted his leisure time and, indeed, many of his active business hours as president of Broadcast Music, Inc., to this worthwhile pursuit. Because of his labors of love, the task of many of our contemporary scholars has been made immeasurably easier. Many of the great books currently being read by students and scholars pay tribute to his collection and his counsel based on his lifetime of study of the American past. He has been most generous in making gifts of rare books and manuscripts to

many of our great libraries and museums.

He is more than a collector. He is also a scholar, and a few days ago it was my pleasure to hear him deliver an inspiring address before the Lincoln Group of the District of Columbia. This remarkable talk deserves a wider audience. Its message should be directed to the American people and to the world. Because I know the Members of the House would like to hear this great tribute to a noble American who once served in this body, I now bring the address before it:

THE LAST BEST HOPE OF EARTH

(An address delivered before the Lincoln Group of the District of Columbia in the Library of Congress by Carl Haverlin, honorary member, Lincoln Sesquicentennial Commission)

This is the first time I have ever had the courage to say anything in public about Abraham Lincoln. The very real distress my acceptance of this invitation has caused me makes it likely that this will also be my farewell address about him.

If one merely restates or reshapes that which has already been well said about him by others, it were far better that the others should speak for themselves—or have that well read which has been well written about him. So many men of ability, some of whom are in this room—Roy Basler, Lloyd Dunlap, David C. Mearns, C. Percy Powell, Ralph Newman and your president, Fred Schwengel, to name but six—have said so much about Mr. Lincoln and said it so well that a man of conscience must hesitate between poaching on their preserves or venturing to shoot upon his own and thus risk bringing down lesser game or none at all.

Fully conscious of this though I was, the invitation came from one for whom I have such affection and respect that I was impelled to undertake that which I should not. So tonight I feel as though I had in a moment of regrettable audacity agreed to duplicate the feat of Blondin and cross Niagara on a tightrope bearing Mr. Lincoln on my back. Disturbed though I am for my own safety, I am more worried about the well being of my passenger. After all his agreement to participate in this trick was neither requested nor secured.

Here and now I find myself on the brink, and between me and the other bank stretches a tightrope some 20-odd minutes which I must cross. For Blondin's pole I have this script. With it I hope to avoid the gulf of unconscious plagiarism on the one side and the abyss of a complete loss of memory on the other.

Instead of the address that I will deliver tonight, I should have preferred to talk about collecting Lincolniana and to speak, with such modesty as a collector may summon up, about some rarities I have acquired recently, or to have told you that we might now fill in a few gaps in the great Lincoln Day by Day Books as a result of some meager gleanings of my own research.

However, I was impelled to choose a more sober subject tonight because some of the things that are troubling the world are diametrically opposed to the philosophy of Abraham Lincoln as I understand it.

He would have been outraged by the shocking outbreak of anti-Semitism and its attendant desecration of houses of worship and violations of the resting places of the dead; the continuing depressed status of millions of our fellow citizens who are Negroes in all of the 50 States and the raising of religious issues in politics. These outward indications of intolerance are the ingredients of a veritable hell brew that we must not let reach a point of critical mass. If we in the United States and all good men everywhere will only adopt the 52-word plan I shall propose tonight, these midnight terrors will vanish.

Too many, and I fear myself among them, presumed in the beginning that Hitler, that vicious little demon, and his dwarfish crew were but the outward indications of a mild case of German athlete's foot. Too late we found them to be leprous and infectious. The world still bears the scars of their dreadful affliction. Whether the current acts of antiracism that trouble me are the sporadic work of delinquents, juvenile or adult, or of a cunning centrally directed cell of vandals, is beside the point. We cannot afford to consider such outbreaks as only night-riding nits of know-nothingism that may be combed out at will from the beard of Uncle Sam. From past history we know they could be the forerunners of Armageddon.

We and our allies are involved in a titanic struggle. It is of such a dimension and complexity as to baffle career diplomats and to defy complete understanding by the layman. It is, in essence, a contest of ideas waged between communism and democracy, with the announced ultimate prize the entire human race.

It is inevitable that I am led back to Lincoln's house divided speech, as so many have been before me, and to wonder whether a world so divided can continue to live half slave and half free. It is the contention of the free world that the world will not fall, that it will not become entirely communistic and that freedom will prevail.

In this battle for sheer survival, the ideas of Abraham Lincoln and the power that has been generated by what he was, what he accomplished and what he stood for are, in my opinion, among the most potent weapons that the free world can wield. Since so many of the globe's inhabitants being fought for by these mighty forces are have-nots, the figure of Abraham Lincoln gains added strength because of his own insignificant beginnings, and his lifelong dedication to the dignity of man. Wherever one looks, whether at home or abroad, there are many examples of his imprint today, after all these years, upon men and women of all countries and in all walks of life.

In 1958 World Brotherhood conducted an international essay contest, "What World Brotherhood Means to Me." There were four winners—a young Mexican woman, a Burmese housewife, a captain in the Danish Army and a police corporal from Ghana. The young people were brought to the United States to receive their awards. In Washington, in February, they were taken to the Lincoln Memorial. The Ghanaian, 23-year-old Assibi Abudu of Accra, walked up the steps and, turning his back on the text of the Gettysburg Address, recited it from memory, flawlessly, and with evident emotion.

My own racial and national heritage is such that I believe, with Abraham Lincoln, that this Union of States which he fought to maintain and to restore, is indeed the last best hope of earth. Because of his race and his nationality, Mr. Abudu may very well look back across these many intervening years and think of Mr. Lincoln as the first great hope of Ghana. He will remember that the thrust of the message to the Congress of December 1862 was directed at emancipation for the Negro—graduated emancipation, it is true, and with a final deadline 37 years off in 1900—but freedom nevertheless. In all logic this young man from Ghana and his fellow countrymen may attribute the recent creation of their own new nation in considerable part to the extinction of slavery here. It is idle to speculate as to the details of world freedom had the Civil War ended differently or had someone other than Lincoln been President or had he not been a man of such adamantine conviction and utter patience. But none, I think, will deny that the course of freedom would have been retarded had its flame been snuffed out here and that today we would have a different and less favorable national image abroad. How long freedom would have been delayed and the exact difference in the face our Nation shows the world I must leave to those qualified in the nuance and complexities of historical extrapolation.

But, for myself, I am sure that in the balances of men's minds—whether they be men of Ghana and black, or men of India and brown, or men of China and, as they say, yellow, or whether pigmented like ourselves and thus in a world sense in the minority—the existence in our past of Abraham Lincoln and the body of people who supported him weighs in those balances more heavily in our national interest than we can realize.

It would be wrong of me to attempt further development of such a point beyond the obvious. Men like Gerald McMurtry, Paul Angle, Justin Turner, all Lincoln scholars of note, have made recent journeys abroad and can and will, I am sure, speak fore authoritatively in this regard. But so that you might not think that I have emptily conjured up this concept of Mr. Lincoln as a substantial bulwark of our national defense, I asked for some telegrams from the travelers:

George McMurtry: "The people of southeastern Asia know Abraham Lincoln because of his Gettysburg Address. The 'Government of, by, and for the people' is a ringing challenge to them today. Asia still looks to America as the last best hope of earth, and Lincoln is the most salable product any nation has to offer in the great world struggle to capture the minds of men."

Paul M. Angle: "The democratic government which Japan now enjoys is not deeply rooted in the nation's tradition. Many Japanese recognize the need to know more about democracy, and believe that they can best meet this need through the study of Lincoln's life. Thus his example is a significant force in the new Japan."

Justin G. Turner: "Foreign travel enables one to appreciate the world influence of Lincoln. To the illiterate and downtrodden masses of north Africa, Lincoln represents a hope for a better future. In Israel, where Lincoln's ideals are cherished, lectures will be presented by American scholars and historians. In England, reverence for Lincoln has been a factor in adding American history courses to the college curriculum. Lincoln continues to increase in world stature as a symbol of freedom to those peoples whose economic and educational standards must be improved if we are to enjoy peace and security. I should perhaps tell you that Mr. Abudu is now a student at Hampton Institute."

After I had written about him that which I have read to you tonight, I had some qualms in ascribing to him those thoughts and convictions. I will also admit to a certain uneasiness because of the impulses and assumptions I have attached to Mr. Lincoln tonight. I can only say that I have arrived at these after serious and careful deliberation and that on sober reflection they do not outrage any facts I know about him. I could not ask Mr. Lincoln if I had dealt fairly with him. But I could and did telephone to Mr. Abudu. I was pleased to learn that I had not strayed too far from his opinions about Lincoln. Further, I was delighted to have him tell me that although there was no formal instruction in Ghana about the specific contribution of Lincoln to their nationality, it was, as he phrased it,

nevertheless a more or less universal concept there.

If without academic direction this is true in Ghana, I think I take not too great a leap to assume that elsewhere in the world the good that Lincoln did lives on and that he thus serves us still.

He served us well on the 12th of February of last year when dignitaries from many nations went to Springfield, Ill., to attend the dinner given by the Illinois Lincoln Sesquicentennial Commission. I would like to read a telegram from Clyde Walton, Illinois State Historian:

"Twenty-one foreign countries including 10 ambassadors represented at February 12 Lincoln Sesquicentennial dinner at Springfield. Principal speaker Mayor Willy Brandt of West Berlin. Other speakers, Ambassadors Sir Harold Caccia, Great Britain; Herve Alphand, France; and Ernest Bonhomme, Haiti."

And by the way, representatives of 67 nations, including Iron Curtain countries, were on the floor of the House at the joint session of Congress February 11 when Mr. Sandburg delivered his notable address.

Although no Iron Curtain nation was represented at the Springfield dinner, when Mr. Khrushchev came to the United States, he paid his tribute to Abraham Lincoln, and further Soviet interest is apparent in the publication of Lincoln's speeches in Russian.

Most of us remember the dramatic confrontation of Mr. Khrushchev and Mr. Lincoln at the Lincoln Memorial that was suggested to the White House by Congressman SCHWENGEL and which was recorded by Life magazine in an unforgettable photograph. Who of us can evaluate, fully, the effect that long look of consideration had upon the mind of the chief of state of a great nation with a polarity the reverse of ours, with objectives antagonistic to ours and whose physical challenge to our continued existence absorbs more than half of our national budget and occupies not only our waking moments but those of the world at large?

He stared at the heroic statue without speaking for some time. He did not or would not hear the photographers who pleaded with him to turn around, according to eyewitness reports. Then he asked for translations of the graven utterances around him. It is unavoidable to presume that some of the personal greatness of Lincoln and his words and deeds were there and then added to the sum total of the image of this country that Khrushchev was building for himself.

Elsewhere our visitor saw examples of our enormous physical strength and our great economic well-being. At the memorial he saw majestic evidence of our recognition of the emotional and spiritual qualities of the man who gave freedom a new birth and who pleaded in the closing day of a great domestic war not only for a just and lasting peace among ourselves, but with all nations.

It would be as abhorent to me, as it would be to you, to suggest that Lincoln foresaw these troubled times in any mystic sense of prescience. But I will propose to you that had he, by any means, had such foresight he could not have conducted the affairs of his office more accurately, nor spoken more purposefully for our present good. Again and again he related, with brilliance, our domestic problems to the international scene. Time after time he directed our foreign relations, or exerted a restraining influence on others involved in them, in such a way as to earn our plaudits for his wisdom and foresight.

Consider the full closing paragraph of his message to the Congress in 1862. All too many remember it only for the literary excellence or emotional content of a few phrases:

"Fellow citizens, we cannot escape history. We of this Congress and this administration, will be remembered in spite of ourselves. No personal significance, or insignificance, can spare one or another of us. The fiery trial through which we pass, will light us down, in honor or dishonor, to the latest generation. We say we are for the Union. The world will not forget that we say this. We know how to save the Union. The world knows we do know how to save it."

This audience needs no assurance that he did not invoke the world in the manner of the head of a household ashamedly warning that the neighbors would hear of the family quarrel. Rather, I think, as I assume you do, he said "world" for a far more noble purpose. He knew that in his household was a plague of a most virulent kind and that its germs were blowing abroad. He believed that if the plague could be contained, curbed, and eventually cured at home, then the plague of slavery, throughout the world, in all its manifestations—whether the bondage of men's bodies or their minds—would be replaced by freedom.

Certainly the rest of the paragraph needs no further gloss of mine to prove that he spoke not only for that day and to a narrow and insular purpose, but for all men, everywhere to hear, and for all time to come.

"We, even we here, hold the power and bear the responsibility. In giving freedom to the slave, we assure freedom to the free—honorable alike in what we give and what we preserve. We shall nobly save, or meanly lose the last best hope of earth. Other means may succeed; this could not fail. The way is plain, peaceful, generous, just—a way which, if followed, the world will forever applaud, and God must forever bless."

I need do no more than remind you that Lincoln's concern with liberty and the world as a whole and of our place in it was of long standing. You may trace it through much of his life. In the fifth debate with Douglas at Galesburg, he quotes Henry Clay to the effect that "those who would repress all tendencies to liberty * * * must blot out the moral lights around us—they must penetrate the human soul and eradicate the light of reason and the love of liberty." In the Gettysburg Address he again casts his vision beyond the battlefield, past our continental limits to the farthest shores—it was the world, he thought, that would not remember. In considering his unwavering determination to accomplish his ends and the incredible patience and courage he displayed, I have sometimes thought that his awareness of the importance to mankind as a whole of what he was about might have been an unknown and secret emotional anchor to the windward.

While I do not mean to suggest that patriotism alone would not have sustained him, it is, I believe, admissible to think that the more universal view I ascribe to him was in some ways, at least, an added buttress to his adversities. That he did not delineate a definitive belief in the brotherhood and parliament of man is understandable when we consider the strong nationalistic currents that were flowing then. Indeed they still flow, and strongly. But in our generation most of us have been forced to accept the concept of one world as a concomitant to the one common fate that threatens its extinction. Most of us are really concerned now, and not wholly for selfish reasons, with the problems and the well being of men, women, and children everywhere. Some of our attitude, if not of the world as a whole, must be traced to Lincoln's general benevolence—for just as a man is, in great degree, the sum total of his progenitors, so a people is moulded by its past.

In these difficult times when, as Omar said, a hair perhaps divides the false and true and a split second may decide the fate of mankind, this all-pervading aura of Abraham Lincoln may hold, or may yet tip, the scales in our favor.

Many of us keep casting constant trial balances in regard to the Russians. We give them debit marks for the things they do that displease us or frighten us, but automatically add credit marks for the things about them that we look upon with favor. Instinctively I find myself trying to balance Mr. Khrushchev's barks and scowls and threats with memories of Russian music that I have heard and loved; I shudder at the cruelty of his slave labor and automatically try to redress with memories of the plays of Andryev or Chekhov. I think I know the truth about communism and I take it to be a real threat to all that I hold dear. The reason I think I know the truth about it is that I live in a free country and I have a mind as free as I myself wish it to be. Newspapers, radio, television, books, magazines, the reports of the Secretary of State and other Cabinet officers, the Presidential press conference, and the give and take of congressional debate make it possible for me to know the truth if I choose to read and listen and inform myself—and, from among the varying shades of opinion and emphasis available to a free man, to make up my mind for myself.

Russia is eager to export its composers, ballets and artists so that we will think better of them than their stern political visage alone would let us think. Believing, in turn, that they do not allow their people to know the full truth about us, we are equally eager that our composers and artists should go there to offset the unfavorable propaganda they give our system.

In this continuing and seemingly endless war being fought in the main so far, due to the mercy of providence, only in the minds of men and for the domination of the minds of men, it is my firm conviction that the living memory of Lincoln has played a powerful role.

I want to thank all those who, in the sesquicentennial year which will close on February 12, have labored so assiduously not only to memorialize Abraham Lincoln here, but to send his image abroad refreshed and revitalized by the attention his own people have given him. Only the completely chauvinistic would deny that if Lincoln were alive today, he would amplify his message of 1862 and term all nations in all continents as the last best hope of earth—if they but subscribed to one simple doctrine—perhaps the fairest ever penned—freedom and liberty for all.

In 1948 our American contribution toward world peace—the Marshall plan—electrified the world. In signing it on April 3 of that year, President Truman said, "This is the answer to the challenge facing the free world." In Washington on that very same day, General Eisenhower, in praising the Marshall plan before the Senate Armed Services Committee, said: "The United States cannot live as an island of democracy surrounded by a sea of dictatorship."

I suggest that in 1960 we announce a new American plan—the Lincoln plan. The plan itself, in the words of Mr. Lincoln, would be that all mankind and all nations should conduct themselves "with malice toward none; with charity for all; with firmness in the right, as God gives us to see the right," to "strive on to finish the work we are in; * * * to do all which may achieve and cherish a just, and a lasting peace, among ourselves, and with all nations."

It is my suggestion to the Congress and to the people, yes, to use Carl Sandburg's immortal phrase, that although the money we vote and supply for the plans and projects of nations around the globe is highly meritorious and, needless to say, should be continued, the addition of the Lincoln plan would round out the circle. Any nation of wealth can finance the Aswan Dam, but only we can export in unlimited supply the great

good will, the commonsense, the dedication to his fellow man, the superb sense of justice, the quality of mercy and the universal understanding of Abraham Lincoln.

In a letter dated February 14, 1860, explaining a paragraph in the House divided speech which had been challenged, he wrote: "That is the whole paragraph; and it puzzles me to make my meaning plainer. Look over it carefully, and conclude I meant all I said and did not mean anything I did not say, and you will have my meaning."

Lincoln was assuring his correspondents, and those of us who will hear him, that he thought before he spoke or wrote. To him his words were weapons in his battles for the Union, before and after the outbreak of the war. He thought with the exquisite precision of a great advocate.

We, the people of the United States, and our leaders and the leaders of all nations on both sides of the curtain and all people in all countries must, to the best of our ability, think and speak with the precision of an advocate; because in Lincoln's own words again, "In times like the present, men should utter nothing for which they would not willingly be responsible through time and in eternity. * * * The dogmas of the quiet past, are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise—with the occasion. As our case is new, so we must think anew, and act anew. We must disenthrall ourselves, and then we shall save our country." And if Lincoln were alive today, I am sure he would highly approve the addition of three more words—"and the world."

JANUARY 21, 1960.

Shipping Policy of U.S. Government Agencies and the Arab Boycott

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, Febraury 9, 1960

Mr. JAVITS. Mr. President, the Arab boycott of American flagships, which the U.S. Navy and MATS in effect are supporting by a provision in their contracts covering chartered oil tankers, is also being supported in similar fashion by the Department of Agriculture and the Commodity Credit Corporation in connection with U.S. vessels carrying dry cargoes. These are U.S. Government sponsored cargoes of surplus foods under Public Law 480, on which the United States pays the ocean freight. In charter contracts for such shipments to Arab countries the Department of Agriculture and the Commodity Credit Corporation prohibit the U.S. freighters from calling at Israeli ports and transshipping any part of its cargo. They require the vessel to state in order to qualify for such charters, that it "has not traded to Israeli ports."

The Navy's tactic acquiescence in the Arab boycott has been the subject of previous remarks by me on the Senate floor, and I shall continue to insist that any support by any branch of our Government of the illegal Arab boycott is inexcusable. The United States has always insisted on freedom of the seas and we, therefore, should not condone this kind of interference with American shipping. There can be no compromise with expediency in an action which violates our policy as well as the Charter of the United Nations.

I ask unanimous consent to have printed in the Appendix of the RECORD a report, based on documents provided by the American Jewish Congress, entitled "Two Other U.S. Units Aid Arab Boycott," by Edward A. Morrow, which was published in the New York Times, February 4.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO OTHER U.S. UNITS AID ARAB BOYCOTT—AGRICULTURE AGENCIES JOIN NAVY IN CURBING SHIPS TRADING WITH ISRAEL

(By Edward A. Morrow)

Three U.S. Government agencies are acting as policemen for an Arab boycott of American vessels trading with Israel, shipping industry spokesman said yesterday.

The Navy Department, which was recently criticized for tacitly supporting Arab policy through its tanker charter provisions, has been joined by the Agriculture Department and the Commodity Credit Corporation. These agencies are pursuing a similar policy affecting American dry-cargo vessels.

In chartering ships the Navy has for 2 years almost foreclosed bids by tanker owners whose ships have traded with Israel. This was done by stipulating that owners who may be refused accommodations at Arab ports as a result of the boycott will be responsible for any penalities resulting from delays caused by such refusals.

CONTRACTS ARE SPECIFIC

In the case of dry-cargo ships the U.S. position is more explicit. Charter contracts covering the transportation of Government-sponsored cargoes to the United Arab Republic state:

"Vessel is prohibited from calling at Israeli waters or ports. Transshipment is prohibited. Vessel has not traded to Israeli ports."

Ira Guilden, chairman of the committee of international affairs for the American Jewish Congress, said that most of the affected shipments were made under the Agricultural Trade Development and Assistance Act of 1954. Sales of surplus commodities are made to friendly nations against payment in local currency.

This involves sales of Commodity Credit Corporation stocks authorized by the Agriculture Department.

Under a recent sales agreement with the United Arab Republic, for instance, one-half the proceeds in local currency will be available to Syria for investment and development, one quarter for United States investment there and the remainder subject to negotiation.

"In effect," one shipowner commented, "one can say the Arabs are looking a U.S. gift horse in the mouth by telling us how it should be wrapped and delivered."

Under the last half the Government-sponsored red cargoes must be carried in American-flag ships. A spokesman for the Commodity Credit Corporation reported yesterday that the freight charges for such shipping to the United Arab Republic amounted to $4,549,622.

The International Transport Workers Union reported yesterday that Finnish maritime workers had announced direct action against United Arab Republic ships because of the boycott's effects on some Finnish-flag vessels. The Finns said they would refuse to handle any ship flying the Arab Republic flag that docks in Finland.

INCE TOFT TO SAIL

CAIRO, February 3.—The owners of the freighter *Inge Toft*, which has been held at Port Said since May 21, have decided to discharge her cargo and sail, it was announced tonight. The United Arab Republic has seized the cargo.

The ship is owned by a Danish company but is under charter to the United Mediterranean Agencies of New York. The United Arab Republic contends that the latter is controlled by Zim, the Israeli shipping line.

The ship's agents in Port Said received a telegram today from the owners instructing them to unload.

The unloading of the cargo of cement, potash, beer, brass, and leather has already started and the ship is expected to sail tomorrow. Most of her cargo was loaded in Israel, and was destined for Japan, Hong Kong, and the Philippines.

The cargo was confiscated as a prize of war. According to authorities here, the proceeds will be turned over to Palestinian Arab refugees.

When United Nations Secretary General Dag Hammarskjold saw President Gamal Abdel Nasser January 21, the President told him the *Inge Toft* would not be allowed to sail unless she unloaded, that Cairo would continue to prevent Israeli ships and cargoes from passing through the Suez Canal. He said he considered this question part of the whole Palestine question, which must be settled before Israeli ships could use the canal.

ISRAEL AID COMMENTS

TEL AVIV, ISRAEL, February 3.—An Israeli Foreign Ministry spokesman said the Danish owners of the *Inge Toft* had ordered the ship to discharge her cargo and sail because her condition had deteriorated as a result of the long anchorage.

The charterers have been paying an amount estimated at $1,000 a day for upkeep of the vessel.

A Greek ship, the *Astypalea*, remains in Port Said. She carried Israeli cement for east Africa, and her captain refuses to permit the Arab authorities to impound the cargo.

Some Recommendations for Long-Range Foreign Policy Planning

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. IRWIN. Mr. Speaker, in my district, citizens of five communities have united to engage in serious discussion of foreign policy.

Their organization—the Stamford (Conn.) Forum for World Affairs—includes among its participants some of the most distinguished citizens of this country, as well as outstanding authorities in the field of foreign policy.

Recently, the forum completed an educational project which included publication of a booklet entitled "Some Recommendations for Long-Range Foreign Policy Planning."

I regard these recommendations as so important that I would like to introduce them into the CONGRESSIONAL RECORD so that all Members of Congress can become familiar with them.

Here are excerpts from the forum's booklet:

RECOMMENDATIONS FOR LONG-RANGE FOREIGN POLICY PLANNING

Convinced of the need to emphasize longer range considerations in planning the foreign policy of the United States, the Stamford Forum for World Affairs, aided particularly by the advisory committee, the resources committee and the board of directors and after consultations with outstanding experts in foreign policy, respectfully asks consideration of the following broad recommendations:

I. To insure more effective representation overseas, we recommend:

(A) That Congress appropriate sufficient money for the operation of all U.S. embassies so that career diplomats or others eminently qualified may fill all ambassadorial posts without need of private fortunes.

(B) That Congress appropriate on a long-term basis so that recently improved practices for inservice training among Foreign Service personnel may be further extended and a long-range program developed to attract and to hold outstanding young persons in a State Department career.

II. Recognizing that we may not have used economic assistance as effectively as we might have, either as a weapon in the cold war or as an instrument in building a peaceful world, we recommend:

(A) That economic assistance be planned, and financial appropriations be made where necessary, on a long-range basis.

(B) That long-term, low-interest loans be made more readily available, particularly for the benefit of underdeveloped countries.

(C) That for economic and technical assistance, more use be made of international organizations such as the U.N.-specialized agencies.

(D) That U.S. Government personnel administering economic assistance programs be, insofar as possible, career personnel with high standards of inservice training and specialized experience.

(E) That in both the planning and operation of economic assistance programs, full advantage be taken of eminently qualified technical consultants from universities, foundations, industry, and labor.

(F) That proper incentives be devised to stimulate increased participation of private groups, including business and foundations, in economic programs of value to the free world.

III. Recognizing that de facto recognition of foreign governments has been our policy during much of our Nation's history, although a de jure policy has sometimes been used to express disapproval of certain governments, we recommend:

That our recognition policy be realistic. It should be made clear to our citizens that recognition does not necessarily denote approval of a government but is based on the belief that important benefits will be derived by our Nation and our people.

IV. Besides bilateral recognition policy there are also important questions concerning membership in the United Nations. In this regard, we recommend:

That in view of recent developments such as the possibility of a worldwide atomic test monitoring system on the one hand and the Tibetan experience on the other, the advantages and disadvantages of the admission of Communist China to the United Nations be thoroughly explored to chart a course of action of maximum value to the continued survival of the free world.

V. To insure a more valid American image overseas and to offset propaganda directed against us as well as certain inaccurate impressions emanating from our own country, we recommend:

That the Department of State be encouraged to stimulate and coordinate public and private resources in the most effective program possible for informing our allies, those who oppose us and the neutral nations so as to bring a more real focus on our national life and on our objectives for the future in a world changing its ways with revolutionary rapidity.

VI. Secretary of State Herter on May 7, 1959, told the American people:

"Foreign policy is not an obscure art for a few specialists. It is of importance to all of us. Therefore, it must be of interest to all of us. Our foreign policy, to be successful, requires your continuing understanding and support."

To this end, we urge that newspapers, magazines, radio and television provide increased opportunity for citizen understanding by offering more information about world affairs. We also recommend that for increased citizen interest, understanding and support, the leaders in the Department of State be encouraged:

(A) To offer more frequent and better delineated statements of policy to the American people.

(B) To use the fullest candor limited only by minimum requirements of national security so that the American people are confident that they have a maximum of significant facts, be they favorable or unfavorable to the continued survival of the free world.

Arbitrary Residency Requirement for Relief Recipients

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, February 9, 1960

Mr. JAVITS. Mr. President, the issues raised by proposed State laws requiring minimum periods of residence for relief payments transcend State boundaries because they touch on one of the aspects of our national policy of freedom of movement. In a nation like ours, the criterion for relief should be need. Statistics show that only 2 percent of the 500,000 recipients of public assistance in New York State have been residents for less than 1 year. Strict administration to guard against frauds and cheats is vital—and measures required to assure this are essential—but our concern for every really needy citizen has always made for the freedom of everyone of us. The Community Council of Greater New York has opposed legislation for any arbitrary 1-year rule, and its chairman, Carl M. Loeb, Jr., has waged a long fight against it. He has ably summed up the issues in a letter to the New York Times on January 27. I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

RESIDENCE BILL OPPOSED—RESTRICTION ON GRANTS OF WELFARE ASSISTANCE CRITICIZED

To the EDITOR OF THE NEW YORK TIMES:

The New York State Legislature will shortly be called upon to consider the Cooke-Volker bill which asks for 1-year State residence as a requirement for receiving State public welfare assistance. Such proposals have been put to the legislature before and have been defeated. The present bill well deserves the same fate.

The misguided thinking behind such proposals assumes three notions: migrants come here because they want to cash in on easy relief; migrant, whether from the South or from Puerto Rico, are a liability to the community; residency laws will keep them out.

How wrong can some of our upstate legislators and others be?

People come to New York not for public assistance, but for better jobs, better housing, to be with relatives, etc.—the very same reasons that brought in the forebears of our advocates of State residency.

New York has always benefited from the arrival of these newcomers. Labor officials say, for example, that the $5 billion garment industry would have left New York had it not been for the influx of Puerto Ricans. The hotel business, the restaurants, and many factories depend utterly on Puerto Rican and Negro workers. In short, our recent migrants are an asset, not a liability.

Trying to keep newcomers from a State through residence laws simply doesn't work. People seeking the opportunity for a new life are seldom deterred this way. To cite an example, California, with severe residence requirements, has a much higher inmigration than has New York State.

Finally, if the advocates of residency were frank, they might concede that it was prejudice against the newcomer which motivates their attempts and not economy at all. For there is evidence enough to show that putting welfare on a local basis rather than the traditional State basis would be far more costly to the public.

The Cooke-Volker bill should be defeated. Legislation which has the effect of making a target of Puerto Ricans and Negroes must not be countenanced in New York State.

CARL M. LOEB, Jr.,
Community Council of Greater New York.

NEW YORK, *January 22, 1960.*

The Impact of Our Foreign-Aid Giveaway Program on the American Economy

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. SMITH of Kansas. Mr. Speaker, during the past 12 years the debate over the so-called foreign-aid program has received a lot of attention in the Congress. The debate at the outset of this program was rather one sided. Scarcely more than 60 Members of the House voted against it—when it was called the Marshall plan. Each year, however, the number of Members voting "no" has increased.

Perhaps no appropriation of tax dollars by the Congress has ever received as much favorable publicity from business interests, newspapers, radio, and TV commentators as has this measure. This, of course, has been called a bipartisan issue—the proponents of this spending always point out that only those who oppose it—are steeped in provincialism and are generally reactionary to the needs of the times.

Many of us who have always opposed this foreign-aid program are frequently

referred to as "uninformed and out of step with modern worldwide conditions." When some of us say we are opposed to it as being unconstitutional because it does not come within the so-called catch-all welfare clause of the Constitution we are quickly told the Constitution must be highly flexible in matters of this kind in order to keep pace with a fast-moving world.

Throughout the years, however, there have been groups and individuals with clear visions who have pointed out the road we travel and the dangers thereon, but their voices have generally not been able to stop these appropriations for foreign aid, but have only been able to cut the amount.

Recently it was called to my attention a most forthright statement in regard to foreign aid. I commend this address delivered by Mr. Walter Harnischfeger, of Milwaukee, Wis., chairman, Citizens Foreign Aid Committee, at Institute of U.S. Foreign Aid, Marquette University, Milwaukee, December 11–12, 1959:

THE IMPACT OF OUR FOREIGN AID GIVEAWAY PROGRAM ON THE AMERICAN ECONOMY

Father O'Donnell, Reverend Fathers, distinguished guests, ladies, and gentlemen, permit me to offer my heartfelt congratulations to Marquette University for arranging this auspicious Foreign Aid Conference. As a native of Milwaukee and as board chairman of a 75-year-old manufacturing corporation whose products go to the far corners of the world from Milwaukee and subsidiary plants to play an important role in the progress and development of many foreign countries, I am gratified to share in our community's contribution to the study of this vital subject.

This is a most timely gathering. In less than 4 weeks the Congress will be engaged in its perennial controversy over foreign aid, a program which already has cost the American taxpayer more than $80 billion, not including American generosity, both Government and non-Government, in countless other forms for generations.

In January of this year, the White House requested another staggering foreign aid appropriation of $3.9 billion, an amount approximating its usual annual requests for the giveaway program since the Marshall plan was instituted as a temporary help-Europe device soon after World War II. The $3.9 billion was cut by an aroused Congress to $3.2 billion after the greatest fight in foreign aid history. Because of a country-wide taxpayer's revolt, the President avoided sending to Congress an additional $400 million request made by the Draper committee.

In January of 1960, Congress will assemble in a vastly different and improved atmosphere. There have been numerous developments during recent weeks which pfove conclusively that there has been a tremendous breakthrough in national thinking concerning the perpetuation of the giveaway program in its present form.

1. On September 28, both President Eisenhower and Secretary of the Treasury Anderson told the annual meeting of the World Bank, the International Monetary Fund, and the International Finance Corporation in Washington that other industrialized countries must help bear the foreign aid burden and must end their discrimination against imports of American goods.

2. A "Buy American" policy has been adopted in the administration of the Development Loan Fund.

3. The Director of the Budget, Maurice Stans, disclosed that Government spending was gaining a momentum threatening to wreck our economy, with our present public debt and future commitments now reaching the almost incredible total of about $750 billion—three-fourths of $1 trillion—apart from annual operating expenses.

The Citizens Foreign Aid Committee, of which I have the honor to be national chairman, is dedicated to a program of arousing the American people to the peril of continued foreign aid. As the only national organization devoted exclusively to opposing this program, we made numerous appearances before Senate and House committees earlier this year. Formed as recently as last March, our committee is conducting an action campaign for the end of the foreign aid program in 3 years.

Our committee speaks from a wealth of experience. Various of our members have devoted a lifetime to successful foreign trade and foreign business activities—men like Sterling Morton, of Morton Salt Co.; Gen. Robert E. Wood, of Sears, Roebuck; Col. Willard Rockwell, of Rockwell Manufacturing Co.; former Ambassador James Kemper, of Kemper Insurance Co.; the late Henning Prentis, of Armstrong Cork; Howard Pew, of the Sun Oil Co.; former Ambassador Spruille Braden, and others. We have four distinguished West Pointers with the rank of general on our committee.

Those who would label such men as isolationists with extensive overseas trade interests and investments are merely resorting to name calling rather than giving honest answers to questions the foreign aid problem presents.

I, personally, have seen Europe on various occasions since before World War I. In fact, my business interests have taken me throughout the world. As one of the first civilians to visit Europe after World War II, under Army order to submit a report to the U.S. Senate, I personally saw the results of unsound fiscal policies resulting in inflation, government upheaval and misery.

I returned only last week from another extensive trip in various parts of Western Europe. I can add my voice to that of countless other businessmen, journalists and others to the fact that Western Europe not only has recovered but it is experiencing a tremendous boom in many places. Our committee urgently and insistently wants to know why American taxpayer money is continuing to flood Western Europe, to name only one area.

Upon formation last March, our committee recognized certain basic facts. We recognized that since 1932 when President Roosevelt called in the gold we have gradually been giving up our economic freedoms. Meanwhile both parties were far along with spending habits that started with so-called domestic depression relief projects and grew to enormous global and seemingly endless giveaway programs—all supported by the American taxpayer. No less a Government spokesman than General Draper was quoted as saying that Uncle Sam might have to continue the foreign aid program for 100 years.

At the outset, our committee outlined a set of fundamental principles that we felt were sound and to the interest of our country as conceived under our Constitution. As soon as we had developed our initial report, which was approved by every member of the committee, it was sent to all members of the executive department of our Government, to the Congress and thousands of citizens who are leaders in forming public opinion. We also organized a public relations program for press conferences and radio.

On the occasion of my appearance before the Foreign Affairs Committee of the House of Representatives, the administration made public a 65-page report prepared by the department of government which are involved in foreign aid. It purported to be an answer in detail to our first report. Unfortunately, many of the facts referred to in the alleged answer were so worded as to become distorted.

We proceeded to rebut the administration's answer item by item in our second report. In the meantime, our research personnel developed information for the use of the various members of our committee who were regularly appearing before congressional committees. For the first time since the inception of foreign aid, a group of citizens, outwardly and steadfastly opposed our foreign aid policy before Congress. The total testimony given by members of our committee before congressional committees covered 7½ hours.

In addition to this activity, members of our committee conveyed our message in speeches from the Atlantic to the Pacific to the Gulf of Mexico. Leading newspapers, especially in Washington, D.C., have carried our ads.

Time will not permit me to refer in detail to the contents of our various reports which are available to you upon request. I am here to pass on to you in somewhat of a concentrated form the alarming facts that have prompted our committee at great personal sacrifice of its members to alert our fellow Americans to the serious consequences of our present foreign aid program.

Our studies have disclosed wasteful foreign spending on a global basis. In the course of this spending, under the guise of economic assitsance and military aid, there has been a serious impairment of our own economy and a weakening of the defense of America—the last bastion of the free world.

One of the most serious adverse effects of foreign aid is the flight of gold—the devaluation of the dollar.

Last year, we exported merchandise totaling $16,207 million. Half of what we ship abroad is giveaway or goes to pay for giveaway. But our exports were also needed to support the private foreign expenditures of American business, of travel abroad, and to pay for the $12,944 million of goods we imported. To balance accounts, therefore, foreigners took, according to the Department of Commerce studies, $3½ billion in gold and liquid dollar balances. It is estimated that the loss of gold in the year ahead will be at least $4 billion. Alfred Hayes, president of the Federal Reserve Bank of New York, in his recent speech before the National Foriegn Trade Council warned that no objective observer would argue that we can face with composure anything like a $4 billion adverse balance continuing for an indefinite period.

This process of drawing down dollars in gold or using them to accumulate investments in this country—bank balances and stock market securities—has gone on since the beginning of the Marshall plan. In the past 10 years, over $5 billion of the gold supply has been drawn down, or 20 percent of the total, and the gold reserves are today less than they were at the beginning of World War II.

Today, of our total gold stock of less than $20 billion, something like $18½ billion is subject to call by foreigners. Anyone who recalls the 1929 panic knows that it doesn't take much to tip the scales of public confidence and start a run on the bank. The point I would like to make is this. The U.S. dollar today supports the whole American economy, now running at twice the 1939 rate with less than the 1939 backing in gold. The U.S. dollar also supports half of the world's trade and provides half the backing of the free world's currencies. This is too heavy a burden to put on our diminishing stock of gold.

Foreign aid spending is a major contributor to growing inflation—another menace facing America today. Inflation initially brings a business boom. Everybody is elated, prices are going up and everybody is making profits—then suddenly collapse, stagnation, misery, hunger, breadlines, factories idle

while prices continue to rise. Unless this situation is brought under control, it is followed by political chaos and dictatorship. The only solution to the problem is a balanced budget and a sound fiscal policy. The beginning of a sound fiscal policy is to stop the wasteful, extravagant and useless spending of foreign aid.

To date, we have spent some $80 billion in foreign aid. The total foreign aid program which has been under consideration for the fiscal year 1960, amounts to the fantastic total of $17.5 billion.

Of course, not all of the $17.5 billion will be made available. Nevertheless, indications are that approximately $14.85 billon will be made available for foreign aid. The entire 4-year Marshall plan cost $13 billion and was enacted immediately after World War II at the time Europe was prostrate and in the great international crisis. It was to be a one-time program and was not to be perpetuated. Yet, today, over 20 percent of the personal income tax dollars of every American is hypothecated for foreign aid.

The dollars that are provided for foreign aid are so astronomical that an efficient administration of the program is impossible. It also results in setting up a planned economy in nearly every country in the world. It breeds state trading which in turn breaks down commerce, American private investments and free enterprise and it brings about international socialism, which is the first step to communism.

Many of the loans that are being set up are repayable in local soft currencies which compete with hard currency and break down American investments abroad. Many loan commitments have been made in foreign countries to build up basic industry without consideration to the importance of building secondary industries and developing distribution. It takes much experience and many years to develop an efficient distribution organization, even in highly developed countries.

It is unrealistic to build up artificially underdeveloped countries beyond the limitations of their internal resources and their ability to sustain them, and in turn subsidize them by American aid. American business possesses by far the largest know-how and experience to expand commerce and international trade on a self-liquidating basis with benefits to the American economy. Our committee has recommended greater incentives for such industry to accomplish these results.

We have literally taken billions of our resources to provide our foreign competitors with the latest type facilities to strengthen their competitive effort. This effort is further strengthened by low wage scales. In Europe, labor cost to these competitors is one-sixth of ours; it is one-tenth of ours in the Far East. At the same time, we are advocating free tariffs. The result is we are destroying one American industry after another, creating ghost towns and are subsidizing unemployment through unemployment insurance at the taxpayer's expense.

The huge foreign give-away program our country has indulged in on a most lavish basis since 1940 started with lend lease, war relief, international agencies. Foreign aid administration has been in a state of constant change and turmoil. The supervision has been poor and the records even today are often not available. The favorite method of preventing an investigation is for the administration to term the pertinent records as classified information.

An Army of 20,000 bureaucrats has been developed to administrate and maladministrate the civilian tied into the army procurement. The heads of this organization are given unlimited time to appear before congressional committees and even to utilize friends for propaganda purposes to justify the perpetuation of these efforts.

In addition to spending billions on NATO, we have spread our Armed Forces and maintain overseas troops and naval installations at 73 far-away bases throughout the world. One emergency follows another which in turn is used to frighten us into more spending.

The dollars spent abroad by the many spending agencies change hands many times. Many of them have enriched unscrupulous operators from here and abroad. However, they all ultimately return claims on the American economy and must be redeemed by the American taxpayer. Foreigners may exchange these dollars for American goods, land, residential and business buildings, stock shares and investments.

Part of foreign aid program involves the Development Loan Fund. I should like to make several observations on this lending device. First, 90 percent of the loans go to governments, instead of a private industry, and they serve to increase the tendencies to statism and socialism in those countries. Private enterprise is unable to compete with State enterprise which gets its capital at low rates of interest, which pays no taxes and which, in the case of these foreign loans, are under little obligation to repay. The result is that we encourage state capitalism and socialism and put a blanket over private enterprise.

Secondly, our effort is directed to building up integrated economics in the underdeveloped areas for which they are presently unprepared and which requires years of preparation.

Thirdly, in certain areas we have fostered a lush growth of industry in competition with American industry. Where wages are at a subsistence level and where costly fringe benefits are unknown, we have further reduced manufacturing costs by providing the most modern machinery and processes. The result is that foreign wares of every sort and description are now flowing into the American market at prices with which our industries cannot compete.

Our defense dollar represents 60 percent of our total budget and is closely tied into our foreign aid expenditures. Members of our committee who have had top assignments in military affairs and possess practical experience in global defense planning believe this entire defense program should be reevaluated.

Our committee believes that our Strategic Air Command, SAC, is the true keeper of the peace and the United States alone is providing the free world with the greatest known war deterrent—SAC—so long as SAC is superior to the Red strategic striking force, our deterrent is likely to remain effective, but SAC bombers are wearing out and our missile program lags.

The maintenance of overwhelming air-space-nuclear supremacy should be our No. 1 objective.

Our committee believes that considerable savings can be effected by bringing home a substantial number of our troops and reducing hardware handouts to allies who can be neutralized.

We believe that industries and all our intercontinental bombers, together with their essential personnel, should be provided with adequate bunker protection against sneak nuclear attack. We believe this is a better investment than our present foreign aid program of wastefully scattering funds throughout the world.

We believe that it is unrealistic to assume that it will be possible to coordinate military efforts of 40 to 60 allies on short notice in an atomic war.

We believe that reluctant allies are worse than no allies; that people who are unwilling or reluctant to meet the cost of their own military establishments are questionable allies. We have, in support of this view, the experience in Korea.

Our committee has made an extensive investigation of the total foreign aid and waste which has disclosed a tremendous amount of graft, corruption, maladministration and mismanagement. We have tabulated in detail many of these programs which have been brought to light at congressional investigations.

In Iran, a total of a quarter billion dollars was involved in the loose, slipshod administration of an unbusinesslike program. In Pakistan, a great deal of waste in equipment as well as over-indulgence of administrators was reported by the Government Accounting Office. In Laos, the Committee on Government Operations found a great conflict between the State Department and the Defense Department's decisions which brought about very substantial losses. In Vietnam, we set up a planned economy which was fantastic and entailed terrific expenditures without any relation to what this country could absorb. In Peru, the Country Director set up a sizable livestock operation for himself, utilizing foreign aid. Controller General Joseph Campbell, in testifying before the House Appropriations Committee, said that investigations by his auditors showed a pattern of loose, tax administration running throughout the entire foreign aid program. Korea, Thailand, and Burma are other areas of extreme wasteful spending.

Our committee is not unmindful of the fact that this huge unrealistic program was set up wtih the idea of fighting communism. Certainly, it is in order to analyze the results we have attained. In Europe, the Communistic element is strongest in the areas that have received the most financial foreign aid. Likewise in the Middle East, communism has made substantial progress in spite of the millions we have appropriated. According to the records, communism has expanded in Indonesia, Thailand, and in the Far East. In Latin America, certainly our lavish gifts have not stopped insurrection in Bolivia, Venezuela, Cuba, Guatemala, Haiti, and the Argentine.

The Communist expansion is accomplished by infiltration and then seizing the Government in power. Our billions wastefully spent on a global basis have not stopped this type of procedure. Even administration leaders stress the fact that the Communist menace is now greater than ever even though we have spent $80 billion on foreign aid. Our best defense against communism is a healthy internal economy.

The Mutual Security Act of 1959 is one of the greatest pieces of "pork barrel" legislation ever conceived. It is most unrealistic to assume that 6 percent of the world population, even though we have many resources, can indefinitely support 94 percent of the world population by a giveaway program and if continued can only lead to chaos and international bankruptcy.

Proponents of global, continuing an ever-expanding foreign aid, expanding as new countries continue to be born around the world, would have the American people believe that the free world would suddenly collapse if foreign aid is killed. This is simply not so. There are abundant channels in existence designed especially to assist private overseas investment under our private enterprise system that can be adequate to any development situation arising.

The complete return to private enterprise in the financing of the needs of free world nations would restore to beneficiary nations the integrity, respectability, and responsibility lacking in government-to-government foreign-aid programs.

Our committee has not taken a negative approach to this involved problem. We have made a series of recommendations to systematically liquidate the giveaway programs and rationalize this program to put it on a busi-

ness and self-liquidating basis. We made the following recommendations to Congress:

1. That our traditional general private charity and governmental grants to relieve disaster be continued; that we encourage the expansion of our private missionary efforts.

2. That in countries which we are morally obligated to defend and which are directly threatened with Red aggression, military assistance, for the time being, should be continued but on a realistic basis.

3. That for our own and the free-world survival, the United States built and maintain overwhelming air, space, nuclear supremacy over that of the Soviet Union. (This can be effected for less than is now being spent for defense and foreign aid merely by reducing appropriations for our military surface forces which are no longer decisive, and by terminating foreign aid.)

4. That foreign aid which directly or indirectly promotes governments that are hostile to our constitutional concepts of government be terminated immediately.

5. That we cease immediately using foreign aid to enable socialistic governments to finance government-owned industries that discourage private enterprise, support a basic principle of communism, and are a competitive threat to American industry.

6. That so long as governmental foreign aid is continued, the recipient should pay a part of the cost of the proposed project; that our aid should terminate when the conditions on which that request is based have been remedied; that private technical, scientific, and educational assistance be extended only to friendly peoples who seek our aid on a cash or loan basis. In any successful enterprise, experienced management is the principal ingredient. By virtue of the necessity to make a profit, business possesses many more men whose education has been directed toward results and economy, and developing self-liquidating projects. Every effort should be made to expand the experience of men employed by American business in its outposts, reinsure private bank credits, utilize engineers employed by American companies to develop programs without charge that are self-liquidating.

7. That greater encouragement be given to private capital as a substitute for Government-financed programs. Foreign gifts stimulate socialism and communism. American foreign investments build up the standard of living, increase production, produce profits and taxes, and are self-liquidating.

8. We endorse enactment of the Boggs bill as soon as the gold flight is under control.

9. That soft and local currency loans, which represent an unsound practice, be abandoned.

10. That counterpart funds, which are impossible to administer effectively and are a political fester in foreign countries, be liquidated by sale on the best terms obtainable and all counterpart accounts be closed.

11. That until foreign aid is terminated, the Congress take steps properly to exercise close supervision and control over the manner in which all foreign-aid funds are being spent; that aid during the tapering-off process be handled by the Export-Import Bank.

12. Our committee holds that the American people have the right to demand from the administration well-defined objectives for the foreign aid program so that they can be evaluated in the light of our huge national debt and deficit spending.

As a result of all of our efforts during the past year, we believe that our committee has been largely responsible for a reduction of $1,200 million in foreign aid requested by the administration. However, it must be taken into consideration that in the interim the World Bank has substantially increased its resources and also just recently appropriated $1 billion for soft money loans throughout the world.

During the last two decades, we have been gradually losing our freedom. Our Government is rapidly drifting from a capitalistic society to a socialistic government.

The one world philosophy plus our unsound fiscal policies will result in pulling our standard of living down to the standard of the underdeveloped countries.

Billions are voted by our Congress and are squandered on a global basis without adequate control and in areas where our people do not have the opportunity to observe the results. It is further questionable whether these appropriations are constitutional.

The forces involved in this international revolution are so great that no living individual can accurately appraise the results.

However, there is a simple axiom that we should follow to avoid disaster and that is keep the home bases strong and maintain a sound fiscal policy and maintain a sound dollar.

It is axiomatic when a family lives beyond its income it results in bankruptcy, when a business get into financial difficulty a receiver is appointed, when a government spends more than its income and mortgages the future of several generations, it results in inflation and a breakdown of its social structure.

I believe we all recognize that we are living in 1959 when the world has shrunk by reason of modern aviation. The facts remain we have grown and prospered over many years by adhering to a constitutional form of government which has produced a Nation of the highest standard of education, the greatest wealth per capita, the highest standard of living in the world, and a society of free men.

Under a constitution, our Government is supposed to be the servant of the people rather than the people being the servant of the Government.

There are many areas of government operation in which public scrutiny is necessary to eliminate waste and poor administration. The foreign aid program presents you with a real opportunity and challenge to bring about economy and efficiency in government. You can help to rationalize this huge program by alerting your friends and the Congress to the need for eliminating foreign aid.

I thank you.

Senator Bridges Offers Suggestions for Dealing With Cuba

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, February 9, 1960

Mr. COTTON. Mr. President, my colleague from New Hampshire [Mr. BRIDGES] recently offered some suggestions for dealing with the problems caused by Fidel Castro in Cuba which have attracted favorable editorial comment and deserve careful consideration. In order to bring them more fully to the attention of the Senate and the country, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the February 2 edition of the Laconia Evening Citizen, of Laconia, N.H.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRIDGES HAS GOOD PLAN TO BRING CUBA TO TERMS

Erwin L. Smith of the high school faculty, Laconia's top authority on Latin American affairs, due to his frequent trips for the purpose of on-the-spot study, showed clearly, in a letter to the editor published in the Laconia Evening Citizen last Saturday, that a U.S. policy of indifference has led to steadily worsening conditions south of the border. Several readers have commented favorably to us about the views expressed by Mr. Smith. He advised that it is time for a change in the thinking in this country, with suitable action in conjunction with other nations in the Americas.

Senator BRIDGES, addressing C. of C. members here yesterday at the excellent meeting arranged by Peter Karagianis' National Affairs Committee, also proposed a change in thinking in this country, and he favored immediate action in contrast to a possibly more deliberate approach suggested by Mr. Smith.

Senator BRIDGE'S proposal is to touch Cuba's pocket-book nerve. He spoke of tremendous revenue from lavish spending by American tourists. He would cut this off summarily, and there are more reasons than one for doing this. In a country infiltrated by Communists, where as Senator BRIDGES said, anti-American tirades are a daily occurrence, there is a real hazard to sightseers and persons from the United States bent on a good time.

Further, and with still greater effect Senator BRIDGES indicated, this country should stop buying Cuban sugar for which it now pays a 2-cent premium, the latter presumably in the interest of better relations. There are other countries on which we are on friendly terms which raise sugar, and they ought to have our business Senator BRIDGES declared. He mentioned the Philippines and Peru.

Communists are running the show in Cuba, as Mr. BRIDGES said, literally "in our backyard," in a country for whose freedom the United States went to war in 1898.

Congress is now in session, and we wish the text of Senator BRIDGES' address and the letter by Erwin Smith could be in the hands of all its Members for careful consideration. The thoughtful Smith letter reviews at length the circumstances which have resulted in a threat from the Communists at our very door. And Senator BRIDGES offers a method by which Cuba could be brought to good behavior. His plan ought not to be disregarded.

Woman of the Year

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Plain Speaker of Hazleton, Pa., on Wednesday, January 27, 1960, announcing that Mrs. James A. Boyle was honored as the Woman of the Year for 1959 by the Soroptimist Club of Hazleton. I wish to

warmly congratulate Mrs. Boyle for this distinction.

MRS. JAMES BOYLE NAMED WOMAN OF YEAR

Mrs. James A. Boyle was honored as the Woman of the Year, 1959, at a dinner last evening at Gus Genetti's Town and Country Room, held by the Soroptimist Club of Hazleton.

The award is made by the Soroptimist Club to the woman who has been selected as most active during the preceding year.

Mrs. Boyle is past president of the Hazleton Business and Professional Women's Club; past district 8 secretary of the Pennsylvania Federation of Business and Professional Women; served on the original committee for the organization of the Hazleton Guidance Clinic; was the only active woman member on the committee for CAN-DO; is affiliated with the Visiting Nurses' Association and Child Care Center; has solicited for the Community Chest, Red Cross, March of Dimes, and other projects.

Religiously she is a member of the board of the Confraternity of Christian Doctrine of St. Gabriel's Church, and is active in the auxiliaries of the Boy Scouts, the Friendly Sons of St. Patrick, and the Knights of Columbus. She also is cochairman of the HHS 1937 class reunion.

Last evening more than 100 men and women from various civic and service organizations paid tribute to Mrs. Boyle, as Soroptimist President Marie D'Amico presented her with an engraved silver tray acclaiming her as the 1950 Woman of the Year.

KEY TO CITY

Mayor S. Thomas Capparell presented the key to the city to Mrs. Boyle, the first Hazleton woman to receive the honor. Mrs. Mary Ellen Schagan, chairman for the dinner, was toastmaster for the program.

Mrs. Boyle, in receiving the silver tray and the key, said that she was accepting in the name of the good all women of the community have done.

Mrs. Boyle's husband, James A. Boyle, was a special guest at the affair, and a surprise feature of the program was the presentation of piano selections by their children: James, Jr., 13 years old, and Mary Ellen, 10 years old; as well as the bouquet of red roses, presented by their third child, Tommy, 6 years old, to his mother.

Mary Ellen's selection was "Dark Eyes," and Jimmie played "Pillow Talk." They presented a duet of "Heart and Soul."

COSTELLO'S TRIBUTE

Attorney James P. Costello, Jr., main speaker for the function paid tribute to Mrs. Boyle and commended her for her many activities. He also complimented the Soroptimist Club of Hazleton, as well as the 15,000 members in 520 chapters of the club both here and abroad.

Miss Rose Marie Stevens, president of the Business and Professional Women's Club of Hazleton, which nominated Mrs. Boyle for the Woman of the Year, presented a gift to Mrs. Boyle from the club, and a letter from Miss Stevens relative to the selection of the Woman of the Year, was read.

Remarks of tribute were offered by Vincent Santapoli, Unico president; Mrs. Peter Forliano, AAUW president; Mrs. John R. Williamson, 1958 Woman of the Year; Ben Matteo, HHS class of 1937; and Miss Mary Jane Goldsworthy, president of Woman's Club.

Other organizations represented were Ladies of Unico, chamber of commerce, and child care center, and business and professional Women.

Mrs. Williamson, 1958 Woman of the Year, was introduced to the guests, as were Mrs. Boyle's husband and children, her parents, sister, brothers, and sisters-in-law.

Mrs. Schagan introduced the judges who made the selection of Woman of the Year, as Miss Dorothy Bayless, chairman; Mrs. Theodore R. Laputka, and Mrs. Julius Foldes.

Rev. Paul Purcell, of St. Gabriel's Church, gave the invocation and the benediction. Group singing of "America" and the Salute to the Flag opened the program. The Soroptimist pledge preceded the benediction.

Soroptimist colors of blue and gold were used in the programs and in the floral centerpiece.

Let's Take America Off the Hook on the Farm Program

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. DULSKI. Mr. Speaker, it is the expressed intent of our agricultural program to limit or provide methods for the limitation of the total quantity of certain products and certain commodities. A better definition of featherbedding cannot be found elsewhere than in the legislative findings on the various crops now benefiting from this Government dole system.

It is the expressed intent of the law to encourage producers to underplant their allotments for more than a year, to allow the land to remain idle throughout the contract period—not less than 3 years—and not to harvest any crop from the acreage and not to graze any acreage. The U.S. Government agrees to make annual payments to the producers for fulfilling these "nots." Agriculture is the only business wherein idleness is not only encouraged, but is compensated for legally.

We city people are paying the price for this boondoggling featherbedding because our consumer prices are pegged to an artificial standard that has no rhyme or reason. To follow this subsidy to its logical conclusion, why should not city people be allowed to put their back yard lawns into the soil conservation program and receive annual payments for performing certain "nots"? And why should not cities receive soil bank payments for the acreage devoted to parks and playgrounds?

The farmers of our Nation, because of this subsidy program are in the public opinion doghouse, and sweeping the dirt under the rug or whitewashing the absolute failure of the program will not get them out of it. The public patience is exhausted and they will not tolerate a continuation of the present program indefinitely until it collapses of its own weight, and takes our country with it. Individual rights are being violated when one segment of our economy freeloads on another.

The farm subsidy system is the dole system, no matter by what fancy or justification it is promoted. It is nothing more than taking money from one group of taxpayers to purchase things it does not want or need, to cause these same taxpayers to pay more for food and agricultural commodities. The next thing farmers will want is the Government to drill each of them an oil well behind each barn to provide them with cradle to grave economy security.

The economic monstrosity of the agricultural support programs have now become sacred, solid, and perpetual. The programs have been in effect for 20 years with the result of staggering surpluses, and backbreaking costs to the taxpayers. Let us take America off the hook on the farm program.

The Foreign Trade Crisis

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. BECKER. Mr. Speaker, I am inserting in the RECORD today an address made by Mr. O. R. Strackbein, chairman of the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy.

I am certain this address will be not only very enlightening but informative to all Members of the House and to the people of the United States; more particularly, the working people who are being affected and will be affected by imports from abroad.

The address follows:

THE FOREIGN TRADE CRISIS

(By O. R. Strackbein, chairman, before the Nationwide Committee on Import-Export Policy, January 14, 1960, Washington, D.C.)

I have titled my talk to you today "The Foreign Trade Crisis." Perhaps it would have been more fitting to call it "The Crisis in Our Foreign Economic Policy."

Either of these titles will seem extreme to those who, viewing the scene with great calm or bravado, say that we have nothing to worry about.

It is certainly not my purpose to view with alarm for the sake of viewing with alarm Use of the term "crisis" does not mean that an immediate falling-in of the roof is expected. Rather, the term is used to throw light on the overriding fact that the elements of a world trade showdown loom in many directions, and also to fan up some recognition of the inescapable character of the hard-pressing competitive factors that are on the move internationally.

We become accustomed after many years of one-way thinking, such as has been the dominant course in the tariff and trade question, to believe that a permanent benevolent order has been established, unshakable, unassailable, and sublime. We become insensitive under this hypnotic state to movements and shifts that silently and slowly shape the maladjustments that make for a future earthquake.

To say then that we are in a foreign economic crisis is to say that heavy factors in the competitive world have so shifted and moved and changed that we today bestride the ominous calm of a threatening economic earthquake. This crisis is actually in the advanced stages of its longtime shapeup.

One of the signs of the underlying shifts that augur trouble is the cost differential between this country's producers and their

competitors abroad. It has been expressed in simplified terms by saying that we have priced ourselves out of foreign markets. More about this later.

Another sign consists of the technological leap made by other countries as a result of the installation of tens of billions of dollars' worth of modern equipment, shipped abroad by the United States under foreign aid and as commercial exports. The technical aptitudes of the people in many of the foreign countries is very high; and our long lead in production techniques and automation that previously served as an insulation against import competition is fast melting away. More later on this point, too.

A third sign of trouble lies in the lag of wages behind rising productivity in the more industrialized foreign countries. Labor unions in other countries have not achieved the bargaining power of American unions. Because of this the competitive advantage of low wages, such as prevail in most other countries compared with wages prevailing here, has become wider rather than narrower.

These three trouble spots are deepseated and have been long in the making. They will now be discussed in turn.

The higher prices that prevail in this country are not attributable to any single cause, such as high wages. Wages themselves would not be high had their rise not been accompanied by other strong contributing factors. Some of these factors were of legislative origin, principally in response to the great depression of the thirties. Rightly or wrongly the measures that were adopted were designed to increase employment, raise wages and farm prices, and in general to expand purchasing power. Among the elements of this design were obligatory collective bargaining, shorter work week, minimum wages, social security, crop curtailment, and price inflation as a means of lightening the burden of debts that were contracted during a period of higher prices.

Whether these steps would have succeeded in their design without the advent of rearmament and then the outbreak of World War II is beside the point. The fact that is important to us today is that they and the policies they represented did result in lifting the economy of this country onto a plateau, at least in combination with the vast demand created by war.

After the war the expected economic collapse did not materialize. Instead there was only a recession in 1949, and this was followed by the Korean outbreak. The latter event catapulted us back into the field of mammoth Federal budgets and ever higher levels of prosperity, drawn forward by rising wages, rising profits, rapidly expanding population and strong foreign demand for our materials, equipment and supplies. This latter demand was heavily financed by us and helped keep our national budget unbalanced and added to our debt and tax burden. The budget rose to a magnitude of $75 to $80 billion dollars, or about equal to the total national product in 1939.

The war and its aftermath left us a national debt of mountainous proportions, standing today at some $290 billion. The interest alone on this debt is higher than the total national budget in the thirties, or some $9 billion per year.

This great upward movement represents another of the great shifts that have been underway beneath the surface for 25 years.

In the past it was the inevitable answer of the academic economists to say in reply to charges of low-wage foreign competition, that our higher wages were offset by our greater productivity. If we paid our workers 10 times as much as the Japanese employers paid their workers, we still had nothing to worry about, they said. We were 10 times as productive per man-hour, or more. With respect to Europe, similar explanations were made.

It was under this aegis of this economic thought that our great mass production industries fell into line behind the great tariff-mutilation program launched 26 years ago by the eager economists who came tumbling out fresh from the universities, like a trail of ants, into Washington.

Assured by the erudite economists that they could outproduce the rest of the world to the end of time, these mass producers applauded the great trade program that was incidentally to pacify the world, in the belief that their future lay in expanded foreign markets while on the domestic front they would be immune to import competition. The words of the economists rang in the ears of these men in the forefront of American technology. After all, was it not true that our higher wages were offset by our higher productivity? Was it not stupid to be afraid of foreign competition merely because foreign wages were relatively so low? Only a low order of intelligence could possibly see any remote threat in such a situation: only McKinley-era type of horse-and-buggy thinkers could see any dangers in the premises. Or, better yet, Neanderthalers, or, if moderns, then sufferers from mental atrophy.

In the post-1950 world one of the great shifts already mentioned began to take shape slowly, like the earth movement alongside the St. Andreas fault in California, but just as ominous. With the shipment abroad of tens of billions of dollars in up-to-date machinery and equipment, foreign productivity began to rise much faster than ours. Much of this machinery was installed to replace machinery of a much lower order or even handicraft style of production. Where we gained a few percentage points in productivity when we replaced a less modern machine with a more modern one, installations of modern machinery in other countries might mean a doubling or tripling in productivity in the particular plant. In foreign competitive terms this meant a great deal.

Unfortunately for our competitive comfort, foreign wages have not kept pace with the rising productivity, as already noted. Reports have it that since 1954 foreign wages has risen more rapidly than the U.S. wages; but by 1954 we had come up a long way from the wages of 1945. Foreign wages were far behind us in getting started on their uptrend.

By 1958 our mass-production industries, supposedly immune to foreign pressure, began to feel the heat of the new competition. Steel, for one, began to pour in at a rate higher than our exports, which had begun a decline a year or two earlier. Automobiles, for another, saw a reversal of previous form. Small cars from abroad began to speck our highways and dot our streets; while the outflow of the proud American car took on the aspects of an ebb tide. Other countries were capturing our foreign markets. Typewriters felt the same reversal of flow, as did many other products. Suddenly, it seemed, we were living in a wholly new competitive world; and we were indeed.

Were the university-hatched professors wrong? Had they taken their cues too much from their textbooks which in turn were written by other university professors who in turn taught from books written by other university professors who also had never been out in the world?

Even today these professors are still blowing bubbles of doctrine that burst on the first impact with reality. They say, many of them, that we have not priced ourselves out of foreign markets. They say our industries have merely slid down into the wallows of laziness and no longer know how to sell; and that that is why they cannot compete as they did before. At the same time they applaud the oversea trek of industry after industry from this country seeking a foreign haven of lower costs, thus implicitly recognizing our increasingly untenable competitive position.

Under these various shifts that have been described lies the rubble of our shattered tariff structure. In its reduced circumstances it can no longer withstand much pressure or fend off the competitive onslaught.

Altogether the great changes and permutations of the past two decades have produced the elements of a cataclysm that may have the force to up-end the United States economically unless some reversing steps are taken soon.

The economists who predicted a collapse in the early years after 1945, and were left dangling as false prophets by events, for all to see, now seem inclined to the view that nothing will again upset our economy. Some of them, if not all, look with disdain on any disrupting effects that might be produced by our mounting import competition. When all indices point upward and optimism oozes from all pores, it seems like madness to suggest that all is not well.

Yet, the underlying elements of our foreign economic relations are in a state of serious maladjustment. In the immediate postwar era a number of important factors combined to underwrite a vastly expanding domestic economy. Bulging roundly among these factors were the heavy foreign demands of the war-torn countries for all sorts of materials, supplies, machinery, equipment, etc. The brisk foreign market was sustained by our own money, and was added to the pent-up war demand of the home market.

The final effect was the escalation of the American economy to the upper stories of the rising structure.

If we look about us today we will see that the elements that in the past have succeeded in containing our successive recessions have changed, so far as the foreign economic field is concerned. No longer can we ship the spillover of our domestic production abroad at will. The productive capacity of other countries has not only been rehabilitated. In the leading industrial nations production has expanded far beyond the prewar levels. They are not only supplying more of their home needs but of foreign markets as well, including that of the United States. It is no longer a simple matter of expanding our foreign aid as a means of sopping up our surplus production.

The Secretary of the Treasury, who is at the receiving end of the results of our past financial and economic operations, is in a position to appreciate what we face. Further foreign aid or better yet, increased foreign aid, would merely aggravate our problem. The point of saturation has been reached when, as now, further financing and further nonreimbursible outlays can be sustained only by offering higher interest rates; for these increase the Treasury's own future burden. In the earlier postwar years there was always some further recourse, some elasticity. Some new juggling could still produce postponement of the evil day. Today that elasticity is about used up.

The life has even drained out of our exports. It is not merely a matter of selling more energetically. We can sell until we froth at the mouth but we cannot sell our raw cotton in foreign markets when we are 8 cents above the world market. We can sell only by subsidizing to that amount; and that is what we are doing. It will avail us nothing to try to export wheat at the home level prices, which are some 65 cents per bushel above the world level. We can do so only by subsidizing. Yet when we subsidize, the Treasury picks up the check and that means a higher budget and a greater deficit.

It is well known that in the field of many industrial products we are priced as much above the world market as we are in cotton and wheat.

A few weeks ago the application of the buy American principle to the Development Loan Fund by the Secretary of the Treasury was sharply denounced by the liberal-trade prophets. They pointed out that if India, for example, was forced to buy its materials and equipment and supplies in the United States under the DLF, the loans made to her would fall 40 percent short of the distance they would go if she could spend them in other countries. In other words, our prices, according to that estimate, are 40 percent above world prices on equipment, materials, and supplies. This was an unwitting admission from the ramparts of free trade.

For that reason the general export front faces a somewhat dismal future. We will have to fall back more and more on special new advantages, while we see our accustomed advantages, in such things as automobiles, steel, electrical apparatus, typewriters, machine tools, farm implements, etc., fade away.

Under these circumstances it is even doubtful that the relaxation of import restrictions by other countries, such as Britain, France, Japan, and West Germany, will be of much avail. If we are as badly overpriced in world markets as our cotton and wheat prices attest and as the freer-trade zealots unwittingly allege when they deplore the Buy American requirement of the DLF, our exports will get but the slightest lift from these much-touted steps toward trade liberalization by Europe and Japan.

The point has been reached in the postwar world where we should take steps to recognize and counteract the cataclysmic shifts that have produced our foreign economic crisis. It should not so long have escaped our notice, as apparently it did, that the other leading trading nations while busily denouncing protectionism to the whole world during the postwar period, and particularly for our benefit and edification, nevertheless practiced protectionism in its most virulent form. They regulated imports not by reliance on mere custom duties but used real instrumentalities of control.

Believe it or not, lethal as protectionism is supposed to be to all healthy economic development, those countries by relying heavily upon it, convalesced, and with our help, recuperated and are now in a position to throw their protective crutches away. Of course, while continuing to pour the vials of venom on protectionism they will not cast the crutches beyond reach; for, as in the past, they will surely and quickly again pick them up, if, when, and as they need them; and they will hardly ask our permission.

Somewhere in this behavior lies a lesson for us. Are we bright enough to learn what it is?

Meantime we should not be deceived by the slanted official reports that say our exports have done an about face and that imports are lagging. Our exports of agricultural products depended in 1958–59 to the extent of 56.7 percent on subsidies and on sales for foreign currencies. Only 43.3 percent were sold for dollars in the course of private commerce. Since then we have increased our subsidy on raw cotton, and our exports have responded.

To suggest that this increase and a few others are the harbingers of a new dawn for our exports could come only from a species of paralysis in the face of unwelcome facts such as afflicts those who are incapable of meeting reality. Their recourse is wishful thinking and this will not meet the crisis.

The Future of Water Resources Development

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. EDMONDSON. Mr. Speaker, yesterday the Mississippi Valley Association meeting in St. Louis heard an outstanding speech on "The Future of Water Resources Development" by Maj. Gen. Walter K. Wilson, Jr., Deputy Chief of Engineers for Construction, U.S. Army.

General Wilson, with penetrating analysis and great ability, outlined not only some of the achievements but also some of the key problems to be overcome in carrying forward a water resource program of a scope adequate to meet our future needs.

His comments on some of these problems, and particularly in connection with proper regulation of flood plain development, should be of interest to State and local interests, as well as to anyone concerned with our great water needs of the future.

General Wilson stressed "the urgency that attends the necessity for moving forward both rapidly and soundly with water resources development." He pointed out one of the great truths of our generation when he said, "We can afford to waste no time, or money, in gearing up our navigation, flood control, water conservation and other water resources activities to meet what undoubtedly will be one of the greatest challenges ever to confront us in accommodating national growth."

Mr. Speaker, I commend this speech to every thinking American, and would like to insert the complete text of this speech in the RECORD at this point:

THE FUTURE OF WATER RESOURCES DEVELOPMENT

(By Maj. Gen. Walter K. Wilson, Jr., Deputy Chief of Engineers for Construction, U.S. Army, before the Mississippi Valley Association, St. Louis, Mo., February 8, 1960)

It is a pleasure to address the Mississippi Valley Association and to associate with your membership gathered here today.

Yours is one of the country's oldest and most effective groups dedicated to the development of our water resources. During the past 40 years in which it has been active, it has provided much of the stimulation and support of basic legislation and specific project development which underlies the progress being made both within your own area and nationally.

The importance of the Greater Mississippi Valley to the United States and the intensity of the Corps of Engineers' interest in its advancement are reflected by the fact that more than one-half of our total water resources development effort is currently located there. Next year's budget, now before the Congress, contemplates a 15 percent increase in the Corps of Engineers' water resources construction program there. It comes to more than $420 million for advancing the work already underway and initiating construction on 10 new projects which ultimately will require more than $120 million to complete.

The improvements which the Corps of Engineers has made to our water resources in the Mississippi Valley and elsewhere are contributing greatly to the expanding national economy. Inland waterway traffic, exclusive of the Great Lakes, has grown at a spectacular rate from about 9 billion ton-miles in 1930 to nearly 115 billion ton-miles in 1957. Coastal shipping and Great Lakes commerce continue at the high levels prevailing for a number of years. Flood control projects in operation are preventing flood damages of some $600 million per year on the average, in addition to protecting human life. Electric power generation at multiple-purpose projects included in the Civil Works program, amounting to about 27 billion kilowatt-hours during fiscal year 1959, now comprises about 20 percent of all hydroelectric power produced in the Nation and about 4 percent of the total generation by all sources. Other benefits of the program such as the improvement of water supplies, abatement of pollution, enhancement of fish and wildlife resources, and the creation of new opportunities for recreation also are of major importance.

Despite the accomplishments to date, impressive as they are, much remains to be done before the civil works program adequately meets present-day needs, to say nothing of those of the future. We are a growing nation and one which is in the process of changing from an agricultural to a predominantly urban-industrial economy. This evoluation is accompanied by increasing needs for more and better transportation, protection from flooding, assured water supplies, and adequate electric power. Increasing urbanization, shorter workweeks, and our generally higher standard of living are accompanied by greater pressures for outdoor recreation and increased emphasis on the need to conserve and enhance our fish and wildlife resources.

The rapid growth of traffic on our 23,000 miles of improved inland waterways, coupled with a trend toward deeper drafts and larger tows, highlights the need for modernization and extension of many of these waterways. This is particularly true of the Mississippi Basin system which accounts for well over one-half of the present ton-mileage of inland waterway traffic. Our increasing reliance on foreign imports to feed our expanding industries, the trend to large deep-draft bulk carriers in ocean commerce, and the changing patterns of industrial development require continuing adjustment in seacoast harbors and channels.

Now underway to meet current needs are such works as the Calumet-Sag project to improve the interconnection between the Mississippi Basin navigation system and the Great Lakes, the replacement of outmoded locks and dams on the Ohio and Warrior-Tombigbee Rivers, the extension of navigation up the Arkansas, deepening of the connecting channels of the Great Lakes to provide depths consistent with those provided by the new St. Lawrence Seaway, deepening of the Delaware River above Philadelphia, and the new Mississippi River-Gulf Outlet project. Contingent on appropriations we will start construction of the new Poe Lock on the St. Marys River and begin improvements of navigation some 14 miles up the Minnesota River next fiscal year.

Other works, such as a system of duplicate locks on the Illinois River, have been recommended to Congress to meet the needs of the relatively near future, and still others are under consideration in various investigations authorized by Congress, including the deepening of our Great Lakes harbors.

Flood control works completed or under construction include more than 200 reservoirs, over 8,600 miles of levees and floodwalls and almost 7,000 miles of channel improvements. Despite these facilities, the average annual damages occurring in areas not yet protected are now aggregating some $700 million. About one-third of the losses now being experienced will be prevented upon completion of projects now under construction or authorized for future construction. Probably another third can be prevented by new projects not yet authorized but which will prove to be economically justified in the foreseeable future. Thus there will always remain a sizable residual of flood damages that cannot be economically prevented, but we have a long way to go before we reach the point where only that uneconomic residual remains. And new developments add to the potential risk annually.

The project for flood control in the alluvial valley of the Mississippi is further advanced than the flood control program for any other major section of the Nation, but as you well know the alluvial valley is still vulnerable to catastrophic damages in the event of extreme flood conditions which are within the realm of possibility. The flood control project for the alluvial valley is, in fact, now under review as a comprehensive whole to determine modifications that may be advisable under present conditions.

As the Nation continues to become more highly urbanized and industrialized, the assurance of an adequate water supply for domestic and industrial usage assumes ever-increasing importance. Not only are the population and industries growing, but per capita usage of water continues its upward trend, thus accelerating the problem of adequate supply. Estimates indicate that our present total demands for water will almost double by 1975. There is sufficient rainfall to meet this tremendous need, but to do it successfully there must be a substantial advance toward the ultimate goal of making beneficial use of all runoff. Until quite recently the Corps of Engineers was able to contribute to this growing need only to a limited extent by disposing of surplus storage capacity available in its reservoirs and, where practicable, by providing additional water supply storage to meet existing needs, with repayment by local interests in both cases. The Water Supply Act of 1958, however, will permit us to make greater contributions in this field by planning for future needs. Under that act beneficiaries of water supply storage may pay their share of project costs over a 50-year period, and payments for water that cannot be used immediately may be deferred until that use begins.

Earlier I mentioned increasing pressures for fish and wildlife enhancement and preservation and for recreation. In these fields, too, there is recent legislation and activity affecting our civil works program. The Fish and Wildlife Coordination Act of 1958 opens up a new field in the planning of water resource projects by authorizing, for the first time, consideration of modifications to a project for the specific purpose of improving and enhancing fish and wildlife resources as well as the previously authorized measures for the prevention of loss of, or damage to, such resources. In the field of recreation, the Outdoor Recreation Commission now is making a comprehensive study of future needs and policy recommendations. We know from experience at our completed projects, where relatively modest provisions for public use have been made at Federal expense, that the opportunities for recreation afforded by water resources projects are in high demand at the present time. The public made nearly 95 million visits to Corps of Engineers projects for recreational purposes in 1958 and we expect the 1959 figure to be higher when the computations are completed. We look for the study of the Outdoor Recreation Commission to be most helpful in establishing guidelines for planning our future activities in this field.

In the face of increasing needs of water resources development and the expanding scope of our civil works program to better meet those needs we must overcome increasing difficulties on several fronts. Little need be said about such obvious difficulties as those caused by the continuing increase in costs of land, materials, and labor, since those are difficulties common to the entire construction industry and, in fact, in some degree to all industry. Suffice it to say that as a result, the true worth of civil works appropriations of recent years, in terms of physical work that can be accomplished, is less than the worth of appropriations of some earlier years of smaller dollar amounts. Not only do these increasing costs reduce the volume of work that can be accomplished per dollar appropriated, but they prevent new projects and result in some previously authorized projects becoming uneconomic under present-day conditions.

A major contributing factor to the increasing cost of reservoir lands is costly investments in improvements placed within the reservoir areas before the projects can be initiated. A number of our authorized reservoir projects have been rendered uneconomic by this factor and the costs of many others have been increased inordinately. We have a policy of notifying State and local interests wherever areas needed for reservoirs can be definitely indentified, to encourage local authorities to take appropriate measures to discourage or prevent further expensive development within the areas involved. Organizations such as your association can be most helpful in accomplishing that objective.

Another pressing problem of recent years is to maintain properly our completed projects. As more projects are completed our responsibilities for operation and maintenance have grown. But funds available for this purpose have not kept pace with the needs, with the result that there has been a growing backlog of urgently needed work. We are extremely hopeful that new procedures worked out in cooperation with the Bureau of the Budget will be supported by the necessary appropriations not only to prevent a further increase in deferred maintenance but to enable us to start reducing the existing backlog.

There are other problems to be overcome in carrying forward a water resources program of the scope adequate to meet our future needs. Some of these, such as the present trend toward higher interest rates with consequent elimination of marginally justifiable projects, and an increase in the rates of reimbursement by consumers of water and electricity, may be relatively transitory. Others—such as the requirement for greater local participation in such phases of the program as basic planning, recreational development, and cost sharing—are dependent on the Congress and the value the general public places on development of our water resources for the welfare of the Nation.

But there is one problem about which very little has been done and which inevitably will become increasingly severe. That is the unnecessary and undesirable development of flood plain areas. Basically, all flood damages result from man's encroachment on natural flood plains. Granted there is frequent justification for such occupancy with its inevitable alternatives of either suffering the recurring hazards and economic losses resulting from flooding or incurring the cost of providing effective flood protection. Too often, however, developments have taken place in hazardous areas with little thought of the consequences when equally suitable sites were readily available outside the danger zone. Unfortunately, this tendency continues and can only become increasingly severe with the growing population and urbanization of future years if reasonable measures of regulation are not put into effect. As a consequence, it would take larger and larger expenditures merely to hold average annual national flood losses at their present level without making any progress toward our goal of greatly reducing them.

We frequently hear the complaint that our flood-control program is ineffective because national flood losses continue to run extremely high despite the huge expenditure for flood prevention. This reflects the fact that the extent and value of property improvements being located in the flood plains are growing. Surprisingly this is true even in cities which show a decline in population.

We are greatly concerned over the needless drain on the national economy reflected by this problem whether through recurring flood losses or the necessity for building costly works to protect areas that might better be left undeveloped or developed in such manner as to require minimum protective measures. The States and communities affected also should recognize their vital stake in this problem, not only because of the local financial drain for flood fighting, evacuation, and rehabilitation of the affected people during times of flood and the possible deterioration in value with losses to tax rolls, but also the increased local share in eventually providing the needed protection.

Another aspect of this problem, and one which may eventually result in chagrin for many communities, results from allowing ill-conceived developments to usurp sites that might otherwise be in high demand in the future for the location of industries that need ready access to the riverfront for such purposes as industrial water supply or water transportation. With the increasing industrialization of future years there will be a corresponding need for new riverfront sites. Generally speaking, industrial facilities to be located in flood plains can and should be so planned as to require a minimum of flood protection. Well-planned developments of that type do not add to the flood problem to the degree, nor involve the threat to health and life, that occurs when such developments as residential property are allowed to occupy the flood plains.

Proper regulation of flood plain development is, of course, primarily a State and local responsibility. It is most gratifying to note the growing interest in this subject throughout the Nation and the promise of more effective action in the future. For our part, we wish to encourage action in this field in every practicable way and will therefore always be most pleased to assist local efforts by such means as furnishing any data available to us on the flood hazard and areas subject to inundation. We believe your association and similar organizations throughout the Nation, should attack this problem with the same effective vigor and enthusiasm that you have displayed for many years in fostering and encouraging development of the Nation's water resources.

On the whole, the future of water resource development in this Nation is a bright one. The growing public recognition of the needs in this field and the importance of continued progress in meeting those needs increase the prospects that the basic water requirements of our growing and thriving economy will be met.

However, in conclusion, I want to impress you with the urgency that attends the necessity for moving forward both rapidly and soundly with water resources development. Two factors must be kept prominently in mind. First is the extremely long lead time, which in some cases can be as much as 10

to 15 years, required for the long and difficult processes of conceiving, authorizing, funding, and building major water projects. And the other is the great rapidity with which the phenomenal increase in population and the attending expansion of water resources requirements is descending upon us. We can afford to waste no time, or money, in gearing up our navigation, flood control, water conservation, and other water resources activities to meet what undoubtedly will be one of the greatest challenges ever to confront us in accommodating national growth.

The Mississippi Valley Association can, and I am confident will, play an equally effective part in the task ahead of us as it has in the past. Certainly with your continued support, as individuals and as an organization, those of us who labor in the field of water resources development can do so with the assurance that our efforts will be much more rewarding. I wish you well in all of your present and future endeavors.

Advertising Versus Badvertising—A Few Quiet Reflections

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. WILSON. Mr. Speaker, as an advertising man I am concerned about current attacks on my profession. I feel constrained to say a few good words in defense of this much-maligned segment of the business world.

Admittedly, recent revelations of unsavory practices have cast a reflection on all advertising, but we must not let the exception prove the rule. It is the exception that is making the headlines these days. It is the misleading claim, the excessive counterclaim, the absurd distortion, or the downright rude or crude commercial that is under attack. All of these are true exceptions, the less than one-half of 1 percent that the Federal Trade Commission claims is unacceptable advertising.

It is to the credit of the advertising profession that a constant policy of self-policing has resulted in greatly improved advertising practices over the years. Undoubtedly, this public conscience has resulted in making advertising, like ivory soap, more than 99 and 44/100 percent pure.

A recent editorial in the Wall Street Journal, the national business daily, expresses more eloquently what I am trying to say. I congratulate Mr. Robert M. Feemster, chairman of the executive committee, and Mr. T. E. Callis, advertising director of the Journal, for what can only be termed as a constructive contribution to a calm, effective solution to the current controversy.

I ask unanimous consent to include the editorial as a portion of my remarks:

[From the Washington Post and Times Herald, Feb. 5, 1960]

ADVERTISING VERSUS BADVERTISING—A FEW QUIET REFLECTIONS

This is no attempt to minimize the seriousness of what advertising men presently are concerned about: the method by which public confidence can be restored and sustained.

But amidst all the many proposed remedies, here are a few central facts which ought not be overlooked:

The first of these is that as a profession, advertising performs many constructive benefits. This is acknowledged by nearly everyone. Nobody but a grossly misinformed alarmist, or an out-and-out demagog, would wish to cripple advertising or to destroy it.

The second central fact is this: The overwhelming bulk of all advertising is honest and reliable. (In 1959, the Chairman of the FTC publicly stressed that probably less than one-half of 1 percent of all advertising was bad from the standpoint of the public interest. Ergo, more than 99½ percent was blameless.) This results from the average adman's combination of acumen and ethics. He is both a good businessman and a good man. He knows it pays to be on the level * * * and, personally, he wouldn't wish to be otherwise anyway. Thus, financially and morally, advertising has strong built-in controls.

It takes much courage these days to describe somebody as being "a good man." The phraseology dates back to McGuffey's Reader. It's old fashioned. It's corny. And it certainly doesn't mesh with what many a novelist has said about advertising men, does it? Its only merit is that it happens to be true.

Here is another thing not widely known about admen: They are advertising's harshest critics. Like the best men in the medical and legal professions, advertising professionals devote much of their time to stern self-examination. Public and governmental reaction to recent exposés was mild compared with the reaction among admen themselves. It was a personal blow.

However, a psychoanalyst would explain it, the ad man is extremely self-conscious. He gives full support to the only trade journals we know of, which week after week raise the embarrassing issues of morality, ethics, and straight-shooting among their own readers. This compares favorably with other professions we hold in the highest esteem. Just as the Bar Association takes action against misguided lawyers * * * and just as the AMA unsmocks a doctor when necessary * * * in almost every issue, the professional advertising journals wallop the daylights out of ad men who step out of line.

And look at the professional advertising associations. They are positively relentless in their war against misrepresentation. The Advertising Federation of America maintains an unceasing insistence on truth in advertising. And through its clubs, the better business bureaus originally came into being. It was even at the suggestion of AFA that the FTC was born. AFA would have disbanded in explosive disunity long ago if its membership itself would not be equally insistent that AFA continue to be forthright. The American Association of Advertising Agencies actually invites its members to submit evidence of advertising not measuring up to AAAA's high standards. The Association of National Advertisers and the Advertising Association of the West are leaders among the many other organizations whose vigilance is directed first toward the public's best interests, knowing full well that these policies also will be best for business.

That these strictures are not 100 percent successful is to be deplored. More significant is that advertising never hesitates to launder its own linen * * * and in the full public view. (It should also be remembered that the most stringent recent criticism, right or wrong, of advertising organizations came not from public officeholders or consumers, but from highly regarded advertising leaders. They want the organizations to be even more aggressive.)

Many thinking admen believe the chief key to current problems is more of this self-consciousness and more self-policing.

Would it work?

Well, you might be surprised to learn how well it is working.

Major media (including the Wall Street Journal) reject millions and millions of dollars in advertising annually. The media believe this rejected advertising doesn't measure up to the standards of dependable information.

And even more of this undesirable advertising never reaches the media at all. Alert advertisers and their agencies kill it before it sees the light of day. No official hearings or investigations could possibly be tougher than the slug-it-out sessions from which most advertising copy finally emerges. "Can we prove that?" "Not 100 percent true." "Too wild." "Is this really fair?" "Believable?" "Let's tone it down" come floating through the transoms far, far more often than, "Think we can get away with this?"

Unbelievable? Only to those who enjoy thinking that admen are all villains, and not many people would be willing to admit to a prejudice of such enormous immaturity.

(Incidentally, an interesting aspect of the undesirable advertiser is that he is not truly an advertiser in the real sense. He is more likely to be the one-shot, hit-and-run promoter whose operations can't survive prolonged scrutiny. Less than 1 percent of the advertising rejected by the Wall Street Journal comes from well-known advertisers served by bona fide agencies. Years of experience have demonstrated that the prominent corporate name, and the well-established product brand, are not only valuable sales assets but also the public's best guarantee of dependable performance.)

This is not to say that even respectable advertisers and media are infallible. They sometimes repose trust in underserving individuals who populate the fringes of advertising. Overenthusiasm sometimes results in excessive claims. Competitive pressure is reflected in an occasional lapse of taste. But in the long run, the advertiser and his agency can give Caesar's wife useful lessons in decorum.

Witness the recent rash of proposed "remedies" for advertising's problem. You'll not find bland unanimity. Ad men—large and small—feel keenly on the subject. Notice, moreover, that no ad man is suggesting that the profession merely wait for the storm to blow over. Many another industry has had to face adverse public and political relations. But in the advertising profession, even the innocent are searching their souls and are doggedly asking: "How can we do it better?"

No, nobody wants to apply a broad brush dipped in soothing whitewash. There are things to be remedied in the world of advertising. But it is a civilized world. Its citizens are good citizens. They can be trusted.

Have We Lost Our Minds?

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the CONGRESSIONAL RECORD an editorial that appeared in the February 5, 1960, issue of the Winter Haven News-Chief, one of the leading daily newspapers in Florida. The editorial is

entitled, "Have We Lost Our Minds?" It is extremely pertinent because it questions the sanity of supporting the Cuban sugar industry while our Government is being harassed by Fidel Castro and while American investments in Cuba are being lost. I commend the editorial to the attention of my colleagues.

The editorial follows:

HAVE WE LOST OUR MINDS?

The American people are going to contribute at least $150 million this year to Fidel Castro so that he can continue to insult us, breed a Communist group to harass us and cause us further to lose face in the world. Have we gone nuts? Aren't we bright enough to see that if we continue to go along with the sugar guarantee that we become the laughingstock of all nations?

We don't need to buy the sugar produced by Cuba. We can actually grow almost enough right here in Florida to take care of the needs of our country. However, we can get more from the Philippines, or from Puerto Rico—but we probably won't. We place a support under the Cuban price, which guarantees them double the world market price.

And on top of that Americans are scheduled to lose over a billion dollars in investments in Cuba. We can't help but wonder whose side some of the people in Washington are on? This thing is serious in Cuba. And every day we dally around trying to be the good fellow means that much more trouble later. We can expect trouble, for everything we do, is twisted around into a pack of lies by the "bearded one," supported by direct lies from Moscow. Maybe we have lost our minds.

Will Chiang Step Down?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. PORTER. Mr. Speaker, Chiang Kai-shek has said that he will not be a candidate for reelection and the Constitution of the Republic of China would have to be changed to make his acceptance of a third term legal.

His second term expires May 20, 1960.

If Chiang is inclined to challenge the national assembly's authority to choose his successor he must act before May because the constitution says that the national assembly must be called into session 90 days prior to the expiration of the President's term, that is, by February 19, 1960.

John T. T. Ma has written a revealing article in the New Republic, February 8, 1960, entitled "Will Chiang Step Down?" Mr. Ma says that Chiang's personal choice would be his son Chiang Ching-kuo. It would not surprise me to learn that this man received his education in the Soviet Union and while there, prior to 1938, married a Russian and wrote public letters condoning his father and the Kuomintang, which letters he has never since denied.

Indeed, according to Mr. Ma, he has never publicly denied sympathy or affiliation with the Communists nor has he ever publicly taken back a single word of the criticism and censure he had previously directed at his father and the Kuomintang.

Another most likely successor, according to Mr. Ma and according to what I heard when I was in Taiwan last November, is Ch'en Ch'eng, now the Vice President of the Chinese Republic, vice chairman of the Kuomintang and head of the Executive Yuan. He is also widely identified with the very successful and reform movement in Taiwan. However, he is over 65 and is in extremely poor health. Mr. Ma believes that even if he were made president Chiang might still control matters so that the real source of power would be in his son's hands.

Recent correspondence from Taiwan confirms that the plan is to draft Chiang Kai-shek to serving another term.

Mr. Ma writes:

Even were Chiang strong willed enough to break the "opium" habit, that is, hunger for power, he will be pressured not to renounce the Presidency. Chiang is surrounded—captured is perhaps a more accurate word—by a host of relatives and personal followers, both on Formosa and abroad, whose only claim to the lucrative positions of power they hold is their personal relation to Chiang. This group is not only reactionary in its thinking, but is composed of men and women of at best mediocre talents whose sole interest is in position and the money it entails. They know full well that their very survival depends upon Chiang's continuation in office, that their services would be quickly dispensed with were either Chiang's son, or Ch'en Ch'eng to take his place. They are determined, therefore, to use every means at their disposal to have Chiang continue.

Chiang is a symbol of a defeated, discredited regime. It would be well for the United States if this symbol were to change so that Formosa would come to represent in Asia, not impotent aggression, but a successful land reform program.

Mr. Ma's article should be read by everyone who is interested in our policies in the Far East. He was editor and publisher of a Chungking newspaper until the Communist regime took over in 1949 and is now on the staff of the Foreign Service Institute in Washington.

Under unanimous consent previously granted, I include the text of his article:

WILL CHIANG STEP DOWN?

(By John T. T. Ma)

Within the next few weeks, time and circumstance will bring about within the Republic of China a singularly important development. The constitution of the Republic of China limits the president's tenure of office to two successive terms and President Chiang Kai-shek's second term expires May 20, 1960. Late in 1958 (December 23), President Chiang announced to the Mainland Recovery Planning Board his opposition to all proposals by the National Assembly for amending the constitution. The statement, made in Chiang's dual capacity as chief of state and chairman of the Kuomintang, came in the wake of Mao Tse-tung's announcement that he would not again be a candidate for Communist China's highest governmental position. Chiang's announcement has attracted widespread attention and has been interpreted as a firm pledge that he will voluntarily give up his position as head of the Chinese Republic in 1960. There is good reason to believe, however, that Chiang's course of action may not fulfill these expectations.

The question of Chiang's future, whether he will part with the office of president, cannot be analyzed realistically without considering the question of possible successors. There are, to be sure, several possibilities, but given the present state of politics on Formosa only two likely candidates: President Chiang's son, Chiang Ching-kuo, and the present vice president of the Chinese Republic, Ch'en Ch'eng.

Assuming that Chiang does intend to relinquish the presidency, it seems clear that his personal choice of a successor would be his son, who is already the controlling power in Formosan affairs, next to Chiang himself. And it is a public secret that in recent years President Chiang has had all important questions of policy referred first to his son, before being brought to himself. There is, thus, strong reason to believe that Chiang would personally place his son first on any list of possible successors to the presidency. Such a preference would fit in well with both Chinese tradition and the Chinese concept of family.

There are, however, strong factors working against such a choice by Chiang. Not only the native Formosans, but also the Chinese who have come to Formosa from the mainland since World War II would find the son unacceptable as Chiang's successor. This political opposition is considerably strengthened by similar sentiments within Chinese military circles. As for the Kuomintang itself, the prospect of the son's succession would be met with unmitigated hostility by the party's elder statesmen, those party members who have been Chiang's coworkers throughout the Kuomintang's history, not to mention the rank and file.

The widespread opposition to the prospect of the son's succession arises largely from uncertainty and suspicion regarding his intentions vis a vis the Chinese Communists. For more than a decade prior to 1938 the son received a typical and thorough education while living in the Communist motherland, the U.S.S.R. While there, he married a Russian and, of far greater significance, he wrote public letters condemning his father and the Kuomintang. Furthermore, since his return to China in 1938, the son has never publicly denied sympathy or affiliation with the Communists nor has he ever publicly taken back a single word of the criticism and censure he had previously directed at his father and the Kuomintang.

Ch'en Ch'eng, the other most likely successor to Chiang, is now vice president of the Chinese Republic, vice chairman of the Kuomintang, and head of the Executive Yuan. He has worked closely with Chiang for more than 30 years and has been entrusted with many top-level posts, both political and military. The place he occupies in Chiang's confidence and esteem was demonstrated in the winter of 1949 when he was appointed military and political commander of southwest China, in effect, the only part of the mainland then under Nationalist control. Perhaps even more significant, it was Ch'en Ch'eng who, during this same period, was assigned the task of preparing the way for Chiang's flight from the mainland to Formosa.

If Chiang's personal preference were to be the controlling factor in selecting a successor, there is little doubt the mantle would fall to the son. If other factors are taken into account, however, Ch'en Ch'eng's chances of succession are far greater. He commands the respect of the Kuomintang elder statesmen with whom he has had intimate relations for some four decades, and they

would undoubtedly support him as against the son. Similarly, if other political parties and independents, and especially the military circles, were faced with a choice between the two, they would also without hesitation favor Ch'en Ch'eng.

Should Chiang renounce the presidency, therefore, the relevant question would be how he could satisfy a personal desire to bequeath power to his son, and at the same time take into account the general and deep-seated hostility which the son's succession would arouse. It would be possible, although extremely unlikely, for Chiang to ignore everything other than his personal feelings and arrange directly for the son's succession. He would be more likely to seek his goal in a round-about manner. He could arrange to have Ch'en Ch'eng move up to the presidency and thus nominally become his successor while seeing to it that Ch'en Ch'eng himself arranged for the son's election to the vice presidency and his appointment to other high posts. Since Ch'en Ch'eng is over 65 and in extremely poor health, he would not be able actively to bear the load of the presidency and in all likelihood would soon be forced to retire from the political scene, opening the way for the son's assumption of the presidency. Even while Ch'en Ch'eng remained on the stage, Chiang could so arrange it that the real source of power would be in the son's hands; his appointment as head of the Executive Yuan, as Minister of Defense, and as chairman of the joint chiefs of staff would serve this purpose. In short, he would pursue a course which would pass the title of succession to Ch'en Ch'eng but the main substance of succession to his son.

Even in this event, it is highly unlikely that Chiang himself could be satisfied with merely memories of bygone authority. This would be in keeping with neither Chinese political tradition nor Chiang's personal history. In any country where political life is dominated, if not exclusively controlled by a single political party, power within the party carries with it ipso facto power within the government. Once before, Chiang gave up the Presidency for a short time—from January 1949 to March 1950—but managed to exercise a controlling voice in governmental affairs by retaining his position as chairman of the Kuomintang. If Chiang does relinquish the Presidency he would in all probability choose to follow this precedent again.

Obviously, more significant than the question of possible successors are Chiang's real plans regarding the Presidency: Was Chiang's announcement of December 23, 1958, really evidence of his intention to renounce the Presidency in 1960?

THE ARGUMENTS FOR RETIREMENT

It can be argued with considerable conviction that Chiang genuinely desires to step down from the Presidency. For one thing, such a step holds the promise of certain gains for the Nationalist reputation abroad. It could be pointed to as evidence of Free China's devotion to the rule of law and other bases of Western democracy, and could not but attract favorable comment from abroad, the United States in particular. The history of the constitution also offers reason to believe that Chiang never intended to serve more than two terms as President. When the present constitution was being drawn up in the spring of 1947, the draft agreed upon by the Kuomintang, the Young China Party and the Social Democrats contained a provision calling for a 4-year term for the President, with a limit of two terms. Interestingly enough at no time did Chiang disagree with the two-term limitation. He did, however, take issue with the suggested 4-year term, urging instead a 6-year term. His viewpoint prevailed and was responsible for the present constitutional provision limiting a President to two terms of 6 years each. It would seem, therefore, that 12 years ago at least Chiang was not planning more than two presidential terms for himself.

Another strong indication to the same effect came late in 1948, 6 months after Chiang had become President under the new constitution, at a time when all China was rapidly falling under Communist control and only shortly before Chiang's resignation from the Presidency. Just at this moment Chiang told a highly secret meeting of the Kuomintang that if Heaven would only allow him to live another 10 years he would destroy communism in China. Thus, at a time which by any standard must be considered one of the most critical in his career, Chiang was not thinking of continuing in office beyond the limit set down in the constitution.

Even if one assumes that Chiang did then and does now genuinely desire to abide by the two-term limitation on the presidency, all indications are that he will not be able to do so when the time comes. For one thing, voluntary relinquishment of personal power runs contrary to the Chinese political tradition. The exercise of political power in China can perhaps best be compared to the smoking of opium: it is not only satisfying, but also extremely hard to renounce. Even when there is an intellectual conviction that it should be renounced, more often than not the pleasure and strength of habit prove too great to resist. (In this connection, it might be interesting to note that for many Chinese the least comprehensible incidents in U.S. history are Washington's voluntary renunciation of the presidency after two terms, and his refusal to lend even an iota of support to suggestions that he head an American monarchist movement. The incidents are incomprehensible precisely because they are completely alien to Chinese political history and tradition.)

Even were Chiang strong willed enough to break the "opium" habit, he will be pressured not to renounce the presidency. Chiang is surrounded—captured is perhaps a more accurate word—by a host of relatives and personal followers, both on Formosa and abroad, whose only claim to the lucrative positions of power they hold is their personal relation to Chiang. This group is not only reactionary in its thinking, but is composed of men and women of at best mediocre talents whose sole interest is in position and the money it entails. They know full well that their very survival depends upon Chiang's continuation in office, that their services would be quickly dispensed with were either Chiang's son or Ch'en Ch'eng to take his place. They are determined, therefore, to use every means at their disposal to have Chiang continue.

HAVING IT BOTH WAYS

It seems certain that the habit of political power coupled with the pressure of this group will prove irresistible to Chiang, that he will, when the time comes, refuse to vacate the presidency. Such a decision would on the surface seem irreconcilable with Chiang's recent announcement disclaiming any intention to revise the constitution. But there is a way the two can be reconciled: under the constitution, the president is chosen by the National Assembly, a body of delegates elected to represent constituencies and special groups on the Chinese mainland. Not unnaturally, under the conditions ruling in China, there has been only one National Assembly elected to date, the one which chose Chiang as president in 1948. In 1954, at the end of Chiang's first term, the same National Assembly reconvened and reelected Chiang. The Assembly had no mandate to take such action; indeed, according to the constitution, delegates to the Assembly are to be elected every 6 years. It acted, however, arguing that since the election of a new Assembly, as required by the constitution, was impossible, the old Assembly would simply have to continue to function.

When Chiang's present term expires on May 20, such a precedent would seem ideally suited to his purposes. He can argue that since a new national assembly cannot be elected in the manner specified in the constitution, there is no constitutional means to choose a new president; and if a new president cannot be chosen, obviously the old president must continue to serve. Even if Chiang does not decide to deny openly the present national assembly's right to choose a president, there is a second variation on the same theme open to him: he can point out that less than one-half of the membership of the national assembly is on Formosa and claim, therefore, that the present assembly is not properly constituted to perform its functions. Whichever ground Chiang may pick to challenge the assembly's authority to choose his successor, Chiang must act before May because, under the terms of the constitution, the national assembly must be called into session 90 days prior to the expiration of the president's term, that is, by February 19, 1960.

The constitutional propriety of denying the national assembly's right to choose a new president would, of course, be open to serious question. The Chinese Government on Formosa, however, is not renowned for its adherence to the constitution. The ill-concealed control of the Chinese armed forces by a political party, the Kuomintang, has been in direct conflict with the letter of the constitution; and the Kuomintang's persistent use of government money for party purposes is, similarly, contrary to the spirit if not the letter of the constitution.

It would be difficult for the national assembly to denounce Chiang's reasoning, for almost identical logic has been used to justify its own continued existence. Indeed, the same argument has been used by two other organs of the Formosa government, the legislative and control yuans. In both cases members have continued to serve long beyond the terms set down in the constitution, arguing that old members must continue in office as long as conditions make it impossible to elect new members in accordance with the constitution.

Such logic and precedents will serve admirably to reconcile Chiang's announced intention to oppose any revision of the constitution with a decision that he cannot but continue as president.

There is no denying that Chiang's continuance in office under such tactics would only put off a problem which must eventually be faced, and there is no doubt that such toying with the constitution will seriously weaken it as a central symbol of the government to which many Chinese cling as an alternative to the Communist regime. Pitted against these arguments in the presently developing situation, however, are the weightier factors of political traditions and personal power.

Cleveland's Role in International Cultural Relations

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mrs. BOLTON. Mr. Speaker, the city of Cleveland has truly pioneered in programs designed to build a better understanding of foreign nations and peoples through people-to-people diplomacy.

One of the outstanding examples of community participation in foreign affairs is provided by the Cleveland international program, which annually brings a group of foreign youth leaders and social workers to this country for 4 months of study, work, and participation in American family life. This unique project, which is made possible by the cooperative efforts of Cleveland citizens, the Department of State, and foreign governments whose youth participate in the program, has frequently been described as a model in the field of cultural diplomacy.

Now in its fifth year of operation, the Cleveland international program is the first of its kind to have the leadership of private American citizens. It is also the first and only program which reaches youth leaders in foreign countries as such a cooperative international enterprise. Directed by Mr. Henry Ollendorff, the program gives nearly 70 young people each year opportunity to acquire a better understanding of the United States and its citizens. Through the creation of lasting personal friendships, the program is enabled to make a greater contribution to permanent peace than nearly any other activity today.

In a recent address before the Cleveland International Program for Youth Leaders and Social Workers, Inc., Mr. Robert H. Thayer, special assistant to the Secretary of State for the Coordination of International Educational and Cultural Relations, gave a most interesting account of the work presently carried on by the Cleveland international program and the Department of State. As these cultural activities are certain to be of wide interest, I include Mr. Thayer's address "Cleveland's Role in International Cultural Relations" at this point in the RECORD.

CLEVELAND'S ROLE IN INTERNATIONAL CULTURAL RELATIONS

(Address by Hon. Robert H. Thayer, special assistant to the Secretary of State for the coordination of international educational and cultural relations, before the Cleveland International Program for Youth Leaders and Social Workers, Inc., Cleveland, Ohio, February 3, 1960)

The subject of my speech today is Cleveland's role in international cultural relations. I should think that you would feel it pretty presumptuous for anyone not a citizen of Cleveland to come here and talk about Cleveland's role in anything—a typical U.S. Government attitude I can hear some of you say—but let me reassure you right now I have not come to Cleveland to tell you what your role is or is not, or ought or ought not to be—I have come to tell you that we in the U.S. Government believe that what Cleveland is doing in the field of international cultural relations is one of the finest examples in the entire United States of this new exacting movement that has changed the imagination of the American people—a movement to build mutual understanding through the relation of people to people. The Cleveland international program is pioneering in a field that can make a greater contribution to lasting peace than any other activity today—and I have come here on behalf of the Department of State to thank all of you who are engaged in this work and to congratulate you, Mr. Mayor and the city of Cleveland on being such public spirited citizens.

The city of Cleveland has an outstanding reputation at the State Department for its work in the promotion of community participation in foreign affairs and in the Bureau of International Cultural Relations which I have the honor of heading. People like Katherine Bang, Henry Ollendorff, and Elizabeth Brown are considered regular members of our team. The Department of State is proud to be associated with the Cleveland international program as it prepares for a fifth year of operation. I want to hear about Cleveland's role as an example which I feel sure will be followed by every city in the United States. This international program of yours and its increasing success and rapid growth is proof positive that in this jet age today, international diplomacy is not the province of government alone, it is the responsibility of every single citizen. The old forms of diplomacy, the relations of government to government, are not alone adequate today to assure the kind of peace that is worth having—peace with justice and freedom and dignity for the individual. They must be reinforced by what I call cultural diplomacy—the relations of people to people. Cleveland's program represents a model in the field of cultural diplomacy.

Why are these relations between people and people, the people of distant lands and the American people so important today? One answer to this question was well expressed to me by a high official in the Government of the United Arab Republic in Cairo last April. He pointed out that war has been for centuries a common way of settling serious disputes. But today war is self-destructive and unthinkable. Disputes must be arrested before they become violent enough to lead to war, and there is no greater arresting force to violence than mutual understanding. No matter how much you may disagree with someone or even dislike someone, if you understand him or her, it becomes much easier to reach a modus vivendi. So mutual understanding and relations of people to people are the surest way to mold the cultural understanding which is essential as a force to maintain peace.

But there is another reason for the importance of mutual understanding between the American people and the people of other lands—the people of Africa and Asia are moving forward to take their places in the sun—they are forming new nations and in so doing are meeting the same difficult problems we faced as a new Nation less than 200 years ago. They are seeking as did we to develop their lands in peace. We have much to contribute to this development, particularly in helping them achieve peace with freedom and justice and dignity for the individual, but the peoples of these countries are not going to blindly follow our example unless first there can be established between us—mutual understanding.

What is mutual understanding? I can tell you what it is not: It is not trying to impose the American way of life on other peoples; it is not trying to make them into Americans; it is not ignoring or thinking queer their customs, their background, their way of thinking and of expressing themselves because they are not like ours. I think Mrs. Katherine Bang expressed the reasoning of mutual understanding as well as it can be expressed in a statement she made 2 years ago to the Cleveland Plain Dealer. Discussing the World Affairs Council's hospitality program for foreign visitors, she said: "We hope our visitor from abroad will like what he sees of our country, but we are not trying to indoctrinate or make him into an American. We want him to go back home with a sympathetic understanding of our ways and national ideals."

It is the Government's hope that this "sympathetic understanding" of which Mrs. Bang spoke will someday be mutual and widespread. Without it, no amount of traditional diplomacy, economic assistance, or military maneuver will suffice to eradicate the prejudice, ignorance, and fear that inhibit the natural desires of people to live in peace and cooperate for the benefit of mankind. The task of developing sympathetic understanding and building confidence is not something that can be legislated by Congress or negotiated by the Department of State. This is truly a process that starts in the hearts and minds of men. The development of understanding between peoples must begin at the grassroots or else international exchange programs are only an empty gesture.

This is certainly an era of revolution and massive change in all phases of human endeavor. While the Western nations cope with the complexities of political and economic interdependence, Africa and Asia are giving birth to new sovereign nations, the menace of international communism hovers over millions of people in the Soviet bloc. Events of the next 10 years will test this country's honored traditions far more than they have been tested during the past 180 years. At the same time, we will find it necessary to discard inadequate and obsolete methods to meet the unprecedented challenges of a world in ferment.

Make a quick survey of international affairs today, and I think you will agree that complacency and lack of imagination are two of our greatest potential dangers. The United States is in a position of dynamic world leadership. How successfully that leadership will be exercised depends upon a number of factors—our military alertness, our economic vitality, our ability to guide three-quarters of the earth's peoples into an industrial age. All of these factors combine to measure a nation's strength, or lack of it. But one more vital ingredient is needed to turn that prescription for strength into one for effective leadership—a solid dose of compassion for the values, aspirations, cultural achievements, and tribulations of the people of other lands who refuse, and rightfully so, to be mere statistics in a geography textbook.

Call it sympathetic understanding or mutual understanding or cultural diplomacy. They all mean the same thing—a conscious desire to go more than halfway to meet the other fellow on his home ground and listen to what he has to say and appreciate what his culture has to offer. I submit that this is one of the most difficult tasks for a people to accomplish in a world that is accustomed to the harshness of national isolation and economic degradation. It is a task that demands an effort far greater than the production of more steel or the building of bigger rockets. It is a job that can be done only if we divest ourselves of a conditioned antipathy toward people who look, act, and think differently than we. It is a goal toward which shortsightedness and feelings of superiority can effectively bar our path. It requires a quality that I am afraid we Americans are sometimes somewhat short of—perhaps because our struggles to build a great nation discouraged its growth—it is the quality of humility.

I do not feel the need to convince any of you here this afternoon of the importance of having the American people identify themselves with the strivings of their brothers in the family of man. I am sure that you would not be associated with the Cleveland international program if you thought otherwise. And I think you are all aware of the importance which your Government attachés to this aspect of international living today. Indeed, even the diehard traditionalists in Government are beginning to realize that world leadership without mutual understanding between peoples is no leader-

ship at all. The creation of the position that I hold is evidence of the interest of the Government in cultural relations.

Let me tell you about what the Government is doing in the field of international cultural relations. Much of this will be known already to you here today, active as you are in this field, but I am constantly amazed by the number of people who apparently do not appreciate all that the Government is doing.

The international educational exchange program, which most people know through such familiar terms as "Fulbright" and "Smith-Mundt" scholarships, has sponsored more than 70,000 exchanges of students, teachers, professors, leaders, and specialists between the United States and 100 countries of the world. The alumni of this program are the leaders and future leaders of the free world—the people who are in a position to disseminate the facts of international life to millions of their compatriots.

Under the President's Special International Program for Cultural Presentations, American orchestras, theatrical troupes, jazz combos, dance groups, and athletic teams are assisted in traveling and appearing abroad. Attractions like the Cleveland Symphony Orchestra, the San Francisco Ballet, the Benny Goodman Sextet, and the Westminster Singers have appeared on every continent to help dispel widespread misconception abroad that the American people are preoccupied with material objectives. Furthermore, we are conducting a survey in certain areas of the world of how we can broaden the base of our audiences and reach some of the people at the grassroots as well as the more sophisticated audiences in the big cities. We want very much to send some of our imaginative young nonprofessional talent abroad and give them a chance by spending a larger time at each place to make a greater impression on the local population through personal contact, lectures, and seminars.

During the past 2 years, we have been able to open the first of what we hope will be a growing number of channels of communication between the American and Soviet peoples. The epic making Cultural, Technical, and Educational Exchange Agreement between the United States and the Soviet Union of January 1958, has recently been extended for another 2 years, with arrangements for increased exchanges of students, professors, and experts in various fields.

We have also noticed with a great deal of satisfaction that our participation in the programs of the United Nations Educational Scientific, and Cultural Organization are bringing an awareness of other cultures to the many thousands of American citizens who cooperate with the U.S. National Commission for UNESCO.

Through the steadfast and able work of the U.S. Information Agency, millions of foreign citizens are able to buy inexpensive American books which are translated into their own languages; thousands of foreign educational institutions receive American text books and teaching materials; 200,000 foreign students in 55 countries receive instruction in the English language each year; and American reading rooms and libraries are open for business in a majority of the world's major cities.

Through the technical assistance programs of the International Cooperation Administration, about 8,000 foreign citizens come to the United States for technical training each year, and more than 3,500 American technicians go abroad to teach the skills other people need to grow more food, build better tools, and maintain their health. These people are engaged in cultural interchange as much as the students, teachers, and professors who take part in educational exchange programs.

The same situation exists for the foreign citizens who come to the United States and the American citizens who go abroad under the military assistance programs of the Department of Defense; or the fellowship programs of the National Academy of Science and the research programs of the National Institutes of Health. In all, 15 Government agencies conduct programs that involve the movement of persons, cultural materials, and ideas between the United States and other countries.

It was the recognition by the Department of State and the administration of the need to find a common focus for this vast proliferation of programs with an impact on our cultural relations that led to the creation of the position I now hold. I have not been assigned to coordinate the international cultural relations activities of the U.S. Government in order to create a new bureaucratic hierarchy. My primary job involves keeping other policymakers informed about trends and activities and underscoring common objectives in the area of foreign affairs and pointing out gaps that need filling and increasing overlaps in our cultural effort.

During my first 12 months in office, I feel we have made a great deal of headway in persuading many responsible officials to include in their planning a long-range view of what we are trying to achieve in the field of cultural relations. Representatives of different agencies are talking to each other more often these days about such common subjects of interest as the development of educational systems abroad; the teaching of English as a foreign language; and the orientation of exchange grantees to ease the changeover from one society to another.

Outside the Government, the work of private enterprise to foster international cultural exchange is far more extensive than the efforts of all Government agencies combined. Organizations like the Carnegie Corporation; the Rockefeller Foundation and the Institute of International Education were already highly experienced when the Department of State began its first educational exchange programs with Latin America in 1938. Missionary groups had already founded hundreds of American schools in Latin America, the Middle East and South Asia. Service clubs and professional groups, like Rotary and the American Association of University Women, had well established international fellowship programs.

Today, American universities have an annual population of approximately 50,000 foreign students and educators. On many college campuses, the job of foreign student adviser is a full-time faculty position.

According to the most recent available statistics, 184 American universities are conducting 382 international programs involving exchanges of students, faculty members and materials with educational institutions and Government agencies in 93 countries. Many of these programs are sponsored by the International Cooperation Administration in recognition of the university's role in economic development.

More and more American institutions of higher learning are including foreign travel in their curriculums. Right here in Ohio, Oberlin College is sending third-year music students to the Mozarteum in Salzburg for a full 10 months of instruction; and the Western College for Women, Oxford, Ohio, has an excellent course called "The Development of World Civilizations" which includes a summer of travel in an area of the world that has been thoroughly studied by the participating students for an entire year.

Several eastern schools have conducted junior year abroad programs in Western Europe for many years. This year, for the first time, three junior year progams are being conducted in Brazil, Peru, Costa Rica, and Chile by New York, Indiana, Kansas and Fordham Universities with the assistance of the Department of State.

In addition to our universities, many hundreds of philanthropic foundations, labor unions, service clubs, professional societies, religious groups, and civic organizations are conducting educational and cultural programs with foreign countries. These include the teenage exchanges of the 4–H Clubs, the American Field Service teenage program, the professional affiliations of the Inter-American Bar Association, and the educational programs of the League of Women Voters. Last week I spoke in Louisville to the National Convention of Ruritan, and I was told that 1,000 farm families had opened their homes to receive foreign visitors.

We haven't even begun to take stock of the work that is being done and the money that is being spent in the cause of mutual understanding by hundreds of thousands of individuals and perhaps thousands of organizations in the United States, although we are trying to make a survey, country by country, of all that is being done. In one small country there are 12 Government agencies and 93 private agencies with programs in the field of international educational and cultural relations.

How, for example, does one measure the contribution made by the 200 host families of the Cleveland International Program? Can you say that these families spend a total of $10,000 for extra groceries and recreation over a 6-week period and be done with it? Or take the family of Dr. and Mrs. Ernst W. Erickson, of Ypsilanti, Mich. Last year Doctor and Mrs. Erickson received Department of State grants to help set up a new library and teach high school subjects in Katmandu, Nepal. They took their three teenage children with them at their own expense and enrolled them in local schools. In typical American teenage fashion, these children had their Nepalese classmates coming to their home after school. They gave social dancing lessons which became so popular that the students were soon being accompanied by their parents and relatives. The Ericksons were finally forced to set up a Friday night dancing class to control the demand. How do we measure the contributions of this family? Certainly not in dollars and cents.

I think you will certainly agree after this recitation that cultural diplomacy is on its way—but let me emphasize something of very great importance. You in Cleveland are using the greatest care in the selection of those who come here from abroad and of the Americans who go overseas. You are taking foreign visitors into your homes and you are making certain that they are receiving the closest possible attention while they are in this country. Both of these factors are of vital importance. We must guard against the American propensity to do things on a mass basis. We must be certain that private organizations and institutions and particularly the Government in their enthusiasm for carrying on this vitally important activity of cultural diplomacy, do not forget that the visitors from abroad do not want a canned trip around the United States. They want to live in American homes and have time to themselves to find the flavor of American life in their own way. We must give more careful thought to our visitors as individuals, we must take care lest in our enthusiasm we unintentionally turn our visitors from other lands into an assembly line. I think that this type of partnership between private and public effort that exists today between the Cleveland International Program and the Department of State is one of the greatest safeguards against this danger.

And above all we must not forget the all important task of preparing the generations to come in our own country for the task of living in a world where their next door neigh-

bor is not from Cleveland but from Kabul or Cairo or Karachi. Our children and grandchildren must be taught at least one if not two languages other than their own and taught early enough in elementary and secondary schools so that they can speak fluently. They must learn to communicate rather than study the language as a language. They must be taught to understand the peoples of other countries—they must be ready to live their lives outside of their own environment. For this we must have more teachers of foreign languages and area specialists—are we doing enough to train these teachers and specialists. The United States of America is living in a world community—in this world community there is as much pioneering to be done as there was in the early days of the founding of this great land of ours. I am told that juvenile delinquency has increased because there is not a sufficient challenge to the youth of today to give them the physical and spiritual fulfillment that growing minds and bodies require. But I submit to you that the fault lies not in the environment of modern American life today—nor in the nature of young America—it lies in the lack of imagination in those responsible for the bringing up of our youth—in the lack of vision to see the great tasks that lie ahead—in the task of a sense of international responsibility to help guide the great masses of the peoples of the new nations of the world to a life of freedom and justice, and to help guard them from the force of evil in the shape of international communism.

You in the city of Cleveland have shown that you have that imagination, that vision, and that sense of responsibility. Don't keep it to yourself. The role of Cleveland in international cultural relations goes far beyond Cleveland. It can by example be used to enlist similar activity by every city and town not only of Ohio but of the other 49 States of the Union.

And finally may I emphasize that you private citizens are the ones who can succeed in establishing mutual understanding between the people of America and the people of the rest of the world. We in Government stand ready to help you and to serve in this effort but you are the people and cultural diplomacy is a people's program, and only through this program lies the certainty of lasting peace.

I speak for my children, and my grandchildren, and those who come after them when I say may God be with you and give your efforts continued success.

Resolution of United Regular Democratic Organization of Kings County, N.Y.

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following resolution condemning religious and racial bigotry adopted by the United Regular Democratic Organization, 16th Assembly District, Kings County, N.Y. The resolution was unanimously adopted at a meeting of the organization on February 4, 1960, on motion of Philip Ruffo, an ardent civic worker of our community:

RESOLUTION CONDEMNING RELIGIOUS AND RACIAL BIGOTRY

Whereas the widespread eruption of religious and racial bigotry recorded in recent press dispatches has not only shocked the whole civilized world, but calls insistently for a vigorous and public repudiation of this evil by all right-minded citizens; and

Whereas the defilement and desecration of synagogues and churches—whatever the stimulation and motivation that underlies this behavior—is a matter of grave import to all who have a deep-rooted belief in the inviolability and dignity of man; and

Whereas all citizens are, in this time of stress and crisis, called upon, whether Christians or Jews, and all those who love truth and justice, to protest privately and condemn publicly against further manifestations of bigotry in all its aspects and in whatever form it may be expressed; and

Whereas the people who comprise the membership of United Regular Democratic Organization, 16th Assembly District, Kings County, take pride in an historical tradition of tolerance and understanding, having a mutual and reciprocal respect for each other regardless of racial origin, ancestry and religious faith: Now, therefore, be it

Resolved, That the membership of the United Regular Democratic Organization, 16th Assembly District, Kings County, hereby publicly declare their categorical condemnation against all forms and manifestations of religious and racial bigotry; and be it further

Resolved, That it is the unalterable sense of this body to express our collective detestation of any and every kind of hatred and bigotry, no matter what its source or against whom it may be registered; and be it further

Resolved, That the membership of this organization pledges its unstinted and affirmative efforts to combat, by word and deed, the evil of racial and religious bigotry, and to this end each and all of us are resolved to pledge our mutual help and assistance.

Mr. Freedom Forest

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. KARTH. Mr. Speaker, it is with a sense of high privilege and great pride that I command to the attention of the Congress and the people of the United States another editorial of recognition and tribute to an outstandingly great American, the senior Senator from Minnesota, the Honorable HUBERT H. HUMPHREY.

Because it so clearly indicates the Senator's grasp of worthwhile human relations, under the leave to extend my remarks in the RECORD, I include the following:

[From the American Jewish World, Jan. 29, 1960]

MR. FREEDOM FOREST

The strange and wonderful affinity between men and trees will find luminous expression Monday evening at the Minnesota Freedom Forest Dinner—at the Pick-Nicollet—honoring Senator HUBERT H. HUMPHREY. It is a tribute this State's senior Senator fully and profoundly merits.

The event has two great aspects. One is the honor to Senator HUMPHREY; the other is the cause the tribute bespeaks and the certainty that the event will give dramatic impetus to the cause.

HUBERT HUMPHREY has brought the full force of his towering prestige, his buoyant personality, his sparkling mind, and his responsive heart to his warm and sincere friendship for the Jewish people of America, and for that unique human community, the people of Israel. Almost every significant movement in the Jewish life of this country can claim a specific and helpful act of friendship on the part of the Senator. If his personal friends among the Jews of this country could be counted, they might constitute a larger number than some national Jewish organizations can claim as constituencies. Senator HUMPHREY is, in sum (if anything as dynamic as the Senator can be summed up), the kind of significant and incandescent friend who symbolizes the quintessence of worthwhile human relationships.

It is almost gratuitous—and certainly in the nature of anticlimax—to add that the February 1 tribute to HUBERT HUMPHREY is apolitical. The identity of the guest speaker at that occasion, the senior Senator from New York, JACOB K. JAVITS (who happens to be a Republican), is an indication not that the event is nonpartisan or pan-political, or whatever innocuous label one may invoke to indicate neutrality, but that the dimensions of the man's humanity—the fervor, the zest, the joyousness with which he seeks the welfare of people—have earned him this deeply meaningful recognition and accolade.

As for the Jewish National Fund, and the gift of growing life and rootedness it has brought, first to Palestine and now to Israel, can anything at this date be said of its contribution that would not be dwarfed and hushed by the forests it has raised up in the Holy Land? We need only add the pragmatic note that the February 1 event is intended to help get a running start on the $50,000 fund the Minnesota JNF group is seeking for the Freedom Forest in Israel immortalizing Senator HUMPHREY. JNF's goal in this country—"Fifty States, Fifty Forests"—is a catchy and even dynamic expression of both its function and concept.

The forthcoming community tribute to the Minnesota Senator will, we are confident, be a distinguished and memorable occasion. We find that its very nearness evokes a pleasant, gay, festive mood. We have every reason to hope that the numbers who come to participate in the event and partake of its festivities will help make the Minnesota Freedom Forest in Israel a speedy reality.

Hon. David M. Hall

SPEECH
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. HERLONG. Mr. Speaker, I came to know DAVID HALL early in the 86th Congress through relatives of his in my own congressional district who are personal friends.

I admired him for his philosophy of government, and for his great personal courage. Had his cereer in the House of Representatives not been cut short, I am sure it would have been a brilliant one.

The world is, I believe, better for DAVID HALL's example. His State and congressional district are better because of his having lived there. I am sure that I am better because of having known him.

Eyeless in Wonderland

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. OLIVER. Mr. Speaker, the devastating impact of Charles Van Doren's confession of guilt before the House Legislative Oversight Subcommittee is still causing reverberations through the Nation.

This sordid affair transcends Van Doren's importance as an individual. It is more a reflection of the deterioration of our Nation's standard of values. When a university professor with a doctor of philosophy degree is not willing to make the basic distinction between right and wrong, it is a cause for widespread national concern.

During recent hearings concerned with the increased transmission of obscene literature through the mails, one of the conclusions reached was that "there is a lack of public conscience in America." This moral decay plays right into the hands of our Nation's sworn enemies. All the funds expended on national defense will be in vain unless the citizens of our country, who are willing to sacrifice their integrity for the sake of a "fast buck," begin to reform. There is no easy road to morality, but this is the road which the citizens of our country must find and follow.

The following absorbing article, written by Prof. Lawrence S. Hall, of the Bowdoin College English department, Brunswick, Maine, places Van Doren's confession in the proper perspective. Professor Hall's essay appeared in the December 10 edition of the Reporter magazine:

EYELESS IN WONDERLAND

(By Lawrence S. Hall)

One snowy December afternoon in 1955 a tall young man with a cultivated and ingratiating manner came into an office I was occupying at Columbia College. He tossed his green-cloth book satchel on the table, and without removing his coat sat down and looked at me with shining eyes.

"It's wonderful," he exclaimed with equal obscurity and charm, as though the mere feeling of wonder were in itself what was important and not the thing, whatever it may have been, that caused it. "It's wonderful."

Not being addicted to this sort of mesmerism, I said: "What's wonderful"?

"The mind of man. You know," he said, "it's wonderful what you can learn from people. I'm editing an anthology of famous love letters, and it's incredible how much I've learned. I tell my students what my father always does; they aren't in class to learn from me; we're all there to learn from each other. And I have as much to learn from them, if not more." Notable events have occurred which now lead me to speculate with alarm on what in fact it was that Charles Van Doren's students taught him and he taught them.

Today, in 1959, he tells us in his own words: "I have learned a lot in those 3 years, especially in the last 3 weeks. I've learned a lot about life."

In spite of the freshman-theme idiom, we grant that this is a considerable lesson, and we ask him what it is he has learned about life, and find him saying: "* * * the truth is the only thing with which a man can live."

Again we grant the premise and ask what truth he has learned, and hear him say, "I've learned a lot about myself."

Now we put it to him: What truth has he learned about himself? And this is what he says:

"I was involved, deeply involved, in a deception. The fact that I, too, was very much deceived cannot keep me from being the principal victim of that deception, because I was its principal symbol. * * * There may be a kind of justice in that. I don't know."

Well, here is obviously something he has not learned: He doesn't know whether what has happened to him is just or not. But, beyond this, when he describes himself as being "very much deceived" and the "victim" of a deception, by whom or what does he think he was deceived? From his own testimony, certainly not by Producer Albert Freedman, who told him he could not possibly go on the quiz program "Twenty-one" without collaborating in the deceit that had been so undeceitfully proposed in the privacy of Freedman's bedroom.

The only deception of which Van Doren is certainly the victim is his own self-deception. He has been made aware, with the great help of external pressures, of the more obvious phases of this self-deception. He knows, for example, that you do not do "a great service to the intellectual life, to teachers, and to education," of which he says he believes "nothing is more vital to our civilization," by performing mental stunts, even when they are honest; though it comes hard to imagine how, with his high intelligence, the best of education and training, and experience in the profession of the intellect, he could have avoided realizing this from the beginning.

But I myself do not see that he recognizes any of those acts of deception which have not been made forcibly obvious to him, because he is still practicing them.

While he was preparing his statement to the House subcommittee, he told a Time correspondent: "I've been getting just wonderful letters from wonderful people. I put the good letters in one pocket and the bad in another. When I looked I had 39 good letters in one pocket and there was only 1 bad one in the other pocket. I've been getting so much love from so many people that I just wish I could return it all. People are wonderful."

Here is material for another volume of love letters, of which the young man can this time be both editor and recipient. Of one of these letters Charles Van Doren says to a committee of Congress: "In the end, it was a small thing that tipped the scales. A letter came to me. * * * It was from a woman, a complete stranger, who had seen me on the Garroway show and who said she admired my work there. She told me that the only way I could ever live with myself, and make up for what I had done * * * was to admit it, clearly, openly, truly. Suddenly I knew she was right, and this way, which had seemed for so long the worst of all possible alternatives, suddenly became the only one * * * In the morning I telephoned my attorney and told him my decision."

This is an extraordinary piece of self-hypnosis. On October 14, 2 days prior to receiving the quoted letter, Mr. Van Doren was served with a subpena that he had by his own statement been forced to invite. At any stage of the 3 years preceding that moment he had been free to decide to tell the truth, but from this point on it became impossible for him to make a decision because he had left no real choice. To the very end he never did perform the ethical free act of making up his mind, and to the very end of his hearing he had not learned that vital fact about himself. At the very end he still speaks of "possible alternatives" as though circumstances, as inexorably as in a work of fiction, had not closed every one of them off. Van Doren did not decide to tell the truth; what he did was adapt himself to the finally inescapable necessity of telling it. The way he talks about finding, with the help of his correspondent who did not know he was no longer a free moral agent, was to blur the stark and damning distinction between these two actions.

"I spent the rest of the week (before the hearing)," he says, "trying hopelessly to seek a way out. There was no way, but even though my mind knew there was none, I could not face the prospect emotionally." Van Doren frankly did not have the emotional strength to face what he had done or what he was; and from the necessity, moral and practical, of facing this, he did at the zero hour find a way, as he inadvertently puts it, "out." By means of the little packet of letters in his pocket he was able to lay down a smokescreen of love and devotion which clouded the issue so that all distinctions could be miraged.

Any man must struggle for the image he needs of himself to make life supportable, regardless of what that image is, in the best way he can. If camouflage is indispensable to Van Doren, then in all humanity, I am willing it should do him as much grace as possible. I would do better than forgiveness, which as Shaw once pointed out has an element of condescension in it; I would forget him and let him rescue what felicity he is able to as a private man. But it is not as a private man that I am concerned with him, because he himself calls himself a symbol. And it is by this symbol, in all its pretentious deceptiveness, that I am repelled and alarmed.

There have been men throughout history who have regarded themselves as symbols; some of them have been good and some have not. But all are dangerous if they are not seen to be what they are. There is always megalomania in a man who regards himself as symbol, as Eliot's Archbishop Becket saw when he rejected the fourth and ultimate temptation of martyrdom. There is certainly megalomania in a man who says he could not act honestly without betraying the hope and faith of millions of people—as if the hope and faith of all these millions hung on him alone; who further says, "I felt that I carried the whole burden of the honor of my profession"—as if the burden of the honor of his profession were not being carried by thousands of the relatively obscure, conscientious men who were his colleagues, who were and still are discharging their responsibilities to the intellectual life undeceiving and undeceived, and whose honor could neither be upheld nor despoiled by any one man.

What Van Doren is asking us to believe here is that he sacrificed his personal need for honesty to his larger duty to all those people whose symbol he saw himself as being. So as not to fail in his larger duty, he martyred himself to the fatal obligation of deceiving them into believing he was the symbol he knew he was not. Van Doren told an interviewer for Newsweek: "Oedipus' reaction was to pluck out his eyes in order to see a strange paradox. Well, some explosion had taken place in me, too." When I read this I realized to my utter amaze-

ment that this young man sees himself as a hero in a Greek tragedy.

But in spite of his talk about his inner explosion, the record will show that from beginning to end Van Doren has learned nothing of himself, from himself or from others. He has indeed, though in a very different way from Oedipus, plucked his eyes out. There is a pitiful circular consistency in his behavior. His performance on "Twenty-One" and his performance before the House subcommittee with its nationwide gallery are of a piece. Let me quote him again:

"I hve deceived my friends, and I had millions of them. Whatever their feelings for me now, my affection for them is stronger today than ever before. I am making this statement because of them. I hope my being here will serve them well and lastingly." The symbol, alas, is still pathetically deceiving its believers, chief among whom is Van Doren himself.

Van Doren has taken his medicine only after, by a specious alchemy, he has converted it to an elixir—a love potion. He bowed out still representing himself as the loving martyred servant of these wonderful people who will be saved by his hapless example from being beguiled by worldly wickedness.

The shortest sane response to all this is, How noble can you get? Well, pretty noble, I'm afraid, if you set sail on the befogged sea of schmaltz in Van Doren's beautiful pea-green boat. And the alarming thing is that so many members of this culture are doing just that. We have the spectacle of four members of the House subcommittee commending this young man, and the chairman actually God-blessing him as if he had done something heroic, for a confession which he was driven into.

We have another spectacle of the students, who learned from him and from whom he learned, petitioning Columbia to restore to his intellectual duties a man they described as a conscientious and brilliant teacher.

But this is not a brilliant and conscientious teacher; this is a cruelly and pitiably confused young man who by exuding and receiving indiscriminate compassion, playing footsie with the public to the end, had made himself a rallying point, a national hero of the similarly confused. They do not help one another; they compound each other's difficulties. This is far more dangerous to a culture than crooked television with its rigged quizzes and its shows of murder and rape for which Van Doren thought he was atoning by being, he imagined, the only person to read 17th century poetry on a TV network program. Crookedness, murder, and rape are among those evils he had alluded to which appear to be clearly what they are. But so far neither he nor his sympathizers have learned to detect the other kind, which lurks, among other places, behind the easy safeguards of the sacred slogan.

The supreme fraud in this whole sordid and sick affair lies in concealing under piously reflexive formulas—poetry, kind heart, truth, gentle soul, contrition, fellow sinner, forgiveness, love—the most maudlin and promiscuous ethical whoredom the soap-opera public has yet witnessed. The time can come, if it has not already come, when wanton pity for human weakness will betray the equally pitiable but uninfatuated fidelity to its strength.

Nor is this kicking a man when he's down, because this young man is anything but down, a fact he realized well in advance of most when he said (Newsweek): "Will I have the guts to withstand this if they come up with new attractive possibilities? I don't know." He will have many chances to find out. Among other things, he has already been offered, in the movie "Wake Me When It's Over," the role of prosecutor in which, if he chooses, he can duplicate the histrionic subterfuge with which as unawakened defendant he delivered his lines before a committee of Congress and the Nation.

It has been a painful chore to come to grips with this case, which has in it many of the authentic Conradian tensions between judgment and sympathy. But in defense of what may seem to be and indeed may be harshness, I offer this paradox. If judgment without sympathy is monstrous, sympathy without judgment is also monstrous. Every sound judgment has behind it the injunction: Judge not, that ye be not judged. But this does not mean, as the misguided compassionate think, Don't judge at all, because you too are guilty. It means, Don't judge in a way that assumes you are not open to the same judgment. The first enjoins chaos, the second understanding. We have to judge where we are required to, though we may already ourselves have defaulted, or we perpetuate our defections in others from a sympathetic fear of denouncing our own.

What I have really indicted here, at the expense of Charles Van Doren, is an attitude, a cultural soft spot. In this connection I have indicted also Van Doren's commenders, his condoners, his publicizers—all those who are his creators and the creators of others like him.

I would say a final word about the man who, behind all the rest—the self-pity, self-delusion, self-devotion, and self-destruction—is the same as we all are, as all men have been and will be. Not the symbol, not the tragic hero publicly pronouncing "Troubles bring you closer together," "I found myself again," "Everything came too easy," "Maybe this is all a farce, too, part of the masquerade," "This is a phenomenal thing that has happened to me—I don't think it happens to most men." Not this man but the one whose genuine private torture shows now and then amid these tortuous and phony cliches.

The man I would finally speak about is the one you get only an insufficient faltering glimpse of now and then, as I did that wintry day 4 years ago when I forebore to tell him directly what I thought of his philosophy of education. It is the man who pitifully told the reporter for Newsweek: "I've been acting a role for 10 or 15 years, maybe all my life. It's a role of thinking that I've done far more than I've done, accomplished more than I've accomplished, produced more than I've produced. It has, in a way, something to do with my family, I suppose. I don't mean just my father, there are other people in my family. But I've been running."

What Happened to Ike's National Forest Program?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. PORTER. Mr. Speaker, our great national forests are the concern of every citizen of the United States because they are a tremendous asset which is owned by the citizens of the United States and which produce immense revenues.

They can produce more revenue and more benefits if their managers, mainly the U.S. Forest Service, are given the amount of money they need to do the necessary jobs.

Last year Secretary Benson sent an ambitious 12-year program to Congress called "A Program for the National Forests." This year the budget falls far short of recognizing the needs which were apparently so clear last year.

Forest Amsden, executive editor of the World—Coos Bay, Oreg.—now a congressional fellow here on the Hill, tells the story in an article printed in his paper for January 28, 1960, and which is included here under a previous unanimous consent, as follows:

LETTER FROM WASHINGTON—WHAT HAPPENED TO IKE'S NATIONAL FOREST PROGRAM?

(By Forest Amsden)

WASHINGTON, D.C.—About a year ago, Agriculture Secretary Ezra Taft Benson sent an ambitious 12-year program to Congress called a program for the national forests.

Under this plan, yearly stages of work and expense would be undertaken to bring the 180 million acres of national forest land up to adequate levels of development. The program covered all areas of the subject, from timber sales to recreation.

The program met the approval of most Congressmen and Senators. In fact, the approval was manifested in statements and money by legislators who had long urged that just this sort of planning be carried out.

In fact, Congress has been prodding the Forest Service for such a long-range plan ever since President Eisenhower suggested such a course in his very first state of the Union message.

Congress was so happy about it last year, in fact, that it raised the Forest Service's budget by $10.9 million to get the program underway. Benson had not asked for any money last year when the program was sent up to Congress. A start on the program, apparently, was to wait until this year's budget.

Well, this year's budget is now in Congress hands. And what, many are asking: What ever happened to the program for the national forests?

You couldn't tell, hardly, that the program had been remembered in the budget, for the expenditures to make it work—in the main—were not included.

Had the Agriculture Department forgotten its mighty fine long-range plans? Or did it perhaps run amuck in the far less development-minded Budget Bureau?

We'll probably not find out. But we do know that the appropriation which the President requested for the Forest Service for fiscal year 1961 is more than $20 million too low to achieve the minimum first-year goals of the program for the national forests, even after counting the almost $11 million which Congress appropriated last year, and which presumably is being spent this year if the administration has not impounded it.

The proposal is $5 million short of providing enough for access roads and trails.

It is $2.3 million short of asking enough for reforestation and stand improvement—perhaps the most serious deficiency of all.

It is $1.6 million too low in the field of developing recreation facilities.

It would be a mistake to think this isn't about what Congress expected. In fact, perhaps the budget comes closer to the program for the national forests than was expected.

Said a Senate Interior Committee aid: "The only reason Benson sent that program up last year was because a lot of Congressmen and Senators were riding him for it. After Eisenhower mentioned it in 1953, Benson hasn't been able to forget it.

"So last year he sent it up and walked right into the trap. It will be thrown in his face all year. And it should be. These were the things that have to be done in fiscal year 1961 to get our national forests in

shape. It will cost money, but not so much money as not doing it."

Added a Congressman: "Somewhere between planning and budgeting, the administration has forgotten to carry out its glorious intentions. I hope we can help it remember."

The problem is well understood by the Forest Service. Its personnel has for years known that deliberate, well thought out goals must be set and the time and money spent to achieve them. But the career people have been undercut, this is nothing new.

This administration's attitude in the matter is typical.

The gentlemen in policymaking jobs throughout the departments will recognize problems, most of them, but they are then required to beg that the country simply cannot afford to solve them.

Failure to solve the problems of the national forests—failure to fully develop this heritage—creates more problems easily understood by southwestern Oregonians.

Understanding of this particular problem is not so acute by most of the population of the country, however. This makes it relatively easy for the administration to bring pressures against solving the problems.

This has not been the case of the national forests alone. For years, the administration has been saying we can't afford to tackle our problems in all realms of activity, and has used the bright sounding, fooling cry of "economy" to head off anyone who wants to solve them.

When the United States again gets a Government ready to take a hard look at problems, the activity (and cost) necessary to attack them will be staggering.

Wilkes-Barre Businessman Acquires Controlling Interest in Dean Phipps Stores

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Tuesday, February 2, 1960, which comments upon the acquisition by Mr. Oscar Weissman, president of the American Auto Stores, of the controlling interest in the Dean Phipps Stores, a retail chain with some 60 outlets in Pennsylvania, New York, and New Jersey:

LAND OF OPPORTUNITY—OSCAR WEISSMAN ACQUIRES CHAIN

That our country and our community offer almost limitless opportunity to men of ability, initiative, and foresight was strikingly demonstrated when formal announcement was made that Oscar Weissman, president of the American Auto Stores with headquarters in Wilkes-Barre, had purchased a controlling stock interest in the Dean Phipps Stores, a retail chain with headquarters in Scranton, 60 outlets in Pennsylvania, New York, and New Jersey, two warehouses and a realty subsidiary.

Last year, Mr. Weissman took over the full responsibilities of ownership and management of American Auto when his father, Charles Weissman, founder of the company, formally retired and severed all connections to devote himself to other interests.

Although he is only 43 years of age, Oscar Weissman has had a variety of experience in the quarter century he has been identified with American Auto Stores and the wholesale division, American Auto Accessories, Inc. He launched his business career while attending Wyoming Seminary and continued it through 4 years of college at Lafayette and while he was doing post graduate work at Babson Institute in Boston, with time out for the Second World War and a tour of duty with the Office of Price Administration. Important milestones in his career were his advancement to the post of general manager in 1946 and to the presidency in 1954.

Mr. Weissman was not content just to follow in the footsteps of his colorful father, no small feat in itself; he pioneered on his own, nationally and locally, acquiring a reputation for civic and business enterprise that suggested he was on the way to bigger things.

Yesterday, the thoughts that were in back of the minds of business associates and other friends were confirmed with his acquisition of the Dean Phipps chain. As soon as it is possible to comply with the formalities, he will take over the active management, operating it independently of American Auto.

Like the late Fred Morgan Kirby and others who became nationally known figures in American business, Mr. Weissman has faith in the future of America and in the free enterprise system. So obviously he is set to grow with the country, picking up where his father left off. Who knows where his ambitions will lead, for Dean Phipps could be just a steppingstone to other conquests when he has consolidated his position? For an executive of Mr. Weissman's capacity, the outlook is promising indeed.

Mr. Weissman's business acumen is fortified by a becoming modesty, lofty idealism and his unfailing conisderation for others, be they members of his organization, store patrons or individuals with whom he comes in contact through his extracurricular activities.

His hometown, Wilkes-Barre, which is indebted to him for many services beyond the call of duty, will wish him well in the new venture.

Unification

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. KOWALSKI. Mr. Speaker, it has been well said that it is good now and then to laugh at one's self.

Recently I introducer in this House a bill to unify the armed services under a single civilian head. Understandably enough, my proposal has met some opposition in the services.

The current issue of Army Times, a publication which I read faithfully, has on its front page a bit of verse poking fun at my bill. The verse is so cleverly done that I believe it is worth quoting in the RECORD.

I still believe strongly in unification, Mr. Speaker, and I trust that the distinguished chairman of the Armed Services Committee will set down my bill for a hearing in order that we may have a full discussion of this vital subject. However, I can relish some good-natured fun, hence I am happy to quote for the RECORD this verse from the Army Times of February 6:

UNIFICATION

(Representative FRANK KOWALSKI, a veteran of 33 years in the Army, has introduced a reorganization bill to create a single service with one uniform for all.)

Mr. KOWALSKI once was a soldier,
The uniform proudly he wore;
But now he's no longer a soldier
He don't like that suit any more.

Now he's a Member of Congress,
Where a man can wear what he likes;
No bugles at 4 in the morning,
No full field pack 20-mile hikes.

He wants a reorganization:
One uniform for all the troops;
The Army, the Navy, the Air Force
Would give way to functional groups.

Goodbye to marines, to tradition.
Goodbye to the Joint Chiefs of Staff.
When you all wear the same kind of clothing
Personnel costs will be cut in half.

Well, we'd go for this drastic idea
To balance the budget for Ike,
But think of the possible savings
If civilians all dressed alike!

So we'll back Representative KOWALSKI's proposal
And work for it at every chance
When all women start wearing bikinis
And Congressmen all wear short pants.

Twenty-fifth Anniversary of Rural Electrification

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of all the Members the timely article appearing in the International Teamster magazine for February 1960 concerning the 25th anniversary of rural electrification which had its beginning under President Franklin D. Roosevelt.

The article follows:

RURAL ELECTRIFICATION CELEBRATES 25TH BIRTHDAY—96 PERCENT OF RURAL AREAS RECEIVING ELECTRICITY

President Franklin Roosevelt was in the third year of his New Deal. His brain-trusters, as all of his assistants were known, presented him the results of a survey of the number of electrified farms in rural America, revealing that only 10 percent of the farm homes had electricity. Thereupon FDR by Executive order established the Rural Electrification Administration with responsibility to electrify the farm homes in the Nation.

That was 25 years ago—1935 to be exact. Today, as REA celebrates its silver anniversary, 97 percent of all the farms in America enjoy the benefits of modern electric service. The farmers owe it all to their ingenuity and the Rural Electrification Administration, which has financed over 1,000 rural electric distribution systems. From these REA-financed co-ops have come the electric power to make America the greatest agricultural Nation the world has ever known.

Rural electrification has meant roughly $16 billion in jobs for teamsters and other members of organized labor. Today, as farmers are buying television sets, water heaters, refrigerators, electric motors and other electrical appliances, rural electrification represents additional millions of dollars in jobs for teamsters and others.

To the farmers of the Nation, rural electrification means much more than just jobs for their city brethren. It has changed their lives completely. For the farm women, life is now much more livable. The back-breaking drudgery that they once faced has been eased, and many of the working hours are now hours of leisure. For the farm men, years have been added to their life expectancy. They can now turn over to electric motors the tasks that they used to have to do with their muscle. A point of fact is that there are over 400 different tasks that electricity can perform on the farm that formerly the farmer did himself.

To city people, electricity on the farm means much more than we realize in terms of good health. For example, a farmer used to milk cows by hand. The milk went into an unsterilized bucket. It was then placed in a cellar or some other cool place until the dairy truck picked it up, and took it to the plant for pasteurization and bottling.

Today, the farmer uses electric milking machines, sterilized by electric hot water heaters. The milk is placed in electrically sterilized containers and immediately placed in an electrically refrigerated room. It never touches human hands that might contain any one of a variety of germs.

Electricity on the farm played a prominent role in winning World War II and the Korean war. It is also a major factor in our national security and defense today. If there is one area where America is unquestionably superior to Russia, it is agriculture, and much of the credit is due to the rural electrification program begun 25 years ago by President Roosevelt and subsequently supported by President Harry Truman and President Dwight Eisenhower.

Much of the success for the rural electrification program can be attributed to Roosevelt. He had the foresight and courage to devise a perfect partnership between the Government of the people and the people themselves.

Roosevelt created the REA by Executive order, but a year later, Congress realized the wisdom of the program and passed a law making it an agency of the Government.

Interestingly enough, the REA bill in Congress was authored by Democrat SAM RAYBURN of Texas, now Speaker of the House, and Republican Senator George Norris of Nebraska. This is typical of Republican and Democratic support that the rural electrification program has had over the quarter of a century of its existence. It is also strongly supported by Teamster officials and other segments of organized labor.

REA is empowered to make loans at 2 percent interest for a period of 25 years. The vast majority of REA borrowers have been groups of farmers who organized themselves into nonprofit co-ops. REA, itself, does not own or operate any electric facilities. Rather, it is a bank where money can be borrowed on liberal terms to perform an economic and social function for the Nation as a whole.

Co-ops are very similar to teamster locals. They are voluntary, democratic organizations. They are organized to perform a service for their members. They are not in business to make a profit. Both organizations are owned by the members they serve.

In 25 years, the REA has loaned over $4 billion to farmers' electric co-ops. Seventy-seven percent of this money has gone to construct electric distribution systems. This type of co-op purchases its power wholesale from either commercial profit power companies or from Federal public power projects like the Tennessee Valley Authority.

Twenty-two percent of the $4 billion has been loaned to farmers' electric co-ops to construct generation and transmission facilities. This type of co-op is called a G–T co-op, and its membership consists of several of the distribution co-ops, who have decided to join together and build their own supply of electricity.

These REA-financed co-ops have a record of repaying their loans to the Government that is nothing short of fantastic. REA Administrator David Hamil has published figures that show the electric co-ops have repaid over $1.1 billion on their loans. This includes $628 million repaid on principal, $375 million repaid in interest, and $146 million paid ahead of schedule. Only one REA borrower was delinquent in repaying its loan.

As REA celebrates its silver anniversary, it must look to its future. There are many power people and organizations that say it should be dissolved with "job well done" salute.

REA Administrator Hamil says: "The future of rural electrification can be summarized in three phrases: More people, increased consumption (of electricity), and heavier plant (facilities).

"These trends seem certain to continue for at least 20 more years:

"More nonfarm families will move into rural areas. Many will buy homes in new suburban housing developments. More retired people will buy country homes to escape the high living costs of the city. As highways are steadily improved, more commuters will seek a rural environment for their families. And in many areas, the resort boom will continue.

"More businesses and industries will start operation in rural areas, or move there from towns and cities.

"The number of farms will diminish and families that give up farming will be reclassified as nonfarm. Those farms that remain will use more electricity for farm chores.

"Nonfarm consumers, as well as farm, will heat more homes with electricity; year-round air conditioning may be as commonplace as refrigeration in 20 years.

"Rural power distributors will have to 'heavy up' existing lines and substations to keep abreast of demand.

"The first goal of the rural electrification program has been all but attained. * * * As REA borrowers approached their first objective, a second goal began to take shape," according to Hamil.

"To assure the availability of a constantly high quality of service to all rural consumers within a service area in whatever amounts they will use, at the lowest possible cost consistent with sound management of the cooperative."

The "Featherbedded" Farm Program

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 28, 1960

Mr. DULSKI. Mr. Speaker, the dictionary definition of "featherbedding" is "pay for unnecessary or duplicating jobs, or limiting the amount of work to be done in a day as a means of stretching work."

The American people, from one end of our land to another, have been treated to the spectacle of gigantic advertising campaigns by industry, leveling this charge against the workers in major segments of our industrial machinery. As a result of this campaign, featherbedding is considered to be unethical, immoral, and indefensible.

A careful review of Federal legislation relating to agriculture leads one to the inevitable conclusion that the greatest area of featherbedding in our country today is concealed in our farm subsidy program, wherein farmers are being paid for work not performed. Agriculture is one business in America where idleness is not only encouraged but is made profitable through taxpayer-supported farm subsidy programs.

The present featherbedded farm program is a sick program because it tampers with economic laws under various guises which cannot be amended, and has failed miserably to accomplish its announced objective of a high per family real income for the farmer.

I agree that farming must be encouraged, but not in this giveaway manner. Farming, as defined by the typical pastoral scene of a ruggedly individualistic individual and his family tilling the soil on a small farm, is a misnomer or smokescreen to hide the real beneficiaries of this subsidy program—the gigantic agricultural corporations which are the real culprits draining the billions of dollars from the Public Treasury.

The small marginal farmer is being used and referred to as a man of the soil, and must be preserved at any cost.

To put the corporation farmers on an equal status with the rest of the segments of our society, we should throw them off the overburdened backs of the American taxpayers who have carried them long enough on the flimsy arguments to justify the current featherbedding, and provide them only with disaster protection such as given the workers in industry-unemployment insurance or welfare. It is just as much a disaster for a worker to lose his job as it is for a corporation farmer to fail to sell his crop at an adequate price.

There is a growing revolt among the average taxpayers who are treated to the spectacle of an example of one farmer receiving $40,000 of hard-earned tax dollars in one year for keeping land out of production to pay for work not performed—the definition of featherbedding accepted by all.

The American people are being taken by the farm program.

Expansion of Promotion of Private Commercial Exports Can Reduce Future Budget Outlays

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. MILLER of New York. Mr. Speaker, I believe that economy in Government operations is absolutely essen-

tial and I know that our Appropriations Committee has done an outstanding job in eliminating unnecessary expenditures. However, there are times when a very slight increase in appropriations can yield returns to the Nation of much greater magnitude. I am referring to the budget for the Bureau of Foreign Commerce of the Department of Commerce. The budget recommended by the President and the Bureau of the Budget would permit a modest expansion in the BFC's program to promote private commercial exports. An increase in exports at this time is absolutely essential if our country is to be successful in eliminating the deficit in our balance of payments—that is, increase our income from foreign transactions so that it will equal our outgo. A deficit in our balance of payments is every bit as serious as a deficit in our budget. As a matter of fact, if commercial exports are not increased so as to eliminate our deficit in our balance of payments, we can surely foresee that the consequences will be felt in our national budget. Timely attention to the promotion of private exports will result in elimination of many future demands for budget outlays for foreign spending. I believe that the Bureau of Foreign Commerce should have the resources which it believes, and the President believes, are necessary to provide trade promotional services to increase exports.

Maritime Inquiry

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address I made before the Maritime Associates, New York City, on Monday evening, February 8, 1960. The text of my address follows:

I want to talk to you briefly today about the investigation of antitrust problems in the ocean shipping industry in which the House Antitrust Subcommittee, of which I am chairman, is currently engaged. This investigation is both a continuation of a long-range investigative program and a response to immediate legislative problems. Let me explain.

In February 1956, I announced that the Antitrust Subcommittee would undertake a series of investigations of monopoly problems in industries subject to Federal regulation. Since that time the subcommittee has held extensive hearings and issued comprehensive reports on antitrust problems in the airlines, television broadcasting, oil pipelines transportation, and telephone communications industries. In each case, the object of the subcommittee was to ascertain whether the principles of free enterprise competition embodied in our antitrust laws were being carried out to the maximum extent consistent with the regulatory statute, the powers entrusted to the regulatory agency, and the responsibilities reposed in the Department of Justice. The present investigation of the carriage of ocean freight in the foreign commerce of the United States is part of this series.

Enactment by Congress in 1958 of so-called interim legislation which legitimized for 2 years the continued use in ocean shipping of dual rate systems served to stimulate the initiation of our ocean freight inquiry. In dual rate systems, as you know, so-called steamship conferences establish a rate differential for the carriage of cargo. Shippers who agree to use vessels of conference members exclusively pay the lower rate; all others pay the higher.

You will recall that the Supreme Court had held, on May 19, 1958, in *Federal Maritime Board* v. *Isbrandtsen Company*, 356 U.S. 481, that the dual rate system proposed in that case, whose purpose the Maritime Board had found to be that of stifling outside competition, was unlawful under the Shipping Act. Concerned lest this decision might have the effect of outlawing all dual rate systems, the shipping industry urged the adoption of validating legislation. In response, the interim enactment was passed in the closing days of the 85th Congress. It provides that all dual rate systems in use on the day of the Supreme Court decision, whether or not approved by the Maritime Board and whether or not discriminatory, or detrimental to the commerce of the United States or violative of the antitrust laws, shall be valid for 2 years. During the debates in the House on this legislation, I made clear that the Antitrust Subcommittee of the House Committee on the Judiciary would be interested in the proposed suspension of our antitrust laws and would undertake a thorough inquiry into the operation of dual rate shipping conferences in their impact on those laws.

In our ensuing investigation, the main focus of the subcommittee has been upon the interrelationship between the principles of fair and free competition inherent in the antitrust laws on the one hand, and the antitrust exemption of the Shipping Act of 1916 on the other. In this context, section 15 of the Shipping Act is one of the most important provisions of the statute. It exempts from the operations of the antitrust laws any agreement restraining competition entered into between or among persons subject to the act, provided such agreement has been filed with, and approved by, the Federal Maritime Board. In the absence of Board approval the antitrust laws are fully applicable.

Other important sections in the statutory scheme are sections 14, 16, and 17, which make unlawful certain unfair trade practices and certain discriminations by carriers between shippers, carriers, or ports. Section 20 of the act forbids the solicitation, giving, or receiving by any person subject to the act, or his agent or employee, of any information concerning the shipment of goods that might be detrimental to any shipper or carrier. These, in their relationship to the policies of the Sherman and Clayton Acts are the provisions of law with which we are most concerned and whose interpretation, enforcement, and shortcomings we are examining.

In preparation for public hearings the subcommittee staff examined the files of the Federal Maritime Board, 53 steamship conferences, and 9 American and 4 foreign steamship companies in an effort to study as many of the restrictive agreements and practices employed by the industry as time would permit. The most important—and by far the most voluminous—of the restrictive agreements filed with, and approved by, the Board under the antitrust exemption provision of section 15 are those providing for the formation of steamship conferences. These are associations of competitive steamship lines furnishing regular scheduled service on a given trade route. They are formed for the purpose of fixing uniform rates and establishing other uniform conditions of freight or passenger carriage that are binding upon all members. Conferences are of varying degrees of formality and size. Some conferences have as few as 2 members; others have as many as 55. Some have central offices and chairmen in this country while some have them abroad.

In general, the subcommittee is seeking to learn what standards the Board follows in approving conference agreements, what functions steamship conferences perform, what their procedures are, what their agreements provide, how those agreements are enforced, what action conferences take against independent operators, and what their economic impact might be upon other steamship operators, shippers, consignees, and the consuming public.

In addition, of course, the subcommittee is studying the conference's most favored tying device—the dual rate system. We are examining the provisions of existing dual rate contracts between the various conferences and their shipper customers, how these contracts are enforced, and what their economic impact is upon carriers, shippers, and consumers.

Of especial interest, too, are interconference agreements whereby antitrust exemption is granted to a conference that wishes to set rates jointly with another conference. For example, one conference of steamship lines operating from the east coast of the United States is permitted in effect, under such an agreement, to regulate the rates charged by a conference of lines operating from the west coast. Such power could easily affect the well-being of other industries and ports as well as the parties to the agreement themselves. Consequently, it is a power that must be closely supervised.

During October and November 1959, the subcommittee held 12 days of public hearings in New York, taking testimony from officials of the Federal Maritime Board and 19 representatives of 10 private corporations. Further hearings will be held next month.

The subcommittee's record to date discloses that the shipping lines frequently have conducted their operations without regard for the requirements of Federal law. There have been numerous examples of predatory actions against other shipping lines. The subcommittee's examination of the files of this industry has uncovered many instances where shippers have been victimized.

Efforts of the Federal Maritime Board to secure compliance with the requirements of Federal law is one of incredible failure. Neglect by Federal officials of their administrative responsibilities over a period that commenced before World War II is manifest in the subcommittee's record. The shipping industry's disregard for the requirements of the Shipping Act, coupled with the inadequacy of the Federal Maritime Board, undoubtedly has injured our foreign commerce, has caused American consumers to pay more for imported goods and has been detrimental to U.S. manufacturers and American exporters.

Among the problems revealed in course of the subcommittee's hearings are the following:

(1) Unfiled agreements: In studying the existing statutory provisions it is necessary, of course, to consider the conditions in the trade which gave rise to the Shipping Act and to weigh the purposes for which it was enacted. The 1916 act was an outgrowth of the extensive study of steamship agreements and affiliations made between 1912 and 1914 by the House Committee on Merchant Marine and Fisheries under the leadership of its distinguished chairman, Joshua W. Alexander, of Missouri. It was that committee's conclusion that steamship lines operating in the foreign commerce of the United States had made so many anticompetitive agreements among themselves that were detrimental to the commerce of

the United States that such agreements, if not outlawed completely, should be permitted to continue only under close governmental supervision and regulation.

The Alexander committee's report on this subject declares:

"While admitting their many advantages, the committee is not disposed to recognize steamship agreements and conferences, unless the same are brought under some form of effective Government supervision. To permit such agreements without Government supervision would mean giving the parties thereto unrestricted right of action.

"The committee believes that the disadvantages and abuses connected with steamship agreements and conferences as now conducted are inherent, and can only be eliminated by effective Government control; and it is such control that the committee recommends as the means of preserving to American exporters and importers the advantages enumerated, and of preventing the abuses complained of."

It is thus clear that the Alexander committee believed that conferences and other anticompetitive agreements among steamship lines should be permitted only under strict Government supervision, in order to insure the greatest amount of competition possible.

Our subcommittee's hearings to date reveal that the abuses detailed in the Alexander committee's report have continued unabated and unallayed. Many steamship lines and conferences have entered into numerous so-called gentlemen's agreements, restrictive arrangements and collusive practices without notifying the Board or obtaining its approval. Since these agreements often affect independent operators, shippers, and ports, and since without Board approval there can be no antitrust exemption, it may be that some of these agreements violate the antitrust laws, as well as the provisions of section 15 of the Shipping Act. It should be noted, too, that section 15 prescribes a civil penalty of $1,000 a day for each day of violation. Over 50 possible violations of the antitrust laws and over 100 possible violations of section 15 were demonstrated. Yet there has been no single instance of prosecution by either the Department of Justice or the Federal Maritime Board.

(2) Discriminatory practices: The hearings indicate that, notwithstanding the provisions of the Shipping Act, some lines discriminate in favor of valued shippers by making erroneous measurements or classifications of cargo, changing shipping schedules, reserving shipping space, reducing or eliminating passenger fares on freighter cruises, bestowing lavish entertainment, and similar practices. Over 140 instances of such rebates and discriminations, which may constitute violations of sections 14, 16, and 17 of the Shipping Act were disclosed at the hearings.

(3) Conference membership practices: Although it has long been the policy of the Federal Maritime Board and its predecessors to insist upon free and open membership in steamship conferences, the hearings reveal that this principle is not always followed. On occasion, applicants have been made to wait weeks or months for admission, during which period much revenue has been lost through inability to compete for carriage of goods shipped by contract signatories.

(4) Exchange of information: Among the many kinds of information exchanged among conferences and lines is data regarding shipments made via competitors, particularly on independent competitors. This practice could involve violations of section 20 of the Shipping Act which forbids soliciting, giving or receiving such information where it may be detrimental to any shipper or carrier. In one significant case before the Board, allegations were made by a party of violations of this section by one of the conference chairmen. However, the Board took no formal action on these allegations, and the inquiry was permitted to lapse even though the conference chairman refused to answer the Board's questions concerning these alleged violations on the ground of possible self-incrimination.

(5) Conference malpractices: According to documents and testimony received at the hearings, a considerable number of conference members engage in rate-cutting, rebating, use of unfiled rates, and other deviations from conference tariffs, rules, and regulations.

These and many other problems affecting the industry were aired before the subcommittee. When the hearings were recessed the subcommittee promptly referred all the revealed instances of possible violations of law to the Attorney General and to the Federal Maritime Board for appropriate action.

What has been the response of the Department of Justice and the Federal Maritime Commission to the revelations of our subcommittee's initial public hearings? For one thing, the Attorney General, on the basis of the subcommittee's hearings record to date, has embarked upon a grand jury investigation of steamship industry practices, impaneling juries in San Francisco and Washington. Preliminary litigation involving a challenge to the grand jury subpenas is even now pending.

Further, in January 1960, the Federal Maritime Board instituted a full scale investigation of abuses and law violations reflected in the public testimony so far received by the subcommittee. To this end, the Board has opened four rulemaking and seven investigatory dockets and has in addition issued three orders to show cause why certain agreements having Board approval should not be cancelled.

It would, of course, be premature to say how satisfactorily these enforcement steps of the Department of Justice and regulatory and investigative steps of the Maritime Board will have dealt with unlawful anticompetitive practices of the industry. When the Antitrust Subcommittee resumes its hearings toward the middle of March, the Department of Justice and the Federal Maritime Board will be asked to report on their activities. After the hearings have been completed, the subcommittee will submit its report and detailed recommendations. Our efforts will not stop there. We do not issue reports merely to file them. The agencies and enterprises which are the subject of subcommittee recommendations will be queried periodically concerning what they have done toward the solution of the problems involved. If their actions inadequately correct revealed abuses, remedial legislation will be considered. But in any event, the subcommittee will persistently follow up its investigative recommendations. This is a slow process, but, in my experience as chairman of an investigating committee, the continuing and patient attention to problems of enforcement is the only technique that brings results.

More on the Loyalty Oath

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. SCHWENGEL. Mr. Speaker, my position on the loyalty oath and the disclaimer provision in the National Defense Education Act is well known. I have introduced legislation to repeal this section of the act. I take this stand not because I object to oath per se, but because I think that it is unfair to single out these young people and imply that they are any less loyal and patriotic than any of the other people who receive Government subsidies and loans.

Not all of my constituents agree with my position, which is their God-given right. I respect their viewpoints and welcome the opportunity to make them known. Only in this free expression of viewpoints and opinions on all matters can we have true democracy.

One person who disagrees with my position is Attorney Howard E. Kopf of Davenport, Iowa. He has written me a letter with the hope that I will bring it to the attention of the Members in the House. I am glad to do this.

Under previous consent I include his letter in the Appendix of the RECORD:

KOPF & CHRISTIANSEN LAW OFFICES,
Davenport, Iowa, February 4, 1960.

Re oath of allegiance.
Hon. FRED SCHWENGEL,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR FRED: I realize it is useless to expect you to face up on the proposition of a student asking for a free education at the taxpayers' expense, taking an oath of allegiance. I am ashamed of the weakness which will cause our Congress and even the President to oppose the oath. My only thought is that votes are needed. There could not be an honest moral ground.

The fact that revolts in foreign countries sooner or later involve students is reason enough for me to be opposed to giving taxpayers' money to any so-called citizens who refuse to take the oath for a free education. You say it is a loan. I'll agree when I see the loan paid and not turned into a subsidy by future acts of Congress. You already are on record as to asking financial help to individual families and income tax deductions for college education.

Do you object to repeating the confession of faith when you go to your church? Do you say it does no harm to the devout, but might help a sinner? The true Christian does not object and should not object. The hypocrite sounds off in the loudest voice and joyfully proceeds in his hypocrisy. Is that reason to abolish the confession?

Now you say, "Howard, I am sorry if you do not agree with my church. I do believe in my church and the confession of faith." I guess all you can do is find yourself a church which does not require a confession of faith. You would be right 100 percent.

I say the same thing about a college or a college president or a student who will refuse to approve the oath of allegiance in order to get free education at taxpayers' expense. If they are intelligent, red-blooded Americans, it should be a pleasure for them to support our Government. If they don't want to, let them get their education by whatever means pleases them.

When you attend this deal at Grinnell and get all the publicity, please look around. Are you actually happy in supporting any group of persons who will find some excuse to refuse to take the oath of allegiance or to object to it? I place all such persons in the classification of the ones who take advantage of the 5th amendment. If they are honest with themselves and God and our country, they will not be hurt.

You and I belong to a great many organizations. I belong to some that you should

belong to. I consider it a privilege as a red-blooded, honest, American citizen to take the oath of allegiance. I find no objection within these organizations to the oath of allegiance.

I ask that the next time you stand with hat in hand or hand over heart or at salute or at attention in the presence of your God and your fellowman, and while the national anthem is played or the oath of allegiance repeated, that you reflect for a moment. If I am in that room, I will be thinking also. Are you really doing right in assisting anyone who, for any reason, will refuse to take the oath of allegiance? Decide how you can justify your vote.

I wish it were possible for you to read this letter to Congress before the vote and put it in the CONGRESSIONAL RECORD.

Yours very truly,

HOWARD E. KOPF.

Address of New York State Winner in National "I Speak for Democracy" Contest, Harold Szenes of Schenectady, N.Y.

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. STRATTON. Mr. Speaker, one of the finest educational programs in our Nation is the annual Voice of Democracy contest which has been sponsored over the years by the National Association of Broadcasters, the Electronic Industries Association, and the Veterans of Foreign Wars. This contest is valuable because it points up for the young people of our country the significance of our American ideals, which so many of us all too often take for granted, and to that extent it contributes greatly toward making better citizens of these young people, as well as all of us who have the benefit of hearing their presentations.

This year again the winners of this contest in the 50 States will assemble at the Statler Hotel on February 24 for the final awarding of national prizes, including the award of a $1,500 scholarship to the top winner.

One of these top State winners will, of course, be the winner from the Empire State of New York, Mr. Speaker, and it is my distinct honor and privilege to announce to this House that for the second straight year the New York State winner will be a constituent of mine from my home city of Schenectady, N.Y.

This year the winner is Harold Szenes, son of Rabbi and Mrs. Michael Szenes. Rabbi Szenes is the spiritual leader of the Congregation Gates of Heaven in my home city.

Harold Szenes' victory in the State with the largest population in the Nation is particularly outstanding because of the fact that he is not a native American, but came to this country originally as a refugee from both the Nazi and Communist brands of tyranny in Europe. The fact that this young man has so well understood and appreciated the principles which make for our democratic system of government that he has been selected as the top winner in the most populous State in the Union, is not only a great personal tribute but also a great tribute to his teachers and to his parents.

I know all of us in Schenectady are pulling hard for Harold to win the top national award, and in the meantime it is a privilege for me, under leave to extend my remarks, to make his thoughtful essay on this vital subject available to my colleagues and I commend it most highly to their thoughtful attention:

I SPEAK FOR DEMOCRACY

How shall I speak for democracy? Shall I speak in terms of myself? I am one of the fortunate few who escaped to the United States of America from Hitler's Hungarian prison camps and the newer Russian tyranny. I could praise democracy for all it has done for me, but would it be right on my part to make my personal experience the test? Can a system be praised for what it does for one person? I need not search very long to discover that what democracy has given me, it has given to hundreds of thousands who in our time or another have found haven in democratic countries. I shall speak also for the millions to whom democracy has brought fewer benefits in a no less real way.

In a democracy every individual is important. Democracy chooses to educate the mass rather than a select few. Each individual, it feels, will have some contribution to make to society. On the other hand, certain other systems would rather think for the majority and educate the few who will be of immediate aid to the country. Democracy places the right to govern in the hand of the individual rather than in the hands of a select few. Each member of a democratic society has the right (even the duty) to select those individuals who will govern that society. Another of the cherished rights of citizens of democratic countries, and the strongest safeguard of democracy itself, is the right to be informed through a free press. The honesty of public officials, and the respect of the rights of the individual are protected not only by the law enforcement agencies and courts of justice but also by the vigilance of the people and the ever alert and curious press. Only the weightiest security reasons can keep information from the public in a democracy. Even the most hostile opinions appear in newspapers, magazines, on radio and television, pointing out the fact that democracy has nothing to hide. The opportunity for education, extended to every free man, has its material rewards, enriching the country as a whole and slowly but constantly raising the living standards of its citizens. Given the opportunity to try and to experiment, people will keep searching for ideas and ways by which to better themselves, and will thereby create new conveniences for all. It can hardly be considered an accident that countries which have followed the democratic way of life for a few generations have the highest living standards in the world. While material wealth is certainly not their only goal, the ambitious, imaginative, and creative individuals who produce it are the ones who are independent in their thinking, jealous of their freedom, and are willing to assume responsibility, thereby safeguarding the spiritual values of democracy, in which they believe.

This democracy for which I speak is not the sole possession of one country. It can be found developing in the newer African States, in Israel, and in many other countries throughout the world. Thus we have every reason to hope that the privileges we enjoy as citizens of democratic countries will spread to all countries of the world. We can hope that freedom of education, of economic advancement, and of the press will become cherished possessions of all. It may be that someday no person will be in need of haven from tyranny because the rights of individuals will be respected everywhere.

The Crisis on the Commuter Railroads—No. 5

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. IRWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which was published in the New York Times on January 21, 1960.

This fifth of a series of articles I am inserting in the RECORD to focus attention of the Congress on the commuter problem is important in that it shows that there can be cooperation at the local level which, in my opinion, will be essential to the success of any program attempting to solve the commuter crisis. The article also indicates the need for Federal assistance to supplement local and State efforts.

Tomorrow I plan to introduce legislation to provide Federal assistance for improvement of commuter service which depends upon local cooperation as an integral factor in administration of the assistance.

The article follows:

PHILADELPHIA TO SUBSIDIZE RAILROADS TO HELP SERVICE

(By Clayton Knowles)

PHILADELPHIA, January 20.—The city, two railroads and railroad labor joined today in announcing a nonprofit corporation that is designed to increase fast rail transportation within the city, help the railroads stay in business and keep automobiles out of the center of the city.

The new agency, which will be known as the Passenger Service Improvement Corp., will operate at first under a city subsidy exceeding $2 million a year.

It will provide fast, frequent service from outlying points within the city to the center of the city at 30 cents a ride, a reduction from the normal fare. The Pennsylvania and Reading Railroads, acting as contract carriers for the new corporation, will be guaranteed fixed amounts. If the fares do not meet minimum guarantees a city subsidy will make up the difference.

The arrangement, the first of its kind in the Nation, contemplates Federal assistance for the railroads, possibly before the end of the year.

The hope is that legislation will be approved so that the Federal Government will match local contributions at least dollar for dollar, much in the way it now assists localities in urban renewal programs.

"The long-range success of this venture depends on Federal aid—and I think it will be forthcoming." Mayor Richardson Dilworth said.

Joining with the mayor in announcing the plan were Walter W. Patchell, vice president of the Pennsylvania Railroad; Joseph

A. Fisher, president of the Reading, and Anthony Matz of the Railway Labor Executives Association, representing 23 railroad unions.

The mayor will name 11 directors of the nonprofit corporation, the railroads 2 and the unions 2. Incorporation papers will be filed tomorrow.

The operation of the plan at the outset will be confined to the Philadelphia city limits. But Mayor Dilworth and the rail officials expressed the belief that suburbs in Bucks, Montgomery and Delaware counties and possibly even across the Delaware River in New Jersey would ask to come into the operation.

Commuters living in these areas do not benefit from the present plan if they board the train in their hometowns. If they drive to the city limits, however, they can park, take the train and get the saving.

Under a highly successful test of the program begun in the fall of 1958 many commuters have taken advantage of the service. It is hoped they will bring pressure on their home communities to extend the plan beyond the city limits.

The test also showed that many persons living inside the city were willing to stop driving into the center of the city and use the train instead. Other people gave up the cheaper, but slower, public transportation system to use the train.

This has added to the railroads' revenues and enabled them to improve service.

The tests were called Operation Northwest and Operation Northeast.

Both operations were subsidized, the first at the rate of $320,000 a year and the second at $105,000. The city assistance just about covered the actual cost to the railroad of the extra service and reduced fares the city demanded.

Operation Northwest, serving the fashionable Chestnut Hill area, has increased rail travel by 20 percent. The number of riders to the more modest Fox Chase section under Operation Northeast rose 200 percent since last fall.

Both routes will be continued under the new arrangement and, in addition, the new corporation will take over two other routes this year. One will be to Torresdale near the Bucks County line on the Pennsylvania's New York division and the other to Manayunk and Shawmont on the Reading's Norristown line generally to the west.

If this can be achieved, 75 miles of railroad within the city limits will be included in the system.

Persons using these lines derive a further benefit in that they can get a transfer to the subway and bus facilities operated by the Philadelphia Transportation Co. for an additional 10 cents. The straight fare on these facilities is 20 cents.

Long-range objectives of the corporation will be the purchase of modern air-conditioned railroad cars, electrifying the Fox Chase line, building more auto-park-and-ride depots around the periphery of the city and merchandising transportation to attract new riders.

Lamar, Colo., an All-America City

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. CHENOWETH. Mr. Speaker, I was very pleased that the city of Lamar, Colo., was selected as an All-America City, and will receive one of the annual awards presented under the joint sponsorship of the National Municipal League and Look magazine.

I want to congratulate Mayor Bowman, the members of the city council, the officers and members of the chamber of commerce, and all of the civic and community leaders in Lamar who made it possible for Lamar to receive this recognition, which is so richly deserved.

I am sure that Lamar will continue to grow and prosper, and I extend best wishes for the years ahead.

Economic Meaning of School Aid

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. BECKER. Mr. Speaker, I read an article in the Washington Evening Star of February 8, 1960, by David Lawrence, entitled "Economic Meaning of School Aid—Inflationary Effect Seen if Congress Keeps Adding to Federal Obligations."

I commend the reading of this article to every Member of Congress as well as to every interested citizen. It is clearly indicated that with the great national debt of today the continuance of increased spending programs, further adding to the national debt, will cause inflation to spiral even more rapidly than it has in the past. Having recognized this condition for quite a number of years, I am opposing a great amount of legislation, while having very laudatory meaning, would only add further to the burdens of the American people and further reduce the purchase value of the dollar. I think it is time the American people made their feelings known and help prevent further inflation.

The article follows:

ECONOMIC MEANING OF SCHOOL AID—INFLATIONARY EFFECT SEEN IF CONGRESS KEEPS ADDING TO FEDERAL OBLIGATIONS

(By David Lawrence)

The Democrats in the Senate are unwittingly doing a great deal to scare American business. They have set the stage for a spending orgy by Government which can gradually cut down the purchasing power of the dollar.

The vote in the Senate last week to provide nearly $2 billion in the next 2 years for school aid could start the Federal Government on an unprecedented course of subsidizing teachers' salaries. What has hitherto been a local obligation now could become a Federal liability every year. It starts with a few hundred millions for teachers' salaries, but, once a formula of this kind is embedded in Federal budgets, it means increasing sums every year thereafter.

Certainly schoolteachers should be better paid, and, if the States don't recognize this, they will lose teachers and fail to gain new ones. But once the Federal Government starts an aid program, the States will gradually transfer it to the majority responsibility. This could even lead to Federal control of the curriculum and teaching methods—as is the case in many a totalitarian government.

The States are not bankrupt. If they fail to appropriate enough, it is the local citizenry who should be making a fight for better schooling. The moment the Federal Government steps into anything, it becomes a custom that is never repealed.

What can all this mean to business? If dollars are to be cut down in value, unions will insist upon higher wages. Then prices start going up faster and faster. Also, interest rates have to be boosted to attract investors. It means a dislocation of the American economy.

Now, many of the 42 Democrats and 9 Republicans who voted for the $1.8 billion measure to aid the schools realize that in the House of Representatives this bill will be pared down, if not rejected altogether. Then there is a probability of a Presidential veto if the bill should get through the two Houses. It is, however, the possibility that this kind of spending will be approved by the White House if a Democratic administration comes into power a year hence which is causing apprehension in business circles.

It is significant that 10 Democratic Senators from the South and Senator LAUSCHE, Democrat of Ohio, voted against the school bill along with 23 Republicans, but the coalition wasn't big enough to stop the measure.

Naturally, all the would-be presidential candidates on the Democratic side announced themselves as in favor of this inflationary bill. Vice President NIXON had a chance earlier to break a tie on a somewhat similar bill, and he cast his vote against it. He had been warned that this might hurt him politically, but he wisely disregarded such advice.

Skyrocketing expenditures of the Federal Government are a matter of growing concern. Just a few days ago, Maurice H. Stans, Director of the Federal Budget Bureau, gave some unpleasant facts to the public in a speech he made in Chicago. He pointed out that the U.S. Treasury is faced with a large amount of future obligations growing out of the tendency to start a system of continuous spending for projects—many of them taken over from the States. He said:

"Our present national debt of $290 billion is far from all we owe for the past. Here are some items it doesn't include: Our already accrued liability for military retirement is about $30 billion. Our unfunded present accrual for retirement benefits for civilian Govenment employees is almost $28 billion. On top of that, future pensions, compensation and other benefits voted to veterans will cost about $300 billion.

"Now, the $290 billion of current public debt, plus over $350 billion of future obligations for past services, plus $98 billion of c.o.d.'s add to the almost incredible total of nearly $750 billion. That is the Federal Government's mortgage on America's future—on ourselves and our children—beyond the regular annual cost of defense, welfare, and commerce. Is it any wonder that your President pleads for a sense of proportion, for a limit on compulsive spending, for a passion for responsibility?"

What Mr. Stans means by his reference to commitments for the future is illustrated by the new school-aid bill. Once it starts, an annual obligation of the Federal Government is incurred. These are what is known as built-in expenditures, and Mr. Stans says:

"I see already built-in increases pushing expenditures up and up year after year. I see pressures continuing to mount for the Federal Government to spend more and more, to take over local governments' problems and to meet demands from pressure groups for more handouts on many fronts. If we yield to these temptations, we can soon have $90 or $100 billion budgets, higher taxes or more deficits, debasement of our money and weakening of our economy."

How many Members of Congress heeded that warning? The Democratic majority in the Senate evidently didn't, and neither did the few Republicans who apparently were

intimidated by political threats at the polls coming from pressure groups. Maybe some day an informed electorate will constitute itself as the biggest pressure group of all and vote for representatives who favor a sound economy.

Russian Textiles and Automobiles

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 4, 1960

Mr. DORN of South Carolina. Mr. Speaker, I was amazed to see where the United States is to import Russian automobiles. I was further amazed to see Americans are to build a huge textile plant in Russia. Of course this means someday, through our State Department, we will be importing Communist textiles from Russia. Khrushchev had all this in mind when he made his New York City trade speech last year. Khrushchev, with slave labor and world conquest in mind, can and will dump goods on the market much below cost. If permitted by our Government, this is the surest and quickest way to destroy the United States. The same threat to America is posed by Communist China and many other foreign countries operating with low wages and little fringe benefits. Mr. Speaker, here is the story from Southern Textile News:

NOW RUSSIAN TEXTILES?

The American textile industry, already feeling strongly the knife of low-wage foreign competition, probably is not welcoming the news that a $30 million textile plant soon will be built in Rusia by an American combine.

Some may argue that the Soviet Union never has been a large consumer of American textiles. Looking at it this way, it could be further argued that this large mill will not mean a loss of American markets.

But the Russians do business a little differently than most other countries. They have demonstrated before that they can use their productive facilities in political moves in the international markets. They are quite agreeable to deprive their own people of needed goods and use that production to swing political and trade deals in other countries.

While Americans have long been known as leaders in textile manufacturing, it has been very definitely demonstrated in Japan, Hong Kong and other Eastern nations that, given the same textile equipment found in American mills, they can become strong contenders in the world's textile markets.

The Russians, too, have demonstrated in many fields that they can equal or surpass other countries in scientific and engineering fields. It would be foolish to blindfold ourselves to the fact that they cannot produce textile goods of a fairly comparable quality at a lower price than American textiles.

This new turn of events merely again points up the pressing demand for protective legislation by the Congress of this country.

If this is not forthcoming, it will not be too long before we see Russian-made textile goods on the shelves of American stores, side by side with those of Japan and Hong Kong.

On Parliamentary Law

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. HALEY. Mr. Speaker, there appeared in the February 5, 1960, issue of the Sarasota Herald Tribune, an excellent editorial column on the importance of parliamentary law, which was written by Mr. Stan Windhorn. As Mr. Windhorn has stated, although it is a neglected and overlooked topic, parliamentary law has played and continues to play an important role in governing the lives we lead.

I hope our colleagues read his remarks and give thought to them.

The article "On Parliamentary Law" follows:

ON PARLIAMENTARY LAW
(By Stan Windhorn)

Here is one of those thoughts that never would have crossed the mind if it had not been brought to our attention by Mrs. Helene M. Morris.

It is the subject of parliamentary law. Although it is a neglected and overlooked topic it has had its role in governing the lives we lead and, more important, it has often prevented the potential tyranny under which we might live if it had not been devised as a substitute for bloodshed 1,000 years ago.

Mrs. Morris points out:

"It was 1,000 years ago—in the year 959—that King Edgar, the first ruler of a united England, developed a formula for settling disputes among his subjects. As a result, and in contrast to the previous 300 years of constant warfare, King Edgar's reign was largely peaceful.

"The outstanding means he used to promote this peace was to evolve elementary rules and regulations enabling individuals with conflicting interests to gather under one roof to discuss their grievances in a fair and orderly manner.

"This pattern of King Edgar's which protected the rights of even the least person, was rooted in old tribal customs. It was the forerunner of what we know today as parliamentary law.

"Putting such procedures into practice was no easy task for King Edgar. You can imagine the scene of the first meeting. Men accustomed to the terror and bloodshed of the battlefield were filled with misgivings. There was always the danger that the strong would push everyone else around and the weak would be shoved into the background.

"But King Edgar felt the plan had untold possibilities for good. After all, it was based upon a divine truth. The objective was to put into living practice Christ's principle: 'As you wish men to do to you, so also you do to them.'

"The new approach gained favor slowly but surely. Men began to see what could be done in every assembly to protect the rights of each human being.

"Nearly three centuries later these rules of order were adopted, strengthened and expanded by the English Parliament—hence the present name of parliamentary law. For the past 700 years parliamentary law has been used throughout the world. Tremendous advantages can be gained from its widespread application. Even if you have only a bowing acquaintance with parliamentary law you should be aware of the important and practical contributions you can make to the orderly running of human affairs."

In pointing to practical application of parliamentary law, Mrs. Morris cites these points:

"Even if you do not belong to an organization, you will find the spirit of justice and fairness encouraged by parliamentary law useful in the home, in your work and in every phase of life.

"Tens of thousands of organizations hold meetings every day. Whether religious, social, civic, educational, labor, business or fraternal, these groups involve your destiny and that of countless others. Many of these groups would increase their efficiency if all participants were familiar with parliamentary law. Its chief function would be to permit every person, without exception, to exert his influence for good.

"Without the regulations that parliamentary law provides, bedlam often results. A few individuals tend to dominate and the shy become disheartened. Wrangling impedes progress and many come to regard such gatherings as a hopeless waste of time and lose interest.

"Many persons with good ideas surrender leadership because they fail to learn the rudiments of parliamentary law.

"Many others with sound principles attend meetings out of a sense of moral obligation. But because of their lack of knowledge of how to participate their voices are never heard. With a little extra effort in learning the bare essentials of parliamentary law they could become an effective force in shaping policy.

"Those who are bent on favoritism, double dealing or disloyalty have a full knowledge of all the ins and outs of parliamentary law and the only way they can be thwarted is by all members sharing equal knowledge of such procedures."

In considering Mrs. Morris' contribution we recall the 1930's and early 1940's when hoodlum (and later Communist) elements set out to infiltrate and take over trade labor unions. In the local of the average union it would be safe to report that 99 percent of the membership bore no sympathy for either gangsters or Communists, so some people will consider it a manner for wonder how a small, hard core of gangsters or subversives could take over and dominate a sizable organization.

It was really very simple. In the case of hoodlum infiltration intimidation outside the meeting halls played a major role, but the Communists operated in a more subtle and surprisingly, legal, manner. They simply learned—as Mrs. Morris mentions—all of the ins and outs of parliamentary law.

They took over meetings and through use of parliamentary law they silenced a loyal majority by involving rules of parliamentary law upon members who had never bothered to learn the first fact about such procedures.

Had a loyal majority been familiar with parliamentary maneuvering such acts could have been avoided and we would not have lived to see the sorry sight of thousands of trade unionists—all loyal citizens—ruled and controlled by a handful of traitors. More than a decade has now been spent trying to eliminate influences which became strong simply because most people know nothing of parliamentary law.

As Mrs. Morris points out, the same thing has happened in less spectacular fashion in many clubs and organizations where a small minority has dominated, and finally discouraged, a majority made helpless through lack of knowledge of parliamentary law.

It is well to remember that rules and laws devised for the protection of the individual

can be quickly turned to a directly opposite use if the majority refuses to honor such laws by studying and learning their provisions.

Bates Strikes a Blow for Admen

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Advertising Age, issue of February 11, 1960:

BATES STRIKES A BLOW FOR ADMEN

We do not admire everything Ted Bates & Co. does. We have been critical of a number of its campaigns, most recently that for Life cigarettes.

But we do admire Bates for taking pages in newspapers last week to question the action of the Federal Trade Commission in citing the Palmolive rapid shave cream ad and other advertisements. We believe that by doing so, Bates has struck a blow for sensible regulation, and done a public relations service for the advertising business.

In much the same way, Fairfax Cone, of Foote, Cone & Belding took public issue with the FTC in citing television advertising of Pepsodent, and Walter Weir, of Donahue & Coe also attacked the action of FTC in citing Palmolive and others, although none of his agency's clients is involved.

We believe all of these people deserve the thanks of the advertising business for speaking out, plainly and clearly, in cases in which they believe the FTC has overstepped the bounds of commonsense, and has unnecessarily brought advertising into disrepute through public charges.

Our own position about the necessity for cleaning up advertising is clear, and we do not in any way intend to defend advertising which is deceptive or misleading in any important particular.

But it does seem clear that in the most recent foursome of complaints to issue from the FTC, the bounds of reasonableness were exceeded, the FTC's own informal definitions of what constitutes deceptiveness were ignored, and a good deal of publicity was generated with the principal purpose of showing how alert and serious the FTC has suddenly become.

The shift from lack of diligence to sudden overzealousness on the part of regulatory agencies cannot be surprising to anyone who has been reading his newspapers or listening to radio or television newscasts in recent months. It is precisely because such overzealousness can be expected in a period like the present that it is important for people who believe they are attacked unfairly to speak out, publicly and forthrightly. Otherwise, it is too easy for the public to get the impression that every charge against every advertiser and every advertisement is sound and valid.

The advertiser's position ought to be a simple one: If an advertising campaign deserves censure, give it up, as quickly and as gracefully as you know how. But if you believe you are right, and the regulatory agency is wrong, fight vigorously and openly. If you don't, there is likely to be more and more encroachment on grounds which cannot be justified on the score of either law or reasonableness.

Southern Negroes Can't Vote Until Congress Enforces Constitution

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. NIX. Mr. Speaker, there has been brought to my attention a very revealing and analytical editorial published in the January 30 edition of the Philadelphia Tribune, one of the outstanding newspapers of this country. Its publisher, Mr. E. Washington Rhodes, author of the editorial, is one of the outstanding personalities of this generation. He has given many years of thought to the problems of America and to the problems of the Negro in America. His views therefore are of the greatest significance.

SOUTHERN NEGROES CAN'T VOTE UNTIL CONGRESS ENFORCES CONSTITUTION

"Representatives shall be appointed among the several States according to their respective numbers counting the whole number of persons in each State. * * * But when the right to vote at any election is denied to any male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridges, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State." Article XIV, section 2, the Constitution of the United States.

(NOTE.—Art. XIX, the right of citizens of the United States to vote shall not be denied or abridged by the United States or any State on account of sex.)

Where are the great liberals in Congress who shouted in loud voices about their burning desire to assure American Negroes their full enjoyment of their privileges and responsibilities as American citizens? Are they blind? Have they not read the Constitution of the United States which they have sworn to obey?

Many of the brilliant minds in Congress and high executive officials are wrestling with the problem of how to guarantee Negroes the right to vote. They say that if we can get the South to permit Negroes to vote freely all the other injustices which they endure would pass away. They appear to believe that it is a most difficult task. It is complex because their thinking makes it so.

All the ills which Negroes suffer all over the United States can be directly traced to the denial of the ballot to them in the South. For if Negroes had full voting privileges in the South there would be no Senators and Representatives elected to Congress such as Senators JOHNSTON, of South Carolina; BYRD, of Virginia; and EASTLAND, of Mississippi; BARDEN, of North Carolina; SMITH, of Virginia; and DAVIS, of Georgia. These men and their associates come to Congress with the avowed purpose of maintaining white supremacy. All they had to do to get elected, since Negroes are barred from the polls, was to tell the voters that they were more determined than their opponents to keep Negroes in their place.

The record is full of facts which prove that officials of the State have barred Negroes from voting. All who read are aware of the constitutional provisions which declare that the basis for representation in such States shall be reduced in proportion which citizens are denied the right to vote.

Why, then, has nothing been done to reduce the number of Representatives from such States? The answer is clear. Members of Congress did not want to reduce the power in the South; they are not really anxious to give to Negroes their complete rights as Americans; they want to use the sufferings of Negroes as a political football.

It appears that those in Congress of both political parties should use their great powers to enforce the Constitution which they have taken a sacred oath to uphold and enforce. The racial bigots from the South control Congress because the so-called liberals permit them to do so. There are no other sections of the Constitution which are completely ignored by those in high places except those dealing with the basic human rights of Negroes. This inaction reflects upon the honor and integrity of every Member of Congress.

The test of their sincerity then rests upon their willingness to tackle head on the reduction of Representatives in Congress from States which bar Negroes from voting.

Fargo: All-America City

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. BURDICK. Mr. Speaker, the citizens of Fargo, N. Dak., which I am proud to say is the city of my residence, are sharing in one of the finest honors that can come to any community dedicated to civic progress. Fargo was named last Thursday to the "all-America city" team in a nationwide competition sponsored by the National Municipal League and Look magazine.

The basis for the selection, as quoted in the forthcoming issue of Look which carries the stories of the winning cities, is "energetic, purposeful, intelligent citizen effort in attaining specific civic improvements in the public interest."

Fargo faced some tough problems a few years back. Through concerted citizen effort and good leadership, these problems are being solved efficiently and with unusual speed. A sizable residential section was turning into a slum—it is now the site of a growing new civic center. Already completed is a fine city hall, replacing one outmoded and outgrown by a rapidly expanding population. A new city auditorium has been constructed. An urban renewal program is nearing completion and families who had lived in the depressed area are being successfully relocated. Other public buildings are going up and community projects, many supported by volunteer contributions and workers, are underway or in the planning stages.

To single out individuals who have contributed the most to Fargo's accomplishments would be impossible. I would like to compliment especially though, the Fargo City Commission, the City of Fargo Renewal Agency, the chamber of

commerce, the citizens city hall-auditorium committee, and the citizens for city planning organization.

Fargo, in short, is streamlining and modernizing itself. This is an expensive proposition and requires devoted participation from each citizen. The people have responded with spirit and determination to carry out a job that is never really finished.

Is it any wonder that Fargo made the team?

Boy Scouts

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. CANFIELD. Mr. Speaker, this is Boy Scout Week and I was pleased no end when 10-year-old Cub Scout Freddie Vaughn, of Forest Heights, Md., pinned on me last week my 1960 Boy Scout pin and presented me with a copy of the "Golden Anniversary of Scouting," from my good friend, Mr. Elmer Condit, Scout executive, of Aheka Council, Boy Scouts of America, Passaic, N.J. Last Tuesday, the Passaic, N.J., Herald-News carried the following article on our Boy Scouts:

BOY SCOUTS
(By the Vagabond)

The Boy Scouts of America are making plans to observe the 50th anniversary of scouting this year. The various celebrations recognizing this half century of service to boys the world over will include dramatic and other characteristically Scout program activities. These will be on local, regional, and national levels.

Boy Scout Week in 1960 is February 7–13. In a special event to be held in Washington, D.C., that week a representative Scout or Explorer from each of our States and territories will make a special report to President Eisenhower in person. National leaders in many national groups will meet in a report to the Nation broadcast. On February 8 our Government will issue a 4-cent Boy Scouts of America golden jubilee commemorative stamp.

One of the character-building phases of scouting is the annual observance of Scout Week through attendance at a worship service in a church or synagogue. They attend in uniform and are recognized for their work in making their citizenship meaningful. It is rather significant their 50th anniversary theme is "For God and Country."

The golden jubilee celebration will be highlighted in the Nation's Capital at the time of the meeting of the National Council of Boy Scouts of America June 1–4, 1960. At this time recognition will be given to all the cooperating institutions which have done so much to make scouting available to so many boys across the country and the world during the past half century.

Perhaps the most dramatic event of all during the year's anniversary program will be the fifth national Boy Scout jamboree which will be held at Colorado Springs, Colo., July 22–28 of this year. It is estimated over 50,000 Scouts, Explorers, and adult leaders will be present at this huge encampment.

Scouting has provided boys with a big lift in their personal lives characterwise and with a great stimulation for the finest kind of American citizenship. In every walk of life one finds men of responsibility who have learned to "Be Prepared" by the Scout route.

I recall clearly when Admiral Byrd made his first long trip to Antarctica he took with him a Boy Scout. This Scout is today one of the world's greatest scientific authorities on Antarctica—Dr. Paul Siple. At the very heart of our national life and at the far frontiers are Scouts who are always prepared to be of service.

Internationally the movement has importance. On freedom's side are Scouts of all nations bringing encouragement and real assistance to the world's peacemakers.

And anyway—it is always good to "Be Prepared."

Public Service Time on Television

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. SCHENCK. Mr. Speaker, under leave to extend my remarks, I would like to insert the following letter from Dr. W. James Westhafer, of Dayton, Ohio, a director of the Dayton Council on World Affairs, to Mr. James Cox, Jr., operator of Station WHIO–TV.

My reason for bringing this letter to your attention is to show what a great service can be rendered by a television station willing to offer free time to organizations having programs of educational value to present to the local community. You all know the purposes and aims of the Council on World Affairs. Its chief role is to produce an enlightened citizenry through its interest in and its study of international problems. Television is an excellent medium to use to get ideas across to the general public, but its cost could not possibly be borne by any single nonprofit organization. That we have a station in our city of Dayton donating 30 minutes of its valuable time each week to these educational programs deserves the gratitude of all who benefit from them and justifies our pride in the owner who makes them possible. May this serve as an example of a truly public spirited citizen and an inspiration to those with similar facilities to offer in other cities.

The letter follows:

Mr. JAMES COX, Jr.,
Station WHIO–TV,
Dayton, Ohio

DEAR MR. COX: At the monthly meeting of the board of directors of the Dayton Council on World Affairs it was noted that our educational television program, "It's Your World," for which you have provided one-half hour weekly on WHIO–TV, is entering its ninth year on the air.

The board took official cognizance of your fine spirit of public service and cooperation and asked me to write you an official letter of thanks.

We are also quite indebted to a member of your staff, Mr. Harry Butler, who for many years has voluntarily contributed time of his own to moderate this program.

There has been a good deal of comment in the news lately about the small amount of public service time contributed by TV stations. We don't know what stations in other cities have done nor what you have done overall, but we are so impressed by the extensive support of the Council on World Affairs program that we are taking the liberty of sending a copy of this letter to officials in Washington who we think should know about your generous actions in the past.

Sincerely,

DR. W. JAMES WESTHAFER.

The Mass of the Holy Ghost

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following sermon delivered by the Reverend Francis E. Lucey, S.J., regent of the Georgetown Law Center, at the Mass of the Holy Ghost—the red Mass—held at St. Matthew's Cathedral on Sunday, January 31, 1960. This historic mass is usually celebrated to mark the opening of the court year and goes back for centuries. In Washington, it traditionally marks the opening of the legislative session. The term "red Mass" comes from the color of the vestments worn by the celebrant of the mass. Father Lucey was recently honored on the occasion of his 50th anniversary in the Jesuit Order.

SERMON FOR RED MASS, SUNDAY, JANUARY 31, 1960, BY REV. FRANCIS E. LUCEY, S.J. REGENT, GEORGETOWN LAW CENTER

"Sovereignty over every man is in the hand of God who imparts His Majesty to the ruler." (Sirach X5.)

In a letter written to the New York Times, in the middle of this past December, Prof. John Herman Randall, Jr., Woodbridge professor of philosophy at Columbia University, suggested that it would be immensely helpful if some Catholic teacher would explain just what Catholic thinkers mean by the natural law of morality.

Professor Randall's request suggested to me a topic for today's talk, a subject inclusive of his idea but somewhat broader, namely: "The Catholic Natural Law Doctrine and Its Relation to Civil Law." It appeals to me as a subject quite appropriate for this occasion. This doctrine is not exclusively Catholic. There have been non-Catholics who have been its earnest advocates.

This question of natural law and its relation to civil law, though looming large in present day discussions, is not of recent origin. Back in the period of great Greek philosophers we find men proposing the question: Is civil law the product of custom, the will of the dominant, the wisdom of wise men or of a higher God-given law? A concept of natural law as the higher law has perdured down through the centuries, at times pushed into the background by new theories and explanations and at times the recipient of almost universal assent and approbation. The present-day Catholic concept of natural law received most of its revamped contents and a tremendous impetus from the writings of that brilliant philosopher and theologian, St. Thomas Aquinas. For centuries thereafter, though hotly con-

tested by many able philosophers, it continued to be the dominant doctrine.

After the French revolution, when there was danger of the natural law ideas of egalité et liberté spreading to other countries such as England and Germany, some able legal philosophers started a new attack on the natural law doctrine. They resurrected and strongly urged the old accusations that natural law was sterile and historically unrealistic. They contended that natural law, with its eye focused on the purposes of law, disregarded the real sources of law and strove for an ideal body of civil law that could be worked out by reason alone. Although these accusations were unfounded, the result of the attack was the birth of two important new schools of thought in jurisprudence. These two schools of legal philosophical thinking gained remarkable prestige during the latter part of the 19th century in Europe and America.

Savigny in Germany and Austin in England were the outstanding protagonists of the two schools. Savigny based his origin of civil law on a pantheistic concept of a volksgeist an unconscious spirit of the people unconsciously urging them into uniform ways of acting. By an unconscious process, customs arose which in time became mores and finally crystallized into civil laws. Each national group has its own volksgeist. Reason played no rule in the evolution of civil law. The obligation to obey laws flowed from fear of public opinion.

Austin in England devised quite a different theory. Adopting Hobbes' philosophy of man as antisocial by nature, and society as the result of a social contract embraced by force or fear of the same, he conceived civil law as the command of the sovereign. Civil law is the sum total of such commands or norms. Necessity to obey the law rests on the force or power of the sovereign. It involves a must not an ought. Civil law rests on no higher law, it stands on its own powerful feet. Laws do not have to be reasonable or just. Whatever is enacted is law, be it good or bad, just or unjust, reasonable or unreasonable. These two schools of jurisprudence, and especially the latter, dominated legal philosophy on the Continent and in the United States during the last half of the 19th century. In the first 40-odd years of this century in America, refinements of Austin's theory and new schools of thought gained vogue. The realist, with a system based on behaviorism or psychoanalysis, replaced norms or commands with what the courts will do in fact. Kalsen, retaining Austin's norms and force theory, evolved his stepladder theory of legal validity. Dean Pound, with allegiance to norms and ideals and some role for reason evolved his theory of harmonizing and balancing interests, needs, wants, and desires. Most of you are familiar, I am sure, with the battle that raged between Dean Pound and the realists during the thirties.

Just as the French Revolution gave birth to the historical and analytical schools, so World War II and its aftermath gave birth to a strong revival of natural law. Hitler's regime, and its atrocious and inhuman laws showed mankind the extremes to which positivism could lead. Positivistic legal philosophers in Germany and elsewhere started to reexamine and weigh their legal philosophy.

So today, legal philosophers are posing the question again: Does civil law impose a must or an ought? Does a subject have to obey unjust tyrannical laws? Do people have a right to rebel?

We here in America sometimes forget that our United States owes its existence to a rebellion against a constituted but tyrannical authority and its oppressive legislation. We at times forget that those who brought this great civil society into existence justified their rebellion on a higher law, natural law. God-given inalienable rights in the Declaration of Independence was not just a pious ejaculation. The Founding Fathers fought and suffered for the higher law. Many of their relatives and compatriots died for it.

When the war was over, the Founding Fathers wrote a Constitution. That Constitution was written with the thought of tyranny, dictatorship, and a higher law still fresh and vivid in their minds. No wise people would or should write into their fundamental law a provision for rebellion. They can, however, as did our Founding Fathers, eliminate as far as possible the need of recourse to the higher law. Our Founding Fathers made provisions for balancing the three branches of Government so as to practically eliminate the possibility of any one of them becoming a dictatorship or a tyranny. They added a Bill of Rights which was aimed at eliminating the possibility of a dictatorship of a majority and unjust laws. They wrote in provisions for freedom of speech, right of assembly, right to petition their Government potent and peaceful methods of providing for change without recourse to force. Our Constitution and its Bill of Rights became a revered document throughout the world because it protected the God-given inalienable rights and dignity of man.

The natural law of the Founding Fathers was, at least, in its basic tenets, what is now called the Catholic concept of natural law. The Catholic Church adopted natural law ethics because the doctrine responded to the test of reason and as such was in harmony with revelation. Unlike faith, it is not based on revelation, but reason alone. Some writers have termed it a theological doctrine, and, in the sense of resting ultimately and primarily on the existence of God, and man's relation to God, it is theological. There is no Catholic natural law without God in the picture. But it rests on God in a manner entirely different and distinct from faith. What we Catholics accept as a matter of faith rests upon the authority of God revealing. We accept revelation, not because we fully understand it, but because we accept God's say-so. In that sense, faith is authoritarian, that is, based on the revealed authority of God.

Catholic natural law ethics is only a part of an integrated philosophy adopted by Catholic philosophers and moralists. Natural law ethics is based on propositions taken from various parts of that philosophy. These propositions include the existence of God, the creator of all things, the existence of an eternal law of God governing all creation, a distinct part of that law governing man's free acts called natural law, the existence in man of a spiritual, rational soul separately created by God for each individual, the existence in man of a capacity to know some things with certainty, the capacity of man to exercise freedom of the will in some areas, and, finally, the fact that man is social by nature.

Because man has a rational spiritual soul given to him by God, he has a dignity in se, i.e., in himself. He has something he did not get from other men. He has a little bundle of basic duties and rights given to him by God which no man has a right to destroy. He does not exist by sufferance of a dominant individual, a dominant minority, or a dominant majority. He cannot be used as a chattel by others. Accordingly, there are limits as to restrictions other men impose on him. Relatively to others, the individual is as it were, sui juris.

Because of the natural law, man has duties to God, to his fellowman, and to himself. From these fundamental duties flow the natural rights necessary to carry out these duties. He has a duty and a right to use all his faculties and powers to perfect his nature and being. There are acts that perfect, and acts that are harmful to his nature. Those that are perfective of his nature we call morally good. Those that are bad for his nature we call morally bad. Man must use his intellectual faculty to discover and act, in accordance with what reason finds is good and to avoid what is discovered to be evil.

Catholic natural law philosophers hold that man is readily aware of the principle, "Do good and avoid evil," and quite easily recognizes fundamental principles that are easy inferences from the principle of "do good and avoid evil." These fundamental inferences correspond pretty much to the contents of the Ten Commandments. They are so intimately connected with the perfection of man's nature that they are said to be universal, perpetual, and inmutable. While man remains man, they will universally apply. Other principles of morality have to be worked out by reason with the aid of expanding experience and scientific investigation. The fundamental principles together with further implementing norms taken collectively constitute the contents of natural law ethics.

While natural law ethics holds that man has duties and hence some rights which are absolute in the sense that they have their origin in God, not other men, it does not hold that the exercise of these rights may not be restricted. Exercise of a right may be restricted because of its effect on others or on society. Reason dictates justice to others.

Studying the free acts that may be freely posited by man, natural law philosophers find that some are mala in se, i.e., bad under all circumstances, as for instance murder, and that others are neither good nor bad, looked at in the abstract. The latter get their goodness or badness from concrete circumstances of time, place, object, or intent. These latter are called indifferent acts. A good portion of individual behavior and a vast portion of civil law deals with these mutable indifferent acts.

But there is another source of mutability in the natural law doctrine. While the fundamental principles of the natural law are absolute, their application to concrete cases may be mutable. Some of this mutability flows from improved and expanding knowledge of how to apply the absolutes correctly. Experience and science are tremendous aids. What men considered murder not too long ago, may not be considered murder today. Discovery of irresistible impulses and urges and a fuller knowledge of psychotic conditions makes us aware that many acts formerly considered free acts are really not such. The principles have not changed but the application has.

In working out the norms of morality and the correct application of the same to particular concrete types of human acts, the role played by reason in the natural law doctrine is dominant even though reason draws on experience and science for factual information. Other nonnatural law philosophers have likewise emphasized the role of reason. But their rational conclusions may be far different from the catholic natural law philosopher's, because their premises are different.

In developing a body of ethical law or even civil law, the catholic natural law philosopher is always using reason against a particular framework of reference, namely: those established conclusions mentioned earlier, the spiritual nature of man's soul, its creation by God, its capacity to know, freedom of the will, the duty to act for the perfection of his being, all those elements which constitute the dignity, equality, and independence of the individual.

A legal philosopher who wishes to leave God and a spiritual soul out of the picture, may derive a philosophy of ethics and civil law quite contrary to that of the catholic natural law philosophy, no matter how much he emphasizes the role of reason and logic, or how much he desires some dignity for man.

Thus far I have devoted my talk to the basic framework of natural law and its application to man as an individual. As I mentioned before, one of the basic principles of the catholic natural law doctrine, is that man is social by nature. By that we mean, among other things, that man's very nature demands civil society, in short, that civil society flows from the natural law and through it ultimately from God. This position is in marked contrast with Hobbes' concept of man as antisocial by nature and Rousseau's concept of man as unsocial by nature. Since man is social by nature there is a God implanted necessity for civil authority and respect for the same.

In the Catholic concept, the citizen is morally bound to respect civil authority and to obey laws of lawful rulers unless by the intent of the lawmaker or the nature of the law itself, nor moral obligation is entailed.

While the Catholic concept stresses the moral ought in law, it does not however exclude the concept of force. Sanctions either penal or premial are a necessary adjunct to the moral ought. They serve as a buttress to the edifice of law and the moral structure of the edific. Sanctions are necessary because free human beings do not always do what they ought to do. Many factors influence the use of reason and human behavior. Emotions, intellectual limitations of cognition and understanding, weakness of the will and character, psychological and physical well being or its lack play a great part in determining man's behavior. Sanctions in such cases may exercise a subsidiary but powerful inducement to act or forebear from acting in accordance with the law. Laws do not exist to operate in a vacuum. They are made for man as he is with all his weaknesses and handicaps. A rational realistic concept of law demands sanctions.

The existence of civil society enables the individual to secure and develop his personality in a way he could not do as an isolated being. Civil authority accomplishes this objective by means of laws which effectively direct the actions of citizens toward the end of civil society, the attainment and preservation of order, peace, well being, and prosperity. Its eye is focused on the common good. The Catholic concept of the common good however includes the preservation of the natural law dignity of each and every individual. The common good is not an end in itself.

In selecting means required for order, peace, well being, and prosperity, civil authority has a right to limit and in some instances restrain, man's exercise of natural rights. It does this to protect like rights of others and the common good. Civil society may ration man's food, regulate his movement, his freedom of speech, his possession and use of property, his engagement in occupations or activities for which he may not have the requisite skill. It may outlaw ultra-hazardous occupations or hold the actor absolutely liable to unforeseeable plaintiffs, if the hazardous occupation is permitted. It may impose conditions for the validity of sales, contracts, deeds, wills, and many other transactions.

In addition, civil society may and should, enact laws necessary for the preservation of its own existence and for the progressive betterment of its own operation. In doing this however, it should not make itself an end in itself. The State is for man, not man for the State.

In view of the nature of this occasion I would like to indicate a couple of guides emanating from the natural law doctrine which Catholic lawmakers should bear in mind. First of all the civil law does not have to cover the whole field of morality with legislation. Under the natural law the chief concern of civil authority is with those things which are necessary for or helpful to the common good. Secondly in formulating into law the means which will attain the ends of civil society the lawmaker should exercise prudence. In fact, the chief function of the lawmaker consists in making prudential judgments, judgments as to the goodness or badness of proposed legislation and judgments as to the advisability or inadvisability, effectiveness or ineffectiveness of legislation as a means to the end of civil society, the attainment of order, peace and prosperity. In a country where the vast majority of the people have the same moral standards what would be prudent might not be prudent in a pluralistic country such as ours with a diversity of religious moral and social standards. Prevailing, predominant standards of the time and place must be given serious consideration in forming a prudential judgment as to what laws should be enacted or not enacted or what decisions should be rendered in cases and controversies.

While the vast portion of lawmaking presents little or no difficulty for the Catholic natural law lawmaker, there is one sphere in which it could inject a very serious problem. The Catholic natural law lawmaker may by nonaction permit evils for serious reasons of order and peace, but he cannot actively cooperate with the enactment of laws which order the doing of something which is intrinsically evil. Fortunately this type of proposed legislation is rare because most people accept the fundamental principles of the natural law.

Where problems of cooperation arise the Catholic lawmaker should carefully weigh the moral principles governing cooperation to discover what is permissible and what is not permissible.

The lawmaker under the natural law doctrine has been granted great authority by God. He holds in his power the life, liberty, property, and welfare of God's creatures. He is the recipient of great honor and majesty. "Sovereignty over every man is in the hand of God who imparts His majesty to the ruler." That majesty coming ultimately from God demands the respect of the governed. Without that respect, all law would fail.

While the right to rule carries with it honor and majesty, it also carries with it grave responsibilities for those who play a part in government, our executives, legislators, judiciary, and members of the legal profession, who by the nature of their profession participate in the administration of justice.

Looking over the history of our country, I believe we can be proud of our rulers and the role played by the legal profession. Critics may point their finger at instances of corrupt executives, corrupt judges, corrupting intrigue of powerful interests, political logrolling, and blackmailing minorities. But the overall picture, especially on the higher level of government, executive, judicial, and legislative, State and Federal, is a picture of dedicated men, conscious of their responsibility, striving to the best of their ability with the aid of reason, research, and experience to preserve our precious inheritance of the inalienable God-given rights of man within a framework of law directed toward the dignity and welfare of every individual. Looking toward the future I have only one anxiety.

The poet has said, "The night has a thousand eyes, the day but one, yet the light of the whole world dies with the setting sun." My only fear is that if we ever take God and His light out of the picture of law and legal justice, our people will wander in darkness and misery.

God has blessed our country and its rulers with a keen sense of justice and prudence and tolerance. May God continue to bless those who share His power and majesty.

Phil Regan: One-Man Mediation Service

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article by the well-known columnist on labor affairs, Victor Riesel, which appears in the New York Mirror of February 9, 1960.

The article, entitled "Regan's Irish Tenor Soothed Steel Crisis," is about the role played by my old friend and former constituent from Brooklyn, Phil Regan, who turned out to be a one-man mediation service in helping to settle the recent steel strike. I am very pleased that this story about Phil Regan has now come out into the open so that he may get the credit due him for his service to the Nation.

The article by Victor Riesel reads as follows:

REGAN'S IRISH TENOR SOOTHED STEEL CRISIS
(By Victor Riesel)

When everybody was singing the blues over the steel strike there was one voice which kept them all cheery with Irish lullabies, including Torra-Loora-Loora.

This story—the story of Singer Phil Regan and the debt the country owes him has never been told.

Phil Regan, ex-Brooklyn cop, movie star, and now public relations spirit for National Distillers, is to Steel Union Chief Dave McDonald what Robert Montgomery is to Dwight Eisenhower. It was Regan who was at the Palm Springs Airport when the President arrived the other week. Regan drove to the home of his friend, George E. Allen, host to the President.

Meanwhile, back at Regan's Palm Springs home, McDonald was waiting. Regan returned with his coup. George Allen was on phone. The come-to-breakfast call came soon. The next morning, Saturday, January 30, Regan and Allen quietly listened to President Eisenhower talk to McDonald.

The President said, "You people in labor and the men in industry could keep things harmonious if you would fraternize more. Management wants that," McDonald replied, "It's also up to them—I'm ready and willing."

There was more, of course, in this man-to-man breakfast. Regan beamed. For him it was the windup of a long experiment in imaginative mediation and personal relations.

He had been in this steel thing, behind the scenes, for over a year—and not only as the voice of the union's "Man of Steel" radio program. Actually the trail leads backward from George Allen's Palm Beach home to Allen's tower suite in the Hotel New Yorker. Regan got to know Allen when the entertainer sang the "Star Spangled Banner" at Harry Truman's inauguration.

Late last year, Allen had Phil Regan and Dave McDonald in for breakfast at the New Yorker. Allen suggested that the Vice President would be just the man acceptable to both sides. It was then that McDonald flew to see NIXON at a Pittsburgh ball game. NIXON agreed to try to mediate.

Then there was much coming and going in and out of Regan's apartment in Park Avenue's Park Lane Hotel. It was there that

Regan first brought Edgar Kaiser and McDonald together. When the strike leader thought it was time to see the President of the United States, it was Regan who telephoned friend Tom Stevens, Ike's appointment secretary. The President said certainly. Regan set the half-hour talk with the President in a Waldorf suite.

Regan, McDonald, and the President talked about the Vice President's efforts. Mrs. Eisenhower said there would be more of them. Then, on November 5, the union people thought it time to brief the President again. Regan set it up—and McDonald slipped in a side door for a 45-minute secret talk.

Each time they talked, the President consulted DICK NIXON. Finally the Vice President called both sides to his home and laid it on the line. Then he flew to New York, got into a secret service car, and was just as blunt with the steel management's big 11. Then he flew to California. There Phil Regan, mellow voice and all, was the conduit. NIXON talked to Eisenhower, then to Regan. The singer telephoned Dave McDonald long distance. He relayed the messages to NIXON.

During this time Regan talked to steel industrialists and bankers—always good humored, always bringing all sides together. Practically a one-man mediation service—or it should be said a national service.

U.S. Diplomatic Academy

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. WOLF. Iowans are very much aware of the position of the United States in world affairs, and are cognizant of the need for a good supply of well-trained diplomats, capable of conducting international negotiations with the highest degree of efficiency. The following resolution, adopted by the members of the Department of Public Safety Youth Commission of Cedar Rapids, Iowa, calling for the establishment of a U.S. Diplomatic Academy, is a good recommendation for this proposal.

Whereas the security of the United States and the free world depends on proper and effective international negotiations; and

Whereas such negotiations must necessarily be conducted by individuals trained to a degree of excellence in the field of diplomacy so as to assure future peace and prosperity for these United States of America; and be it

Resolved, We, the members of the Department of Public Safety Youth Commission of the city of Cedar Rapids, in the State of Iowa, do vigorously encourage legislation providing for a U.S. Diplomatic Academy; and be it further

Resolved, That such an Academy would insure unerring, competent, and reliable representation of the United States and its foreign policy in the realm of international relations.

RICHARD A. BRANDT
(For the Chief Administrative Officer).
JOHN A. SIVER, *Chairman*.

Let Them Go on Earning

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. LEVERING. Mr. Speaker, more and more each day our people are urging Congress to eliminate the inequities contained in existing social security laws dealing with elderly citizens.

Only last week, one of the leading newspapers in my district, the Mansfield News Journal, published a penetrating editorial dealing with legislation which I introduced last year designed to remove the limitation on earnings of persons participating in the social security program. Under previous leave, I include the editorial in the RECORD, as follows:

LET THEM GO ON EARNING

Last year, Congressman ROBERT W. LEVERING introduced a bill (H.R. 4212) in the House which would have raised the limit of $1,200 now placed on earnings of people receiving social security.

As you know, if a social security beneficiary makes more than $1,200 a year his benefits are cut accordingly. If social security truly represents a return of what the citizen has paid into the program, then this limit is unfair.

In this session of Congress, Senator STEPHEN M. YOUNG has taken over LEVERING'S idea. He wants the earnings limit raised to $3,000.

Actually, is there a necessity for any limit at all?

Social security is, at least in theory, like a gigantic insurance plan. Thus, it can be argued with conviction that a person who pays his premiums (i.e., social security charges) should get his promised payments whether he be pauper or millionaire.

A vast amount of confusion, cheating, record keeping and checking could be eliminated if every social security "policyholder" automatically began collecting at the age of 65.

Those who argue that it's unfair for an individual with a good income to collect social security overlook the great equalizer—income tax.

It can be accepted as a certainty that oldsters, given a free hand by the lifting of an earnings limitation, would produce a substantial return in income tax.

The major objection to the proposal is that oldsters would take jobs needed by younger people, and would add to the problem of overproduction.

That is a subject in itself, but a brief answer is that our Nation and the world do not have overproduction but rather underconsumption stemming from flaws in the system of distribution of goods. If the necessary adjustments can be made in distribution, there will be jobs for all and the oldsters will be needed in the productive system.

Any program which forces idleness on those who desire to work—and, in effect, that is the result of the earnings limitation set by social security—is putting an artificial barrier in the path of the Nation's progress, which is tied inextricably to production.

Hon. Adam Clayton Powell

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. DENT. Mr. Speaker, I have received some inquiries from my district concerning a matter that seems to have become controversial and yet I can find no reason for the controversy to exist. It appears that there has been a widespread mass of misinformation given to the general public on the qualifications of ADAM CLAYTON POWELL to be the chairman of the House Committee on Labor and Education.

After a thorough and exhaustive search and after making inquiries, I find there is no such thing as standards for qualification as chairman of any committee of the House or Senate. The only thing that a man has to do to be chairman of any committee of this House is to live long enough and be elected more times than any other member of the committee. This is the time-honored system employed in the naming of chairmen and regardless of what may be said about a person—good, bad, or indifferent—there is no instance on record of any Member being denied the chairmanship when he met these very simple and somewhat ridiculous standards. So, the question of qualification for the position is one that cannot be argued by any person, whether he wants to help or wants to hurt Representative POWELL. I believe, however, at this time as a fellow member of the Committee on Education and Labor, that I must in all fairness state that insofar as Congressman POWELL'S position on that committee on the various pieces of legislation that have come before us, he has always given his support for legislation that would do the greatest good for the greatest number of our citizens.

It is noteworthy to chronicle here that during the hectic and ofttimes bitter debate and through the mountainous piles of newspaper clippings, editorials, letters, petitions, and telegrams that were sent in while the argument raged on the proposal of the labor legislation originally introduced by Senator KENNEDY and finally passed under the cosponsorship of Representatives LANDRUM and GRIFFIN, Representative POWELL never deviated from what he believed to be the proper and honorable course to follow. He fought shoulder to shoulder with those on the committee who felt that this was an attack upon the legitimate and honest labor unions, their officers, and their members and as an eyewitness to his activities, I can say that he was a stalwart in the fight for the rights of the little peoples. Further than this, I appeared before the Subcommittee on Mines and Mining of which he is chairman and received the most courteous and considerate treat-

ment when I appeared in behalf of the bill to create a Coal Research Commission.

In passing, it is noteworthy to note that Congressman POWELL reported this bill to the full committee and that it has been passed by the House and although it was vetoed by the President, Congressman POWELL has again reported the bill out of his committee and it is now awaiting action by the House of Representatives. I am particularly astounded at the bitterness of the attack on Mr. POWELL by certain writers. It appears that while condemning Mr. POWELL for his publicly known position of fighting for equality of rights for all citizens, these same writers show a tendency to bigotry and prejudices that are the main reasons for Mr. POWELL's forthright fight for equal and inalienable rights for all Americans. It is interesting to note that Mr. POWELL has been awarded much recognition for his outstanding services in various fields of endeavor and I would like to record for the RECORD the following awards that have been tendered to him:

In 1953: Citation of honor for outstanding service in the advancement of civil liberties and human rights. The Bronx division of the American Jewish Congress.

In 1955: House Resolution 236. Resolution submitted by Mr. DINGELL. For statesmanship, patriotism, and forthright courage displayed at the recent Afro-Asian Conference at Bandung.

In 1955: House Resolution 239. Resolution submitted by Mr. KEOGH. For statesmanship, patriotism, and forthright courage displayed at the recent Afro-Asian Conference at Bandung.

In 1956: For loyalty to the cause of civil rights in the Congress of the United States. Maryland State conference, NAACP.

In 1956: Outstanding man of the year—Veterans of Foreign Wars of the United States.

In 1956: The Rheingold award for meritorious services in the cause of unity and progress. I.B.P.O.E. of W. department of economics and Liebmann Breweries, Brooklyn, N.Y.

I know nothing about Congressman POWELL's home district, and know very little about his all-time record in Congress, but I do speak from personal knowledge of his performance as a Member of the Committee on Education and Labor which, in the final analysis, appears to be the bone of contention, I would not hesitate to give my full degree of support and to the best of my knowledge I know of no member of the committee who has expressed any opposition whatsoever.

Men Over 50

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

Mr. McDOWELL. Mr. Speaker, under leave to extend my remarks I would like to include the following letter to the editor which appeared in the Journal Every Evening, of Wilmington, Del., January 27, 1960.

MEN OVER 50

To the EDITOR:

I would like to get help in my effort to reduce the age limit for social security from 65 to 60.

I am at the age of 62 and have been unemployed for 3 years. Just this morning I called on the phone the personnel manager of the Chrysler plant in Newark and was told the usual thing, namely that the age limit is 50. Now I ask you sincerely, what are men in the age bracket from 50 to 65 going to do?

I have received some favorable replies from the following: Senators WILLIAMS, FREAR, Congressmen MCDOWELL and BRADEMAS, of Indiana, but they and they alone cannot do a job like this by themselves. That is why I was hoping that your paper would give this matter just a little thought, because while this affects me, I am thinking of the thousands over these United States who are in the same predicament.

In a recent issue of Life magazine there was a picture of the wedding gown of the bride to the Shah of Iran—price $46,000. So we had better send some more money under the terms of foreign aid to help pay for the gown.

HENRY O. SWENSON.

Committee of One Million: Lobby of a Million Ghosts

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. PORTER. Mr. Speaker, our China policies are bound to change in the very near future. The prevention of war and the establishment of a disarmament program make these changes inevitably imperative.

What about the so-called Committee of One Million against the admission of Communist China to the United Nations? Back in 1953 and 1954 they collected 1,037,000 signatures but no attempt has been made since then to find out what the signers believe now.

It took a lot of doing for the organization to get the signatures spontaneously in the first place, and 1,037,000 was a pretty poor showing compared to the 11 million American signatures which were claimed for the Stockholm peace appeal which was subsequently denounced by the State Department as Russian-inspired fakery.

The secretary of the Committee of One Million, Marvin Liebman, wrote me an indignant letter last fall after I identified the committee with the China lobby in a speech I made in San Francisco. However, he told John O'Kearney, who wrote the informative article, "Lobby of a Million Ghosts"—The Nation, January 23, 1960—that "if there is a China lobby, we are it."

Under a previous consent I am including the text of Mr. O'Kearney's keen and informative article.

LOBBY OF A MILLION GHOSTS
(By John O'Kearney)

Using a bloated title for themselves, and working with a budget of about $70,000 a year, a handful of zealous men exert a more determining influence upon U.S. policy towards the People's Republic of China than all sanity, unorganized, has thus far been able to counteract. "If there is a China lobby, we are it," says Marvin Liebman, secretary of the Committee of One Million Against the Admission of Communist China to the United Nations. The handful of men who control this lobby base their claim to express what they call the "grassroots sentiments of all America" towards the Communists of China on 1,037,000 signatures to a petition which for almost 6 years has lain unriffled in the darkness of a New York warehouse; but though there are not more than 6,000 persons out of the 1,037,000 who ever contribute a dime, and not more than 25,000 names on the committee's mailing list, the weighty name of it will be slung about again in this election year in an effort to silence every politician who may dare to suggest that recognition of China, and trade with her, are essential to peace.

One of the major voices of this lobby, which has its headquarters at 343 Lexington Avenue, New York City, is Senator MIKE MANSFIELD, Democrat of Montana. "Americans who favor the admission of Red China to the United Nations," said Mansfield, "base part of their argument on the false premise that opposition to such admission comes from a minority and lunatic conservative fringe of American politics." He then cited the 1,037,000 signatures, and asserted that millions more have endorsed this petition through the action of national organizations.

But what do they say at committee headquarters about the possibility of there being just such a lunatic fringe? The genial Liebman observes that in 1953 and 1954, with Korea fresh in the public mind, "anyone would have signed the petition." Since then, he admits, no one knows in what fashion the collective mind of 1,037,000 persons may have changed. "It would cost about 10 cents a head to get in touch with them all, and the committee simply cannot afford that."

Nevertheless, on the authority of all those names, the committee is working to get both the Democrat and Republican national conventions to adopt a joint plank against any move for recognition of China or resumption of trade with her. A propaganda kit is in preparation to be sent out to every person who runs for Federal office. The committee plans to poll all candidates. Conferences at the universities will be arranged to give the 1960 anti-Peiping campaign the respectability of what Liebman calls a "high degree of literacy." And since politicians and literate people who are well known and also conservative are never ignored by newspaper editors, the issue of China will again appear to have had a fair verdict among us.

Let us now consider who they are that rig the jury. A few are old China hands, but among the rest it is difficult to find any common motive beyond that of a fervent belief, as Liebman puts it, that they are acting as patriots whose only concern is what is best for their country. This is true, surely, of Liebman himself, if we may take it that his motives are as pure as his admitted ignorance of the evils of the Kuomintang rule over China is absolute.

The honorary chairman of the Committee of 1 Million is Warren R. Austin, member of the Loyal Legion of the Sons of the American Revolution, member of the China Society of America, and our first ambassador to the United Nations. After him come the six more or less active brains of the Steering Committee, the executive exploiters of the authority of a petition long years in a warehouse. At the head of the list is Senator PAUL H. DOUGLAS of Illinois, one-time pro-

fessor of economics. (Most politically aware people ask: What's he doing there?) With him are Charles Edison, former Governor of New Jersey; former Senator H. Alexander Smith of New Jersey; Congressman Francis E. Walter, of Pennsylvania; Congressman Walter H. Judd, of Minnesota, and Joseph C. Grew, Ambassador to Japan from 1931 to 1941. JUDD was a medical missionary to China from 1925 to 1938, a man who knew Shanghai in the Kuomintang days when every dawn revealed more than a hundred human bodies to be carted off out of the filth of the gutters.

The treasurer is Frederick C. McKee of the National Casket Co., an avocational joiner of causes. He was chairman and national director of the Committee for Boycott Against Japan from 1938 to 1939; national chairman of the Citizens for Victory, 1942–43; national treasurer of the League of Nations Association, 1942–44; and a member of the Committee to Defend America by Aiding Anti-Communist China, 1949–52. McKee's assistant is Bettis Alston Garside, missionary to China, 1922–26, bearer of the Order of the Auspicious Star (Chiang regime), executive vice president and secretary of United Services to China, Inc., New York.

The committee got its start in October 1953, with a statement signed by 212 politicians, businessmen, scientists and religious leaders, intended for the ears of President Eisenhower. It was a protest against the growing pressure from Britain for recognition of China and relaxation of the American-enunciated trade embargo. It was ultimately to be given to the President on his way to the Bermuda Conference "to arm you in speaking to the British"; but it appears that Time magazine was the first to call it to his attention. "Congressional signers," said Liebman, "got mail pro and con, and before we knew it there was a spontaneous movement." How spontaneous it was may be better determined, perhaps, by Liebman's admission that the signatures came in pretty slowly because most of them were gathered through channels dug locally out of the membership of the American Legion and the American Federation of Labor. The Benevolent and Protective Order of Elks also helped, along with the General Federation of Women's Clubs and the Catholic War Veterans.

The Stockholm Peace Appeal had earlier claimed to have gotten 11 million American signatures, so it was decided that the committee must get at least a million. On July 9, 1954, the committee sent a telegram to the President announcing that it had rounded up its one million. In the end, the Stockholm petitions were denounced by the State Department as Russian-inspired fakery; but President Eisenhower took the 1,037,000 names presented by the committee as supporting evidence that 95 percent of the American people wished to keep the People's Republic of China beyond the pale. As a document, the full petition had less literary interest than an old telephone book, so it was never read. It was put in a warehouse and the committee closed up shop.

In the autumn of 195, an American assembly of Protestant religious leaders was held and there was more agitation for recognition of Red China, so it was decided to set up an informal group from within the membership of the Committee of One Million and get it going as a lobby in opposition to the agitators. Those who had led the previous petition movement became the lobby. The signers of the original petition were not solicited for support. "It would," said Liebman, "have been too expensive." However, in 1958, the committee polled 50,000 Protestant clergymen, and of those who responded, 93 percent were on our side. The support of these clergymen was taken as a mandate for continued exploitation of the 1,037,000 signatures.

Today, the authority of the original number has become dogma: On the basis of the original petition, the committee claims to have among its charter members one-fourth of the U.S. Senate, one-fourth of the House of Representatives, and nine Governors. The list is impressive, but it is a question how many would be there today if Judd, Smith, Douglas, Grew, and Edison were to turn around to look. Newspaper editors still accept the committee at face value, as ready to believe in the existence of an army here as those who were deceived by the 'round and 'round parade of the troops of Henri Christophe. Nevertheless, the committee's executives find it harder and harder to make news as time goes by. To keep itself in the public eye on a shoestring budget, the committee takes page advertisements in the international edition of the New York Times and reprints them for mail distribution, buying the aura of the newspaper's reputation for $450 on international page, instead of the $5,000 it would have to pay for a page in the domestic edition. The committee's friends in Congress provide further reprint material, flying the flag of the CONGRESSIONAL RECORD: for example, the speech of Senator ROBERT C. BYRD, Democrat, of West Virginia, "Should the United States Change Its China Policy?" CONGRESSIONAL RECORD, delivered June 8, 1959, reprinted (not at Government expense) and distributed as committee propaganda. This Byrd speech could have been prompted by Chiang Kai-shek. "Continued support of the Nationalist Republic of China serves to best advance the interests of the United States and the free countries in Asia," BYRD said.

After the resumption of activity in 1954 by the small informal group which still calls itself the Committee of One Million, "we found ourselves," said Liebman, "with new responsibilities we had not figured on. We were the only responsible organization dedicated to anti-Communist activity, and suddenly we were getting letters from all over the world, particularly from the Far East regions."

Liebman has since been out there to meet the committee's friends. Chiang, a hard man to see, gave him 2 hours of his time and posed for a smiling, side-by-side photograph. In Bangkok, 2 years ago, Liebman was told by a cabinet-level spokesman: If the United States were to recognize Red China, within a week we would have to do so also. Presumably Liebman did his fervent best to reassure his friends in Thailand. Telling of his tour around the area, he said: We felt it was important to convince them that the United States is not changing its policy.

Out of their new-found sense of responsibility the committee's leading members set up the American-Asian Educational Exchange, with Edison as chairman and Liebman as executive vice chairman. Judd and McKee are vice chairmen, along with Bishop Herbert Welch. This organization, which Liebman says will try to fill the gap left by the United States Information Service and other outfits that try to educate Asians, began its work with the publication of Communism at Work in China, by Stanley K. Hornbeck, who from 1928 to 1937 was Chief of the Division of Far Eastern Affairs of the State Department. He was Special Assistant Secretary of State in 1944, at the moment when President Roosevelt was upbraiding Chiang (United States Relations with China, the Department of State, pp. 66–68, 1949) for his persistent refusal to cooperate with General Stilwell in prosecuting the war against Japan, and for letting his anti-Communist obsession bring China to the brink of catastrophe. But Hornbeck still champions Chiang.

The transcendent arrogance of this China lobby was bared by Liebman last November 4 in a press statement attack on Conlon Associates, Ltd., of San Francisco, for having urged the admission of China to the United Nations. The Conlon group had been hired by the Senate Foreign Relations Committee to study the China problem and came out for recognition and trade. Said Liebman:

To the best of my knowledge, Colon Associates conducted no serious investigation of either the sentiment of the American people or their leaders. We doubt very seriously whether Conlon Associates consulted with either the people or the governments of Korea, Free China, Hong Kong, et cetera.

More Debate by Insertion

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. PORTER. Mr. Speaker, in this the greatest of all deliberative bodies we should, it seems to me, debate the vital issues face to face on the floor of the House. Our distinguished colleague, war hero, and former chairman of the National Republican Committee, Mr. B. CARROLL REECE, of Tennessee, however, apparently prefers to debate by insertion.

This means the gentleman turns in his side of the argument to the clerks, just as I turned this in. It means he does not have to undergo cross-examination by a colleague who may disagree with him. It means he does not have to defend his words.

It was this kind of debate he insisted on carrying on with me during the 85th Congress in spite of my efforts to persuade him to debate the issues personally on the floor of the House.

Now, in the Appendix of the RECORD for February 8, 1960, pages A1002–A1003, the gentleman reverts to this regrettable practice of debate by RECORD insert. Not only is this unworthy of the issues and the traditions of this great House, in my opinion, but the practice makes it very difficult for the readers of the RECORD to follow the arguments.

I repeat my most respectful request to my distinguished colleague: Desist from debate by insert and agree to carry your differences with me or other colleagues to the floor of the House. I would be delighted to discuss personally our policies with respect to Cuba or China with my esteemed colleague from east Tennessee on the floor of the House at his early convenience.

It is my hope, but hardly my expectation, that the gentleman will see fit to alter his policies and to give me an affirmative answer to this request.

Meanwhile, since the gentleman saw fit to include in the Appendix a slanted article from Time magazine—November 30, 1959—about my trip to the Far East last November, I shall include, following these remarks and by previously granted unanimous request, the text of two press releases issued by my office with respect to the Time article, copies of which releases were sent at the time to Mr. REECE.

The releases are as follows:

NOVEMBER 25, 1959.

Charging distortions and inaccuracies in Time magazine's November 30 article about his recent Far Eastern trip, Representative CHARLES O. PORTER, Democrat, of Oregon, in a letter to the editor of Time challenged them to produce an editor to debate China policy with him publicly.

"Let the objective press, radio, and television give the public an opportunity to judge as to the merits of the arguments and the good faith of the participants," PORTER said. He said he had informal assurances from one national television network that it would be pleased to program the debate.

According to PORTER's letter to the editor of Time, the question is: "Will Time, the weekly newsmagazine, produce from its editors a champion to dispute publicly and in person the proposition that effective opposition to the Red Chinese requires disengagement from our warm embrace with the defeated, discredited Chinese Nationalists?"

PORTER said he knew that Chiang Kai-shek was "the most cherished of Time's sacred cows but even so the extent of Time's personal attack, distortions and inaccuracies surprised me." He referred to an article on page 16 of the magazine.

The Congressman sent two letters to Time, one for possible publication and one personally to Henry Luce, editor in chief. PORTER cited the distortions and inaccuracies in detail. The text of the letters follows:

NOVEMBER 24, 1959.

The EDITOR,
Time magazine.

DEAR SIR: My China policy recommendations do not, as you correctly report (Nov. 30), meet with the approval of either the Red Chinese or the Nationalist Chinese. I have been expressing them publicly since 1954 and I believe an increasingly large number of Americans hold the same opinions.

My views coincide with the recommendations made earlier this month to the Senate Foreign Relations Committee by Conlon Associates, Ltd., at the conclusion of a study requested by that committee. Of course, I knew that Chiang Kai-shek was the most cherished of Time's sacred cows but even so the extent of your personal attack, distortions and inaccuracies surprised me.

For example, you report that a "glacial silence" followed my opening remark at my Taiwan dinner meeting with Chinese Nationalist leaders and then you say that I returned to Tokyo the next day as though that were the reason. This is untrue and misleading. As I intended, my remark relaxed the atmosphere and we had a cordial discussion. I returned to Tokyo the next day to fulfill a predetermined schedule of work for my committee.

It seems to me a shame, both politically and journalistically, that Time will drag an important issue to such a low level to promote an editor's opinion. Ambassador MacArthur backed out of his challenge to debate China policy with me. Will Time, the weekly newsmagazine, produce from its editors a champion to dispute publicly and in person the proposition that effective opposition to the Red Chinese requires disengagement from our warm embrace with the defeated, discredited Chinese Nationalists?

Very truly yours,

CHARLES O. PORTER,
Member of Congress.

NOVEMBER 25, 1959.

Mr. HENRY R. LUCE,
Editor in Chief,
Time Magazine.

DEAR MR. LUCE: We agree about the importance of promoting world law. We disagree about China policies and I am writing to you now to protest against the distortions and inaccuracies of an article about me on page 16 of your November 30 issue.

I spoke at some length this morning with Mr. Furth, your executive assistant. He very patiently heard me out on the matters set forth below and told me that he would investigate them and bring them to your personal attention upon your return.

Of course I knew the time-line about Nationalist China. I didn't expect sympathetic treatment of my activities on my recent trip but I did expect better journalism. Let me now be specific. I hope you'll turn to the article and have it in mind as you read these comments.

1. The references to tuxes and birds are well within the range of fair comment. Congressmen, however, have always been concerned about our foreign policies and today, far from becoming less active, they are more and more participating in the formation of foreign policy. No real complaint here.

2. As for the "embarrassment and consternation" created by my flight, I found none except among the Chinese Nationalists, not among Americans, both in and out of government, and certainly not among Japanese. The unpalatable fact is that the Red Chinese are in firm control of the mainland and that the Chinese Nationalists, even in the unlikely event of a revolution, have no chance of regaining control. They have the intention but not the ability. We have the ability but not the intention. Point: Good reporting would have made it clear who was embarrassed and who displayed consternation.

3. "He next turned his attention to seething Cuba." Apparently your writers don't read your Latin American edition, much less the New York Times. In the interim I was active with respect to Venezuela, Colombia, and Latin American policies generally, including opposition to Batista. I went to Europe to a meeting of the World Parliament Association at the urging of Grenville Clark. Point: I didn't "next" turn to Cuba.

4. "I've urged him from the first to shave his beard." Of course I urged him to do that and settle down to the hard job of administering his country. I also urged him to hold elections, ban Communists from government and labor union positions, use civil courts, reform land reform, and so on. Any slight check of my activities here would show I had tried harder than any other 10 Congressmen to assist him along democratic paths. Point: The writer wanted me to look ridiculous so he selected that quotation.

5. "Looked around for new worlds to explore." My views on China haven't changed for a long time and I first expressed them publicly when I ran for Congress in 1954. I mentioned them on the floor in 1958 and I made many speeches embodying them earlier this year. Point: I'd been exploring this area for a long time.

6. "But prudently trimmed his travel plans." I had travel orders and a C-54 which could have taken me to Hong Kong from where I might have been admitted to China, just as Senator Malone went into Bulgaria. I didn't go because I had the question before the Supreme Court and I don't believe in defying duly constituted authority however much I may disagree with its rulings. Point: I didn't "trim" my plans.

7. That quotation about sending Chiang to an old soldiers' home is one I've used many times. I told one of your reporters that if you used it you ought to use it all, that is, including "for his protection and ours." Point: You didn't.

8. "Understandably hesitant about going to Formosa." The implication here is that I was afraid. The fact is that Chiang's Ambassador Yeh had warmly urged me to visit Taiwan and his First Secretary in Washington had repeated the invitation after Chiang had formally protested my "old soldiers' home" statement. I didn't want any sticky incident—that is, the sort of thing that a true whooping Congressman would seek. No "discreet inquiry" was made. A telegram went from MacArthur to our embassy in Taipei. The answer was affirmative, strongly so. Point: I made sure I was welcome, not just permitted to come, and I let the State Department have a chance to veto the whole trip.

9. "Chiang too preoccupied." I didn't ask to see him, although I indicated in a polite, low-pressure manner to Foreign Minister Huang that I would be glad to see him, even delay my departure a few hours, if he cared to see me. Point: Chiang didn't snub me nor I him.

10. "A glacial silence descended on the party, and PORTER returned to Tokyo next day." Untrue and misleading. There was a warm response to my intentionally flippant remark and we had a cordial discussion all evening. I returned to Tokyo because I had a heavy schedule of visits beginning the next day. Your people in Tokyo and Washington know better. Your editor had to make this out of whole cloth. Don't take my word. Talk to the Air Force man who accompanied me, Joe Hochreiter. Ask the chargé, Mr. Yager. Point: No factual basis for saying there was a "glacial silence," nor for the implication about my return to Tokyo the next day.

11. "Row" with MacArthur. It might have been relevant to mention what we argued about, namely, his putting off the record an interview I had had with a leading Diet member after the interview and with no previous notice. Point: Maybe I had a right to argue with the Ambassador.

12. MacArthur's denial of the China debate challenge is put down uncritically, whereas I know Alex Campbell understood very well that wire stories on two successive days, emanating from Embassy sources, affirmed the challenge. It wasn't until the third day that the Ambassador issued this denial. Point: The undisputed facts discredit MacArthur's denial.

13. "Excess of adrenalin." This was the reason suggested by MacArthur for our differences at a 40-minute meeting, very cordial, which I had with him on the day I left Japan. This quotation is out of context and garbled. Point: MacArthur's diagnosis, not mine.

14. "Strong nonrecognition in the two places most concerned." I would say the United States was the place most concerned. Point: I did not adopt my views to make either the Red Chinese or the Nationalists happy.

"U.S. goodwill abroad" might be increased if we disengaged ourselves from a defeated, discredited army. The issue is communication and recognition is only a part of that. It is not a question of softness or in any way diminishing our strength. Red China is the nation most likely to commit the rash act that could lead to war. We need her participation in any acceptable agreement with respect to the cessation of nuclear weapons tests. Communication will not insure against rash acts or that Red China will go along with international inspection stations, but it will help.

I cannot see how your editors could write such a story on the basis of the available facts. Crusading journalism is one thing. This article is something else.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

Publisher Henry R. Luce has admitted his Time magazine was imprecise and could have looked further in its November 30 article

about Congressman CHARLES O. PORTER's recent Far Eastern trip. PORTER made public today the publisher's December 5 letter commenting on Time's article.

"Time was imprecise," wrote Luce to PORTER with respect to Time's report of the reaction PORTER's opening remark received when he met with Chinese Nationalist leaders in Taiwan in November.

"Time was 180° inaccurate," PORTER wrote Luce in reply. "My remark was not received by a 'glacial silence' as stated in Time but with relaxation and courteous good humor," PORTER said.

In reply to PORTER's objection that Time misrepresented his concern for Cuba, Luce wrote, "I shall concede that Time could have looked further into your total attitude toward Castro." He added that PORTER had been reported "in rationalization of Castro's acts" and that it was not "clear to us" that PORTER was Castro's "severe critic."

"Mr. Luce should read his Time magazine," PORTER said. "It quoted me months ago as seeing an 'ominous trend' in Cuba. It is easily ascertained that I have constructively criticized Castro more than any other Member of Congress."

In his letter to PORTER, Luce wrote that he thought the story was "sound journalism" and was "just and essentially accurate."

"In spite of Mr. Luce's admissions and in the face of other distortions he does not admit, he writes me that Time will say in its December 21 issue that it 'stands by its story,'" PORTER said.

(The texts of the letter from Luce and PORTER's reply are attached.)

DECEMBER 5, 1959.

DEAR CONGRESSMAN PORTER: On my return from Hawaii a few days ago, I received your personal letter, and a written report from the editors who studied it in my absence. And I have given due attention to both documents.

As you correctly point out, you and I agree on the importance of promoting world law. We disagree, however, not only on policies toward China, but also on what constitutes sound journalism.

I shall be explicit. Was Time's report of your trip to the Orient "sympathetic"? No; and not merely because of our policy disagreement. It was unsympathetic because the reports from our correspondents in the Far East portrayed the incidents of your visit as unfortunate for our national posture there.

Addressing myself to your 12-point letter, I shall skip some points that I consider too tenuous to warrant debate. There remain others worth talking about.

For example, your No. 4, the bit about Castro's beard. I shall concede that Time could have looked farther into your total attitude toward Castro. However, you have been reported in rationalization of Castro's acts, and it is not clear to us that you are, as you imply in your letter, his severe critic.

Your No. 8, "understandably hesitant about going to Formosa." Time did not imply that you were "afraid," any more than you imply it in your explanation: "I didn't want any sticky incident."

Your No. 10, "A glacial silence descended on the party." Time was imprecise. Evidently your remark about shooting was not followed by silence. However, a recheck to our correspondents in Hong Kong and Taiwan confirms that the Chinese guests at the party considered your remarks "provocative"; that they maintained their tempers and good manners with conscious effort.

Your No. 12, the Ambassador said in a press conference: "I have been in the foreign service 25 years and I think I am too experienced to propose that I debate with a Member of Congress on any matter." That sounds convincing to me.

In sum: While I can see why you consider Time's report tough, I consider it just and essentially accurate. Your shorter letter intended for publication will be published in the December 21 issue. Time will say that it stands by its story.

So, it is clear that we have more on which to disagree than we had before. I shall be happy one day to resume discussion with you on, for example, world law.

Sincerely yours,

HENRY R. LUCE.

DECEMBER 7, 1959.

DEAR MR. LUCE: Many thanks for your prompt and careful consideration of my letter of November 25 protesting the distortions and inaccuracies in Time's recent article about my Far Eastern trip. I am glad to know you intend to publish my other letter in your December 21 issue.

You say that Time will say following my letter that it stands by its story which you regard as sound journalism even though—

1. I didn't "next" turn my attention to seething Cuba.

2. Time, as you admit, could have looked further into my total attitude toward Castro. This wouldn't be difficult. I inserted many speeches, etc., into the CONGRESSIONAL RECORD. Your Washington correspondent, Jerry Hannifin, is fully informed in this respect. I still say it's "dirty pool," not sound journalism, to use, all by itself, the quote you did.

3. China was not a "new world" for me to explore politically.

4. I didn't ask to see Chiang so his being "too preoccupied" was irrelevant.

5. Time was, as you admit, "imprecise" in reporting the response to my remark at the Taiwan dinner party. "Inaccurate" 180 degres is more precise. I note you do not comment on the misleading implication in "* * * and PORTER returned to Tokyo the next day."

6. Both UPI and AP carried news stories, coming directly from the embassy, affirming MacArthur's challenge to debate China policy with me. I don't ask you to believe me. All I say is ask Gene Kramer of AP or Arnold Dibble (UPI) or your own Alex Campbell. Moreover, in the same conference where he said the words you quote in your letter he remarked that he had offered to debate the propriety of his refusing a transcript to me. I'm enclosing a thermofax of these news stories so you can see for yourself.

I certainly cannot agree that Time's report is "just and essentially accurate," although I did anticpate that Time would stick by its story nevertheless.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

Dedication of the National Memorial Building of the Veterans of Foreign Wars of the United States

---

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. BRADEMAS. Mr. Speaker, a longtime dream of nearly 2 million members of the Veterans of Foreign Wars of the United States and its ladies auxiliary was fulfilled on February 8, 1960, when President Eisenhower dedicated the magnificent white marble National Memorial Building here in Washington, D.C.

Inside the handsome five-story structure a perpetual light burns in honor of those soldiers, sailors, marines, and airment who paid the supreme sacrifice. As an office building and a memorial, it represents a tribute to both the living and the dead, a symbol of the purpose of the Veterans of Foreign Wars, to honor the dead by helping the living.

Mr. Speaker, at this point in the RECORD, I should like to include the preamble to the constitution and objects of the Veterans of Foreign Wars of the United States:

PREAMBLE TO THE CONSTITUTION AND OBJECTS OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES

We, officers and enlisted men, and honorably discharged officers and enlisted men of the Army, Navy, and Marine Corps of the United States of America, who have served in foreign wars of the United States of America, do unite to establish a permanent organization, which shall be known as the Veterans of Foreign Wars of the United States.

This, the Veterans of Foreign Wars of the United States of America, was organized by the amalgamation of the Army of the Philippines, American Veterans of Foreign Service, and the Army of the Philippines, Cuba and Puerto Rico, on September 14 to 17, 1914, at Pittsburgh, Pa.

The objects of this association are fraternal, patriotic, historical, and educational; to preserve and strengthen comradeship among its members; to assist worthy comrades; to perpetuate the memory and history of our dead, and to assist their widows and orphans; to maintain true allegiance to the Government of the United States of America, and fidelity to its Constitution and laws; to foster true patriotism; to maintain and extend the institutions of American freedom; and to preserve and defend the United States from all her enemies, whomsoever.

Mr. Speaker, members of the Veterans of Foreign Wars who live in the Third District of Indiana are particularly proud that Mr. Samuel E. Leman, of Bremen, serves on the VFW National Council of Administration and that Judge E. Spencer Walton, of Mishawaka, a former VFW department commander and past chairman of the VFW National Legislative Committee, now serves as vice chairman of that committee.

Mr. Speaker, I ask unanimous consent that there be inserted in the CONGRESSIONAL RECORD the following brief history of the Veterans of Foreign Wars of the United States:

HISTORY OF THE VETERANS OF FOREIGN WARS OF THE UNITED STATES

The Veterans of Foreign Wars of the United States was created by the merger in 1914 of three national societies of oversea veterans that were founded shortly following the close of the Spanish-American War in 1899.

These societies were composed of small groups of veterans who yearned to perpetuate that spirit of comradeship that is known only to those who have shared dangers and hardships in the actual zones of warfare.

The American Veterans of Foreign Service was chartered by the State of Ohio on October 11, 1899. After a brief period of activity the founding chapter in Columbus became dormant but was later revived.

The Colorado Society of the Army of the Philippines was organized in Denver, Colo., December 1, 1899, but it has functioned continuously since its origin.

Shortly thereafter, still another society, also known as the American Veterans of Foreign Service, was formed at Altoona, Pa.

These various organizations merged their identities in 1914, at a convention in Pittsburgh, Pa., to become the single nationwide association that has been known since then as the Veterans of Foreign Wars of the United States.

From the very beginning, the new organization took its place on the American scene as a major national veteran society, operating on a nonpartisan, nonsectarian, nonprofit basis. The close of World War I witnessed a great membership increase. As more and more oversea veterans joined its ranks, the VFW grew in prominence in national affairs—not only as a veteran fraternity but as a patriotic and service organization as well.

CAMPAIGN MEDAL SERVICE

A unique eligibility qualification distinguishes the Veterans of Foreign Wars of the United States from all other veteran organizations, past and present. Membership in the VFW is restricted to "any male officer or enlisted man, or any honorably discharged male officer or enlisted man, who is a citizen of the United States of America, and who has served in the military or naval service of the United States of America in any foreign war, insurrection or expedition, which service shall be recognized by the authorization of the issuance of a campaign medal by the military or naval service of the United States of America."

This campaign medal service requirement explains why veterans of the Spanish-American War, who founded the societies in 1899 that later gave birth to the VFW, have enjoyed a common bond in this organization with the overseas veterans of subsequent wars, campaigns, and expeditions—including World War I, World War II and the fighting in Korea.

Thus it is today that the Veterans of Foreign Wars of the United States continues to exemplify that "evergreen" characteristic that inspired its founders in 1899, when they ordained that campaign medal service should always be the basic membership qualification. More than 60 years ago these men planned that the VFW should continue to exist so long as American citizens are required to serve on "foreign soil or in hostile waters" in defense of the American flag.

BASIC PRINCIPLES

The basic aims of this organization—for more than 60 years—have been definitely expressed in a nationwide program of activities with a fourfold purpose: (1) To insure the national security through maximum military strength; (2) to speed the rehabilitation of the Nation's disabled and needy veterans; (3) to assist the widows and orphans, and the dependents of disabled and needy veterans; (4) to promote Americanism through education in patriotism and constructive service to the communities in which we live.

This program is reviewed and strengthened annually on the basis of resolutions discussed and adopted at VFW national conventions.

VFW NATIONAL LEGISLATIVE SERVICE

It is the proud boast of the VFW that every major veterans welfare law now on the statute books was either initiated or supported by this organization. These laws provided compensation for those suffering from service-connected disabilities; pensions for aging veterans with limited incomes; hospitalization and domiciliary care for needy veterans whose physical welfare requires proper hospital treatment; employment preference in civil service; housing and business loans; education and training, etc.

The Veterans of Foreign Wars legislative service in Washington works for the benefit of all war veterans—and to implement policies endorsed by each VFW national convention.

The legislative director prepares measures for introduction in the Congress. He represents the organization at congressional hearings and keeps VFW members advised on current issues most important to all ex-servicemen.

Outstanding among VFW legislative accomplishments are the major roles of this organization played in the creation of compensation, pension, hospital, and bonus benefits for World War I veterans, and their widows and orphans; passage of the GI bill of rights, and subsequent measures for both World War II veterans and Korean veterans, and pensions for their widows and orphans also.

The VFW national legislative service also works constantly for the enactment of laws and policies that will strengthen the national security and international relations designed to preserve peace for America in the future.

SERVICE AND WELFARE

The VFW maintains the central office of its national rehabilitation service in Washington, D.C. This nationwide program serves all disabled veterans of all wars, members and non-members alike, in matters of Government compensation and pension claims, hospitalization, civil service employment preference, etc.

The VFW National Rehabilitation Service office in Washington, D.C., functions as a coordinating agency between the various agencies of the Federal Government and service officers of local and State VFW units. This office is staffed with claim experts and medical advisers qualified by study and experience to prosecute the claims of individual veterans seeking the benefits to which they may be entitled under the law, when such claims have been denied on lower levels within the Veterans' Administration.

YOUTH WELFARE

The VFW youth welfare program embraces countless activities, all dedicated to the purpose of teaching the youth of America the obligations of good citizenship. VFW local units throughout the country sponsor Boy and Girl Scout troops, musical units, rifle-clubs, teenage baseball and softball teams, marble shooting contests, bowling leagues, summer camps for underprivileged children. They cooperate with schools and churches, and—in every possible way—constantly strive to teach respect and reverence for America's patriotic traditions.

VFW NATIONAL HOME

At Eaton Rapids, Mich., the VFW maintains one of America's most unusual child welfare projects. It is the VFW National Home, founded in 1925 as a home for the orphans of deceased and/or totally disabled oversea veterans. Functioning under the "family unit" plan, the home campus includes more than 30 family-size dwellings, each housing a typical family group of children under the care of a trained housemother.

The site is a 640-acre farm, equipped with adequate farm and dairy buildings, swimming pool, athletic fields, nursery, memorial chapel and guest lodge, hospital, community center and auditorium, playgrounds, orchard with farm land, and fields where crops of grain and garden produce are raised.

Education, food, clothing, constructive play, physical welfare—all the essentials to well-rounded American youth—are supplied free of cost for the boys and girls who live at the home, plus financial assistance if they desire to obtain special training or college degrees after they earn their high school diplomas.

Today, more than 60 years since its roots took hold in 1899, the Veterans of Foreign Wars of the United States fills an important place as a great service organization—one that is still composed of oversea veterans exclusively and dedicated to the ideal which seeks to "honor the dead by helping the living."

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Family Farm Income Act of 1960

EXTENSION OF REMARKS
OF

HON. EARL HOGAN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. HOGAN. Mr. Speaker, the beginning and foundation of free enterprise in this country, and indeed of the whole concept of democratic representative government in America, was the family farm system of agriculture. Family farming has continued throughout our history to be one of the major bulwarks of democratic government and our American way of life. The basic ideals of freedom, liberty, and self-reliance that characterize the warp and woof of our social values and our competitive free enterprise system had their roots in the American family farm system. Many observers feel that if the trends of the past 7 years continue, the family farm will disappear, a victim of industrial-controlled vertical integration, factory farming or some other form of rationalized or collectivized agricultural production.

Yesterday, the Congress received a farm message from the executive branch. This message was in two parts: Part 1 was a reiteration of the recommendations made by Secretary Benson, which experience has proven to be wrong, and which repeated hearings before our Committee on Agriculture have shown to be completely devoid of any constructive solution of the major aspects of the farm income problem. The proposals which were yesterday reiterated have already been found in practice to have adverse results and the reports prepared for the Senate Committee on Agriculture and Forestry by the Department of Agriculture in Senate Document No. 77 say these would be the results of future application of such policies: continued increase in farm production; continued piling up of surpluses in Government ownership; continued fall in farmers' income, and a continued increase in the middleman's share of the consumers' food dollar.

The second part of the farm message from the executive branch was more reasonable. The second part of the message indicated a willingness on the part of the Executive to work with Congress to bring about an acceptable solution to these problems. The message said that the timeworn recommendations were preferred, but that alternative courses would be considered and not turned down out of hand.

In the spirit of this second and more reasonable part of the farm message, I am today, in company with a large number of colleagues, on and off the Committee on Agriculture, proposing for consideration, an alternative course, that will in our opinion raise not lower farm income, reduce not increase the Government cost of the farm program, and reduce not increase the quantity of farm commodities in Commodity Credit Corporation inventories.

The bill we are introducing today meets the President halfway on his proposed alternative course. It provides means whereby farmers can make realistic choices commodity by commodity whether they wish to adopt the no-controls-low-supports approach favored by the executive branch or whether they wish somewhat more nearly adequate income stabilization levels and are willing to accept the self-discipline required to balance supply with demand at such stabilization levels.

Title I of the bill, "Balancing Supply With Demand at a Fair Price" gives producers of each different commodity a choice, first whether they wish to solve the problems of their commodity by means of nationwide marketing orders similar to the orders in successful use now for many commodities, or alternatively they want to make use of some other type of commodity market stabilization procedure for their commodity.

Part I, "Nationwide Marketing Orders," amends, as did the bill I introduced last spring, the Agricultural Marketing Act of 1937 in several ways to increase the commodity coverage of the act and to improve its authorizations in other ways. Eligibility to make use of marketing orders would be extended to the producers of all commodities and thus they would take this load completely off the Government and carry out the complete program for their commodity on a self-help basis through an administrative board elected by producers to operate the order. This part of the bill would authorize national, as well as regional, marketing orders.

Part II of the bill, "National Commodity Stabilization Program" provides for the orderly termination of all of the price support and acreage allotment legislation now on the books, except for tobacco, sugar beets, sugarcane, and wool. In the place of existing programs, the Secretary of Agriculture would be directed to work with producer-elected committees of producers of the different commodities to develop workable programs at considerably less cost to the Government than existing programs.

Section 151 of the bill directs the Secretary to initiate the use of a fair-price concept based upon the definition in the Agricultural Adustment Act of 1938.

Section 152 requires the Secretary of Agriculture to establish a farm commodity program development committee for each commodity of importance where the supply exceeds the demand at a fair price, if the commodity is not already serviced by a nationwide marketing order under part I of the bill. This committee would be made up only of producers of the particular commodity and would be elected by secret ballot by the producers of that commodity.

The bill requires that the committee be set up in a manner that will give appropriate regional representation to all production areas of the commodity, with one commodity committee member from each production area of equal size in terms of production and sales of the commodity.

Section 153 provides that each such commodity committee shall, with such help as the Secretary shall provide, develop a workable income and supply stabilization program for that commodity in accordance with the standards specified in the following sections of the bill. When the committee has developed a program for the commodity involved, they are required to recommend it for adoption to the Secretary of Agriculture.

Whenever one of the commodity committees recommend such a program to the Secretary he is authorized and directed to study it carefully to determine if the recommended program is consistent with the standards and yardsticks set up in the bill and if it is a feasible application of such standards and yardsticks. If he determines that these requirements are met, the Secretary shall then submit the proposed program to a referendum of the producers of the commodity. All commercial producers of the commodity with annual sales above $500 would be eligible to vote in the referendum.

If two-thirds of the producers voting in the referendum do not favor the proposed program, the existing program under existing law stays in effect.

However, if two-thirds of the producers who vote favor the proposed new program, it shall be placed into operation by the Secretary, except that if it calls for expenditures from the Federal Treasury of more than $20 million per year, the program must be submitted, through the President, to Congress for review. The proposed program would be submitted to the Vice President, who would refer it to the Committee on Agriculture and Forestry of the Senate, and to the Speaker of the House of Representatives, who would refer it to the Committee on Agriculture.

If either such committee rejected the proposed program by resolution within 90 days, it would not be placed into effect.

Sections 155 and 156 established the standards or yardsticks by which the producer commodity committees, the Secretary of Agriculture, and the Agriculture Committees of Congress must be guided in the development and approval of proposed programs.

The standards or yardsticks are:

First. Each such program must provide for a means to balance market supply with demand at a fair price, while bringing about a reduction of at least 10 percent of the Government inventory of the commodity each year. The needs of each commodity for special domestic welfare food utilization programs and special exports would be included, as well as regular commercial dollar demand requirements;

Second. Establish means for adjusting such quotas or goals among States, counties, and individual farms;

Third. Utilize as necessary a diversified kit of income stabilization tools in workable combinations to meet the fair price objective. However, no method of income stabilization could be used that would result in the acquisition or storage by Government of any agricultural commodities. Each such program must be designed to operate at an annual net cost to the Government of not more than 5 percent of the gross sales of the commodity. This would place a very strict limit upon Government costs, much lower than has been expended on many commodities in each of the past 7 years. Moreover, any payments or benefits under the act would be limited to not more than $5,000 to any one farm family in any one year.

Section 157 of the bill requires that groups of closely related commodities, such as feed grains, be combined into a single program and considered as an individual commodity.

The Commodity Credit Corporation resale price would be set at the equivalent of the fair price rather than at 5 percent above the support price as provided in existing law.

All provisions of the bill, if enacted, would terminate on December 31, 1965.

Title II of the bill would institute a new welfare type food distribution program, aimed specifically at the high protein foods such as meat, milk, and eggs. The Secretary would be directed to take from stocks of Comodity Credit Corporation or to buy on the open market $500 million per year of such foods for distribution to schools, public institutions, and needy people. For each approximately $2 value of such high protein foods so distributed, the Secretary would be authorized to sell $1 in value of Commodity Credit Corporation stocks of feed grains.

Title III of the bill, and again, this is substantially the same proposal which I submitted to the Congress last May 18, would carry out the recommendation in the farm message of the executive branch to take out of surplus commercial production up to 60 million acres of farmland and devote it to soil building practices. The provisions of this title would allow the discredited Soil Bank Act to remain expired, as it did on December 31, 1959, and would not bring it to life or extend it.

Instead, the bill that is being introduced today would expand and implement the soil conservation program established under the Soil Conservation and Domestic Allotment Act of 1937. The new program would be a part of, and an expansion of, the time proven ACP program approved and utilized by almost every farmer in the land over the past 23 years.

Under the program proposed in the bill, each participating farmer would contribute, without rental payments, not less than 10 percent of his tillable acres to a "producers' contributed acreage" of the national soil building base.

In addition to the producers contributed acreage, each producer could place an additional acreage up to not more than 30 percent of his tillable land into the soil building base and receive payments in kind equal to two-thirds of the annual production as rental.

This proposal would meet the major recommendations in the farm message but would avoid some of the major defects that have shown up in the soil bank program. With producers making a partial contribution to the program in acres the cost should be greatly reduced; by not allowing any farmer to put more than a total of 40 percent of his land into the soil building base, the adverse situations developing from the so-called whole farm approach would be avoided.

Title IV of the bill outlines the legislative findings that orderly nationwide market stabilization and supply control measures are required to maintain orderly conditions of interstate commerce in agricultural commodities.

Marguerite Brooks Memorial Week

EXTENSION OF REMARKS
OF
HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. KASEM. Mr. Speaker, I would like to call the efforts of the La Puente Players, a little theater organization in the 25th District of California, to the attention of my colleagues.

The proclamation below was signed last week by Mayor S. Chester McIntosh, of La Puente. All of the proceeds of the presentation by the players will be donated to the City of Hope cancer research hospital which is also in the 25th District.

Marguerite Brooks was one of the most beloved newspaperwomen our area has known and over the years became fast friends with a number of the Nation's leaders. Cancer was the cause of her untimely death last year.

The proclamation reads as follows:

Be it resolved: The week of February 7 through 13, 1960, shall be known to these parts as Marguerite Brooks Memorial Week.

Whereas Marguerite Brooks, cherished, respected, outstanding citizen of this city, active in community affairs, was called by the High Tribunal, the victim of cancer; and

Whereas Marguerite Brooks' final wishes included that funeral contributions be sent instead to the City of Hope, from which institution she had received comfort; and

Whereas the memory of Marguerite Brooks, charter member of La Puente Players, is being honored by that organization with onstage prseentations of "Blythe Spirit," February 11, 12, and 13, 1960, in a Marguerite Brooks Memorial, with proceeds to the City of Hope; and

Whereas the city of La Puente, cognizant of her outstanding abilities and continued contributions to the welfare of this community and local area, and desirous of publicly recognizing such exemplary citizenry, and abetting to the compliance of her final wishes does, therefore, proudly endorse La Puente Players' tribute, the Marguerite Brooks Memorial, and proclaim in these parts the week of February 7, through 13, 1960, as Marguerite Brooks Memorial Week.

In testimony thereof, I have caused my signature to be hereunto affixed. Done in the city of La Puente, Calif., on this 3d day of February in the year of our Lord 1960.

By the mayor:

S. CHESTER MCINTOSH.

Farm Outlook 1960

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. SIKES. Mr. Speaker, I am glad to submit for reprinting in the CONGRESSIONAL RECORD a most impressive article by Mr. D. W. Brooks, who is the general manager of the Cotton Producers Association. This timely article was called to my attention by Mr. George W. Morrow, an outstanding industrialist and civic leader in the lovely town of Graceville, Fla. The serious situation of the farmers generally appears to have escaped the attention of altogether too many of the Nation's leaders who are more concerned with the sociological and industrial problems of the Nation's population centers. Unless there is an improvement in the status of agriculture, we may see farming as an industry killed except for the big corporation farmers in this country.

The article follows:

FARM OUTLOOK 1960
(By D. W. Brooks)

At the beginning of any new year all of us like to start with lots of enthusiasm and hope, believing that this is the way to accomplish most. However, sooner or later we have to look at the bare facts as they are. When we take a look at the bare facts of agriculture, they make a sorry picture.

All of our figures on this are generally based on average prices from 1947 through 1949. This was a 3-year period between the Second World War and the Korean war and was the most stable period we have had in a long while. A careful study of the facts based on this period will show that agriculture has been taking a gradual beating in both directions. No. 1, our prices have been going down; and No. 2, our costs have been going up. Consequently, what is left for the farmer has been getting less and less.

As an example, since the 1947–49 period the average price of agricultural commodities has gone down approximately 18 percent at the wholesale level. The average price of nonfarm commodities at the wholesale level has gone up 28 percent. Even after agriculture has furnished the consumers of this country, farm commodities at 13 percent lower prices, the other parts of the economy of this country, namely labor and industry, have not only eaten up the 13 percent but have increased

their cost 28 percent or a difference of 41 percent. Consequently, even with the farmer taking a licking year after year the cost of living has been going up not only against consumers but against farmers themselves.

We hear lots about industrial revolutions and industrial efficiency, the efficiency of labor, and so forth, in this country, but when you put the bare facts down and look at them, by far the most efficient operation in this country in recent years has been agriculture. Except for agriculture the cost of consumer goods in this country would be much higher and the scale of living of the people of this country would be very low as compared to what it is today.

The sad part is that the industry that has made the most progress in lowering its costs and reducing its prices to the consumers of this country is the industry that is now the most maligned, most misunderstood, and most condemned of any industry in this country. It is bad enough to have to take the licking that agriculture has taken for the benefit of the consumers of this country. When you have to take the licking, and then the cussing on top of the licking, it becomes unbearable.

If you will study other industries in this country you will find that when they bring about tremendous increases in efficiency and lower their cost they can generally continue to hold their price level and the industry itself gets all or at least a good part of the benefit in the improvement of efficiency and lowering of cost. This has not been true at all in agriculture. The more efficient we become, the more we lower our cost, the worse shape we get in, because our prices go down faster than we can increase our efficiencies.

As one illustration of this situation, I have recently made a study of the price of broilers. In 1953, only 6 years ago, our average price was running from 27 to 29 cents per pound. Even as late as 1955 we received as high as 30½ cents a pound for broilers. During the past several months our price has been holding around 13½ to 14 cents per pound, or less than one-half of the price during the same period of time 6 years ago.

If any other industry in this country had been able to cut its prices in half, in the last 6-year period, it would be hailed as the business wonder of the entire world. But all that has happened to the broiler industry is that as fast as it has improved its efficiency the price has gone down and the farmers are obtaining far less money today for their labor than they obtained 6 years ago.

During this same period the wages of labor in most industries have gone up at least 25 to 50 percent, and the price of nonfarm commodities has gone up approximately 25 percent. If some manufacturing industry, such as the automobile industry, had been able to reduce the price of its commodity one-half in the last 6 years through lower labor costs and increasing its efficiency, it would be the marvel of the civilized world. Instead of paying $3,000 for an automobile, we would be paying $1,500 or less for the some automobile today. If this had happened all the way through the industry, we would now have the highest scale of living the world has ever dreamed about, much less actually had.

With this as a background, let's look at what is ahead for farmers in 1960. The prediction now is that the income will go down 5 to 10 percent more. The prediction last year was that we would go down 5 to 10 percent, but it is going to work out 15 percent down for 1959. The price trend is continuing downward and the cost of things farmers have to buy is continuing upward. We are fast becoming an island of poverty in a sea of prosperity. Everybody seems to be getting rich except the farmers. Yet when you read the public press of this country about what the Government is paying out for farmers, they have thoroughly convinced the consumers of this country that farmers are driving Cadillacs, they have so much money they can't spend it, and they got all this money from the taxpayers. All of this indicates to me that we must do an entirely new job of thinking about farm programs and stopping this cost-price squeeze which is making peasants out of agriculture and kings out of other groups in this Nation. Nineteen hundred and sixty will probably be the most prosperous year this country has ever known for everyone except farmers. We are going down that same lonesome road that we have gone down for many years now. To me this indicates that we are going to have to change some roads, and we are going to have to use some of the techniques that have been used by labor and industry to carry them on the high road while we were going down the low road.

The predictions now are that the net agricultural income in 1960 will be back to the 1940 level. Industry and labor have moved forward 50 to 100 percent during this 20-year period. Agriculture is back where we started 20 years ago. If farmers were making the same per hour wage as that given recently to steelworkers, milk would have to sell for $1 a quart and eggs $2 a dozen.

Such a situation is a terrible reflection on the ability of people in agriculture. It indicates definitely that something is basically wrong and we had better start entirely on a new road.

I wish that I could write an optimistic report telling you how good things were going to be in agriculture, but as far as I can see, no changes have been made which would indicate that we have any better chance to stop this cost-price squeeze in 1960 than we have had in the past. Surely there are enough brains in agriculture now for us to rethink and re-do our whole philosophy of agriculture in this country, so that we, too, can join in and participate in this wave of prosperity that is engulfing our country. I am going to be writing articles from month to month as we move along suggesting possibilities of some changes in the direction in which we might go in at least getting some of the rewards which we deserve from the greatest production job and the greatest revolution that has ever taken place on this earth.

Outstanding Alabama Editor Honored

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. ROBERTS. Mr. Speaker, the Lions Club in Piedmont, Ala., recently honored one of Alabama's outstanding newspaper publishers, the Honorable Austin Johnson.

"Mayor" Johnson is one of my dearest friends and neighbors down in Piedmont, and the newspaper which he puts out is widely respected, read, and quoted.

I regretted very much that business has prevented my being in Piedmont to honor my good friend, and I wish to insert at this point in the RECORD an editorial which appeared in another outstanding newspaper in the same county, the Anniston Star.

The editorial follows:

CONGRATS, MR. JOHNSON

The entire populace of Calhoun County and members of the Alabama Newspaper Publishers Association in general will join most heartily in the tribute that was paid Austin Johnson, editor of the Piedmont Journal, last night in observance of his 20 years of perfect attendance at the Lions Club in that city.

Mr. Johnson is one of Alabama's most useful citizens. His weekly paper is one of the best in the State, his editorials being ably written and widely quoted. He has always been progressive in his point of view and never hesitates to take a stand on anything that he conceives to be for the betterment of the State.

It was fitting that the honor paid to Mr. Johnson by his fellow citizens and others from outside Piedmont was in recognition of his 20 years of uninterrupted attendance at the meetings of the Piedmont civic club, of which he was one of the founders and a past president.

And let it be said in passing that the Lions Club is one of the best of all the luncheon clubs that have sprung up in this country in the last 50 years or so. Their affiliation has become international, and their service for the sick and handicapped around the world has won them plaudits everywhere.

But Mr. Johnson does not confine his activities to his paper and the Lions exclusively. He has served on the city council of Piedmont more than once and was one of its most outstanding mayors a few years ago. Indeed, he is always in the forefront of anything that is for the betterment of his hometown.

It is with genuine pleasure, therefore, that the Anniston Star joins with the Lions and the people of Calhoun County in general in congratulating Mr. Johnson on the recognition he has received for his many benefactions to his city, county, the State and the country in general. May his pen be ever damp.

Piedmont itself has been showing many evidences of growth and prosperity in recent years, the fine new hospital there being one of the more recent accessions. And the people of the community are to be congratulated as a whole on the recognition they give to the outstanding service of their good citizens.

"In God We Trust"

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. ALBERT. Mr. Speaker, it was my pleasure on February 3, 1960, to represent the people of Durant, Okla., in the presentation of a plaque to the main post office building in Washington, D.C. This bronze plaque bears the national motto, "In God We Trust," and the official seal of the United States of America. This gesture was stimulated by a desire for public expression of the religious reverence and respect of the American people.

Attending the official dedication ceremony, in addition to representatives of the various departments and organizations involved, were ministers of the Protestant, Catholic, and Jewish faiths. Their remarks on this occasion indicate the fundamental beliefs on which our country is founded, as well as the cooperative spirit symbolized by this National Brotherhood Month. Under unanimous

consent heretofore granted, I include the invocation delivered by Rev. Bernard Braskamp, D.D., Chaplain of the U.S. House of Representatives; comments of the Very Reverend Monsignor Leo J. Ccady, director of Catholic charities in Washington; and the benediction of Rabbi E. William Seaman, Washington Hebrew Congregation; be printed in the Appendix of the RECORD.

INVOCATION BY REV. BERNARD BRASKAMP, D.D.

O Thou who wert the God of our fathers, we rejoice that Thou hast also been the God of all their succeeding generations.

We humbly acknowledge that in our day and generation we are facing tasks and responsibilities which challenge and demand the consecration of our noblest manhood and womanhood.

Help up to feel that America's great hour has come when we must revive our trust in Thee and in the spiritual foundations of our beloved country.

Grant that all the barriers of doubt and misgiving which separate us from Thee may be supplanted and submerged by a renewed trust in Thee.

Create within us those desires which Thou dost delight to satisfy. May we hold our own wishes in abeyance until Thou dost declare Thy will. On Thee may we depend for light to know, for wisdom to choose, and for strength to perform.

Give us a greater faith in the glorious prediction that they who trust in Thee and wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run and not be weary; they shall walk and not faint.

Hear us in the name of the Prince of Peace. Amen.

COMMENTS BY THE VERY REVEREND MONSIGNOR LEO J. COADY

We in Washington are grateful to the people of Durant, Okla., for the interest they have taken in promoting this project of erecting plaques signifying the Nation's trust in God in various public buildings in cities throughout the land. To me, it seems significant that here in Washington we have such a ceremony and such a plaque erected in a city which is the foundation of our Government, where all our ideals, all of our political philosophies have their roots, and all our aspirations find their highest embodiment in what we do here in this seat of government.

It was a small thing perhaps but it is symbolic of a tradition and symbolic of the fundamental convictions that we share. Throughout the years they will have meaning for all of those who pass by in this post office. It is a reminder that the people who began this Government, the great men on whose philosophy our country is based, whose names are still held in reverence, were also men of aspirations and high ideals.

They were men who were, in a sense, joiners in that they joined spiritual ideals and political action. To me it is most significant that here in the city that bears the name of the Father of our Country, the first President, a man who himself was deeply religious, we today here are erecting a plaque signifying our Nation's trust in God. It seems a continuation of one of the things Washington said in the last address that he made as President to the Congress of the United States: "I consider it an indispensable duty as part of my last official action as President to entrust to the protection of Almighty God our dearest country." I think that these sentiments are being reiterated here today.

We in Washington and throughout the country are grateful to you, Congressman ALBERT, the people of your district, and the city of Durant for the interest you have taken in reinforcing our ideals by bringing to mind more forcibly and tangibly in this plaque the aspirations for which we all strive.

BENEDICTION BY RABBI E. WILLIAM SEAMAN

Lord our God, let Thy blessing, we pray Thee, rest upon our country and our people, guarding them from calamity and injury. Enlighten with Thy wisdom and sustain with Thy power those whom the people have set in authority, all who are entrusted with our safety and the guardianship of our rights and our liberties. May peace and goodwill obtain among all the inhabitants of our land. May religion spread its blessings among us and exalt our Nation in righteousness. Praised be Thou, O Lord, in whom we forever put our trust. Amen.

The Library Services Act—Vital to the Nation's Education

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. HECHLER. Mr. Speaker, those of us who believe deeply in democracy place great faith in the power of education to strengthen man's ability to govern himself, and indeed, to provide the basis for the future defense, security, and progress of our Nation.

But education should not cease abruptly with the ceremonious awarding of diplomas and degrees. It is a dynamic, continuing process which keeps freemen forever free.

An essential ingredient of this process is books—books which are readily available to all our citizens, regardless of the ability to pay. Such an indispensable, democratic service is provided by our free public libraries across the Nation.

In 1956 Congress took a significant step toward expanding free public library services where they were needed most—in our rural areas—by enacting the Library Services Act. Federal grants totaling $19,050,000 over the past 4 years have been invested in this program. The States have provided matching funds and imaginative leadership in extending library services into rural areas where books simply were not available to the people.

My State of West Virginia has moved dramatically ahead under this program of Federal-State partnership. Per capita expenditures jumped from 26 cents in 1956 to 45 cents in 1959. And the number of West Virginians with library services has increased from 50 to 56.5 percent.

In 23 counties in West Virginia, with a total population of 243,757, library services have been strengthened. Three bookmobiles are serving new regional libraries operating in eight counties, including two counties—Jackson and Roane—in the Fourth Congressional District which I proudly represent. More than 184,000 books, including basic reference collections, have been purchased for libraries throughout the State.

These significant beginnings in breaking West Virginia's book barrier have been made with only $277,921 in Federal funds and $174,246 in State contributions.

Thousands of West Virginians, however, still do not have reasonable access to public libraries. In my congressional district alone, the citizens of two counties have no library services whatever. More than half of the people in 4 other counties among the 10 in my district are without library facilities. A similar story of library neglect exists throughout West Virginia.

As my able colleague, the gentleman from Alabama [Mr. ELLIOTT] has pointed out, the absence of adequate library services is a national disgrace which reaches into practically every area of our country.

Outstanding progress has been made in the past 3 years under the Library Services Act, which began a new era of Federal-State partnership in making books available to all the people.

My bill, H.R. 9574, would extend this act for another 5 years. I would like to urge my colleagues to vote for this extension of the Library Services Act, which is making a dramatic contribution to democracy's growth. As Thomas Jefferson once remarked: "A nation that expects to be ignorant and free expects that which never was and never will be."

Moral Climate Held Chiefly at Fault in Scandals

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. PATMAN. Mr. Speaker, I am inserting herewith an article from the New York Times of Sunday, January 31, 1960, under the heading of "Advertising: New Villain Is Tagged in TV."

The article is by Robert Alden and has some very interesting and timely references concerning the deported Lincoln Steffens and a very active, patriotic and outstanding American, Philip Cortney, of New York.

It is as follows:

ADVERTISING: NEW VILLAIN IS TAGGED IN TV—MORAL CLIMATE HELD CHIEFLY AT FAULT IN SCANDALS

(By Robert Alden)

Late in 1907, in a speech before some 100 prominent Los Angeles businessmen, attorneys, clergymen, and their wives, Lincoln Steffens, the journalist and an authority in his day on municipal corruption, was asked to give not a superficial view of corruption, but to get right to the basic roots of the evil.

Mr. Steffens turned to the Bible and spoke of the original corruption that had taken place in the Garden of Eden:

"You want to fix the fault at the very start of things," Mr. Steffens said, " Maybe we can. Most people, you know, say Adam was to blame. But Adam, you remember, said that it was Eve, the woman—she did it. And Eve said no, no, it wasn't she; it was the serpent.

"Right now you blame that serpent, Satan," Mr. Steffens paused, almost as if he had finished. Then he went on: "Now I come and I am trying to show you that it was, it is, the apple."

INVITATION TO CORRUPTION

After a long and searching study of corruption across the United States, Mr. Steffens had concluded that any way of life that held up riches, power, and acclaim as prizes for success and conditioned people from the cradle to the view that these were the goals worth seeking no matter what the cost, not only invited, but insured corruption.

At the present time, advertising, as honorable profession as any and a profession more creative than most, stands accused in the public mind of being guilty of a deep wrongdoing.

To draw a parallel from Mr. Steffens' Biblical story, it is as if Charles Van Doren and his like were Adam, the television industry was Eve and the corrupter, at whom the finger of real guilt pointed, was the serpent, the advertising profession.

The moral climate of the time, the actual villain that fostered this tragic disillusionment of the American public, goes virtually undetected. Advertising becomes the whipping boy to salve people's consciences.

The United States is today a rich country, the richest country in history. Its way of life is the most comfortable. It has more leisure, more food, more mobility, more good things to enjoy than any of the people were able to enjoy at the crests of other great civilizations.

This great goal was achieved by good fortune and, more important, by more than 300 years of hard work.

It was not achieved by long weekends and the notion that it is possible to get something for nothing. It was achieved in spite of a small group who felt that it was all right to do things that were illicit—as long as it was possible to get away with it.

To judge by reports of the Government's Central Intelligence Agency, the United States today is becoming soft and flabby compared with another power that already has sent one rocket around the moon and shot another 8,000 miles onto a speck of a target in the Pacific.

WARNINGS IN PAST

The past warns us that great civilizations have been tumbled from their crests before—the Roman Empire, the Kingdom of Khmers, and the Court of Louis XIV.

Gen. David Sarnoff, chairman of the Radio Corp. of America, said in a speech recently, that we ran the danger of confusing democracy with mediocrity, and that we might grow softer, more pleasure-loving, content to squander our increasing leisure on the trivial, if not on the harmful.

Later, on January 7 of this year, in a statement before the Federal Communications Commission, Philip Cortney, president of Coty, Inc., warned that "the degrading of our taste, the corruption of our morals, the juvenile delinquency to which many of the television programs make such an outstanding contribution, are too high a price to pay for so-called free television."

Mr. Cortney was not particularly advocating pay television. He was advocating that television be taken completely out of the control of advertisers, that legislation be passed that "would specifically make it illegal and punishable by law for any advertiser to exercise control over programs."

That was Mr. Cortney's drastic remedy for a situation in which the bill for television, the single greatest influence on the Nation, is picked up by advertisers, "whose main criterion for presenting a program," according to Mr. Cortney, "is what is supposed to be most popular."

The duty of television in these critical times for the United States, Mr. Cortney said, is not to pander to the low tastes, already debased by a steady diet of cheap entertainment, but to raise those tastes for the good of the public and the good of the country at a critical time.

Is a remedy as drastic as Mr. Cortney's necessary—a remedy that would specifically make it illegal for any advertiser to exerecise control over any program?

Does tampering by advertisers automatically spell venality? In other media—newspapers, for example—such tampering does indicate corruption.

And the chances are that if the notion that advertisers are degrading public taste becomes widespread, then the connotation of venality in television programs produced by advertisers will surely follow.

ADVERTISERS' TASK

The responsibility thus becomes the adtisers' to show that they are not only capable, but willing, to exercise the kind of influence on television programing that the television product, which they work on in cooperation with the networks, will be as good a job as the networks could do if the networks did the job alone.

In proper perspective and with proper values, this task would not be a difficult one for the advertisers. However, in the present moral climate, where the most popular shows—no matter by what method their popularity is achieved—are the most sought after, the task becomes almost impossible.

The World of Coos Bay (Oreg.) Wins Freedom Award

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story and editorial appearing in the February 5, 1960, edition of the Coos Bay (Oreg.) World, a fighting and capable newspaper in my district.

The World and particularly its news editor Jack Pease, brought to the attention of its readers the fact that segregation is not necessarily a problem one reads about—it can take place in your own backyard, as it did in the Coos Bay area. The work of the newspaper and its staff has, I feel, made Coos Bay a better place in which to live.

Segregation is a national problem and it is high time we accepted this fact. Past time, indeed, that we put teeth into Federal civil rights legislation.

The editorial and news story follow:

[From the Coos Bay (Oreg.) World, Feb. 5, 1960]

WORLD GETS FREEDOM AWARD

A college, a newspaper, and a community worker have been selected to receive the annual Freedom Award for 1959 of the Portland Chapter, American Veterans Committee, Chapter Chairman John Holley announced today.

Reed College, the World of Coos Bay, and Mrs. Helen Catlin were chosen for their contributions toward achieving a more democratic and prosperous America and a more stable world.

The World, a daily newspaper of Coos Bay and the surrounding area, gave considerable space in its issue of December 7, 1959, to the plight of a Negro serviceman's family which was forced to leave the community because of abuse and inability to secure a home. "The stand of the World for human decency," said the AVC selection committee, "was a community service which might easily have been slighted."

MRS. CATLIN

Mrs. Helen Catlin was named because of her many years of volunteer services in a great many organizations and for a variety of causes. During the 1959 legislative session she worked successfully for a school of social work for Oregon, long needed if Portland and other parts of the State are to be provided with a supply of trained social workers.

Among her many volunteer jobs she has been an active organizer and worker in the United Fund in the neighborhood division, has been a member of the advisory committee to the board of control on the State training schools, and was a prime mover in the volunteer service bureau which gave help to many community organizations and individuals.

At present Mrs. Catlin is employed as director of volunteer services by the Boys and Girls Aid Society of Oregon.

FREEDOM AWARD

To Reed College goes a Freedom Award for the refusal of the college to use available Federal moneys for a student loan fund because of the requirement that each student must sign a negative loyalty oath.

Although a few other colleges in the East had taken a similar stand. Reed was the first college in the West to turn down such funds on the grounds that such an oath unfairly discriminated against college students alone.

"Although the financial assistance would have been of substantial value to Reed College," says John Holley, chairman of the AVC chapter, "this oath would have been in violation of traditional American positive affirmations of loyalty and implies that college students are less trustworthy than other groups receiving Federal assistance. We just don't possess that lack of confidence in young Americans," he added.

The American Veterans Committee was formed at the end of World War II by a group of liberal-minded veterans headed by Charles Bolte.

The group, according to Edgar A. Taylor, Jr., chairman of the Portland chapter's freedom awards committee, dedicated its efforts more toward civil rights and social progress of veterans and all citizens than toward the customary veteran group goals of pensions and cash remuneration.

Pease will be a guest of the Portland chapter at a luncheon in the Downtown YMCA next Thursday, when he will receive the award.

Principal speaker at the award luncheon will be Dr. Ford Lewis, associate minister of the First Unitarian Church of Portland.

[From the Coos Bay (Oreg.) World, Feb. 5, 1960]

HONORS FOR THE WORLD

Like the maker of better mousetraps, or the compounder of finer cheeses, the writer of newspaper stories mainly looks forward to the completion of his product with the satisfaction any good craftsman knows. He hopes someone will get some good from it.

He finds his satisfaction in the knowledge of a good job well done, for a good purpose.

But occasionally, the merit of his work is so great that fellow men rise up and remark that this is indeed a better mousetrap, a better cheese, or a better newspaper story.

And once in a great while, the quality of the product is so outstanding that special rewards are attached to the completion and presentation of the product.

Paths are worn to the door of the mousetrap maker, exhibition awards are given for

the finer cheese, and groups of persons who have special interests attach special merit to certain newspaper achievements.

The World has been so honored today by the American Veterans Committee, a national group dedicated to achieve a more democratic and prosperous America and a more stable world.

The World accepts the honor and transfers it to where the honor rightly belongs, to World News Editor Jack Pease, who spent many weeks sifting every detail of a story he wrote in December concerning the expulsion of a Negro family from the bay area.

The World is proud of Jack Pease for his achievement in winning the newspaper's monthly award for the best story, and this honor from the American Veterans Committee.

However, we like to think that the greatest honor that can come to Mr. Pease is the creation of a proposed community committee in the bay area to see that such incidents do not happen here again.

This, we feel, would be a true monument to his endeavors to educate the public to a better, more creative way of living with tolerance and helpfulness toward all. This is the goal which he was seeking when he wrote the prize-winning story.

Governor Faubus on Aid to Education

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an address by the Honorable Orval E. Faubus, Governor of Arkansas.

The address is as follows:

ADDRESS OF GOV. ORVAL E. FAUBUS, ARKANSAS SCHOOL BOARDS ASSOCIATION, JANUARY 20, 1960

You are familiar with what has been done in Arkansas during my administration. The improvement and expansion of education has been and is a prime objective of my tenure as Governor. Moreover, your State government has assumed leadership in a reassessment program which is, at least, moderately successful. This reassessment program will furnish a firm base for local support of education and other county services. The reassessment program is, perhaps, the most important single governmental improvement which has taken place in Arkansas during our lifetime. The program is receiving national attention.

The 1957 general assembly passed a tax program designed to improve many of the fundamental services, including education. This program, enacted by a progressive legislature, resulted in a 30-percent increase in the salaries of classroom teachers. In addition, some increases have been supplied, or will be forthcoming, as a result of the reassessment program. Though our salaries are still far from what we consider adequate, they have substantially improved in recent years, and we have reason to be proud of what has been accomplished.

I hesitate to quote a former resident of Arkansas, but Mr. Harry Ashmore, in his book, "The Negro and the Schools," published in 1954, stated that "Arkansas ranks ninth among the 48 States in effort to support public education in proportion to our ability to pay." Assuming that the statistics reported by Mr. Ashmore were correct (and since his statement contains only statistics, I am inclined to accept them), we may be sure that Arkansas ranks at or near the top of the 50 States in support of education, in proportion to the ability of the people to pay. This is the real yardstick of the interest of citizens in their schools. Yet, funds available for education are insufficient to meet what we consider adequate requirements.

Let us review, briefly, some of the changes that have taken place during the past quarter of a century in our Nation. Twenty-five years ago when local school authorities took a look at sources of revenue with which to operate their schools, they discovered that 75 percent of all tax revenue was in the local treasury, with probably 15 percent in the State treasury, and about 10 percent in the Federal Treasury. You are probably well aware, as am I, that these percentages have almost exactly reversed themselves. These figures do not hold exactly in all of the States, but on a national basis they are substantially correct. Approximately 75 percent of all taxes collected go to Washington. Moreover, only about 4 percent of the cost of education is returned to the States. As a practical matter, therefore, school boards are required to depend upon two pumps: One in the local tax well, and one in the State tax well, and the combined yield of the two wells amounts to only 25 percent of the tax dollars of this Nation. You must secure 96 cents out of every dollar to operate your schools from 25 percent of the tax revenue of our country. I submit that this is unrealistic, and despite the fact that various political angles are involved, a solution to the problem should be found. The Federal Government has preempted many of the tax sources of the Nation, leaving little for the States to tax.

The local tax well and the State tax well have both just about run dry, not from overpumping by local and State agencies, but by transfer of the revenue to the Federal well. Instead of Federal aid to education, it would be better for the Federal Government to release some of the revenue back to the local and State level, where the local and State tax pumps could obtain the needed revenue for public education.

I cannot refrain from saying at this point that this solution to this overall problem must be discovered and implemented in keeping with the finest traditions of America. These traditions include local control of public schools. I am unalterably opposed to any Federal aid scheme which, through a required State plan or any other subtle way, attempts to control directly or directly the policies, curriculum, operating procedures, employment practices, or any other phase of the operation of the public schools of our State and Nation. Because we have no sound national policy dealing with education, we have a sort of crazy quilt Federal arrangement, so far as Federal participation is concerned. It is unfortunate, I think, that there are no signs pointing to an improvement in the present situation. Our present programs have been evolved piecemeal as a result of pressures from groups and individuals. I am not saying that these programs are bad, but the fact is that the Federal Government has not faced up to the problem of establishing a sound policy, either by the legislative branch, or the executive branch, in the field of public education. As a matter of fact, instead of principle, governing Federal policy action has preceded and tended to set policy. Many arms of the Federal Government are now dealing directly with educational matters. This may or may not be good in each instance, but, nevertheless, it definitely proves that we have no national policy worthy of the name.

The U.S. Supreme Court has seen fit to invade the legislative field by assuming authority which our Founding Fathers never dreamed it would have. Action by what it considers political expediency, even by the Supreme Court, cannot be justified.

Other less-serious examples of Federal invasion of States rights in the field of education could be listed. Categorical legislation supplemented by legal interpretations of Federal counsel, curriculum making by special legislation, and the gradual support of special aspects of education have all resulted in a degree of Federal control in specialized areas. We are not debating the desirability of any of these programs, but these examples are given to support my statement that a national policy in the field of education is sadly lacking.

Among the fundamental questions involved in Federal support for education are: (1) Shall the States control the policies, curriculum, and all operating phases of their own schools, in keeping with the Constitution adopted by our Founding Fathers? and (2) Should Federal assistance be general, broad, Federal support for all phases of education, instead of categorical aid which is the present pattern of Federal support of education?

My position with reference to the first fundamental question is well known. I shall not retreat from this position. If we must submit to the Federal Government in order to secure general Federal support, I would be the first to say that Congress should not pass such legislation. I am opposed to controls, however subtle and innocent they may appear. Some existing controls are not so subtle in nature.

Several programs which have received and are receiving Federal support, which are categorical in nature, are excellent. The school lunch program, which is essentially a welfare service, is a good example. The rehabilitation program for the disabled, which began as an educational program, but is largely now in the category of health and welfare services, is another example. Vocational education has done much for our Nation and our State. All of these programs, as well as the new National Defense Education Act, are categorical in nature. It is interesting to note, I believe, that these programs all have Federal controls, some of which are minor, but they, nevertheless, exist. For example, State plans must be submitted by the States and must receive Federal approval. The requirements of these State plans are contained in outline which are written by Federal authorities as a result of interpretations written by Federal lawyers. It is hardly necessary to pursue further a description of categorical aid and how it works in the States.

The States, due to limited tax sources and the heavy cost of education, have and probably will continue to accept categorical aid. A hungry man would be most likely to accept two pieces of bread, even though he would very much desire to have a full meal. Inadequate financial support is the fundamental reason States and local communities accept Federal assistance, regardless of how meager such funds are in comparison to the total cost of education. But this does not mean that a firm, sound, and sensible Federal policy should not be established. It is my considered judgment that the lack of such a policy is the fundamental reason for much of the misunderstanding in the field of education, as regards Federal-State relationships in fiscal affairs.

In light of all facts involved is broad purpose, general Federal aid to education at the elementary and secondary level desirable?

I do not believe this question can be answered at the moment by simply a yes or no.

If the Federal Government, through the ledership of either the executive or legislative branch, could present to the Congress, a comprehensive proposal which would establish a broad, sensible Federal policy in the field of public education, many arguments

in the affirmative are readily available. The development of such a Federal policy would be a difficult and tedious task, but the importance of education makes it highly desirable that sound leadership in this area be exercised.

In the event a sound Federal policy with reference to education is not developed, it is my considered judgment that the extension of Federal aid would be dangerous. The control of the minds and hearts of the young people of this Nation by the Federal Government, through the control of the curriculum of the schools, would eventually result in the people's losing most of their rights which we all cherish.

It is significant, I think, that all dictators project youth orgainzations having as their purpose indoctrination to the point that submission by future generations to dictatorship will be assured. I do not mean to imply that this would necessarily be true with the extension of Federal aid to education, but I am most emphatic in my belief and conviction that the people should take no chances on interpretations of acts of Congress by Federal lawyers who have as a primary purpose the extension of the powers of the Federal Government. It is almost trite to add that those who are always promoting the authority and power of the Federal Government at the expense of the States have little or no regard for the rights of the States.

The school boards of this State have not only the right, but also the duty to defend the rights of the people to manage their own school affairs. I pointed out yesterday to the general assembly that no school district in Arkansas has been forced to integrate its public schools over the objections of the local authorities.

School boards as a whole have done an excellent job in administering affairs of their districts. You are to be commended for the job you are doing, and you may be assured of the continued support of education by my administration.

I am sure that all of you have noted from the press the reports of the increase of revenue. If the trend continues, as it has up to the present time, we will probably have on hand some surplus funds by the end of the next fiscal year.

An appropriation was made at the last regular session of the legislature which was more or less a faint hope at the time, with not much expectation of its becoming a reality, of $600,000 for construction at the State hospital, and $400,000 for continued construction of facilities at the Children's Colony at Conway. Already we have been able to determine that these funds will be available, and both the State hospital and the Children's Colony have been given the go-ahead for the construction projects which were authorized.

This means that beginning with the fiscal year of 1961-62, we will be collecting funds over and above our present allocation of $93 million. I feel that most of this increase will be justifiably allocated to public education—perhaps as much as 60 percent to the public schools, or anywhere from 60 to 75 percent for the public schools and higher education. This means that as a result of the program enacted by the 1957 session of the general assembly, public schools will continue to benefit, and that further increases in the salaries of public-school teachers can be anticipated from this revenue.

Now, there is something that I don't want to see happen between the public schools and other State agencies. I remember once, when teaching school in a rural community in the midst of the depression, that a pie supper was announced, to be held at the schoolhouse. The proceeds were to be used to buy curtains for the little one-room school, in order that school plays and social programs might be held, and to buy candy, oranges, etc., for the children of the district at Christmas time. In a rural community such as that in those times, no one was left out from the Christmas tree program. A check was made of all the children in the community, and the people who sponsored the program saw to it that each and every child had a package under the Christmas tree. Sometimes this package of candy, oranges, and nuts was the only thing some of the children of the poor families received at Christmas.

As the rural schoolteacher, I served as clerk at the pie supper. I wrote down the name of the purchaser, the price, and the sale price of the pie. Before the pie supper began, the question came up as to what would be done if the pie supper did not bring in enough funds to purchase both the curtains for the school and the candy for the Christmas program. They got into a big argument about the matter. Some people got angry and left. Some of the women took their pies and went home, and one lady made us give her the money for which her pie had been sold. The dispute created bitterness that lasted for weeks, perhaps months.

When the program was all over, there were sufficient funds for both purposes. The dispute was entirely unnecessary, and need never have occurred.

Now, I don't want the public schools to get into a dispute with other State agencies over the division of these funds until the time the funds become available. There is no need for a fight over something which we may not yet have. By the time the next legislature meets in regular session, there may be enough funds to divide equitably between the public schools, the colleges, and other State agencies, and have enough to benefit all. That will be much better than fighting over the funds before they ever become available, or before the division is made.

In conclusion, I sometimes think of the great differences in our public schools of today and even a short 25 or 30 years ago. As a boy, I attended a one-room school. It was so large that it had to have three windows on each side. The only equipment other than the seats was a pot-bellied stove in the center, which we boys fed with wood, a water bucket and dipper, which all of us used, a rather poor-quality blackboard with chalk and erasers. The only thing in that room to be used in training boys and girls was the teacher's hickory switch, which he kept over the blackboard. At that time, there was not even a well nearby to supply the water. We carried it a distance of almost half a mile to the school from the spring. High school training was unavailable to the great majority of boys and girls then, just as it was unavailable to me.

Now we have modern buildings with central heating. I have often thought of how wonderful it is to come into a building and be just as comfortable in the far corner as you would in the center, where it appeared the stove ought to be, or at one end of the building where there might be a fireplace. Instead of walking through the cold in the winter, or the summer heat, along rough roads, crossing swollen streams on foot logs, children are now transported in buses on vastly improved country roads, or hard-surfaced highways. High school training is available to all boys and girls anywhere in the State of Arkansas. Almost all schools have ample facilities for a modern athletic program. In those old days, there were no athletic facilities at all.

With all of this great improvement, I still sometimes wonder—Will the time come when we look back on the days of the one-room school as the best era in American education? In those days the academic facilities may not have been so adequate and expansive as today. Athletic programs were limited, or nil. Yet, there was something we learned from those one-room schools which does not appear to be quite so well promulgated today. That was a basic integrity, honesty, fair dealing, civic-minded attitude. Most of the boys and girls from those one-room schools became good citizens, although they may not have been the best educated.

There is a great increase in juvenile delinquency and crime in this modern age. Are our more modern schools failing in this purpose of moral training in which the old one-room school system did such a magnificent job? Remember that a boy or girl with a bad attitude who acquires a good education merely becomes a more clever shyster or crook. I say that it is not enough to make our students masters of English, good mathematicians, scientists, engineers, or public speakers. There must also be inculcated into them a genuine understanding of the basic principles of democracy, and a Christian attitude, which will make them good citizens, or else we fail in our purpose of education.

Unless we do this, it won't make any difference how much money is made available. It won't make any difference how fine the buildings, how luxurious the facilities, how high the teachers' salaries, how high the degree of academic skill. Our civilization will fail, and if this occurs, we will, of course, look back upon the time of the one-room school as the golden era of American education.

This need not be so, and I hope it is not so. But we must assume our responsibilities in this respect, because fine buildings and high salaries are not all it takes to provide for good education and good citizenship, which are necessary to preserve our great American way of life.

High Cost of Motor Accidents

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. ROBERTS. Mr. Speaker, Dr. Theodore R. van Dellen's column, "How To Keep Well," recently dealt with the terrible toll of highway traffic accidents.

Under leave to extend my remarks, I wish to include this column:

HOW TO KEEP WELL

(By Dr. Theodore R. van Dellen)

THE HIGH COST OF MOTOR ACCIDENTS

The familiar picture of the soldier boy saying goodby to his teary eyed parents should be applied to those who climb into a car every day and wave as they leave for work, the grocery, a Saturday night date, a Sunday drive, or a weekend trip. These individuals stand a greater chance of getting hurt than does the soldier.

Motor vehicles have been booby trapping us for years. The number of people injured on the highways in a single year is greater than the sum of the nonfatally American wounded in the eight principal wars during the 184 years of U.S. history.

Furthermore, the slaughter is not lessening. Automobiles killed more people during the first 6 months of 1959 than they did during the same period in 1958. The death rate, as measured per 100 million miles of travel, may have fallen if we consider the greater number of cars on the road and the increase in drivers. But statistics are of no consolation to the widows, orphans, and parents of the victims.

Each year approximately 4½ million persons are being injured in vehicle accidents. Fatalities usually make the headlines but I

have yet to read a newspaper that carried a week-by-week account of what happened to the injured.

Many are disabled for life despite the best medical care. They spend months or years in hospitals. Others are plagued with complications thereafter. A head injury, for example, may be followed by headache, dizzy spells, or unusual disturbances. Ugly scars may affect the personality. Paralysis, loss of limbs, or blindness means permanent disability.

These injuries are getting to be more costly insurancewise and in every other way. The insurance companies pay enormous bills but who actually pays them? These firms are not philanthropic or benevolent organizations with unlimited funds; their income stems from premiums. Who pays the premiums? You and I—and the more accidents, the higher the premium.

The Buffalo Post Office Project

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. DULSKI. Mr. Speaker, I want to call to the attention of the House the high-handed procedure that a member of the President's Cabinet is following in attempting to railroad through this Congress his request for funds in the 1961 budget. I refer to the Post Office Department's request for $80 million for post office modernization in fiscal 1961.

Here is a little background: About 3 years ago the Post Office Department decided to proceed promptly with plans for a new working post office at Buffalo, N.Y. There were two false starts, but finally the Department acquired an acceptable site near Central Terminal.

The next step is to obtain architectural and engineering plans. Despite repeated inquiries, the Department gives little satisfaction as to the schedule for this Buffalo project.

Now, we are learning why the Department has been so indefinite. Indeed, Buffalo stands to suffer a great disappointment in a few days—the revelation that there will be no funds in the 1961 budget for equipping the proposed Buffalo post office. And if there is no money to equip it, it is logical to expect that the construction schedule will be delayed accordingly.

Two weeks ago, I publicly stated that the Postmaster General was playing politics with the Buffalo Post Office project. Now the proof is out.

In submitting his budget to the House Appropriations Committee, the Postmaster General has juggled the positions of projects in each section of the country in the hope of insuring that not one penny will be cut from his request for equipment and modernization funds.

Whereas recently Buffalo was ranked fifth in priority, now the Postmaster has placed Buffalo second from the bottom of the list—17th among 19 projects.

By juggling the positions and knowing that one of the Congressmen from our area is a member of the powerful Subcommittee on Post Office Appropriations, the Postmaster General has placed Buffalo in the lowest priority category to accomplish his deal. This maneuvering on his part has led me to the opinion that Mr. Summerfield is blackmailing the committee.

No one has done more than Congressman PILLION in getting the ball rolling for the eventual construction of a new post office in our city. Since coming to Washington, I have cooperated and done everything possible to be of assistance. It is my true feeling that this should be a nonpartisan project for it will benefit all the people in Buffalo and the surrounding area.

One of our principal postal facilities in Buffalo is being rented at a high rental cost. The landlord will not renovate or repair the building. If the health inspectors made a thorough inspection, they would find it should be condemned. The amount spent here for rent could be saved and used for new equipment.

In a letter to me, dated as late as December 21, 1959, the Deputy Assistant Postmaster General, Mr. Rollin D. Barnard, wrote as follows:

> We appreciate your expressions concerning the need for improved facilities in that city [Buffalo]. The Department has been aware of this need for some time.

In several letters to the Postmaster General, I pointed out to him the dilapidated condition of the present facilities and the outmoded and antiquated equipment. I repeat that if Benjamin Franklin could return and take a walk through our post office, he would see some of his very own inventions.

Congressman PILLION, who is highly regarded among his colleagues on the Appropriations Committee, has been outspoken in his efforts to obtain economy in government, and I am sure the Postmaster General is well aware of this fact. With this in mind, the Postmaster General is playing the game of cat and mouse, and is saying, in effect, if you want to see a post office constructed in Buffalo, then do not cut any of our appropriation request for post office equipment and modernization.

I wish to state now that if funds are not included in the Department's appropriation bill for our post office, as appears inevitable, I will ask the cooperation of the committee for an amendment to the bill which would earmark at least $3 million for equipping the new post office in Buffalo.

Honesty Still Best Policy

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of February 4, 1960:

HONESTY STILL BEST POLICY

A letter published by the Oklahoma City Better Business Bureau has something to say about the public indignation that followed the revelations of rigged television quiz shows—with accompanying demands for more investiagtions of advertising, more crackdowns and, more Government regulation.

"The whole shameful mess is a dramatic illustration of the inevitable result when business fails to regulate itself," says the letter. The point is that if business fails to police itself, somebody else, probably Government, will do the policing.

The bureau's publication adds that the situation amounts to "a challenge to every field of business to clean house * * * to the retailer who uses ficticious comparative prices—to the stock salesman who misrepresents, either by what he says or by the information he withholds—to the automobile dealer who lies about the condition of the used cars he is selling—to the TV serviceman who charges for unnecessary parts and service—to the * * *. We could run the whole gamut of business. Every business and professional field needs continuous self-scrutiny, so that bad practices can be eliminated before they cause public scandal."

If free, private enterprise is to live, it must have ethics that meet the public concept of what is right, decent, and honest. If it fails to establish and maintain such ethics, it will be asking for punitive treatment.

We Have Civil Rights Laws

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. EVERETT. Mr. Speaker, there appeared in the Nashville Banner, a great southern newspaper, an editorial relative to our distinguished colleague, Representative J. CARLTON LOSER. Representative LOSER is an outstanding lawyer and is held in high esteem by everyone who knows him. The outstanding ability he possesses will be a great asset to the Committee on the Judiciary in this body.

This editorial is very timely and I commend it to those who are interested in this matter. The editorial follows:

[From the Nashville Banner, Feb. 5, 1960]

WE HAVE CIVIL RIGHTS LAWS

U.S. Representative J. CARLTON LOSER is on firm ground when he objects to the so-called civil rights proposals and the measure which would establish Federal voting registrars, basing his reasoning on the fact that these fields are amply covered by the U.S. Constitution.

For instance, that document states it is unlawful to hold a person in involuntary servitude; rights of citizenship cannot be abridged and voting privileges cannot be denied any person regardless of race or color.

These civil rights are embodied in articles 13, 14, and 15 and, as Mr. LOSER points out, they adequately cover the situation, there being no reason—other than for vote-getting purposes—to attempt to further shore up the Constitution.

It also is questionable if Congress has the right to give the Federal Government more power in these fields by merely passing laws.

It has been suggested that if the field is expanded it would take a constitutional amendment, a somewhat more difficult process since it requires passage by a two-thirds majority of both Houses and subsequent ratification by three-fourths of the States.

If, as charged, some States have been abridging the civil rights of certain citiezns, the Federal Government has been remiss in not seeking relief for them. The Attorney General of the United States has enough basic law to act if action is called for.

Mr. LOSER, a former district attorney general of Davidson County, has reiterated a cogent point.

The Customs Service

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an editorial appearing in the Journal of Commerce on December 3, 1959, calling attention to our Customs Service.

The Customs Service is one that plays an important part in the economy of our country. It is the agency that collects the import duties on foreign articles that enter our commerce, and the efficiency and competence of this Service is of prime importance to the importing and shipping industries.

Customs has been doing a highly creditable job all over the country, and a greatly increased workload has been handled under adverse conditions. However, there is undoubtedly room for improvement and the article entitled "Streamlining Customs" that appeared in the Journal of Commerce and Commercial on December 3, 1959, is well worth reviewing.

The Journal of Commerce and Commercial is an authoritive trade newspaper that reflects the thinking of those in the importing, exporting, shipping, and related industries. The suggestion in this editorial that an impartial management group survey the idea of decentralizing Customs appears to have considerable merit. It is said that substantial savings can be realized by this streamlining, and if appropriation dollars can be saved in this manner, the possibility should be explored to its fullest extent.

The article follows:

STREAMLINING CUSTOMS

Customs in this country is big business. Just because it has no profit incentive does not mean that it can be run without proper respect for sound business principles. Its operations must be conducted with greatest possible efficiency and at the lowest possible cost.

We wonder whether this is true in the current way the affairs of the Customs Bureau are being run or whether the Bureau is missing some obvious and valuable chances of reducing the costs of its operations and, at the same time, improve its services to boot. There is now a wide duplication of jobs which could be eliminated.

At least one of the high officials of the organization believes that the Bureau of Customs could do a whole lot better—increase its efficiency, serve the public better, and greatly reduce the cost of its operation.

He is Robert W. Dill, the collector of the port of New York, who believes that all these desirable results can be attained by moving the Bureau of Customs from Washington to New York and combining it with the collector's office in New York into one central agency.

Ever since Mr. Dill came up with his proposal to shift the Bureau of Customs to New York, he has been getting the cold shoulder from most of his colleagues in Washington.

That is understandable. Why embark on new experiments when everything runs smoothly? Why exchange the pleasant Washington atmosphere with life in boisterous New York?

New York collects roughly 40 percent of the customs revenue, has roughly 40 percent of the customs employees, has nearly all overseas passenger traffic by sea and the greatest number of overseas passengers by air. Thus, New York would seem to be the logical place where the Bureau of Customs should be located.

There are other reasons for this as well: The majority of leading importers and exporters are located, or at least fully represented, in New York. The headquarters of the principal steamship lines and airlines are located here. The trade associations which have regular dealings with customs operate from New York. The Customs Court and the Customs Bar Association are in New York, not Washington.

Yet customs and Washington have gotten so used to each other, that it would take more than logic to blast them asunder. Washington may let customs go, but will customs give up Washington?

They nearly parted company during the war when Washington became too crowded with Government offices and bureaus; and construction could not keep up with the demand for space.

Had the separation gone through then, chances are that Customs never would have returned to the Nation's Capital. Now it will take a miracle or a major blast to accomplish such a divorce. At any rate, it will take a hard and tough uphill battle to make New York acceptable to the Bureau's top hierarchy.

This means that, for the foreseeable future, Customs will keep on operating as it always has: slow, cumbersome, in pretty much of a what's-the-hurry philosophy. Actually, under the present system Washington has New York do a lot of the work that should be done at the policy level. Washington frequently queries New York for advice. And New York, on the other hand, has to settle many of its local problems with a detour via Washington. When problems arise in other ports, they go to Washington first and from there to New York. Decisions that should take a few days at worst, drag out for weeks and often months. New York's position in this respect, by the way, is so unique that other ports could hardly object to such a move as regional dominance.

The present split agency setup also costs a good deal of time and money in travel from New York to Washington and vice versa. These expenses are a big item in the Bureau's budget. They also increase the costs of doing business with the Government—unnecessarily.

Those opposed to a removal of the Bureau of Customs to New York feel that this would complicate the liaison with other Washington bureaus and would be unfair to Members of Congress who jealously guard their ready access to the Bureau.

Actually, such contact work could be maintained by a small group of high-ranking Customs officials to be left behind in Washington in case of a move to New York and such a setup probably would function better than the present one.

It would take the suspicion of undue influence, improper use of lobbying, logrolling or what have you out of the Customs setup. Thus this argument, if brought up at all, would favor the move rather than weigh against it.

At the very least, the idea merits an independent survey—preferably by a management group having no identification with either side.

Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. FASCELL. Mr. Speaker, as we all know, this is Boy Scout Week. It also marks the 50th anniversary of the Boy Scouts of America. It is therefore fitting that we Americans join in paying tribute to Boy Scouts everywhere, and to the men and women who have so selflessly dedicated themselves toward the advancement and betterment of America's youth by serving as scoutmasters, den mothers, unit leaders, and committee members.

The Boy Scout organization has come a long way since its inception 50 years ago when it was incorporated February 8, 1910, under the laws of the District of Columbia. To mark the immediate recognition of the importance of this bold concept, that same year President Taft accepted the office of honorary president, and Theodore Roosevelt honorary vice president. During the following year the membership grew to 61,495 Scouts and Scouters.

The Scouts can well look back in pride on its work in behalf of our country during times of stress. In 1917 the Scouts rendered nationwide first aid service in the influenza epidemic. Exceptional service was rendered by the Boy Scouts in 1927 in the Mississippi and Vermont flood disasters and the St. Louis tornado. In 1934, during the worst depression the world has ever known, in response to the request of President Roosevelt in a radio address, Boy Scouts performed a national good turn, collecting clothing, household furnishings, foodstuffs, and supplies for the distressed and needy.

In 1941 the Government requested Boy Scout service in such ways as distribution of defense bonds and stamp posters; collection of aluminum, wastepaper collection, defense housing surveys; victory gardens; distribution of air-raid posters; cooperation with the Red Cross; and by joint agreement with the Office of Civilian Defense, Scouts served as messengers, assisted emergency medical units, and acted as fire watchers.

The following year the Scouts continued in their war service. At the request of the Government, the Boy Scouts collected 30 million pounds of rubber salvage in a 2-week whirlwind drive. The Scouts' service continued throughout the remainder of the war.

Since that time the Boy Scouts' usual cooperation with public authorities in flood, earthquake, hurricane, and other disaster relief has been widely reported and acclaimed.

Among other noteworthy Boy Scout efforts was their get-out-the-vote campaign in 1952. That year the Scouts distributed more than 1 million posters and 30 million Liberty Bell doorknob posters. It is interesting to observe that there was a recordbreaking 60 million turnout of votes that November.

As evidence of the widespread acceptance of the Boy Scout organization as an integral part of our community is the fact that over 70,000 of America's greatest institutions actively support it. Churches, civic, and veterans groups, management and labor, and educational and fraternal organizations contribute to the spiritual and cultural growth of the organization.

Equally attesting to the influence and the high esteem in which the Boy Scouts are held is their tremendous growth during the past half century. In 1920 for instance, only 10 years after its conception, the Boy Scouts already had a membership of 478,528. By 1958 there was a total of 4,950,885 active adult leaders and Boy Scout members.

The goals and achievements of the Boy Scouts are unquestionably of invaluable worth to the future welfare of America. Of utmost importance to all of us is the Boy Scouts' goal aimed at furthering international friendships. Certainly, international cooperation is uppermost in all our minds in our relations with other countries. It is therefore gratifying to know that these youngsters, at ages from eight through their teens, are actively working toward this goal.

The Boy Scouts' overall basic principles, their motto "For God and My Country," are indeed commendable. May their ranks continue to grow and may they continue in their succesful development of America's future leaders.

Interest Rate Ceiling on Long-Term Bonds Should Not Be Raised; the 4¼-Percent Rate, Which Has Prevailed for 42 Years, Should Not Be Increased

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. PATMAN. Mr. Speaker, I am inserting herewith a copy of a letter that was written to the chairman of the Committee on Ways and Means, the Honorable WILBUR D. MILLS, by Mr. Arthur Temple, a prominent lumberman in Texas, which contains good arguments why the 4¼-percent rate should be retained.

It is as follows:

DEAR MR. MILLS: I have a copy of a letter from Cotton Northup to you urging the removal of the ceiling on interest rates on Treasury obligations of more than 5 years' maturity. I take issue with his recommendation and question the logic involved.

The housing market, in my opinion, will be adversely affected by removing the ceiling on this competitor for long-term investment funds. If the magic 5's attracted funds normally invested in long-term mortgages and bonds, it seems reasonable to assume that an even greater shift from the mortgage market to long-term Governments would take place since both investments draw their support from the same sources.

In addition, I am not convinced that an increase in bond rate will do more than start another round of bidding for available funds. Most people seem to overlook the fact that interest rates cannot increase the total quantity of money available for investment and that a temporary adjustment by one of the markets can only attract additional money at the expense of another segment of the economy. Each breakthrough invariably sets off another round of rate increases as inadequate funds flow from one investment to another.

I am concerned about the effect of present high interest rates on the growth of our economy at this time. I am also worried about the tremendous increase in the cost of servicing our public debt at every level.

Yours truly,

ARTHUR TEMPLE.

From Whence the Tools?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Camden Chronicle, Camden, S.C., of February 3, 1960:

FROM WHENCE THE TOOLS?

National Review recently dealt editorially with a proposed revision of the Federal tax laws which, among many things, would eliminate the capital gains provision and treat profit from the sale of securities or other holdings as ordinary income for tax purposes.

The magazine said: "The worst feature of the proposed change would be its almost certain impact on the capital market. With the possibility of capital gains eliminated, why would any man bother to risk his money on a growth opportunity? And who could hope to stay even in an inflationary period?

"In Britain there is no capital gains tax. In Germany, corporations are allowed tax exemption on profits that are plowed back into investment. Result: a constant expansion of taxable incomes. But in America, we apparently elect Congressmen to spend their time figuring ways to knock the investor out. Will it ever occur to Congress that the best way to increase the U.S. tax take would be to encourage investment profitable tax-paying businesses whose expansion would put more and more potential taxpayers to work?"

It costs around $15,000, on the average, to provide the tools needed to create just one job in American industry. The work force increases by millions every year. Where will jobs come from if investors are driven away by tax laws which say, in effect, "You will absorb all losses, while we will take the lion's share of any profits?"

An Iowa Post Office Employee Speaks Out

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks, I include a letter which appeared in the Burlington (Iowa) Hawk-Eye Gazette of January 28. This letter, written by D. L. Hand, vice president of the Burlington branch of the National Postal Transport Association, refers to the continued and increasing use of airplanes to transport first-class mail on which airmail postage has not been affixed. Mr. Hand points out several basic fallacies in the Department's plan to increase the airlift of first-class mail, a program which has already resulted in the movement of 94 million ton-miles of first-class mail by air since the airlift began in 1953 on an experimental basis.

Mr. Speaker, I have introduced a bill, H.R. 9488, which would require that the Post Office Department cease the airlifting of first-class mail. Use of airmail facilities should be restricted to those letters and parcels for which postage has been paid at airmail rates. The continuing use of airplanes to transport first-class mail is unfair to those who pay the premium for airmail. It is unfair to the railroads who have provided and equipped railroad cars for the use of the Post Office Department. It is unfair to the taxpayers who will, until such time as there is no postal deficit, pay the extra costs involved in transporting mail by air.

The letter referred to follows:

All up. All up. These words have, at one time or another, had a very disturbing effect on members of our Armed Forces. These words now have been borrowed by the Post Office Department and will, if present plans materialize, have the same disturbing effect on our civilian population.

The Post Office Department has decreed all up for all mail by July 1, 1960. Your mail will be transported by plane to 62 key points in the country where it will be worked and then sent out by trucks to its destination. There will be no en route distribution.

CHANGE OF PATTERN

This will mean a switch from the use of privately financed facilities for the transportation to the use of publicly financed facilities, airfields and highways, a fact that will increase your already staggering tax-load.

An all-up plan for the transportation of the mails can only lead to the construction of more airfields and the expansion of present fields in order to handle the increased number of flights necessary in carrying out this operation. These new and expanded fields would be financed with tax dollars.

From the key points in the Nation trucks will branch out in all directions over the Nation's highways. The Post Office Department plan to flood our already overcrowded and dangerous highways with more trucks can hardly be called consistent with sound safety and economic practices.

AIRFIELDS CLOSED

These factors together with the fact that the Department is, by its own admission

(assuming this plan will work)—if the planned methods of transportation are available—comes at a time when the Nation's airfields in 40 of the 50 States have been closed to all traffic for a week.

It would not be economically feasible for the railroads to have standby equipment and personnel ready to take over when air transportation failed. The result, in the case of weather such as we had the week of January 10 through 16 would be delayed service to the postal patron.

By the Department's own figures an overwhelming percentage of the Nation's mail travels only short distances from starting point to destination. This would mean that a large percentage of the users of the mail service will be paying for air service even though their mail cannot possibly enjoy that service. We should be allowed to retain the right to choose the type of service we individually wish to pay for.

THREE-HUNDRED-THOUSAND-DOLLAR LOSS

To Burlington this plan will mean the loss of nearly $300,000 annually in wages of displaced postal personnel alone and the loss in wages to Burlington in wages of mail handlers at depots and railroad employees will swell this figure even more.

We here in Burlington would not be consistent in our policies of spending money for industrial sites and paying salaries of men to do research and advertising to attract industry to our city, for the avowed purpose of giving wage earning jobs to our citizens, and then sit idly by and watch several hundred thousands of dollars in wages, leave our city.

Inflationary Threat of Federal School Aid

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. DAGUE. Mr. Speaker, as our Republican colleagues fan out over the Nation during the next few days to expound the philosophy of Abraham Lincoln, I hope they will give some attention to the warning against inflationary spending as sounded by our favorite columnist, Mr. David Lawrence, in the Washington Evening Star for February 8.

Touching on the subject of Federal aid to education, which I covered in a recent extension of remarks, Mr. Lawrence has this to say:

The vote in the Senate last week to provide nearly $2 billion in the next 2 years for school aid could start the Federal Government on an unprecedented course of subsidizing teachers' salaries. What has hitherto been a local obligation could become a Federal liability every year. It starts with a few hundred millions for teachers' salaries, but, once a formula of this kind is imbedded in Federal budgets, it means increasing sums every year thereafter.

Neither Mr. Lawrence nor I are speaking in opposition to an expanded educational program. We believe that the United States provides and should continue to provide the best educational facilities in the world. But we believe that these services should be provided by direct taxation at the local and State levels. We do not believe, however, that we should go through the phoney maneuver of taxing the people for Federal aid, or what is worse add the cost to the national debt, and then eventually collect taxes locally to pay the bill, resulting in a substantial discount in the amount of money actually returned in grants in aid. Addressing himself indirectly to that proposition Mr. Lawrence says this:

The States are not bankrupt. If they fail to appropriate enough, it is the local citizenry who should be making a fight for better schooling. The moment the Federal Government steps into anything it becomes a custom that is never repealed.

And to that I might add that there is nothing so permanent as a temporary Federal aid program or the taxes to finance it, as witness the durability of the so-called wartime excise levies.

Quoting Maurice H. Stans, Director of the Budget, Mr. Lawrence goes on to point out:

I see already built-in increases pushing expenditures up and up year after year. I see pressures continuing to mount for the Federal Government to spend more and more, to take over local governments' problems and to meet demands from pressure groups for more handouts on many fronts. If we yield to these temptations, we can soon have $90 billion or $100 billion budgets, higher taxes or more deficits, debasement of our money, and weakening of our economy.

And in final summation Mr. Lawrence made this challenging observation:

Maybe some day an informed electorate will constitute itself as the biggest pressure group of all and vote for representatives who favor a sound economy.

Mexico Is U.S.S.R. Spy Window

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. SCHERER. Mr. Speaker, Mr. Harry Taylor is one of Scripps-Howard's topflight staff writers. His fine journalistic abilities have won him the Lee-Evans Round Table Award three times and the 1956 award of the American Political Science Association for outstanding coverage of State and local politics. Just last month he was chosen for the Ernie Pyle Award. He is completing an extensive trip through the Caribbean, Central and South America, and at present is in Mexico.

A recent column of Mr. Taylor's entitled, "Mexico Is U.S.S.R. Spy Window," is quite revealing in the light of current Communist espionage activities and should be read by every Member of Congress. Last year the House Committee on Un-American Activities in its report entitled, "Soviet Espionage," stated, among other things, that Soviet embassies and consuls were used as spy nests for the Communist apparatus. Mr. Taylor's findings in Mexico City further document this report. His well-written report follows:

MEXICO IS U.S.S.R. SPY WINDOW
(By Harry Taylor)

MEXICO CITY.—From its Embassy here, Russia is mounting a massive offensive against the United States.

Mingling among the tourists, dozens of Soviet-enlisted agents are shuttling regularly between this city and U.S. defense centers in on-the-job training as the first stage of a spy career.

Men whose profession is to combat communism here, Mexicans and officials of other nationalities, agree that one of Moscow's most potent secret weapons is the modest mansion which houses the Soviet Embassy with its 125 employees whose actions are above Mexican law, diplomatically immune.

Here is how the Soviet espionage network operates:

Through Mexican and other Latin-American leftist groups, Soviet diplomats learn of a man who may be prone to accepting money in exchange for a few simple chores on behalf of Moscow.

He may be a Mexican migratory worker who has access to U.S. travel during the annual fruitpicking season. Sometimes he is actually an American, brooding here over some grievance at Uncle Sam, a man perhaps subject to blackmail or bribe.

Discreetly making contact, the Russian will ask a prospective spy to take a trip to an approachable U.S. point and bring back a description of something easily viewed—such as U.S. Navy ships at San Diego.

The object isn't to gain new information. It's to test—and train—the apprentice. But the recruit is thanked profusely for his important information, paid well (a beginner's fee is around $75 plus expenses), and assigned another routine chore.

These early assignments are seldom complicated or dangerous.

But gradually the tempo of assignments is stepped up. Spies, once they have proved themselves, are asked to make a special target of U.S. airbases, particularly SAC fields.

The key moment comes when a recruit is asked to contact a friend and bring him into the apparatus, too. When an agent has become a recruiter as well as a reporter, submitted reports in writing and accepted cash for them, he's regarded as hooked by Moscow.

The Russian Embassy is the second largest in the capital. Only the United States has more personnel. All 125 Russian diplomats here speak Spanish. The only non-Russians employed at the Embassy are 10 Spanish refugee Communists. Not a single Mexican is permitted so much as to polish the doorknob.

From here the agents go not only to the United States, but also to Cuba and other Latin targets. Sometimes they are detected and there was one instance when a couple of Soviet attachés were expelled.

Stop Pollution of San Francisco Bay

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. COHELAN. Mr. Speaker, my seven California colleagues in the House of Representatives who also represent districts around San Francisco Bay, together with Senators THOMAS KUCHEL and CLAIR ENGLE, have joined with me

in support of legislation to end pollution of the bay by the discharge of raw sewage from Treasure Island Naval Station.

While communities and industries of the San Francisco Bay area have spent nearly $150 million during the past 10 years for water pollution control facilities, the Navy's Treasure Island base continues to contaminate the bay in violation of restrictions set by the Regional Water Pollution Control Board.

In a recent public statement we said:

The Regional Control Board reports that a recent engineering survey indicated that sewage outfall from Treasure Island is directly responsible for befouled bay waters and strong, nauseating sewage odors.

It is clear that the Federal Government will not be doing more than its share by spending $701,000 for these facilities.

The Treasure Island sewage treatment plant necessary to end this distressing situation has now been authorized. It is our hope that appropriations will also be voted this year, with the support of the Department of the Navy.

Under permission to extend my remarks in the RECORD, I wish to submit the following editorial from the San Francisco Chronicle of February 1, 1960, which indicates to what extent this problem is in the public eye in the San Francisco area.

The editorial also points out that a second source of serious bay pollution is the Army's Benicia Arsenal at the city of Benicia located on Carquinez Straits at the northern end of San Francisco Bay. This problem which would cost only $320,000 to solve is a matter of equal concern. Here again the Federal Government is in violation of local restrictions and has a clear responsibility to provide adequate sewage treatment facilities.

STOP BAY POLLUTION BY ARMY AND NAVY

The Army and the Navy, which expend considerable money and energy in the promotion of good public relations, are plainly slipping backward hereabouts through their continuing and substantial contributions to the pollution of San Francisco Bay waters.

The Navy continues to pour 850,000 gallons of raw sewage into the bay every 24 hours from its Treasure Island installations, and the Army pours another 400,000 gallons a day into Carquinez Strait from its arsenal at Benicia.

Thus they violate the California State water pollution law. Thus they flout long-standing orders that Federal agencies comply with such laws. Thus they stultify a Federal antipollution program on which the Government has spent $163 million in the last 4 years—$2.6 million of it in the nine bay counties.

The Benicia case is worth examination. Responsible officers at the arsenal have employed commendable energy toward abating the nuisance. Three times they have asked Washington for the $320,000 that would do the job, and three times the proceeds have been nil.

This sum would connect the arsenal sewage system with pipes that the city of Benicia has carried up the property line for the express purpose of providing the services of its new sewage reduction plant. This plant, built to capacity far beyond the city's needs in order to meet the arsenal's needs, cost $1,148,000. Of this, $250,000 was a Federal grant for the specific purpose of reducing pollution of the very waters into which the arsenal's sewers discharge.

Senators KUCHEL and ENGLE and eight bay area Congressmen have set out to end this offensive and ridiculous situation. They have announced that they will ask an appropriation of $701,000 in the 1961 Federal budget to construct a sewage-treatment plant on Treasure Island. By all means they should ask another $320,000 for the Benicia arsenal hookup.

Communities and industrial plants of the bay area have already spent some $150 million, and will spend many million more, toward ending the contamination of bay waters. The Federal Government, spending millions to control water pollution wherever it occurs, can hardly refuse this relatively small expenditure to clean up this unsavory mess of its own making.

Resolution of the Democratic State Committee, Harrisburg, Pa.

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. TOLL. Mr. Speaker, the following resolution, adopted by the Pennsylvania Democratic State committee on January 25, 1960, may be of interest to Members of Congress, and particularly to Democratic Members:

"Whereas we are proud of the efforts of the 86th Congress and of the Democratic majorities in both its Houses, and particularly of the Democratic Members of both Houses from Pennsylvania; and

"Whereas we are disheartened by the refusal of the national administration to conform to the principles and programs enumerated by Democratic Congressmen and Senators representing a compelling majority of Americans; and

"Whereas we have noted with deep dismay the unwillingness of the national administration to propose or to effect solutions to our many pressing national problems, such as those involving our depressed areas, our urban blight, our farm surpluses, space exploration, and our military preparedness; and

"Whereas we have noted with increasing trepidation the rising dominance of the Communist image and the inability of the national administration to counteract this impression with any actions of substance; and

"Whereas we are deeply concerned with the determination of the national administration to resolve the Nation's problems by use of propaganda techniques rather than through straightforward, understandable programs of action; and

"Whereas we have witnessed the obstinate refusal of the national administration to serve all the people of this great Nation and a determination to sacrifice the welfare and well-being of the many to the will and desires of the few: Now, therefore, be it

"Resolved, That we, the members of the Democratic State committee in regular meeting assembled in Harrisburg, this 25th day of January 1960, do hereby:

"1. Commend the Democratic leadership in Congress and especially each Democratic legislator from Pennsylvania for their outstanding efforts in the legislative branch of the National Government, and pledge them our continued support and assistance;

"2. Express our hopes and determination that the Pennsylvania Democratic delegation in Congress will be substantially increased in 1960, and to this end we pledge our unceasing efforts; and

"3. Express our hope and confidence that the voters of Pennsylvania will join the voters of the United States in electing a Democratic President in 1960 and in returning the administrative branch of the National Government to Democratic leadership, and to this end we pledge our untiring efforts; and be it further

"Resolved, That a copy of this resolution be forwarded to Democratic Members of the Congress of the United States."

I hereby certify that the aforementioned resolution was unanimously adopted by the Democratic State committee at its meeting in Harrisburg, Pa., Monday, January 25, 1960.

GENEVIEVE BLOTT,
Secretary.

Russian and American Education—Like and Unlike

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. HECHLER. Mr. Speaker, I call attention of the Members to the following excerpts from an article from the Educational Record for July 1959:

RUSSIAN AND AMERICAN EDUCATION—LIKE AND UNLIKE

(By Robert J. Havighurst)

There are basic similarities and fundamental differences between Russian and American education. To know what these are and why they exist is important for American educators.

The principal likenesses of the Russian and American educational systems are two: first, both have recruited and trained the manpower necessary for industrial development; second, both have aimed to make economic opportunity available to the children of all the people, regardless of their socioeconomic status.

Beyond this, the two systems diverge because they operate in different societies, with different values, and in different stages of economic and industrial development.

PRODUCTION OF SCIENTISTS AND ENGINEERS

The United States of America has become the world's greatest industrial power within the last 50 years. The Soviet Union has moved swiftly into second place through an immense effort at industrialization since 1930. Consequently, both nations have produced engineers and scientists and technicians at a prodigious rate.[1]

In making comparisons of scientific manpower, it is useful to combine the numbers of engineers and physicists, chemists, biologists, and mathematicians, because a good many Russian engineers do work which is done by people who are called scientists in the United States. Russian higher institutions graduated about 65,000 people in this

[1] The numerical data for this article are drawn from: Alexander G. Korol, "Soviet Education for Science and Technology" (Cambridge, Mass.: Technology Press of Massachusetts Institute of Technology, and New York: John Wiley & Sons, 1957); U.S.S.R. (Russian information magazine), No. 11, 1958; U.S. Department of Health, Education, and Welfare, Circulars, 1957 and 1958 (Washington: Government Printing Office); "Engineering School Enrollments," Journal of Engineering Education, XLVII (March 1957), 619-36; Frank Lorimer, Population of the Soviet Union (Geneva: League of Nations, 1946).

category in 1954, and 90,000 in 1958, while the United States graduated 48,000 and 63,000 respectively. Thus, by this kind of comparison, Russia is currently outproducing the United States in engineers and scientists.

But let us take account of the numbers of young people from whom these scientists were chosen and thereby introduce the concept of effort. The effort of a nation in producing engineers, or any other types of persons, should be defined in relation to the number of young people who are in the basic manpower pool. Thus, if one country has only one-tenth as many young people as another country, it will be equal in effort to the larger country if it produces one-tenth as many scientists.

In effort, the United States is superior to the Soviet Union in the production of scientists and engineers. According to the Russian census reports, the Soviet Union had 210 million inhabitants in 1958, when the United States had about 175 million. Furthermore, Russia has currently almost twice as many young people of university age as the United States, due to differences in the age structure of the population in the two countries. The Soviet Union has had about 4 million 22-year-olds a year for several years to draw upon, while the United States has had a few more than 2 million a year (table 1).

The United States has been producing more engineers and scientists per thousand 22-year-olds than the Soviet Union. In 1958, the United States produced 29 per 1,000 as compared with 22 per 1,000 in the Soviet Union, while in the 1946–50 period, the United States produced 26 per 1,000 as compared with 11 per 1,000 in the Soviet Union.

At the same time, the United States has been outproducing the Soviet Union in other fields of training, both in terms of effort and in terms of gross numbers. In the Soviet Union in 1958, 200,000 young people earned the equivalent of our bachelor's and first professional degrees; in the United States in the same year, 350,000 people were awarded such degrees. Measured in terms of effort, the United States spent three times the effort of the Soviet Union in producing university graduates in 1958.

It appears that Russia is now catching up with her need for engineers and scientists and will not produce them in much greater numbers in the near future. Evidence for this inference is the fact that the resident enrollment in higher institutions has stabilized since 1955. The Soviet universities may even have some difficulty in maintaining the present output, because the Russians will be short of young people during the next decade (table 1), due to the low rate of births during the war years.

The United States has seen a shortage of college-trained people during recent years, due to a combination of three factors—a great postwar economic boom, which has increased the need for college-trained technical experts and executives in business and industry; the low birth rates of the depression years of the 1930's, which give us an abnormally low supply of young adults in the 1950's; and the great upswing in the birth rate since 1946, which has crowded the schools and created an enormous demand for college-trained teachers.

TABLE 1.—*Effort going into production of secondary school and university graduates, United States and Russia* [1]

Year	Number of 22-year-olds (in thousands)		Number of secondary school [2] graduates per 1,000 18-year-olds		Number of university graduates per 1,000 22-year-olds		Number of graduating engineers and scientists per 1,000 22-year-olds	
	U.S.A.	U.S.S.R.	U.S.A.	U.S.S.R.	U.S.A.	U.S.S.R.	U.S.A.	U.S.S.R.
1928–30 (average)	2,000	2,900			58	12	11	4
1940	2,400	3,200	500	125	77	32	13	11
1946–50 (average)	2,400	4,000	520	110	118	33	26	11
1954	2,150	3,800	620	260	135	46	22	17
1958	2,200	4,100	650	420	155	49	29	22
Projected:								
1960	2,300	4,400						
1965	2,900	3,700						
1970	3,600	4,200						
1975	3,900	4,800						

[1] The data for Russia on which table 1 is based are not completely reliable. Population data are inadequate, because there are no official census data on the population by yearly ages. Educational enrollment and graduation data are also somewhat uncertain. One source of difficulty is the fact that a relatively large proportion of students and graduates are older than school or college age and have studied in evening classes or by correspondence, rather than in full-time courses. The actual numbers given by Soviet publications have been reduced to take some account of these categories of students. Since we are concerned here with the education of young people of secondary school and university age, the numbers of older students should not be considered in computing the proportions of young people in various categories. Probably the numbers given in the table for the Russian data are correct within 10 percent.

[2] Figures for U.S.S.R. include secondary school and technicum graduates.

Thus, at present, even though our effort is greater than that of the Soviet Union, and even though we have record enrollments in the colleges, we are short of engineers, scientists, teachers, and nurses; and we will continue to suffer from those shortages until after 1960. Then the upward trend of the birth rate, which commenced in 1942, will begin to increase the numbers in the manpower reservoir from which the university graduates are drawn. By 1966 we will have 3 million new 22-year-olds, 40 percent more than we have now, and by 1975 we shall approach the number of 4 million 22-year-olds. Indeed, some people fear that we shall have an oversupply of university graduates by 1975; but our economy may have expanded by that time to need far greater numbers than it uses now.

While there certainly is a shortage of college-trained people today, particularly in the teaching field, there is some evidence that the shortage of engineers is a thing of the past. The economic recession of 1957, combined with cutbacks in defense spending, actually threw some engineers temporarily out of work. Meanwhile, enrollments in engineering colleges, which reached their postwar low point in 1951, have increased to the point where the 1958 enrollment was 80 percent above the 1951 level. A further increase of some 60 percent above the present level is anticipated by engineering educators during the next 10 years.

It appears, also, that the recent shortage of scientists and mathematicians may soon be overcome, in spite of the need for large numbers of secondary schoolteachers in these fields. Colleges report increasing proportions of students majoring in these fields. Despite the claims made by some people that American youth think of scientists as queer people and do not want to be like them, some recent studies show that the ablest high school students are choosing overwhelmingly to go into science and engineering. Thus, the annual report of the National Merit Scholarship Corp. for 1957–58 shows that 77 percent of the 5,916 boys who won scholarships or were semifinalists have indicated science or engineering as their college field of specialization, and 46 percent of the 2,693 girls have done so. Furthermore, 39 percent of the boys and 33 percent of the girls chose pure science or mathematics. Of the freshman class entering the University of Chicago in 1958, 38 percent say they will specialize in physical sciences, and 14 percent in biological sciences.

Thus the United States and the Soviet Union are each recruiting and training enough scientists and engineers for current and immediate future needs.

SECONDARY EDUCATION FOR ALL

Russia and the United States have in common the aim of secondary education for all. Though neither nation has reached this goal, both are far ahead of other countries in this respect. Table 1 shows that 65 percent of youth graduate from the American secondary schools, while 42 percent graduate from Russian general secondary or technical secondary schools.

The reasons the two countries share for this goal are two: first, both countries need a large supply of fairly well educated people to man the economy of an industrial society; second, both countries wish to maintain as great an opportunity as possible for upward socioeconomic mobility of children of lower-status parents, and conceive the secondary school as an avenue of economic opportunity. Consequently it is important that the secondary school lead the student fairly easily into higher education. Most American secondary schools lead directly into a higher institution. The Russian 10-year school of general education leads to higher institutions, and so does the technical secondary school, or technicum.

The technicum is generally a 4-year technical high school, commencing with the eighth grade of the general school system. In addition to training people for technical and commercial jobs, it also leads, in principle, at least, to higher institutions, since 5 percent of the places in higher institutions are reserved for graduates of technicums. In table 1 the graduates of resident courses in technicums are added to the graduates of the general secondary school to get the total number of Russian secondary school graduates.

Just at this time, however, when the Soviet Union seemed to be reaching toward the American model of a broad system of secondary education for all, leading either to work or to a higher education, there has been a massive change of Soviet policy. Commencing at the eighth or ninth grade (students of age 15 or 16) the Soviet schools are now proliferating a variety of experimental programs in which study is combined with productive work and work gradually takes precedence over study for most students.

The causes behind this movement appear to be two—a factual cause and an ideological one. The factual cause is that the production of university candidates had become excessive in relation to the economic need for people with a higher education. Within the last 2 or 3 years there have been many more applicants for entrance to higher institutions than places for them, and a considerable group failed to gain admission the first year out of secondary school have waited around until the next year, hoping to get in at that time. But the secondary school is now graduating about three times as many students as can get into a higher institution, and obviously something had to be done to direct many secondary school graduates into jobs. This meant that the general secondary school must be redefined so that it should be more than a university-preparatory in-

stitution, which it has been in the past in the Soviet Union.

The ideological cause of the change in secondary school policy goes back to the writings of Marx and Engels who advocated a polytechnic education which "familiarizes one with the basic principles of all productive processes and at the same time gives the child or adolescent the skill of using the simplest tools employed in every branch of production." Polytechnic education for all up to age 17 was in 1919 proclaimed by the Communist Party as the objective and method of the Soviet school. But this slogan lost most of its meaning during the period after about 1933, when the drive began to produce large numbers of people with rigorous scientific and technical training. The school program was filled with academic subjects and the homework assignments became heavy. It was about 20 years before the campaign for polytechnic education was resumed. Then, in 1952, the 19th Party Congress passed a resolution "proposing to undertake the realization of polytechnic instruction throughout the secondary schools." In 1953 the RSFSR Academy of Pedagogical Sciences in Moscow published a book entitled "Polytechnic Instructions in Schools of General Education" in which the stress was on the interdependence of theory and application, and it was argued that polytechnic instruction must include vocational training. In 1954, I. A. Kairov, the RSFSR Minister of Public Education, said:

"The school is now faced with the responsible task of uniquely reeducating the pupils' psychology. Up to the present time the school only prepared them for the institutions of higher education. Now, when a considerable portion of those finishing school will go directly into life, our task is to nurture young people right from the beginning in the habits of work, in the love of work, and in respect for laboring people."[2]

At the same time, in the last 2 or 3 years, there has risen an increasing objection to the pace of schoolwork in the latter half of the school of general education whose enrollment is made up of students from about age 11 to 17. On May 10, 1956, a group of leading Soviet medical authorities published a long letter in the Literaturnaya Gazeta (literary gazette) charging Soviet educational authorities with endangering the health of schoolchildren by overloading them with lessons and homework. They said, "Chronic overexhaustion, frequent headaches, weakened memory and vision, proneness to infectious diseases with various complications, result in a general weakening of the child's organism." They wrote of the "unbelievable overburdening" of schoolchildren. Children of 11 to 13 years of age work an average of 8 to 10 hours a day (including homework); children of 14 to 17 work 10 to 12 hours. The majority of the upper forms of secondary schools not only have no time left for reading, sport, theater, or amusement, but so little time is left even for sleep that an industrious pupil becomes irreparably exhausted mentally.

The following September, the Russian Minister of Education ordered the abolition of end-of-year examinations in all grades but the 7th and 10th, where the examinations are necessary for promotion to other schools. This lessens the nervous strain and the burden of work toward the end of the school year, though it does not decrease the daily amount of work which has to be accomplished during most of the school year.

Thus the stage was set for a revolution in the Soviet secondary school which has come into action only during the 1958–59 school year. The essence of this revolution is the combination of productive work with academic instruction for almost all Russian youth from about the ages of 15 to 20.

[2] Komsomol'skaya provda, Aug. 11, 1954.

Experimental changes have been taking place gradually during the past 4 years and were not announced as official policy until 1958. It was with these changes in the background that Khrushchev made his famous call for a complete reorganization of education in the age period from 15 to 20. Speaking at the 13th session of the Komsomol (Young Communist League) in April 1958, and speaking again in September 1958, Khrushchev proposed that henceforth education should be divided into two phases: from 7 to 15 years old and from 15 years old up. The new elementary eighth year school should be the school of general education for all. The program of this school "should be revised so as to liquidate the overloading of the pupils and to take into consideration their moral, vocational, physical, and esthetic development." In grades 5 through 8 (ages 11 to 15) pupils should participate in caring for public property, work in school shops and school gardens, on collective and state farms. "As the pupils advance in school their socially useful work should take on a broader and broader character until, upon graduation, they are prepared to take their places in the world of work."[3]

Following the 8 year school of general education there is to be a period of about 4 or 5 years in which nearly all youth do productive work and at the same time are encouraged to continue their studies on a part-time, evening school or correspondence basis so as to get ready for admission to a university or higher institution if they so desire.

[3] For an abridged text of these two speeches, see George Z. F. Bereday and Richard V. Rapacz, "Khrushchev's Proposals for Soviet Education," Teachers College Record, LX (December 1958), 133–149.

"However, the general education secondary schools, being oriented to the preparation of their graduates for institutions of higher learning, failed to pay attention to labor education and to Lenin's ideas on polytechnic education. There occurred a definite rift between the schools and life which became painfully apparent during the postwar years when the graduates of secondary schools began to enter into industrial and agricultural productions. Graduates of these schools demonstrated a lack of preparation for real work. Many of them thought that graduation from a secondary school should relieve them of the necessity of doing direct labor as workers or farmers."

Kairov went on to propose that after finishing the new general 8-year school, the following procedure should be followed:

"First of all, the young persons going from the 8-year school into production would receive vocational training, the importance of which would grow constantly. Then he would continue his studies for 4 years without having to leave his job. In order to allow better working conditions for the pupils, it is proposed that they operate on a shortened work day or work week. These new schools could be operated both on an evening and extension basis."

The present technicum courses would be so organized that pupils would spend one-half to two-thirds of their time in productive work.

If these proposals are followed fully, it will mean the end of the present academic and university-preparatory secondary school in the Soviet Union. All youth will enter productive work at about age 16, and those who also carry on evening or correspondence study will eventually be permitted to apply for admission to higher institutions while continuing their jobs. But it seems unlikely that the present 8th, 9th, and 10th grades of academic secondary school will disappear overnight. Kairov himself said that:

"We already have special schools for children who are gifted in music, art, and choreography. It would also be desirable to establish special schools for those children displaying outstanding talent in mathematics and the other branches of scientific knowledge. Each of these special schools should operate on the basis of its unique situation, but all of them should effect a close connection between study and socially useful labor on the part of the pupil."

This may leave the door open to the continuation of the present academic high school on a highly selective basis, with study taking priority over productive work. But such schools, if they are continued, will apparently be restricted to small numbers of students. Most entrants to higher education will be expected to have 3 or 4 years of experience in productive work.

The new policy will also apply directly to the students in the higher institutions. It is proposed that most university students shall commence their higher education on a part-time basis while doing productive work. V. Elyutin, Minister of Higher Education in the U.S.S.R., writing in Pravda, September 17, 1958, on the subject "Higher Education Must Be Brought to the Level of Contemporary Needs," said:

"In our country, which is building a Communist society, it is indispensable for all members of the society to participate in socially useful work. Not even the young people who are studying can be excused from this obligation."

He proposes that students coming to the higher institutions without previous work experience should take jobs and study in evening classes or by correspondence for the first 2 or 3 years of their course. Possibly those young people who have had work experience while in secondary school will be permitted to study full time.

Only the most capable and industrious student should continue beyond the second

Russian and American Education

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. PORTER. Mr. Speaker, the following comments were made by Robert J. Havighurst on Russian and American education:

or third year of the higher institution. It is suggested that after the second or third year in the higher institution students might study full time, having by that time served their apprenticeship in socially useful labor.

Elyutin adds:

"In filling each uinversity's student quota, the general rule should be retained that, if possible, those young people who have had experience in practical work should have precedence. However, the rigid application of such a rule must not be assumed, particularly in determining admission to the universities of students in such fields as mathematics, physics, mechanics, chemistry, and some others."

Thus it appears that the education of the late adolescent in Russia is about to take a completely new form. This writer's interpretation of the situation is as follows. The Russian academic secondary school was expanded with enormous speed after the war to the point where it was no longer limited to serving the traditional European function of preparing students for higher education. By 1957 the academic secondary school was graduating three times as many young people as were needed to fill the quotas for entrance to higher institutions. Further, as Khrushchev pointed out, some 60 percent of the university students were children of officials and intellectuals. This is about the same as the situation in American universities. For a society which aims to give maximum opportunity to the children of its farmers and industrial workers, this is an alarming situation. Consequently it seemed desirable to the Russian leaders to put all youth, no matter what their fathers' occupations are, through the experience of productive work in factory or field, hoping thereby to inculcate attitudes favorable toward labor, as well as to give the children of workers a better chance for higher education.

The effect of this new policy, if fully carried out, will be that practically all Soviet youth will work in factories, offices, or on farms for several years after age 15. Most of them will thus find the vocation in which they will continue all their lives. But all will be encouraged to study part time, and thus those with the most energy, ambition, and ability will get further technical training and go to work as technicians, or will eventually enter a university or higher institution and qualify for a higher level position. The quotas for special secondary schools and higher institutions can be adjusted to meet the needs of the society for various kinds of trained people, and there will be no unruly excess of students competing for white-collar positions and getting into trouble and developing antisocial attitudes because the society does not offer them the positions which they believe they deserve. This is what the Russian leaders hope will come from the new policy of adolescent education.

COMPARISONS OF THE QUALITY OF EDUCATION IN THE UNITED STATES AND U.S.S.R.

To this point, we have been discussing quantity rather than quality in the output of the educational system. But there are some critics of American education who contend that the Russians have a better educational system and that they produce better scientists and engineers than the United States. The question whether the younger Russian scientists and engineers are better than their American counterparts can hardly be answered on the basis of our present knowledge, except by giving opinions. However, it is possible to make some factual comparisons between Russian educational practice in science and mathematics and American education in these subjects. This has been done quite carefully by two recent writers, Nicholas DeWitt[1] and Alexander G. Korol.[2] Both of these men point out that the Russian student at the end of the 10-year secondary school has spent more time studying physics and chemistry than the American student at the end of high school, and about the same amount of time in mathematics as the American student who takes 4 years of high school mathematics. All Russian secondary school students take these courses, and only a minority of American secondary school students. Russian youth finish secondary school about a year younger than American youth, and consequently the Russian student is presumably somewhat ahead of his American counterpart at the age of 17 or 18. Opinions differ concerning the wisdom of studying science and mathematics so intensively at the secondary school age, and the Russian practice during the past 2 or 3 years has been to reduce the intensity of study.

Korol's book contains a careful analysis of the examinations in science and mathematics which secondary school students take at the close of the secondary school, comparing the Soviet questions with those asked by the College Entrance Examination Board of American secondary school students who have taken the maximum of mathematics and science offered in their schools. Comparisons are difficult, since it is not known what level of answer is required for success in the Soviet examinations, and the Soviet questions are drawn from a pool which are known to the students beforehand. However, the Educational Testing Service came to the tentative conclusion that the Soviet mathematics examination was pitched at about the same level as the college board advanced mathematics test, a level achieved in the United States by about 10 percent of 12th-grade students. With respect to the physics examinations, the Soviet examination seems to be pitched at about the same level as that of the college board advanced placement test, which level is reached by only a small fraction of American 12th-grade students.[3]

In comparing the quality of Russian undergraduate college education in science and mathematics with that of the United States, both DeWitt and Korol conclude that they are of approximately equal quality. Korol says:

"Both in science nad, to a lesser extent, in engineering, under a set of circumstances which combines all or the majority of the possible favorable factors, the quality of training provided within the Soviet system can be and is in its technical content comparable to the very best that is included in the undergraduate education of a comparable professional man in the United States and other nontotalitarian societies."[4]

Wtih respect to engineering, Korol says:

"Discounting the vocationally oriented store of precarious knowledge a Soviet engineering graduate possesses after his 5 years of training, we conclude that in terms of basic engineering preparation he does not achieve appreciably if at all a higher level of competency in his 5 years of training than his American counterpart does after a 4-year course."[5]

It should be noted that the Soviet engineering schools in a 5-year course give instruction in basic engineering subjects and also train for a specific job, whereas the American engineering schools generally leave specific training for a specific job to the experience the American gets on his job.

IMPORTANT DIFFERENCES

American and Soviet education are more alike in structure and social function than they are like education in the Western European countries. However, American and Soviet education are different because of several factors.

General culture versus polytechnic education: The current reform of education for the late adolescent in Russia illustrates the consistent Soviet emphases upon education for work and upon educational value of socially useful work. This contrasts with the consistent American emphasis upon liberal education or general culture. Thus while the Russians plan to close the period of general education for youths at about age 16, after which the main stress is upon vocational training, the Americans organize education for the period from ages 16 to 20 around the concept of general education, and tend to fend off vocational choice and vocational training as long as possible. One reason for the relatively larger enrollment of youth in higher education in the United States than in Russia is that the Americans believe it appropriate for a boy who will go into business or industrial management to start with a college degree based on a general liberal education.

The European academic tradition: The Russian secondary school of the postwar period has been very similar to the established European secondary school, with a rigorous academic curriculum designed to prepare students for higher education. One characteristic of this type of school is its bookishness, its separation from the everyday life of the society, and its appeal to children of the professional and Government official classes. This tradition is antagonistic to the concept of polytechnic education and is involved in the present crisis in Russian secondary education.

The American secondary school is much farther from the European tradition and is much more accessible to children from homes of manual workers. The American boy tends to get the equivalent of a polytechnic education through nonschool experiences with machines and tools and through summer and part-time work. Thus the American student, growing up in a capitalistic society, gets work experience and training in the use of tools which are denied the European secondary school student, and for which the Russian educators strive through their program of educational reform.

Russian "puritanism" versus American "hedonism": Since the early 1930's, there has been a continuous and strenuous campaign to extend education to all Soviet youth and over a longer period. It has been understood that progress toward industrialization and higher living standards depended on more and better education. The Russians have seen themselves meeting one emergency after another with austerity, self-denial and hard work as their only choice: it has been a matter of life or death to train engineers and scientists rapidly and in sufficient numbers to man the expanding economy. Not until the very latest years has there been an adequate supply of secondary school graduates.

In contrast, during the 1930's America had an oversupply of young people in relation to the needs of the labor force, and the most effective solution of the problem of oversupply was to keep young people in school longer. There was no need to hurry their education. During World War II there was a need for youth in the armed services and in the labor force, and this resulted in some pressures to push youth through school and college faster. There were experiments in acceleration of

student progress through college. These were continued after 1945 because by this time the postwar economic boom was creating a demand for young people on the labor market, and the low birth rates of the 1930's were producing small annual contingents of new adults. By the early 1950's there was something of a feeling of emergency about the education of youth. Plans for accelerating the progress of young people through school and college had become fairly popular.

Still, there has not been as much feeling of an emergency need for young people in America as in Russia, and the emergency attitude in the United States has had to contend with a kind of hedonistic view of childhood and adolescence which regards these periods of life as good in themselves, worthy to be enjoyed. The Russians have been willing to sacrifice the pleasures of youth to the satisfactions of adulthood, if not to the needs of the state. The Americans are more likely to feel that there should be pleasure in life at all ages, and thus to encourage young people to combine play with work during school and college years. Thus the recent alarmist statements by some critics of American education to the effect that the schools and colleges are too soft on youth have received an ambivalent response from parents and from youth themselves in the United States.

Women's roles: One of the most striking differences between Russia and the United States (and also Western Europe) is the much greater place of women in the Russian labor force at the professional level. Three-quarters of Russian physicians and one-quarter of Russian engineers are women. In 1955, 55 percent of graduates of higher institutions in Russia, were women, compared with about 40 percent in the United States.

Looking ahead for the next 10 years, it seems likely that Soviet and American education will continue to be both alike and different, for reasons both of ideology and of socioeconomic realities. There will be a contrast in the supply of young people which will cause deep differences. The United States will have percentages of young people in their twenties increasing more rapidly than percentages of other age brackets, due to the great upsurge of the birth rate which followed World War II and has not abated. On the other hand, the Soviet Union will have a lean period during the 1960's due to the deficit of births in the disastrous war years. Not until after 1970 will Russia have as many 22-year-olds as she will have in 1960.

Election Year Politics Offers a Threat to a Sound and Sensible Approach to 1960 Legislative Activities of the 86th Congress

---

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. COLLIER. Mr. Speaker, few sessions of Congress in recent history have opened in an atmosphere of louder political overtones than prevails in this election year of 1960. Unfortunate it is, too, because the demand for commonsense in the conduct of the Nation's business has never been greater in the past half century.

I believe it is the keen desire of every citizen to see this Congress rise above partisan politics in dealing with the basic functions of government where it concerns our fiscal stability, national defense, and foreign policy. All are, however, to no small degree related in a world of unrest and changing philosophies which marks the social, economic, and political scene both at home and abroad.

Programs designed purely and simply to vote baiting will undoubtedly be dangled before this Congress and accordingly before the American public with neither a hand on the fiscal throttle nor the safety brake of our Treasury mechanism. Potshot criticism of nearly every program from national defense to education and welfare must be expected with so many eyes on the November elections. An intelligent voting public must and can, I am sure, determine where this criticism ends as constructive and begins as political campaigning. This is the one hope of keeping the 1960 legislative program on Capitol Hill in the proper perspective.

NATIONAL DEFENSE

From 1947 until 1952, the United States fell sadly behind Rusia in research and development of missiles. As a matter of fact, from 1945 through 1952 we obligated a total of $3.6 million for research, development, and procurement of both intercontinental and intermediate range ballistic missiles. Is there any wonder, then, that we now lag behind the Soviet Union in this field by an estimated 2½ to 3 years? Notwithstanding this lag, which is being closed as rapidly as dollars and the human brain permit, our overall defense and striking ability is, according to experts and not some politicians, superior to that of the Soviet Union. Secretary of Defense Thomas Gates and Chief of Staff General Twining, have both testified to this appraisal before the Armed Services Committee. Gates pointed out that our seapower is clearly superior to that of the U.S.S.R. with advance nuclear powered surface ships and nuclear powered carriers and cruisers scheduled to join the fleet next year.

With respect to ground forces, the Soviet Union outnumbers the United States, but a comparison of the ground forces of the Sino-Soviet bloc with those of the free world allies including the United States is more favorable. General Twining pointed out that if the United States downgrades itself by its own hands, it may mislead the Soviets into plunging the world into war.

General Power, Strategic Air Command Chief, testified that the Soviets know well that SAC could "clobber" them right now but he warned that by 1962 Russia may have sufficient supermissiles to destroy our nuclear bases within 30 minutes. The conclusion can only be that we must remain militarily strong and keep our striking power of such strength that it will serve as a deterrent to war until the day comes when leaders of all nations can agree on mutual disarmament as the only means of insuring the very survival of humanity. A world in which freemen can live without the shadow of nuclear destruction and devastation offers, of course, the only hope for this and future generations.

THE INTERNATIONAL SITUATION

The 86th Congress reconvened while the world remains in turmoil, restlessness, and discontent.

Just 90 miles off of the coast of Florida, Cuba is apparently falling into the hands of Communist infiltrators. While in other Latin American countries crises seem to be sprouting. Subversion creeps through Central and South America and as close as the Panama Canal Zone. China, at least for our generation seems to be in the throes of the human slavery of communism and descension punctuates the social, political, and economic lives of Algeria, Kenya, and Ghana. Unfortunately, there is no type of guarantee one nation can offer to another toward its solution of these problems. And, even so, as one writer puts it, "International conferences seeking humane objectives proceed with external piety and inward distrust."

ON THE DOMESTIC HORIZON

Recovery from the cost of two wars in less than two decades has left its mark upon the fiscal complexion of this Nation despite its great economic and productive strength.

As we seek to assist in solving the problems of our less fortunate neighbors abroad, we find ourselves saddled with a national debt which exceeds $290 billion and upon which we must divert $9 billion annually to the payment of interest. We must not ignore the need for not only a determined prevention of any further deficit spending but the further need to reduce the present incumbrance of the Treasury. This will take the courage of self discipline and fiscal responsibility above political expediency. During the great depression of the thirties the flood gates of the National Treasury were thrown open. There have been only weak efforts to close them—such weak efforts that even under the present burden of heavy taxes, we have yielded to the pressures of spending beyond our means as a nation.

Some segments of the American public, acquainted with the weakness of statesmanship and the deep desire for reelection of legislators, time their new demands to campaign years. Those receiving Government subsidies generally pick an election year to get Congress to increase these subsidies—and those trying to get their foot in the door use the same psychology for their purpose.

As Congress deals objectively with many legislative problems this year, we must remember that any new or increased benefits which must be paid for from the Federal Treasury can come but from one source—the pocket of the taxpayer. Until someone discovers a pump from which these dollars flow, other than the means provided by taxes, we must exercise prudence in dealing with the many demands that will exceed in cost the funds available for Uncle Sam to furnish them.

First in Peace, First in War: U.S.S. "George Washington"

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. BOWLES. Mr. Speaker, as the year 1959 drew to a close, an event which was little noticed among the hectic preparations for the celebration of the New Year took place in Groton, Conn. I do not feel it is an exaggeration to say that in terms of our national defense it was one of the most significant developments of the 1950's.

I refer to the commissioning ceremonies of the U.S.S. *George Washington*, this country's first ballistic-missile-launching submarine, held at the shipyards of the Electric Boat Division of the General Dynamics Corp., in Groton on December 30, 1959. Electric Boat, the world's pioneer builder of submarines, was the logical choice to design and build this epoch-making addition to our defense arsenal.

As a tribute to the 11,000 men and women who comprise the superb design and construction team at Electric Boat, as well as to the officers and men of the *George Washington*, I would like to call to the attention of my colleagues an article appearing in the February 1960 issue of Navy magazine, entitled "First in Peace, First in War: U.S.S. *George Washington*":

FIRST IN PEACE, FIRST IN WAR: U.S.S. "GEORGE WASHINGTON"

One day next year a missile shaped much like a champagne bottle will pop out of the ocean and soar down the Atlantic missile range to a target more than 1,200 miles away.

With the launching of this missile, one of the deadliest weapons systems ever conceived will become a reality—a nuclear-powered submarine that fires Polaris intermediate range ballistic missiles from below the surface.

The first such submarine joined the fleet in commissioning ceremonies at General Dynamics Corp.'s Electric Boat Division at Groton, Conn., on December 30.

Named *George Washington*, the 380-foot, 5,400-ton ship has 16 tubes for launching Polaris missiles. "The *Washington*, with nuclear warhead missiles, can cause more devastation than all the bombs dropped during World War II," said her commanding officer, a tough, crew-cut U.S. Navy commander, James Butler Osborn, 41, who looks like a football player, talks like a marine drill sergeant and displays the mind of a well-educated engineer.

Commander Osborn declared that the sub "combines the nuclear power of *Nautilus*, the reliability of *Skate*, the agility of *Skipjack*, the massiveness of *Triton*, and, in addition, possesses the world's most advanced self-contained and mobile weapons system."

The decision to unleash the submarine's power will never be Osborn's but the act itself will be.

How does it feel to be cast in such a role?

"I've never given it any thought," Osborn says, jutting a remarkably square jaw just a bit. "If we ever have to hit, we'll hit. And there won't be a second's hesitation," he adds.

Osborn usually discourses through an almost inevitable cigar. This, along with a black turtleneck sweater he wears frequently, makes him look like Hollywood's conception of what a submarine commander should look like.

The *Washington*, he declares, is a "deterrent force whose purpose is to let an enemy know we can hit him as hard as he can hit us. And when you reach the point where the winner is hurt as badly as the loser there's no point in fighting."

Commissioned an ensign 12 days before Pearl Harbor, Osborn took a short leave to marry Miss June Hanna, of Crystal City, Mo., and then went off to war, serving on surface ships and submarines.

His specialty: gas turbines and jet propulsion engines, the propelling forces of missiles.

"Don't forget the crew," he says frequently and emphatically. "The officers and men are the guys who'll make the ship. I'll do my part and more, but you don't have a fine ship because the captain would like it to be that way. It's the result of hard work by everybody on board."

Some of the hard work he speaks of is behind Osborn and his crew. Most of it is ahead. In fact there will be two crews comprised of 10 officers and 90 men each so that the sub may constantly remain deployed at sea except when one crew relieves the other. One crew will be known as the "Blue" and one as the "Gold."

Dr. George B. Kistiakowsky, special assistant to the President for science and technology, who gave the principal commissioning address, stressed the new capability represented by the *George Washington*.

The new fleet ballistic missile submarines will "provide our Nation with a unique strength—the strength of a secure deterrent—of a force that can, with inevitable assurance, decisively punish an aggressor," he said.

He pointed out that the *George Washington's* detection and destruction will be well nigh impossible and yet her targets for retaliation will be continually within reach.

Very much to the point also were the remarks of Vice Adm. Thomas S. Combs, U.S. Navy, commander of the Eastern Sea Frontier, who accepted the ship for commissioning from Carleton Shugg, president, Electric Boat Division of General Dynamics.

Said Admiral Combs: "We are opening the door on a new era in national power for peace. We live in an age when every fixed address on land can be marked for certain destruction. There are no fixed addresses at sea and there are no addresses at all beneath the surface of the sea.

"The oceans cover 70 percent of the surface of the earth, and the fleet ballistic missile submarine, running quiet and deep, will have the choice of an infinite number of launching points."

Others who participated in the ceremony were Rear Adm. W. F. Raborn, Jr., U.S. Navy, Director, Special Projects, Bureau of Ordnance; Rear Adm. Frederick B. Warder, U.S. Navy, commander, Submarine Force, Atlantic Fleet, and Capt. Arthur C. Smith, U.S. Navy, Navy supervisor of shipbuilding at Groton.

Dr. Herbert F. York, Director of Research and Engineering of the Defense Department, and other high-ranking civilian and naval officials attended.

The *George Washington* was built in the record time, for nuclear submarines, of 2 years. She is ahead of the missiles she is to carry.

The Polaris missile, with Lockheed Aircraft Corp., as the principal contractor, is still in the process of development and testing. The first full-range of 1,200-mile missile will probably not be fired until next summer, but the operational Polaris is expected to be ready next fall.

The *George Washington's* reactor cost about $12 million of the total of $100 million spent on the submarine. The ballistic missile submarines cost about twice as much as prior nuclear-powered submarines. This is partly because of the maze of computers and electronic systems required to fix precisely the ship's position and the equipment needed to process missile-firing data constantly and to launch the missiles.

A shipload of 16 Polaris missiles is expected to cost initially about $20 million in addition to the $100 million cost of the submarines.

So far nine fleet ballistic missile submarines are under construction, of which four have been launched. Funds have been provided for long-leadtime items for three more, and next year's budget is expected to provide money for at least three additional submarines. The Navy wants a total of about 45.

Will We Match Russia's Dedication to Schools?

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. DIXON. Mr. Speaker, the following editorial from the Utah Educational Review, "What Can We Learn From Russian Schools," was written by three of my former colleagues who recently returned from an extensive tour of the Russian school system. It is both impressive and challenging. Certainly there is much that we can learn from the Russian schools, and it is high time that we were learning all we can from every source.

The big question in my mind is, "Does the dedication on the part of American teachers, pupils, administrators, parents, government officials, and citizens equal that of the Russians?" The psychologist, Flemming, said, "Show me a boy's IQ and I will tell you what he is capable of doing, but show me what he wants to do and I will tell you what he will do." The will to do is the greatest factor in learning as well as in the building of better schools. Do we have it?

The editorial follows:

WHAT CAN WE LEARN FROM RUSSIAN SCHOOLS?

Were you impressed by the Russian schools? We were asked this question by a news reporter as we entered the Idlewild Airport in New York on our return from a month-long study of the schools of the Soviet Union. The same question has been asked repeatedly by friends since.

It is difficult to give a simple answer. Our reaction to the Russian schools runs the gamut from revolt to approval of different aspects of the program.

We were revolted at the communistic indoctrination. We were surfeited by the propaganda fed to children by the use of every technique known to the art. We were repelled by the use of negative motivation of children, the extreme formality of the class instruction, the poor school buildings, the great pressures put on the children to force them to conform to one pattern of behavior and to master the single curriculum.

THINGS THAT IMPRESSED US

On the other hand we were impressed by the dedication of teachers, pupils, admin-

istrators, parents, government officials, and citizens to the cause of education. We were impressed by the physical education program which includes a medical doctor on the school faculty and two complete examinations a year for each pupil. We marveled at the well-equipped astronomy laboratories and some of the other scientific equipment.

Among other things that impressed us were: The variety of evening school and correspondence school opportunities for adults to enable them to pick up and continue their education; the respected status of teachers; the numerous opportunities for further education for teachers without loss of salary; the coordinated educational research program for the Academy of Pedagogical Science; the friendliness of teachers; the retirement program for teachers; cultural opportunities provided through teachers' clubs; the opportunities for pupils to further their education in areas of their special interests through extracurricular programs; the use of community resources; and the high ratio of professional staff to children.

PURPOSES OF SOVIET SCHOOLS

The general purposes which guide the school systems of America and the Soviet Union are miles apart. The chief purposes of the schools in the land of the hammer and sickle are to indoctrinate the pupils with the Marxist-Leninist philosophy and to prepare them for life in the Communist society. All other purposes are secondary to these overriding objectives. Even the present national preoccupation with science is motivated by a fierce desire to prove that communism is superior to other forms of government.

The spirit of the Soviet school was defined for us by Mr. Anton Chernikov, the Minister of Education in the Russian Republic in Moscow in the following words:

"The chief aim of the Soviet schools is to prepare the pupils for life, to perform a useful social work, to attain a higher level of universal and polytechnical education, to train well-educated people, thoroughly acquainted with the fundamentals of science, to bring up the Soviet youth in a spirit of full attachment to the principles of the Socialist society, in the spirit of the Communist ideal."

All forms and techniques of propaganda are used in the schools to instill into pupils the spirit of the ideal, from blatant banners in school auditoriums to subtle paintings in libraries and directors' offices. A pupil can't go through a normal school day without being bombarded with slogans, symbols and quotations from Lenin's writings which have become the scriptures for the new Soviet substitute for religion.

One school in Moscow displayed a huge red and gold portrait of Lenin in the auditorium. Large gold letters on a bright red background spelled out this slogan: "The party and Lenin are twins and brothers."

A school in Kiev, capital of the Ukraine, posted this slogan: "Remember, love, study Lenin, our teacher, our leader."

School hallways are favorite spots for displaying quotations of Communist beliefs and portraits of national heroes are standard equipment. Each school has one room set aside for the use of the youth organizations. Red flags, busts of political leaders, oaths of loyalty to the regime and rules of behavior grace the walls.

One can't even attend a sports event in the huge Leningrad stadium without being confronted with a picture of Lenin about the size of our American scoreboards. Underneath the picture are the words "Peace to the World."

In the beautiful University of Moscow there is a large colored panel in one of the main hallways which has this message:

"In capitalist countries only the richer person, the person with capital, benefits from the growth of production.

"The person without capital will continue to eke out a meager subsistence even when production grows.

"The rich possess the goods things in life, but there is no way out of poverty in the poor homes. And thousands of laboring people do not even have work there."

Were we impressed with the Russian schools? Yes—with some phases of their operation. Yes—with the enthusiasm and faith with which the people support education. But from the purposes, the single curriculum and formal methods of Soviet schools we have nothing to learn.

No nation's future rests more heavily on the civic competence of its individual citizens than America's.

Our task is to look critically at our own schools. Are they strong enough to enable us to achieve fully our own national ideals? Certainly, no nation on earth has a greater stake in good schools than America where our national decisions are comprised of a sum total of our individual decisions.

Federal Water Pollution Control Act Amendments

SPEECH
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3610) to amend the Federal Water Pollution Control Act to increase grants for construction of sewage treatment works, and for other purposes.

Mr. DADDARIO. Mr. Chairman, when the House first considered this legislation to augment the national program to control and fight water pollution, I discussed why I believed it was good and necessary. I also outlined a specific instance in which it would aid the towns of New Britain, Berlin, Cromwell, and Middletown to support a project needed to control pollution on the Mattabesett River. Where population is growing as fast as in urban New England, these measures cross not only town lines but county lines.

I note that Connecticut would qualify for $1,114,965 in the coming year under this bill, compared to $619,425 authorized under the present law and only $247,770 recommended in the 1961 budget. Few domestic programs are as important as the fight to conserve our natural resources and protect the water supply on which human life and the economy depend. I would hope that this measure soon becomes law.

A year ago in Connecticut, a survey showed that no new treatment plans were put into effect that did not involve a Federal contribution. Preservation of our water resources and cleaning up our streams to provide adequate water for industrial expansion, the growth of the economy and the needs of an increasing population for a better supply to cope with a rising standard of living insist upon action now in this regard.

Cancer: Enemy on the Run

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. TOLL. Mr. Speaker, it was my privilege to speak before the Cancer League of Philadelphia last Thursday evening, February 4, 1960, in the Phillip Scherr Auditorium of the Albert Einstein Medical Center, northern division. The Cancer League is doing a tremendous job in fighting cancer in the city of Philadelphia. The work which it has done in supplying Philadelphia hospitals with equipment for the detection and treatment of cancer has been a significant contribution in the fight against this enemy. My remarks before the league were as follows:

CANCER: ENEMY ON THE RUN

"Progress in Fight on Cancer Is Reported by Institute Here," "Researcher Suggests Anticancer Tactics," "Significant Changes in Cells Detected in Cancer Patients." Nearly every day reports like these, appearing in newspapers, magazines, and medical journals, revitalize our efforts in the fight against cancer. We sense we are on the brink of a wonderful discovery, and that with a little time, a little more money, and a little more hard work, we will achieve success.

I feel this challenge deeply, as I know you do, and it is for this reason that I am delighted to be here today. I believe that the annual campaign fund rally of the Cancer League of Philadelphia, is a major event on the cancer calendar. It is this type of community effort which makes the hope of finding a cure for cancer a real one.

I need not tell you that the vital statistics on this disease are grim. Each year in the United States, cancer takes the lives of about a quarter of a million persons. Since 1900 it has overtaken tuberculosis, pneumonia, diarrhea and enteritis, nephritis, and accidents to become, since 1938, second leading cause of death in this country. One can point to the cost of hospital care for cancer patients which runs to approximately $300 million a year, or to the loss in goods and services due to this disease, which has been estimated conservatively at $12 billion each year. But these figures are meaningless symbols in comparison to the personal tragedy experienced by families for whom cancer is not a number but a desperate reality.

The monster is powerful, but fortunately his adversaries grow in strength each year. The blossoming of the research effort against this disease has been one of the medical wonders of this decade. You are all aware, I am sure, of the very exciting projects being carried on at the National Cancer Institute, the oldest of the National Institutes of Health in Bethesda, Md. I know of no better example of the difficult, determined, sometimes discouraging medical research being carried on today. You may be interested in some of the work currently being carried on in their laboratories or being supported through their research grant funds.

One striking example of the growth in the Federal effort against cancer is the increase in the annual appropriations for the National Cancer Institute. The figure has climbed from $18,900,000 in fiscal 1950, to $21,737,000 in fiscal 1955, to a staggering $91,257,000 in fiscal 1960. These sums are an indication of the importance attached by Congress to research against cancer. The

House Committee on Appropriations in its report on labor, health, education, and welfare appropriations stated in 1958, and repeated again last year:

"Considering the rate at which medical science has advanced over the past 10 years, it is plausible to believe that in the decade ahead simple, accurate tests for cancer, such as a blood test, may make the early detection of cancer simple and be usable as a routine tool of the physician and public health worker."

The National Cancer Institute is an active outfit. Approximately 600 scientists, technicians, and laboratory assistants have about 325 research projects underway at all times. Scientists work in the laboratory with experimental animals and these studies are coordinated with the studies of human cancer in the 14-story clinical center. Studies in biochemistry, chemical pharmacology, endocrinology, pathology, environmental cancer, radiation therapy, clinical cancer, and biostatistics are being carried on simultaneously—all with one aim: to vanquish this disease enemy.

Perhaps you will be as interested as I was to learn that more than twice as much money is spent on grants to scientists in non-Federal institutions, with no direction, supervision, or interference on the part of the Institute, as is spent on National Cancer Institute research. Surely this is in keeping with our belief in the importance of the intellectual freedom of the scientist. It is also an incentive for institutions throughout the country to expand their research activities, and to look into hidden corners previously neglected by research sleuths.

One of the most impressive crash programs being carried out at the Institute is the cancer chemotherapy program. This research and development program is a cooperative enterprise of national scope. It is jointly sponsored by the National Cancer Institute, the American Cancer Society, the Damon Runyon Memorial Fund for Cancer Research, the Veterans' Administration, the Atomic Energy Commission, and the Food and Drug Administration. The program involves three phases: The initial testing of chemicals, hormonal substances, and other materials on mice with cancer; the testing of materials which appear to have promise on larger animals to determine those safe for human use; and finally the conduct of extensive clinical studies with patients in cooperating hospitals. No final answers have been arrived at. But lives have been prolonged, the course of the disease has been checked, and pain has been alleviated with certain chemical agents. Supporters believe that this may be the road to the development of drugs effective against many different types of cancer.

In addition to the program I have mentioned, the Institute makes grants for professional training, cooperates with voluntary groups in cancer education programs, carries on field projects, makes grants to State agencies for their programs, and even lends radium to qualified persons and institutions for radium therapy.

The rationale for all this activity is summed up in the words of the Surgeon General Burney, who stated: "We do not know from what corner of the research firmament will come the next burst of light that will guide us closer to our goal—the conquest of cancer. But we can be sure that light will come and the goal will be reached.

You must be proud to know that you participate in this giant effort. We are all aware that the work of a scientist in his laboratory must be financed, that his discoveries must be communicated to the public, that the public must be kept aware of the precautions against cancer. Voluntary groups like yours have performed an invaluable task in cooperating with the Federal Government in the support of research and in waging effective public education campaigns. As we seem to approach the goal, the need for this kind of activity becomes more urgent.

Recently two public figures have brought home to all of us the immediacy of the danger. I speak of Senator NEUBERGER and Dr. Tom Dooley who have both recently undergone bouts with cancer. Both of these men have been operated on for cancer. Both are determined to see that the effort to conquer this and other dread diseases is increased. Both men have led useful public lives, and their incapacitation even for a time, was a severe public loss.

Senator NEUBERGER's illness has convinced him that our Nation must build a crash program to beat cancer—perhaps something like the Manhattan project of 1940. He believes, as do most of us, that we can increase our efforts still further. We still spend more on cigarettes, liquor, radio and television repairs, and even chewing gum, than we do on cancer.

Senator NEUBERGER's description of his reactions to his disease are moving indeed. He states: "I can tell you that the cancer victim is frequently the loneliest person in the world. He feels that nothing can help him. Friends, family, doctors, associates, all seem without power to check the malignant growth that perils his life. He wishes, desperately and profoundly, for some miraculous cure which will ring a reprieve."

He continues with words which can serve as a campaign cry for all of us: "As a cancer patient, I want to help others who have suffered or who may suffer this disease. I want to encourage them and their families as I was encouraged and supported by cancer progress. I want more: I want to see us lick this disease the way we've licked the infectious diseases. I sincerely believe the world would be more electrified by a breakthrough in cancer than it was by a rocket landing on the moon. As a U.S. Senator, I'm more convinced than ever that we should economize in any other sphere of government than funds for the research program of the National Cancer Institute, because economy at the expense of human life is the worst extravagance of all."

Dr. Dooley has recently returned, as you know, deep from the jungles of Indochina to be operated on for cancer. He returned from his work in Medico, a nonprofit nonsectarian, organization founded by him to gather money, equipment and personnel for hospitals in Asia, Africa, and South America. Tom Dooley has been described as a "splendid American" who can combat the recent talk about the "ugly American." Before entering the operating room he sent a message to many leaders in Congress which included the following remarks: "I am being operated on tomorrow for cancer. As soon as I recover, I intend to go back to Laos to continue this fight against communism with the tools of health."

These two cancer victims have made an impassioned case for more cancer research. Dr. Howard Rusk, the medical editor of the New York Times, takes up their plea: "When will the scientific breakthrough come to solve the riddle of cancer? No one knows. What we know, however, is that the more scientists who are at work on the problem in laboratories all over the world, the greater are the odds for solution and the quicker that solution will come."

These words stir our souls and reinforce our desires to do something about this enemy. I have little to add to their plea. May I close with a word of congratulation for the fine work you have done in the past and with a hope that this campaign will be better than ever before. Your efforts will one day be rewarded in the conquest of cancer.

Cultural Exchange

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. DORN of South Carolina. Mr. Speaker, the 34th Women's Patriotic Conference on National Defense here in Washington was very fruitful. The following article from the Washington Evening Star mentions the highlights of this great meeting:

CULTURAL EXCHANGES WITH RUSSIA HIT

A warning that the Communist Party apparatus in this country was greatly strengthened by the recent visit of Soviet Premier Nikita S. Khrushchev was voiced yesterday by the 34th Women's Patriotic Conference on National Defense which also denounced the cultural exchange program with Russia.

Delegates from 16 national organizations participating in a 3-day meeting here adopted a number of resolutions yesterday and had others pending as they prepared to wind up their annual session this morning.

In opposing the cultural exchange program, the women said there is sworn testimony that delegations from Russia are accompanied by special agents who have posed as ice skaters, clergymen, educators, and scientists for the purpose of conducting espionage operations in the United States.

In the resolution on communism, delegates urged Americans to become informed on Communist aggression, which is psychological, political, and economic as well as military.

LOYALTY AFFIDAVITS

The conference also called for retention of the loyalty affidavit required of students receiving loans under the National Defense Education Act of 1958. "We believe it is unfair to the taxpayers to ask them to underwrite the education of individuals who hesitate to sign the loyalty affidavit," the woman stated.

They also asked that such Government loans be made only to citizens of the United States.

In other resolutions, the conference called on Congress to proclaim the constitutional sovereignty of the United States over the Canal Zone and urged that the United States announce its claim to sovereignty over territory in Antarctica explored by the United States and its citizens.

The women opposed all efforts aimed at expanding the powers of the present World Court and especially urged retention and enforcement of the Connally reservation.

SUPPORT STUDY

The conference supported a proposal to create a nonpartisan commission to investigate the entire subject of food and beverage contamination and, in a separate resolution, rejected as unconstitutional fluoridation of the community water supply.

Mrs. William D. Leetch, of Washington, was chairman of resolutions for the group which held its meetings at the Mayflower Hotel. Mrs. Frederick Griswold, Jr., of Montclair, N.J., honorary national president of the Patriotic Women of America, was the presiding officer.

Representatives EDGAR W. HEISTAND, of California, and WILLIAM JENNINGS BRYAN DORN, of South Carolina, were among yesterday's speakers. Robert Morris, former counsel of the Senate Internal Security Subcommittee, and Dr. Nicholas Nyaradi, director of the institute of international studies at Bradley University, also spoke.

A mass meeting last night was preceded by a concert given by the U.S. Air Force Headquarters Command Band under the direction of Capt. Harold L. Copenhaver.

Farm Program

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. BREEDING. Mr. Speaker, there were two significant aspects to the President's special farm message which the Congress received yesterday:

First. For the first time in several years the President indicated a willingness to compromise on this issue with Congress.

Second. Apparently Secretary Benson's domination of farm policy in the administration has been ended, if only temporarily.

These two factors present this House with an opportunity to pass urgently needed wheat legislation.

The present situation is serious. Producers realize this. They are not happy with a program that piles up a tremendous surplus in warehouses at a cost of almost a billion dollars a year.

Consumers are certainly fed up. They are demanding a change.

As long as the President followed Mr. Benson, there was no hope for achieving any constructive wheat legislation. Mr. Benson has made it crystal clear on many occasions that the only wheat legislation he will approve would bring about ruinously low prices for producers.

In his message, the President outlined guidelines and said he would sign any wheat legislation which fell within the framework of this broad policy.

For several weeks representatives of a number of farm organizations have been working on new wheat legislation. The only task remaining is to translate the program into legislative language.

The National Association of Wheat Growers, the National Grange, and the National Farmers Union are among the great farm organizations which have worked together in coming up with a plan which, I am firmly convinced, meets the criteria spelled out by the President.

This new program is supported by the National Farmers Organization, Missouri Farmers Association, National Corn Growers Association, American Soybean Association, the Grain Sorghums Producers Association, and several State wheat producing groups.

While I am not in any position to present the proposed wheat marketing program in detail at this time, I can say it will materially reduce the wheat surplus and the cost of the program.

It would stabilize the price of wheat near the parity level by requiring the Secretary to set an annual marketing quota to meet total domestic and export requirements, then subtracting 150 million bushels before breaking down the quota to an individual farm basis.

This provision would force the grain trade to go to the Commodity Credit Corporation for 150 million bushels of wheat each year. Inasmuch as CCC would be barred from selling wheat below parity, this would result in a price to the farmer at or near full parity.

No wheat could be sold for milling or other primary uses without a certificate based on individual marketing quotas expressed in bushels rather than acres. To be eligible, a producer would have to retire at least 20 percent of his wheat base acreage to noncommercial use.

I wish to emphasize that this proposal has the enthusiastic support of a large majority of wheat producers. They see this proposal as an opportunity to achieve postive results and make a start on clearing up what has developed into a serious situation.

I plan to introduce this bill as soon as a draft is completed. I will request the House Committee on Agriculture to hold hearings in the immediate future.

We need action on wheat legislation. This is an economic, not a political problem.

But we have to make sure that the wheat producers' income is maintained. It would be better to retain the present system, imperfect as it is, than to give in to pressures and pass legislation that would bankrupt wheat producers.

We also have to remember that a prosperous agriculture is the key to a sound economic situation for many businessmen in the farm areas. The merchants along Main Street of our small towns depend upon the farmer. When the farmer is hard pressed, the sales of merchants suffer and the entire economy suffers.

This new proposal would maintain the income of the farmer and farm areas. It would reduce the surplus of wheat and it would materially reduce the cost of the program to the taxpayers.

Inasmuch as it meets the requirements set forth by the President, I cannot see any reason why we cannot pass an acceptable bill at this session.

I am going to dedicate my efforts to this end in the coming weeks.

Department of Commerce and Related Agencies Appropriation Bill, 1961

SPEECH
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 9, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 10234) making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. MACHROWICZ. Mr. Chairman, I want to join in complimenting the Committee on the fine job they have done in this field, but I did want to call attention to one matter which I think is regrettable. In the budget for the Bureau of Foreign Commerce I understand that the request for the 94 new positions has been reduced. I would like to call to the attention of the Committee that since 1947 the appropriation for this Bureau has been reduced from 438 to 200 positions; and that today, because of the marked decline of U.S. exports, this Bureau should be given some consideration, and I hope that at some future time the Committee will consider some additional services, at a time and during a period when I believe those services are needed most.

Tadeusz Kosciuszko

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 8, 1960

Mr. DADDARIO. Mr. Speaker, February 12 is the anniversary of the birth of a great Polish patriot whose contribution to the freedom of our United States should never be forgotten. General Kosciuszko designed the fortifications at West Point, as visitors to the partly restored Fort Putnam on Mount Independence at the Academy well recall, and played a vital role in the winning of our independence.

Tadeusz Kosciuszko was a true product of his age: a gifted, energetic, and of course, ambitious youth, born in the mid-18th century with a mission to fight for the cause of human freedom. This son of an impoverished family in Poland showed remarkable abilities even in early youth, and he was aided in his desire to obtain the best military education Poland could offer him. But he wanted to go beyond that; he wished to carry on his studies in the art and science of war in the celebrated Mezieres Military School in France. With the aid of a scholarship he entered Mezieres and graduated as a specialist in artillery and engineering. He had finished his courses there and was staying in Paris when he heard of the American Revolution in 1776. There and then he made up his mind to go to America, and here to put his learning to practice in the service of a good cause. On borrowed money he sailed for the New World and in the fall of 1776 he was in Philadelphia.

Immediately upon arrival he applied for service, was of course admitted, and, on the strength of his preparation, was entrusted with drawing up plans for fortifying the Delaware River. The successful completion of this assignment earned him a commission as colonel of engineers in the Continental Army. Thenceforth his rise was rapid and his accomplishments were great. He was soon placed in charge of the building of fortifications at West Point. Subsequently he took part in the battle of Charleston, and was among the first of the Continentals to enter that city after its evacuation by the British. In Octo-

ber of 1783, in recognition of his outstanding services, Congress made him a brigadier general.

This brave son of Poland, having served the cause of our freedom with distinction, wanted to serve the cause of his beloved Poland. He returned to his native land, and there, after fighting the forces of oppression and tyranny for more than 20 years, he had to seek refuge abroad and then die in exile in 1817 at the age of 71. In commemorating the 214th anniversary of his birth we pay our tribute to this gallant son of Poland for his service in the cause of our freedom.

Is There a Public Conscience in America Today?

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. OLIVER. Mr. Speaker, to view the newsstands at the local drugstore or to attend a movie at one of the so-called art theaters is an education in itself. Unfortunately, it is an education which I feel that most of us, adult as well as juvenile, can very well do without.

Some citizens of questionable repute are willing to exploit others just to make fast dollars for themselves. Many of our young people are prime targets for this type of sordid operation. Their impressionable minds are affected, much in the same manner that narcotics might affect their bodies.

Unfortunately, the dissemination of this type of material appears to be spreading rather than diminishing. Can we allow this trend to continue without taking strong remedial action? I, for one, do not think so. As a member of the Postal Operations Subcommittee, it is my feeling that the Post Office Department must be provided with further tools, urgently needed to combat distribution of obscene, filthy printed, and pictured material.

The Catholic Church, through its Legion of Decency, continues to provide a standard for material which is fit for us all. Perhaps through the development of realistic standards by local groups in each community, it will be possible to restrict the profitable operation of all dealers in smut, thus putting them out of business. At any rate, the whole problem requires immediate action, on the local, State, and Federal levels. We cannot countenance further delay.

I wish to include the remarks of Dr. Adrian H. Scolten, of Portland, Maine, a man who recognizes the enormity of this problem. His comments originally appeared in the editorial column of the January 7 edition of the Norway-South Paris Advertiser-Democrat:

THOUGHTS FOR THE NEW YEAR

As the new year begins we need to take the time to examine ourselves. What are we thinking about? What is the substance of the thought wave that goes on and on in ofr minds when action is stilled and life in general is quiescent. It varies, of course, but whatever it is, it influences our lives for we know from our elementary psychology books that every thought tends to become an act unless inhibited or counteracted by a stronger thought. It is our thinking that in reality makes us what we are.

Let us consider for a minute the influences that are playing upon the thinking of our young people, the murder, intrigue, and false teachings that are the daily diet given on television shows. One cannot see a program of this kind without being affected by it. Its insidious influences permeate the subconscious mind and come to the surface of the conscious mind when one least expects them.

We have often heard the committers of crime say "something came over me—I didn't know what I was doing." Anyone who says "It doesn't do me any harm to see this movie, or read this book—I just forget it" doesn't know what he is talking about.

From the standpoint of the psychiatrist or any doctor who works with young people, he is doing far more harm to his mind than he would hurt his body by eating contaminated food. This subtle invasion of the subconscious mind is responsible for many of the teenage problems which have caused distress and tragedy in so many families.

The television program is being watched by millions every day and every night. The time spent in character building constructive influences; the time spent in church or under good teachers or even good parents, is short compared with the time that the doubtful or downright harmful television program is playing upon the impressionable minds of the grownup boy or girl.

Then there is the movie. We have had a rash of them lately, filmed in foreign countries, the theater managers tell me—and put on here—uncensored. I am told that they are uncensored, and they certainly should be censored. No censor could possibly leave this product for the public—the names tell the story—"Fire Under the Skin" made up entirely of naked people, with no thought, word or deed left to the imagination—"The Naked City," "Unmarried Mothers," etc. I am told that the owners of the chain choose the pictures and the local manager has to take what is sent to him.

He explained that he thoroughly disapproved of the pictures, but it was his way of making a living—in words to that effect.

If a drug house does damage with the medicines he prescribes, or a restaurant serves food that makes people sick physically, he cannot get away with it; the law steps in. Damage to the minds and morals of the youth of our country is far more serious than damage to their physical bodies.

Of course, we all know of the pernicious reading matter that is being given to everybody, young and old—sold over the counter in the corner drugstore, sold for 25 cents a copy in the 10-cent stores and handed out in our lending libraries.

The law states that if the seller knows what he is selling to a young person is obscene, he can be prosecuted—but how about the dime stores and the lending libraries? They know what they are handing out, and they certainly must know that they get into the hands of the young. Is money so much more important to them than minds or morals?

We will not take the time to mention the illicit trade or pornography that is flooding the country. Some effort is being made to combat that, we know, though not enough. It is the combined effect of the veritable food of vicious influences that are being let loose to pray upon our immature youth. It will take the combined influence of all thinking people and certainly all Christian people to check it.

The Catholic Church has made a valiant and praiseworthy effort through its Legion of Decency. It continually realizes that every effort must be made to keep teenagers in the right path or they will choose the wrong one.

Hapy New Year.—Adrian H. Scolten, M.D., Portland.

Annual Recognition Dinner, Blair-Bedford Council, Boy Scouts of America, Altoona Pa., February 4, 1960

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. VAN ZANDT. Mr. Speaker, on February 4 at the Juniata Pavilion, Altoona, Pa., the Blair-Bedford Council, Boy Scouts of America, staged its annual recognition dinner with some 300 leaders of Scouting present for the occasion. Numerous awards were given for outstanding leadership in the field of Scouting.

It was my privilege to deliver the principal address which follows:

SPEECH BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE ANNUAL MEETING, BLAIR-BEDFORD COUNCIL OF BOY SCOUTS, JUNIATA PAVILION, ALTOONA, PA., ON FEBRUARY 4, 1960

It is a pleasure to participate in the program of this annual Scout recognition dinner for the Blair-Bedford Council, Boy Scouts of America.

It is fitting and proper that the fine leadership and the time and effort donated by Scout leaders should be publicly acclaimed.

It is common knowledge that the history of Scouting had its beginning in England.

Its first impression on Americans was during the year 1909 when a courteous unidentified boy offered his hand to guide William D. Boyce, Chicago publisher, to his destination through London's fog.

The lad had thus performed his "good turn" for the day and refused a tip from the grateful American.

He was a British Boy Scout.

So impressed was publisher Boyce by this kindly deed that he acquired all available information on the British Boy Scouts Association and returned to the United States with a firm conviction that America needed a similar youth program.

On February 8, 1910, the Boy Scouts of America were officially incorporated in Washington, D.C., and today "Scouting" is a familiar word in American homes throughout the length and breadth of our land.

From its humble beginning in 1910, the Scout alumni in the United States now exceed 30 million.

During Boy Scout Week this year—February 7 to February 13—more than 5 million boys and leaders of the Boy Scouts of America will begin the observance of the 50th anniversary of Scouting in the United States.

In addition to the observance of the 50th anniversary, the year 1960 marks the triumphant conclusion of the 4-year program of the Boy Scouts of America, "Onward for God and my country."

Like each of the successive special programs of the Boy Scouts in the past, this program has had a close relationship to the continuing ideals and constant effort of Scouting, expressed in the motto, "Be Prepared."

In this special program, the emphasis has been on the spiritual aspect of scouting—on the strengthening of religious faith—and the increasing of religious activities in each individual Scout and in each troop sponsored by a religious organization.

By this program, which owes its success to cubmasters, scoutmasters, post advisers, and den mothers, the Boy Scout has been inspired to be prepared to do his duty to God, as revealed to him through his own religion.

Ministers, priests, and rabbis have in this program been aided in the spiritual direction and teaching of the youth of their congregations, by the support this program has given to their endeavors.

Scout troops have been inspired to new ambition and vigor by chaplains and other religious leaders cooperating with the Scout officials in this program.

It has been brought home to the boys—emphatically and in many ways throughout these 4 years—that service to God is the chief purpose in life of every man—and the ultimate aim of every worthwhile activity.

The joining of "God and my country" in one slogan reflects the religious development in the United States—demonstrated by many factors—that have been particularly strong during the past decade.

Our people have become more strongly religious, as is plain from statistics of church membership, church attendance, and church giving.

The result is that as they have become more strongly religious, they have become more sure that our country itself must be dedicated to the service of God, subjected to his will, and placed under his protection.

It is significant that during this past decade the Congress has established a prayer room, where Members may retire for private prayer and mediation.

In addition, legislative action has been taken to add the phrase "under God" to the pledge of allegiance, to establish "In God we trust" as our official national motto, and to place those four words on all our future issues of currency.

The relation of religious belief to ethics and particularly to political morality has been frequently and earnestly discussed in Congress and in the newspapers and magazines.

This concern of our people generally, with the relation between God and our country is suitably reflected in the Boy Scout program, "Onward for God and my country."

Patriotism and the preparation of our youth for the service of the country have been given prime emphasis by scouting from the beginning.

You leaders in the Scout movement know that scouting—in this country as elsewhere in the world—has successfully resisted powerful efforts to make it a military or semimilitary activity.

However, no one would deny that whatever tends to increase in the youth of our country, the love of country and the value of physical and mental fitness, tends to make of our youth a formidable defense force in war, as well as a stabilizing force in peace.

The love of our country, under God, is the greatest quality any activity could aim to develop in our young people, and the 4-year program emphasizing this ideal is a splendid service to the country by the Boy Scouts of America.

As we swing into this fourth and final year of the great nationwide program, "Onward for God and Country," let us all continue to work together, scouts and adults alike, to make the year a memorable one in the history of scouting, and in the lives of every one of us.

We must work to realize this ideal in our own lives, as well as to develop it in the lives of the boys in whose interest we are serving.

Each of us, as well as each of them, must be: "Prepared in body; prepared in skill; prepared in spirit; prepared in will; prepared as a member of a team."

This is a suitable occasion for reviewing the past achievements of scouting in America, rejoicing over successes, resolving to repair shortcomings, and determining to drive forward with renewed vigor toward our goals.

Much is being said currently of the prevalence of juvenile delinquency.

Though scouting is not generally a remedial measure directed at reclaiming the delinquent—who often expresses his scorn of the ideals of scouting—I should like to emphasize on this occasion that scouting is much more and better than a cure for delinquency.

It is a preventive of delinquency in the individual boy and in the group of boys, and it is a valuable aid for a neighborhood and for neighborhood organizations in combating the conditions that foster delinquency.

New York's chief magistrate, John M. Murtagh, a man in a position to know the facts about juvenile delinquency and a man whose nature and experience alike would prevent his indulging in easy optimism or polite compliments on such a subject, has publicly expressed his opinion that an increase in Boy Scouts means a decrease in delinquency:

"I can't think of better insurance against boys appearing in youth court than scouting," said Mr. Murtagh.

He continued: "Boys who have really healthy homes never will be delinquent, and I believe scouting brings boys closer to their families and communities as well as providing leadership training."

Mayor Wagner enthusiastically seconded this opinion and added that he believed if the 500,000 boys of New York City who are eligible for membership were absorbed into the scout movement, New York City would make great strides toward overcoming juvenile delinquency.

But through the primary purpose of scouting is to take good, healthy, well-intentioned boys and help them mold themselves into strong, able, virtuous men, scouting can be and has been used with spectacular success in the rehabilitation of crime-ridden areas and the restoration to good conduct of rebellious and stubborn boys.

The Boy Scout movement in Washington, D.C., for example, is now engaged in the second of two major efforts to establish scouting in an area of maximum delinquency.

Back around 1954, Rudy Carson—known as "trouble shooter" for the National Capital area council—directed concentrated Boy Scout efforts toward organizing the boys in the second precinct, then considered the "wickedest precinct" in the city.

The project resulted in the formation of 50 scout troops and cub packs in the area, and recruited 1,000 boys.

Since the establishment of these troops and packs and the organization of scout activities, conditions in the second precinct have improved, and the crime rate has been considerably reduced.

As always, scout leaders undertook this project in cooperation with police and other municipal authorities and welfare agencies, and no claim is made that scouting alone accomplished these happy results.

But scout leaders are convinced that the success of the scout program in the area is at once a cause and an evidence of a major contribution to the improvement of the neighborhood conditions.

These are emergeny measures, and certainly constitute working under difficulties.

The ideal situation is more like what we have here in Blair and Bedford Counties where many adults—such as you—have already been through the discipline, learned the skills, and absorbed the ideals of scouting.

Here—instead of an enormous effort to achieve a barely measurable result—you have seized the opportunity and by a sincere effort have achieved enormous good.

What is needed for continued success is a comunity devoted to the Scout ideals—a community in which the children grow up in scouting and in which boys too old to be Boy Scouts join the Explorer Scouts.

There is also the compelling need that those who have gained this experience and earned this prestige continue to use their knowledge and their influence, gained through scouting, for the benefit of younger boys.

This can be done effectively by giving all possible time and effort to the assistance of cub packs and Scout troops in their neighborhoods.

In return, the community as a whole has its obligation to scouting.

We need public and frequent recognition of the glories, as well as of the fun, of scouting.

While the individual scout needs no thanks or recognition for his good deeds—nevertheless, the cub pack or the Scout troop should be given public praise and recognition for its ideals, as well as for each specific contribution it may make to the well-being of the neighborhood.

In this way we shall both encourage the Scouts to live up to the high ideals their organization has placed before them, and by such good examples encourage other boys to take part in their activities and adopt their ideals.

With the aid of such incentives, we shall build scouting and in so doing lead our people onward for God and my country.

I would like to mention another aspect of scouting and that is: The high caliber of you men and women who have dedicated your lives to the Scouting movement for it is through your skills; your deep understanding of a boy's needs; and your inspired leadership that boys are attracted to Scouting.

You volunteers, who now number well over 500,000, are well trained in courses arranged by the national council. However, it is not simply technical ability, it is your patience and your willingness to give so generously of your time and energy that makes invaluable leaders in the Boy Scout movement. Then, too, by the example you set in your personal lives you create enthusiasm for the ideals of Scouting in the young man.

We are fortunate here in the Bedford and Blair council in having men who recognize the vital importance of instilling in our youngsters the ideal of (a) honesty, (b) patriotism, (c) service, and (d) Godliness.

To you leaders I offer my gratitude for the wonderful work you are doing with the youth of our community. I salute you and the Boy Scouts of America on the celebration of the golden jubilee of scouting and extend best wishes for continued success.

The strength of America depends on the strength of the rising generation, and in this connection the Boy Scouts of America are in the forefront of organizations devoted to preparing our youth to meet the challenge of tomorrow with stout hearts and sound principles.

The Range of Soviet Airpower

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 2, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to

insert into the RECORD some very pertinent and well-nigh prophetic observations made by Prof. John Cobb Cooper on the range of Soviet airpower in his book, "The Right To Fly," which was published back in 1947. Professor Cooper is one of the world's leading authorities on air law.

He points out that the range of Soviet bombers results directly from the size and geographical location of the U.S.S.R. I especially call to the attention of my colleagues the following observations by Professor Cooper:

Added together these air-penetration sectors, with aircraft having a range of 5,000 miles, would include all of Europe, all of Asia including Japan and the Netherlands East Indies, all of North America (except southern Mexico, the Caribbean area, and Central America), all of Africa south to Johannesburg. In other words, such aircraft will reach from the Soviet to all the important land surfaces of the world except Central America, South America, Australia, and a small part of South Africa. Only a small percentage of the world's population is in the area free of Soviet airpower—and this assumes aircraft with a range of only 5,000 miles. If the range is doubled, all of South America, Australia, and New Zealand, is included. From the Soviet Union, aircraft with a range of 10,000 miles can cover the entire land surface of the earth except the South Polar regions—and no one lives there.

The Federal Reserve: A Public System

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the March 1959 issue of Economic Trends and Outlook, a publication of the AFL–CIO Economic Policy Committee:

THE FEDERAL RESERVE: A PUBLIC SYSTEM

Last month, the AFL–CIO Executive Council's monetary policy statement recommended that the Federal Reserve become "in fact, a public system, representative of American life."

The Federal Reserve, whose control of U.S. money policy affects everyone, is supposed to be a public service institution, not an exclusive club. An official publication of the Federal Reserve's Board of Governors states, "How is the Federal Reserve System related to production, employment, and the standard of living? The answer is that the Federal Reserve, through its influence on credit and money, affects indirectly every phase of American enterprise and every person in the United States." [1]

Elsewhere the booklet includes this description: "The Federal Reserve System is a service institution to the Nation. The more than 250 directors of the 12 Reserve banks and their 24 branches * * * as well as the Board of Governors * * * are all serving as trustees of the Nation's money." [2]

The AFL–CIO has asked that the selection of these trustees reflect their public responsibility by including representation of the largest economic sectors of this Nation.

THE BOARD OF GOVERNORS

Under present law, guidance of the Federal Reserve System rests with the Board of Governors composed of seven members appointed by the President. "In selecting the members of the Board," states the law, "the President shall have due regard to a fair representation of the financial, agricultural, industrial and commercial interests and geographical divisions of the country." [3]

There is no requirement to avoid dominance of this seven-man Board by a banker-oriented, big-business-oriented group. Nor is there a specific requirement that the President have even a due regard for including representatives of the Nation's largest economic sectors—consumers, labor, and small business.

Yet, this seven-man Board has predominant control of national monetary policy. Its decisions influence economic growth by expanding or contracting credit and money. The Board regulates the operations of each of the 12 Federal Reserve banks and selects three of the nine members on each of their boards of directors. Such regulation includes approving the discount rates the Federal Reserve banks may charge their member banks—and thus influences the interest rates charged borrowers throughout America. If discount rates are high, interest rates of borrowers for homes and cars and small-business loans will almost automatically increase.

The Board of Governors also influences the management and cost of th public debt through its automatic membership on the Federal Open Market Committee, a group which makes decisions about Federal Reserve's buying and selling of Government securities.

Board credit policies and its dominant effect on Treasury Department financing can influence production and employment and affect the whole course of the economy. The Board represents the Federal Reserve System to the Congress and Government departments.

Today much of the original act has been amended. But the selection of the Board of Governors, whose powers have been changed over the years, retains the flavor of 1913, when the labor, consumer, and small-business interests in the economy lacked sufficient voice and recognition, when the standard of living of the average American did not include the kind of life considered important for the whole economy in 1959, when a banking act was enacted mostly to provide a flexible currency and alleviate recurring intermittent money panics.

The AFL–CIO contends that the selection of this Board has been such that the Nation's economic growth lies in the hands of a narrow group—dominated by investment and big business interests. Even if they were the most enlightened and public spirited citizens in America, they are human beings, affected by the minority interests of their background and training. It is the AFL–CIO's belief that whether the decisions this group makes are right or wrong, the power vested in the Board of Governors of the Federal Reserve System should rest with an agency more representative of the public and include labor, consumer, and small business interests.

DIRECTORS OF RESERVE BANKS

The AFL–CIO has also asked for a change in the provisions for the Boards of Directors of the 12 Federal Reserve banks. Some basic provisions for the composition of these Boards have not been changed since 1913.

"The directors are responsible for the conduct of the affairs of the Reserve Bank in the public interest, subject to the supervision of the Board of Governors." [4] But to what extent is the public represented? A look at the composition of the Board of Directors of one of the most important Reserve banks, the New York Bank shows that the current law, despite changes over the years, does not in fact avoid domination by an interest group of bankers and big businessmen.

Yet the Board of Governors believes that each Reserve bank "* * * gives effective representation to the views and interest of its particular region, and at the same time helps to administer nationwide banking and credit policies." [4] The AFL–CIO requests amendments that would make this true, by extending representation to consumer, labor and small business interests.

OPEN MARKET COMMITTEE

The seven-man Board of Governors and five representatives (bank officers) elected by boards of directors of the Federal Reserve banks make up the Federal Open Market Committee—perhaps the most powerful economic arm of Government.

This Government Committee in effect influences the price of Government securities and their future interest rates. It does this by deciding whether, when and how many U.S. Treasury securities the Federal Reserve System will sell or buy in the open market. Decisions by this small Committee, therefore, affect interest rates, the cost of the public debt, the whole bond market and the financial condition of the U.S. Government.

There is no assurance and little possibility that the Open Market Committee will be dominated by anyone except bankers or big businessmen under present law. Yet these 12 men's decisions affect the money standing of the U.S. Government and its citizens. Public interest requirements for such a group need no elaboration. The Open Market Committee should be made more representative of major economic sectors or be abolished.

Decisions by any agency, however representative, will never be beyond criticism in a democratic society. To assume that AFL–CIO proposals to make the Reserve System more representative of American life is an arrogant demand or that the present System is too exclusive and independent to be questioned is to deny our Nation's democratic structure.

FEDERAL RESERVE POLICIES BEFORE AND AFTER RECESSION

In January 1957, this publication called for "a new look at monetary policy," and criticized Federal Reserve policies:

1. Tight money (higher discount rates which cause higher interest rates) was hampering economic growth by creating further imbalance between investment and consumption. The Board was following a fallacious theory that demand inflation (too much money chasing too few goods) was causing price rises. Tight money, we said, could not halt price rises, but could hurt the economy.

2. The pattern of discount rates chasing U.S. Treasury bill rates created inflation and confusion in the short-term securities market. Instead of a Federal Reserve effort to keep the interest rate on Treasry short-term bills low, so that the discount rate would be low, it followed the backward pattern of letting Treasury rates go where they would by "not interfering too much" and then raising discount rates to meet the new heights of Treasury rates.

3. Through a hands off policy, the Federal Open Market Committee did not support the price of Treasury long-term bonds. As a result, Government long-term bonds were offered in the open market on a free and

competitive basis. Since buyers knew there would be no Reserve support for such long-term bonds, they held off buying on the supposition that interest might go up and speculated on prices of the bonds. The result: Treasury attempts to move the Federal debt into long-term issues and out of the bank structure were not successful.

Policies unchanged

Two years and a recession later, several Board representatives have shown signs of an initial recognition that these policies have not been successful or appropriate. Nonetheless, almost the same course of action has been followed.

On February 6, 1959, Chairman William McChesney Martin told the Joint Economic Committee, "Despite the rapid recovery in production and sales, unemployment remains disquietingly high. * * * The present availability of capital and manpower resources represents a potential for near-term growth of the economy without inflation."

This seemed to imply some recognition that another hike in the discount rate would harm an economy whose attempt to recover from the recession had not been fast enough to alleviate unemployment.

A month later, on March 4, Governor Szymczak told the Washington Society of Investment Analysts that "* * * reduction in unemployment has lagged behind gains in output" and suggested that unemployment was deterring the Board from raising the discount rate again. (During the recession, the Board had three discount rate cuts, reaching a low of 1¾ percent in the summer of 1959. Before the recovery got underway, however, the Board approved higher rates in late summer and fall up to 2½ percent.)

Higher discount rate

But on March 5, the day after Szymczak's statement, banks in the important money areas of New York, Chicago, and Philadelphia upped the discount rate to 3 percent—only one-half percent below its prerecession high in the summer of 1957.

Why? Possible reasons lay in Governor Martin's fear of inflationary timber. Obviously, even the recession had not convinced him that tight money hurt the economy more than it affected price rises.

But even more important were money-market problems. In short-term securities, for the previous 7 months, U.S. Treasury bills had been yielding interest rates higher than discount rates. The game of discount rates catching up to Treasury bill interest rates was still to be pursued. The Board still did not recognize that higher discount rates were no solution. They would just make all interest rates higher and thus cause Treasury short-term offerings to bear higher interest rates in order to be attractive to buyers.

In long-term securities, Governor Szymczak had given the clue in his March 4 speech: "Since mid-1958, the U.S. Treasury has found it increasingly difficult to encourage investors to acquire and hold U.S. Government securities, particularly issues of longer maturity. This fact was highlighted by the recent February Treasury refunding in which more than one-fifth of the publicly held maturing securities were turned in for cash, notwithstanding the fact that interest rates on the new issues offered in exchange were generally accepted as realistic."

In other words, the February Treasury refinancing had flopped. Investors hesitated to buy intermediate or long-term Government bonds, because they thought by holding off they might later get a more attractive interest rate on the bonds.

The investors were probably right. When asked about this refinancing failure in a press conference, President Eisenhower spoke of free enterprise and said, if necessary, the Treasury would have to ask Congress once again to raise the legal limit on interest rates charged on Government bonds. Recognition that the Federal debt is not like a corporation's debt has still not reached the big-business administration. Confusion and inflation in the money market continue.

On March 9, faced with the repeated confusion and failure in money markets, the Treasury and the Reserve Board announced a study of the Government securities market. "In this study, we hope we can learn more about what makes the market work," said a Federal Reserve official. This is an admirable, but curious aim for a group of men whose disinterested knowledge of our money system is, in the eyes of the financial press, so great that the AFL–CIO should never have had the arrogance to question them.

Tris Coffin on Nuclear Testing

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. PORTER. Mr. Speaker, intelligent and conscientious Tris Coffin reports on our present status with respect to nuclear weapons testing. It is a chilling, fateful story, told by a first-rate reporter. The text of his broadcast last night is included here under a previous consent:

Men are digging a curious kind of catacombs deep in the pebbled plateau of Frenchman's Flats. The sound of blasting echoes across the bleak and harsh landscape of Nevada. The setting, as one fascinated visitor remarked, is "like a scene from hell."

The landscape is a long, sloping desert of blackened pebbles. The scraggling creosote bush grows in extraordinary geometric patterns and defies the barrenness. This plant with its tiny and waxen leaves sucks what moisture is hidden among the stones. The sky is a gray, for this is the rainy season. The temperature is mild, but a sudden drop chills the bones at sunset. The catacombs are being scooped out on the upper edge of the slope, 2,000 feet down in the rock.

The purpose of these strange underground canals and chambers is as chilling to the marrow as the sudden fall of night.

For here, men are patiently, innocently preparing to resume a race of death. The Atomic Energy Commission and Defense Department are determined to test new nuclear weapons here within 2 months. And then the Russians will test theirs, and the race will be on again, and where it will end God only knows. One observer, watching this digging, said, "They're going to blow us all up. Don't they know that?"

A sharp, intense glimpse of the struggle that has been going on inside the administration and Congress for almost 4 years over bomb testing was given late one afternoon last week.

Crowded into a tiny hearing room in an ancient corner of the Capitol were scientists, Senators, an Assistant Secretary of State, reporters and spectators. There was hardly room to breathe, and people stood all along the wall while the afternoon changed to dusk, and then to night.

The shop talk of the reporters, fitted in with the testimony at the hearing, was a fascinating story. It begins actually in 1956 when Adlai Stevenson asked that nuclear tests be stopped. His reason, he said, was humanitarian. Every fresh explosion showered death, crippling disease, and disfigurement from atomic fallout. But the public was unconcerned, even resented bringing this cruel issue into the open.

But 2 years later, in August 1958, President Eisenhower proposed such a ban, and announced we would halt tests for a year. In October, the three nuclear powers met in Geneva to work out the details of a test ban.

Why did we propose a ban on nuclear testing in 1958? The answer came out at this hearing of the Senate Disarmament Subcommittee. Senator HUBERT HUMPHREY asked, "Why did we choose to end nuclear testing, instead of missile testing? Was it because we were ahead in the production and sophistication of nuclear warheads and behind in the missile race?"

Yes, this was it in large part. Another factor was world opinion. We could score a propaganda victory. But, equally as important, the United States was far ahead of Russia in nuclear warheads, and would like to freeze that gap.

But within the last several months, even weeks there has been a subtle change within the administration. It shows at times a fever of wanting to test again. The President has shown his irritation with the slow progress of the talks in Geneva. He has threatened to test again.

The real reason can be seen only dimly and through a veil of secrecy. Dr. Edward Teller, the inventor of the hydrogen bomb, a man of unusual eloquence, has been talking behind closed doors, and urging new tests. He hints at a revolution in nuclear techniques, one that can miraculously close the missile gap. And what solace it would be to the administration to have that wiped out and silence the cries of the critics.

Our missiles today lack both long-range thrust and dependability. We cannot seem to get them off the ground in long, sustained, successful flights. Much of the weight of the missile is in the warhead. This weight requires a tremendous thrust.

Now, Dr. Teller is talking of the possibility, still a theory, of miniaturizing the hydrogen bomb, that is a bigger boom in a much smaller size. This would mean the size of the warhead could be cut down drastically, and so would the size of the rockets. The thrust power could be reduced to a point where we could handle it with present equipment. And the guidance problem would be easier.

So deep down below Frenchman's Flats, they would play with nuclear explosions—not in the tremendous power needed for an ICBM. A small explosion, say 1 kiloton, could be produced. Data would be gathered and magnified for the more powerful bomb.

A sign that the administration is thinking of weapons, and little else in resuming tests came at the hearing. Senator FRANK CHURCH, of Idaho, has been looking for a way to break the United States-Russian deadlock over underground test inspection. He proposed that the nuclear powers join in underground tests and gather data on detection. None of the administration spokesmen at the hearing were really interested.

There was also an inference, nothing more, that the Russians may be conducting hidden underground tests now.

Senator CHURCH asked, "Can we assume that the Russians have not done any underground testing?"

Senator ALBERT GORE, a member of the Joint Atomic Committee, said quickly in his bland Tennessee drawl, "That is not my understanding."

Senator GORE undoubtedly meant well by raising his point. But this is a tantalizing mystery that should not be kept from the world. If the Russians have broken their pledge, let this be charged openly. No, all we hear are inferences. A Senator says, "That is not my understanding." Well, what is his understanding? What are the facts?

The hearing in the small, stuffy room poked into two major objections the United States raised this year on the reliability of a test ban.

There was talk of being able to muffle an underground explosion by a burst deep underground. An Air Force research laboratory said a 70-kiloton explosion could be so muffled. Seventy kilotons is more than 3 times bigger than the Hiroshima bomb which killed 78,150 human beings.

Senator HUMPHREY asked what kind of a hole would be needed. They said you would have to dig down a half mile and clear an area equivalent of two city blocks in salt. It would take 3 to 4 years to dig such a hole and cost around $25 million. Such a huge engineering task could not be undertaken secretly.

Next, we said that our hardtack tests in Nevada in the autumn of 1958 proved that existing systems for detecting underground blasts—separating the earthquakes from the man-made explosions—were inadequate and unreliable. Therefore we demanded more, many more inspections on the sites of suspicious earth movements. The Russians said this was absurd. Everyone became upset. The talks broke down, and we are now building the tunnels in Frenchman's Flats.

At the hearing, the scientists said the techniques of detection were really in a state of flux, and no one knows the answers. The Atomic Energy Commission produces data to show how very, very difficult it is to detect underground shots. Yet the Coast and Geodetic Survey reports new techniques that can increase detection tenfold. And, it is also revealed, that a technique of burying detection instruments underground might well be substituted for inspection teams on the ground. This possibly could meet the Soviet objections. This we did not push at the Geneva talks.

Where do we stand today? A high official of the Atomic Energy Commission has said privately we must begin tests within 2 months. Nineteen Congressmen have introduced a resolution to stop the tests. The Secretary of State is worried over world reaction if we reopen the nuclear race. The President has not made up his mind.

This is Tris Coffin in Washington.

The Mood of British Policy

EXTENSION OF REMARKS
OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. BOWLES. Mr. Speaker, shortly before the British election last October, the distinguished Washington journalist, Mr. George W. Oakes, drew upon his extensive background of experience in Britain to describe the current mood of British politics. His article, "Why Yesterday's Empire Today Turns Inward," appeared in the October 1959 issue of the magazine, Freedom and Union. What he had to say still has meaning for American policy and public understanding. Under leave to extend my remarks, I include his article as follows:

WHY YESTERDAY'S EMPIRE TODAY TURNS INWARD

(By George W. Oakes)

Whichever party wins the British election October 8, one can safely predict what foreign policy its government will follow. It will aim at reaching a summit conference and modus vivendi with Moscow, seek by soft words and actions to nip in the bud any danger of atomic war, and try to secure as stable a world situation as possible for the coming years.

This last aim is spurred not only by the fear of war's destructiveness, but by the country's need of time in which to: (a) modernize its economic plant, develop those specialized exports in the electronic, engineering, aviation, automotive, and other industries which do successfully compete in world trade and thus contribute vitally to economic stability; (b) continue to satisfy the domestic demand for consumer goods and raise the standard of living; and (c) thus give the people time to digest the economic changes since the war and absorb them into the social fabric.

LONG-TERM FACTORS AFFECTING FOREIGN POLICY AND ELECTION

Although dread of atomic war has had the most immediate and publicized impact on British policy, other more deepseated factors are involved in the election. To a considerable extent, the current British attitude toward foreign policy has been conditioned by important long-term internal psychological and sociological factors.

The tremendous decline in the British power position especially since World War II is a fundamental fact which Americans, as well as the British themselves, have found extremely difficult to accept and understand. Basically, this has occurred as a result of their losses in two World Wars and the gradual disintegration of what had been a far-flung empire. Yet the fast-moving developments depleting the strength of America's other major allies, plus the subconscious and inherited impression of a powerful Britain as our major partner in the world, have tended to obscure the fact that particularly in the last 15 years Britain has been undergoing a series of economic and financial crises. Too often Americans have failed to appreciate the extent to which these factors, having a vital impact on the internal life of the United Kingdom, has been reflected in her foreign policy.

The results of the huge loss in capital assets during World War II, the need for the U.S. loan and Marshall plan, the devaluation of 1949, the accompanying postwar years of shortages, and rationing all focused public attention in Britain on its domestic problems. In addition, the Labor government of 1945 put forward a program of the welfare state which all governments since—whether Labor or Conservative—have felt it essential to maintain and even extend. This program involved a vast process of internal economic and social change.

Therefore, domestic affairs have, by force of necessity, dominated the interest of Government and the public. Today British economic and financial problems, though at the moment in relatively an improved condition, still face an uncertain future. Full convertibility of the pound is far from realization, and this state of affairs seems likely to continue for somé time to come.

Yet, despite concern over the uncertainties at home and consequently of Britain's ability to speak with authority abroad, the impression prevails that those who determine policy in Britain are constantly straining to keep the country in a prominent role in foreign affairs. They are doing their utmost to maintain the historic reputation of Britain as a great power.

Several factors are responsible for this attitude. First of all, Britain is still run by a ruling class. Although the establishment—as it often called—has absorbed especially since the war outstandingly able men who have risen from the lower middle and working class, its traditional sense of values remains. Those who have come up in the social system have in many cases accepted the general point of view of the upper-class groups who have set the tone for British foreign policy for centuries.

MACMILLAN REPRESENTS TRADITION

This governing class includes top civil servants and foreign office officials, industrial and business leaders, leading figures in the universities and professions, outstanding journalists, et al. Many of these are of an age group brought up during the period before and just after World War I when Britain's place in the world was only beginning to change from its 19th century hegemony. Their thinking is rooted in their educational background—the days of the height of Britain's empire, and power in Europe and throughout the world.

Prime Minister Macmillan represents this tradition perhaps to a greater extent than most of Britain's present political leaders. His generation—those who served in World War I—cannot lightly shed the reputation of Britain's power with which they were indoctrinated in their youth. These products of the "public" schools—Eton, Winchester, Harrow, and the others—reflect an attitude that doesn't change easily. This powerful impact of the private schools (as Americans would call them)—with their stress on inherent British values—is largely responsible for handing down a similar point of view to many younger influential opinion-formers in Britain—the sons of the World War I generation.

To a considerable extent, this urge to try to keep Britain in a leading world position also has a psychological explanation. National pride is a most important characteristic among British people of all classes and particularly those who occupy the upper rungs in molding opinion and forming national policy. These groups, reared in the doctrine of British world power, have found it extremely frustrating to live through a period when their confidence in Britain's stature was being repeatedly challenged by the facts of the post-World War II period.

BRITAIN'S PSYCHOLOGICAL HANGOVER

This sense of injured pride, this sudden realization that conditions which supported Britain's former status had basically altered, has produced an extreme national sensitivity. It has shown up frequently in the postwar years, notably at the time of the Suez adventure. All elements of the population were infuriated that President Nasser could dare insult their country, which had dominated the Mediterranean for generations. "Let's give him a bloody nose," echoed on all sides. Any issue that touches the emotional nerve of national reputation evokes an immediate outcry. "What's the matter with us that we are so sensitive to criticism" is a frequent comment among the more sophisticated. As Britain is a highly integrated national unit, such a feeling runs throughout the entire body politic.

This sensitivity, coupled with confidence born of Britain's success in overcoming continental threats to its independence and existence since the days of William the Conqueror, leads many in the ruling groups to boast of their diplomatic know-how. How often have visitors heard the remark, either directly or by implication, "if you fellows would just leave these negotiations to us, we'll find a way out. We've had generations of experience in dealing with these people—Russians, Chinese, Germans, Arabs, etc. You are newcomers in these matters." There exists a strong urge to show what they can do—partly to compensate for injury to their national pride.

This psychological hangover of Britain's former world position is evident in the rising degree of public interest in the past. Of course, the British people have always been unusually conscious of their history. Yet today one senses a stronger tie toward any reminders of the days when London was the

center of world affairs. At a time when the average citizen is being taxed almost to the limit "from the cradle to the grave" people cheerfully support those visual evidences of Britain's historic glory. One senses that the old customs and ceremonies—the famous military pageant of "trooping of the color," the colorful changing of the guard, the pageantry performed at the opening of Parliament or at the installation of the Knights of the Garter at Windsor—have in some ways gained a greater meaning for the public as a reminder of the historic and glorious past. Though these public displays certainly have a tourist value for foreigners, it is clear from observing the crowds that they primarily appeal to the British themselves.

A similar pride in the past has stimulated thousands of Britons of all classes to visit the many country houses, castles, and estates that, because of the rising cost of maintenance, are now open to the public on a paid admission fee.

This sense of looking backward to some extent compensates for the realization that Britain cannot in fact any longer play the part in world affairs that it did even a generation ago. Despite the efforts of the ruling groups to maintain a front, to foster the impression that Britain still is one of the big three, they, as well as all elements of the population, recognize the facts of the present state of world affairs. They know that power has been polarized to a great extent between the United States and the U.S.S.R., and that Britain cannot take an equal place with these two colossi. Yet the British, conscious of their position only a generation ago, as well as the fact that the Commonwealth and colonial areas still give them the most extensive worldwide interests, cannot see themselves on a level with France.

SHIFT FROM FOREIGN AND CIVIL SERVICE TO BUSINESS AND INDUSTRY

The shift in the status of the British oversea possessions from an empire centering in London to a Commonwealth of increasingly independent countries, has had its repercussions on life in the United Kingdom. No longer are there the careers available in the civil and military services abroad as in the days of a large army and navy, and the Indian Civil Service. As these opportunities have shrunk the type of young man who 25 years ago contemplated a lifetime of service in the empire now directs his attention toward a career at home. Even in Africa, one of Britain's last important colonial areas, the rising forces of nationalism will soon eliminate this field for public service work. In fact, increasingly difficult conditions may force many emigrants to return to the United Kingdom.

The urge to reinforce their economic security shows up in the career preferences of university graduates. Since the war there has been a marked shift from public service—the foreign and civil service—to business and industry. Today the outstandingly able graduates of not only Oxford and Cambridge but the provincial universities are being attracted through lucrative salaries by leading corporations.

Oxford undergraduates do not have the interest or enthusiasm for foreign affairs or politics characteristic of them before the war. At that time students vigorously expressed differing views on controversial issues such as the Spanish Civil War. There was a feeling that the troubles of the world could be corrected through political action. Now they are disillusioned and find an outlet for their aspirations in religion, music, art, or drama. The spirit of revolt has almost disappeared and in its place exists an acceptance of things as they are. There still is support for projects fostering international goodwill but the stress is on cultural rather than political means. This state of mind fits into the national desire for a period of tranquility, a search for a way to reduce the continuing threat to existence implicit in a state of constant international tension.

Chatting with Englishmen in a leading London club, whose members are drawn primarily from the academic world, the professions and business, one feels a strong sense of the pervasiveness of domestic problems. After-luncheon conversation seldom centers on foreign affairs.

The appetite for the material advantages of modern industrial society has been so whetted that it must be continually and increasingly satisfied. This is a major goal toward which the average voter—particularly in the lower middle and working class—insists that Government policy be directed. Foreign policy must take this basic, popular demand into account and follow a line that will permit its maximum possible fulfillment. One major reason why the most daring foreign adventure in British postwar policy—the Suez operation—had such widespread support was that the average citizen believed that the hard-won material gains he had achieved since the war were in serious jeopardy through Nasser's threat to Britain's Mideast oil supply. In such a crisis, vigorous action seemed the only solution.

The demand for higher living standards is reflected in popular pressure on the political parties that a larger share of the national budget be spent on housing, health, education, atomic power for industrial use, roads, etc. For some years opinion polls have shown that the public has picked defense expenditures as the area where budget cuts should be made, and so the proportion of funds devoted to defense has been reduced.

Between 1953 and 1958 the gross national product rose £5 billion but defense spending increased only £14 million. On the other hand the national health program received £170 million more in the budget during the same period.

Political leaders in both major parties fully realize that they must be responsive to this powerful public demand to maintain the gains in the standard of living for the mass of the people. Since Britain's economy is so dependent on trade, they recognize that in foreign policy this requires that every effort be made to achieve the maximum possible stability in international relations.

BRITAIN AVERSE TO ANY RISKY POLICY

Public pressure for relaxation of tension is likely to increase if the Labor Party should come to power. There is a strong element of pacifism in the party stemming from its Christian Socialist doctrine. Labor, moreover, would be more responsive to the public's desire for a greater diversion of the national product toward consumption goods.

Britain cannot lightly risk any policy that would tend to provoke international ferment. In terms of Soviet relations, the result is that a modus vivendi must be worked out. All groups in Britain are convinved there is no other practical solution. On the basis of their bitter experience during the last war, they appreciate, to a degree that the American civilian population cannot realize, what war means as it affects the life of the ordinary family. Now with the potential destruction that nuclear war could bring at a moment's notice, their vulnerability to devastation is deeply understood.

The British realize that any such power requires the backing of the United States. Two years ago Aneurin Bevan, in stating that he would not favor the closing of American airbases, explained he took this position because the British need the power of the United States in order to be in a strong negotiating position with the Soviet Union.

British policy has to concentrate on doing its utmost to persuade American opinion that its interests will be equally well served by following the British line. For this reason alone, more attention has been paid in recent years toward seeing to it that influential Britons in industry, the professions, academic and cultural life, and so forth travel more extensively than ever in the United States and exchange views with their opposite numbers in this country. Britain's cultural heritage—as well as current achievements—are important elements in strengthening Britain's status abroad, particularly in the minds of those who shape opinion.

Conversely, the British appreciate that if the Anglo-American relationship is to survive the hazards of Soviet attempts to divide the two, greater understanding of the United States must be encouraged in the United Kingdom. Therefore influential circles have been fostering expanded study of American history, for example, in the schools and universities.

Running counter to these efforts are several deeply held convictions which find an outlet in widely shared anti-American views, more often suppressed than expressed. Many also resent Britain's dependence on the United States.

Perhaps the thing which most infuriates Britons in their relationship with the United States is that it is in position either intentionally or through miscalculaton to plunge them as our ally into nuclear war without their knowledge and before they have had a chance to make their views felt. This fear is so great that Soviet provocations are often disregarded.

Americans must never forget the fact that Britain is determined to avoid any provocation action that might lead to war. As Alfred Duff Cooper, who resigned from the Cabinet during the Munich crisis, wrote in "Old Men Forget": "It is a curious fact that the British, who fight with the most glorious courage and toughest tenacity, have such a horror of war that they will never support a policy which entails the slightest risk of it. Nor have they yet learned that reluctance to take risks is not the way to acquire security."

But when they do see clearly the handwriting on the wall, then, as the whole world witnessed so impressively in 1940 and throughout the last war, they will fight to the end.

The difficulty in the present situation vis-a-vis Russian power is that the Soviet attack is not so far a headon military challenge against which the British would react in keeping with their obligations but an indirect one which encourages the public in the view that in some way an accommodation can be reached.

Birthday of Thaddeus Kosciusko

EXTENSION OF REMARKS

OF

HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. ROSTENKOWSKI. Mr. Speaker, on Friday, February 12, we observe the anniversary of the birth of Thaddeus Kosciusko, an outstanding hero whose belief of liberty and justice for all mankind carried him to two continents to fight for these rights. He played an important part in creating our right to stand in these Chambers and express the will of the people of our great country in deciding our own fate and future.

Our country is made up of people of every conceivable nationality who have united for one purpose—life, liberty and

the pursuit of happiness. We, of Polish descent, are proud of Kosciusko for he played an important part in our war of independence. He borrowed money to come to America to offer his services to the struggling Colonies. As a student of engineering and artillery, his choice of battlefields and erection of fortifications contributed greatly to the brilliant victory of our forces at Saratoga. He was among the first of the Continentals to enter Charleston after its evacuation by the British. His success as a leader of men earned him the rank of brigadier general in 1783.

Having served our country brilliantly in gaining our independence, he was not content to relax and enjoy the fruits of victory. This burning desire for freedom of all men carried him back to his native Poland to carry on the fight for freedom there. For more than 20 years he continued his valiant but unsuccessful efforts for the independence of Poland. He died in exile in Switzerland in 1817.

His name will live forever and will remain a symbol for the oppressed people of Poland today. It is fitting that today, Americans of all rank and creed solemnly observe the anniversary of his birth and do homage to his memory.

TVA: The Unlearned Lesson

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. OLIVER. Mr. Speaker, no other Government agency has been the target of so much invective as has the Tennessee Valley Authority. The interests who continue to publish their self-serving propaganda not only refuse to recognize TVA's substantial accomplishments but resort to representations which have inadequate relation to fact.

In spite of the living testimonial of the TVA system in terms of industrial growth, flood control, national defense, and agricultural development; unreasoned accusations continue to be made. Unfortunately, these accusations, in addition to being inaccurate, are retarding the development of our country's natural resources.

If the United States is to continue to pace Soviet efforts in the field of power development, action must be taken to harness to its ultimate, our Nation's power potential. The Passamaquoddy tidal project on the Maine-Canadian border is only one of the many projects throughout our Nation that must be undertaken without further delay. The development of Quoddy-Rankin Rapids would bring to New England the same benefits that have accrued to the Southeastern States through the development of TVA.

I would like to include an article entitled "TVA: The Unlearned Lesson," which appeared in the August 1, 1959, edition of the Nation. Mr. Lloyd Armour, in his objective study of TVA, clearly outlines its many positive contributions to our Nation's progress. All Americans should know of the results achieved through this creation of American initiative, and demand further similar investment in our Nation's natural resources.

The article follows:

TVA: THE UNLEARNED LESSON
(By Lloyd Armour)

Twenty-six years separate the historic legislation creating the Tennessee Valley Authority from the latest important TVA measure; a new method of financing the continuing work of the agency. In that time, a new generation has grown up without knowing what it was like in the days before TVA. And an older generation has had time to forget.

This is a fitting time, then for a new look at the reality of a dream, at an experiment that has become a $2 billion going concern. How does it justify its costs to its owners, the people of the United States? What has it done for the people of the Tennessee Valley? Is it "creeping socialism," as some have claimed, or is it "democracy on the march," as others describe it? Does the valley use the agency as a lure to uproot industry elsewhere? Does TVA steal pennies from the pockets of taxpayers elsewhere to subsidize cheap power? Does it build steam plants as an excuse for continuing its work, now that the task of developing a river is all but complete?

These are some of the questions raised by a continuing barrage of criticism, against TVA. For the answers, it is necessary first to go back, briefly, beyond the TVA era to some farsighted statesmen such as Theodore Roosevelt. Gifford Pinchot and Senator George Norris. These were men who pondered long about ways of conserving and developing the Nation's resources. From their thinking, and that of others, emerged the concept of total development of river valleys. In the depression years, a small band of men in Congress began a long fight for such an experiment in the Tennessee Valley.

From almost any standpoint, the choice was an excellent one. The South as a whole was underdeveloped, and it was labeled by some as the Nation's No. 1 economic problem; and in the South, no region presented a greater problem than did that valley washed by the deceptively passive Tennessee River. For each spring, this sleeping tiger awoke and became a roaring, rampaging flood. Residents fled in terror to the high ground as the water swept away crops, homes, and land. Millions upon millions of tons of topsoil vanished in hours. Businesses were wiped out, and with them sources of taxation.

The region depended upon a one-crop economy. "Balance" in agriculture was a phrase of the professors. There was little industry and much poverty. Malaria, tuberculosis and malnutrition left their marks upon the people and the burial places.

But the sickness that sapped the region most was one for which no doctor could prescribe. It was the sickness of fear. There was fear of the river, fear of the land that produced less and less. There was fear of the future. And in the beginning there was fear of TVA.

But the building of dams meant jobs and a flow of money. As the mighty dams took shape, hope rose. There was a new look about the land. Ears began to listen to what the experts of the fledgling TVA had to say. Eyes began to see help, as in mosquito control. There were specialists looking at the land, testing it and finding the need for fertilizers of a particular type. Since the type wasn't being produced, TVA began to make it.

Quickly, the valley learned something about the TVA: It would help, but there had to be cooperation. Soon the valley farmers, guided by their extension services and county agents, began to apply lime and phosphates to jaded land in the first of many, many thousands of farm-test demonstrations. They began to learn about soil needs, about contour plowing, about the importance of trees as windbreaks and erosion curbs. In a few seasons, the barren, soil-scalped hillsides were green, the valleys below them lush.

As research and production details were worked out and TVA-born fertilizers developed fully, the agency turned over its data and its processes to private industry—free of charge. In addition, industry got another gift—a readymade market. Since research, introduction and promotion of any new fertilizer is costly, the industry moved slowly. But here TVA was doing the whole job with its research, demonstration plots, fertilizer schools and educational programs for the farmer.

Today, the farmer in Wyoming or New York, as well as in Tennessee, benefits by the TVA fertilizer program (which is paid for by appropriations from Congress). Minnesota farmers saved almost $750,000 from 1949 to 1954 by using TVA-developed and promoted "4–16–16" and "5–20–20" fertilizers.

It may be noted here that a chemical paradox—the fact that nitrogen is both a lifegiving plant food and an ingredient of powerful explosives—makes it possible to turn the TVA fertilizer development center from peacetime to wartime use in a day.

As TVA was helping to promote a new and more productive farm economy, it was also having an effect on commerce and navigation. The series of high dams which canalize the Tennessee created a long, deep waterway over which freight traffic moved in increasing tonnage. Tows hauled automobiles from the industrial north to the Alabama plains, saving more than $10 a car. Ferroalloys moved from Muscle Shoals, Ala., to Pittsburgh $5 a ton cheaper.

What does this mean to shippers? On 12.1 million tons of traffic in 1958, they saved more than $24 million. Deducting the annual cost of the waterway—$4.2 million—there was a net transportation benefit of $19.8 million. This is a 14.5 percent return on the $136 million net investment in a navigation system which contributes to interregional commerce and strentghens the whole Nation.

It is axiomatic that navigation development and industrial growth go hand in hand. Since 1933, private industry has invested nearly a billion dollars in more than 130 terminals and plants along the river. All in all, more than 3,000 new industries have come to the TVA region.

This growth has prompted many critics of the agency to raise cries of "industry piracy" on the part of the valley. But the vast majority of new plants represent branches and subsidiary operations of industry which still have their headquarters elsewhere. In a recent survey by TVA, it was found that during a 19-year period only 25 plants pulled up roots elsewhere and relocated in the TVA area. During this time, nine much larger plants left the region. The 25 incoming plants represented 3,800 jobs; the 9 outgoing, 2,000; net gain for the valley, 1,800 jobs.

The truth is that while industrialization in the valley has been rapid, it has lagged behind the Nation as a whole, and the cry of industrial piracy is absurd.

Originally, cheap electric power was considered among the less important objectives of TVA. It was viewed merely as a byproduct of river control that would allow for increased rural electrification and encourage a moderate expansion of industry. But with

the coming of World War II, the picture changed. A secret installation known as Oak Ridge needed power in enormous quantities. Opportunities for increasing hydropower were limited; new dams might justify their costs in power terms, but not, at the time, in other ways. Besides, a hugh dam is not an overnight project. In 1940, TVA turned to a much quicker method of adding to generating capacity: the steam plant. First to be built was the Watts Bar plant, with a capacity of 240,000 kilowatts.

After World War II, and with the beginning of the Korean conflict, it became increasingly clear that more sources of quick power were needed. Not only were farms, homes, and factories demanding more current, but entirely new energy-devouring installations were entering the area: atomic-energy plants, the Arnold Engineering Development Center, and the Redstone Arsenal, where the Army was building missiles.

By fiscal 1958, the atomic-energy plants and other Federal defense agencies in the area were using 51 percent of all TVA power—more than 29 billion kilowatt-hours. This is more power than was sold last year in any of the States outside the valley except four.

So TVA became a defense weapon. But it had an extra meaning for taxpayers in that it provided very large savings on the Government's electric bill. Perhaps this will show how much:

From 1959 to 1958, TVA delivered 129.8 billion kilowatt-hours of power to Oak Ridge and Paducah, Ky., atomic facilities. This cost the Government $590 million. If there had been a one-mill per kilowatt-hour increase in this cost, the bill would have been $130 million more—about the cost of the U.S. share of the St. Lawrence Seaway.

Now compare the average cost of producing and marketing electric power by TVA with that of privately owned utilities. Last year, the operating cost for TVA was 5.21 mills per kilowatt-hour; the corresponding cost of privately owned utilities was about 10.09 mills. At that rate, the Government's $590 million electric bill would have been almost doubled.

But, say the private utilities, TVA doesn't pay taxes. It's a subsidized operation. True, TVA doesn't pay taxes in name, but it makes payments to State and local governments in lieu of taxes. In 1958, these payments (from TVA and is distributors) totaled $13,751,000. Excluding Federal agencies, about 6.3 percent of the electric bill of all TVA consumers was paid to State and local governments. Corresponding taxes of private utilities in neighboring areas ranged from 5.1 percent to 11.8 percent.

In addition, the law requires TVA to repay to the Treasury, from its power revenues, the entire investment in each power facility within 40 years. To date, payments of $250 million put the agency well ahead of schedule. The payments exceed the entire Federal investment in the first 13 dams TVA built.

There are other money savings involved. Millions of electricity users in other parts of the Nation are paying lower electric bills because of TVA's rate policies—the so-called yardstick of power. Electric rates, according to Federal Power Commission data, are lowest in the TVA and Bonneville areas, and grow progressively higher as the distance from these public-power facilities increases. Before TVA, rates in a semicircle through parts of Texas, Oklahoma, Iowa, Michigan, and New York were $10.08 for each 250 kilowatt-hours. In 1958, rates for the same area averaged $7.10.

The power companies nearest the Tennessee Valley have made the greatest reductions in retail rates. Nevertheless, their earnings have increased at a rate substantially greater than the average of all the large utilities in the Nation. From 1937 to 1957, according to published Federal Power Commission figures earnings available to the common stockholders of the larger privately owned utilities multiplied 3¼ times; similar earnings of companies bordering the TVA increased 8 times.

So much for power. To many people, a more important objective of TVA is flood control. The valley is now protected by 10 major multiple-purpose dams providing 6 million acre-feet of storage for flood waters.

Were there no TVA dams, a flood stage of 57.9 feet in the Tennessee River today would cause $100 million in damage to lowlying Chatanooga. The total estimated annual average value of flood regulation by the reservoir system is $11 million. Over 26 years, this annual sum more than equals the annual cost and total investment combined of the system's flood control facilities.

TVA's extensive experience in mapping, advising and aiding in engineering studies of flood control is being put to work in many sections of the country. One of the agency's special interests now is the tributary watershed program—away from the rivers, back among the creeks and branches where flooding is also destructive, though less so than on the rivers. This program seeks to establish ways by which, under State leadership, communities can organize themselves, study their problems and apply solutions through their own agencies and their own resources.

Critics charge that the citizens of the valley are the helpless victims of an autocratic project. How well have these helpless victims done with the help of the TVA? In 1933, only 3.4 percent of the total Federal income tax collections came from the seven States of the TVA region. By 1958, the percentage had more than doubled. From 1933–56, total collections amounted to $21,900 million. If we assume a rate of gain based on the 1933 percentage, TVA has meant an extra $10 billion in Federal tax revenues—almost five times the entire cost of the project.

At the same time, the valley has become a vast market for goods produced outside. From 1934 to 1958, TVA alone purchased $1.1 billion worth of outside goods. Users of TVA power spent $1.8 billion for electrical appliances. Still another billion has been spent on automobiles, boats, motors, and other products.

These figures should not lead anyone to envision the valley as more prosperous than any other section of the Nation. It is far from that. It lags the national averages in almost all economic measurements. Twenty-five years ago the per capita income was only 45 percent of the national average; despite a sizable gain, it is only 63 percent today.

There is a great deal yet unaccomplished. The balance between agriculture and industry is short on the industry side. Too great a portion of the region's youth leaves each year because there are not enough jobs. Farms are too small and too many. An estimated 2.7 million acres need to be reforested.

The demand for electricity is growing at a rate of 800,000 kilowatts a year. People are just naturally using more power—the air conditioner, for example, is a big sales item where it once was a rarity. Business expansion, new industry, demand more—and the valley must have these if it is to continue to progress.

So TVA must have new funds merely to keep abreast of demand. That is why its supporters have fought for a self-financing measure (a method, incidentally, first suggested by the Eisenhower administration). TVA will be lucky if the $750 million made available by the latest TVA legislation can adequately provide for needed facilities in the valley. The pattern of progress has been set, and there can be no slackening off without harm to the region.

The great irony of TVA is that its value is given more recognition abroad than in the United States. It is the one great American project that draws a steady stream of potentates, students, engineers, and politicians from every corner of the globe. It is the one great idea we have exported with success. Eight foreign countries now have big projects based on TVA—countries ranging from India to tiny Lebanon.

Efforts have been made to establish TVA-type authorities in the valleys of other American rivers: the Missouri, Rio Grande, Colorado. A new Columbia Valley Authority bill—the Neuberger bill—is before Congress. None of these efforts has thus far succeeded.

The TVA was an experiment at a time of national economic distress when the public was receptive to daring innovations. The electric utility interests, natural enemies of such an enterprise, were themselves in trouble. These interests, reviving, have since fought the spread of the TVA idea with a rising fear. While keeping TVA under carping attack, they have sown widely and nurtured well a confusion that restrains the people of other sections from emulating a valley program that is, nevertheless, the outstanding example of a people's ability to make the most of a natural environment.

February 12: Birthday of Lincoln and Kosciuszko

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 9, 1960

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks, I should like to join in paying tribute on February 12 to two outstanding figures in American history. There is an interesting significance in the fact that on this particular day we honor one of America's greatest Presidents, Abraham Lincoln, on the 151st anniversary of his birthday, and, at the same time, honor Gen. Thaddeus Kosciuszko, hero of the American Revolution, on the 214th anniversary of his birthday.

The significance lies in the fact that even though each of these heroes lived in an entirely different era, they had the same unyielding respect for the dignity of man and the value of human freedom.

Every American knows the inspiring history of Abraham Lincoln and how he virtually gave his life in the great struggle for equality of man. His brave decision to end slavery in America has been a symbol to people who respect freedom throughout the world.

It is perhaps ironic that the glorious contributions of General Kosciuszko to American history have, unfortunately, been obscured by time and have not found as great a recognition in this country as they should. General Kosciuszko was born February 12, 1746, at Siechnowicze, Poland. He was a brilliant son of a prominent but impoverished family. After briefly attending college, young Kosciuszko entered the Polish Corps of Cadets and completed his military training with the rank of captain. The King of Poland, impressed with Kosciuszko's natural ability for engineering, sent him to France to pursue further studies.

Kosciuszko returned to Poland 7 years later, in 1774.

He demonstrated his deep dedication to freedom when, realizing that there was little opportunity for his engineering talents in his native land after the first partition of Poland, this young soldier decided to come to America, determined to help our Nation in its struggle for independence. He arrived in this country in 1776 at his own expense and volunteered his services to General Washington. On October 18, 1776, he was commissioned by an act of Congress as an engineer in the Continental Service with the rank of colonel.

Kosciuszko's unique engineering ability gained recognition in 1777, when he joined the northern army and participated in the campaign against Burgoyne. Perhaps his greatest contribution was in the victory at Saratoga, a victory which won for America not only a campaign, but France's recognition of her independence.

In the course of the running battle for American independence, Kosciuszko was selected to build the fortifications at West Point. We can all take pride in the fact that it was his suggestion that the Nation build a national military school at the spot which he first helped develop as West Point.

Perhaps one aspect of Kosciuszko's deep dedication and respect for human dignity which places his own beliefs in close parallel with those of President Lincoln, is demonstrated by his concern for the American Negro. Kosciuszko first recognized the plight of the American Negro when, at the request of General Gates, General Washington transferred the Polish hero to the South. Kosciuszko was stationed in Virginia and, while awaiting further orders, he saw the Negroes at close quarters and was brought face to face with Negro slavery. It was this experience, coupled with Kosciuszko's deep resentment against every form of human suffering, that developed in him a profound sympathy for the American Negro, which 17 years later was to dictate his parting testament to the New World.

By 1784 Kosciuszko had written a brilliant record of bravery in the American Revolution, when a wave of patriotic ardor swept over Poland after the second partition of that nation in 1792. Convinced that his efforts in America were no longer needed, the Polish hero of the American Revolution returned to his native land. Upon his arrival in Poland, General Kosciuszko immediately proceeded to Krakow, where he summoned the people to arms and proclaimed new decrees in favor of the Polish peasants. He attacked the Russians at Raclawice. Infuriated, Catherine of Russia sent a large army to fight Kosciuszko and his poorly equipped army in the south of Poland. The battle can best be described as devastating. The two forces met, and after suffering heavy wounds himself, Kosciuszko was taken prisoner. With him fell the independence of Poland. Kosciuszko was taken to Peterburg as a prisoner, and only after Catherine's death, her successor, Paul I, liberated the Polish hero.

In December 1796, Kosciuszko returned to America, arriving in Philadelphia. His great contribution to American independence had not been forgotten, and he was warmly received by Thomas Jefferson. By this time, grants of American land and American money awarded to Kosciuszko by a grateful Congress were very considerable, and these he turned over to Jefferson, with the stipulation that the gifts be used to establish a Negro school and to buy and free Negro slaves.

Thus, in 1826, the legacy went to found the Negro school at Newark, the first educational institution for Negroes in the United States and which bore Kosciuszko's name.

Kosciuszko returned to Europe in 1798 and began negotiating with the French Government for her help in restoration of Polish independence. In 1806, Napoleon summoned Kosciuszko to assume leadership of the Poles, who were in revolt. Kosciuszko had little faith in the promises of the emperor, and believing the offer to be a trap, he remained in Paris.

Kosciuszko died on October 15, 1817, in Switzerland, and to the very end his courage and determination for a free Poland served as a symbol to his countrymen.

From the tribute which we pay to these two great heroes on February 12, modern Americans can learn a great lesson. As we engage in the great debate over civil rights in America today, it is wise to reflect what great sacrifices have been made by our forefathers to restore men—all men—to their proper place of dignity and freedom. We should also learn that there can be no lasting peace so long as people are subjugated, whether it is in the United States, or in Poland, or any other corner of the world.

Both Lincoln and Kosciuszko have carved for us a great challenge; but it is we, as Americans, who today must dedicate ourselves to the fulfillment of those principles for which both these inspiring heroes fought and died.

Our recognition of respect, equality, and dignity for all Americans by passage of appropriate legislation can indeed be an inspiration to people throughout the world that the principles of Lincoln and Kosciuszko have not been forgotten. Perhaps through our forthright action in the field of civil rights in this country, we can look with greater confidence for the restoration of total freedom from Communist oppression in Poland and the other captive nations throughout the world.

Additional Federal Judges for Eastern District of New York

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. DORN of New York. Mr. Speaker, it has long been known among members of the bar in our area, that additional Federal judges were needed for the eastern district of New York, and in the U.S. Court of Appeals for the Second Circuit. Hearings were held recently before the House Judiciary Committee on legislation for the creation of these new judgeships, and I fully support this legislation.

A fellow member of the Brooklyn Bar Association, Robert A. Morse, chairman of its committee on Federal legislation, presented the bar association's views to the Judiciary Committee. I am sure what he had to say to the committee will be of interest to my colleagues in the House. I concur with his logic before the Judiciary Committee and join with him in urging the passage of the necessary legislation.

His statement was as follows:

I should like to extend my appreciation, and that of the Brooklyn Bar Association, for this opportunity to set forth our views in support of the bill which provides for two new Federal judges in the eastern district of New York, and two new judges in the U.S. Court of Appeals for the Second Circuit.

Unfortunately, your communication did not reach me until February 1, 1960. Consequently, there has not been sufficient time to collect all the data which might be desired for presentation on February 3, 1960, before your committee. However, this matter is so important that I have been designated by the president of the Brooklyn Bar Association, Lynn G. Goodnough, to present our views to your committee concerning the essential elements underlining the problem concerning the Federal court in Brooklyn. We would appreciate the privilege to submit such additional data as we may see fit within the near future.

I am addressing this report not only in my capacity as chairman of the committee on Federal legislation, but as one who served as an assistant U.S. attorney in the eastern district of New York for approximately 2½ years, and as one who served as law clerk to the Honorable Walter Bruchhausen, presently the chief judge of the court. It is with this experience in mind that I desire to present to this committee the compelling reasons for passage of H.R. 6159.

The eastern district of New York comprises the counties of Kings, Queens, Nassau, Suffolk, and Richmond, the last of which is known as Staten Island. In 1930 the population of this area was 4,288,984. At that time the district had five judges and a sixth judge was added in 1936. Today, some 25 years later, the population has grown to 6,764,000, a growth of approximately 2,476,000. During that time the jurisdiction of the Federal court was immeasurably increased by changes in the national labor law. In addition, the waiver by the Government of its sovereign immunity brought forth a great number of tort actions against the Government. During this time litigation concerning such subjects as taxation, immigration, maritime causes and criminal actions was greatly increased.

The population explosion was accompanied by a litigation explosion the nature of which has been such that the court has been, for all purposes, severely hampered.

During the entire 25 years, when our system of society was undergoing vast changes calling for extensive litigation, the judge power of the U.S. District Court for the Eastern District of New York has remained in status quo. The eastern district of New York has undergone a phenomenal growth of those factors which bring about litigation. An example of this is the fact that although a high proportion of incoming sea passenger traffic goes through the Southern District

of New York an extremely high percentage of the freight discharged by cargo ships passes through Brooklyn, which is Kings County. This fact, coupled with the tremendous increase of new dock facilities in Brooklyn, has brought about a tremendous increase of litigation arising out of injuries to longshoremen and harbor workers, which injuries are covered by Federal law. The growth of industry in Nassau and Queens, as well as within other counties in the eastern district, has brought forth extensive Federal litigation. Much of this litigation requires trials of an extensive nature all of which increase the workload of the court. As pointed out by Judge Bruchhausen in his letter dated February 2, 1960, a copy of which is appended hereto, one of the judges in the eastern district recently presided in a criminal trial which consumed 7 weeks of trial time and a number of other long cases await trial. Judge Bruchhausen emphasizes the fact that he has been unable to obtain help from judges in other districts since they, themselves, have problems within their own jurisdictions.

A quotation from Judge Bruchhausen's letter adequately points up the problem. He says: "While the adoption of modern procedures has been helpful, they are of minor value and not a substitute for judge power."

Although statistics are of great value it is only by practicing within the eastern district that one may be fully impressed with the great injustices that result from inadequate judge power. All too often I have witnessed, with saddened heart, the tragic capitulation of plaintiffs who have been forced to accept inadequate settlements because of the inability of plaintiffs to receive an early trial. On the other hand I have also seen, during so-called crash calendar programs, defendants pay on cases which have absolutely no merit when faced with settlement conferences before the court. It would be a tragic affair if the Federal court, long the barrier and bulwark of individual freedom and liberty, were to become an insurance adjustment house as has occurred in so many of our State courts.

With respect to the so-called crash program wherein visiting judges assist with calendar clearance within the eastern district, as referred to on page 1 of Judge Bruchhausen's letter, it might be readily seen that no sooner have the judges departed for their respective jurisdictions when the backlog of new cases brings the court right back to where it was before. Artificial crash programs which strain the court, overload the office of the U.S. attorney in order to bring about an improvement in the numerical statistics of the court, are not a substitute for a just result which grows either out of a fair trial, or as a result of a settlement against a background where either the plaintiff or defendant could get a trial within such a time so as to render any settlement a sensible one.

With respect to the time element between the filing of the note of issue and the actual date of trial, litigants are required to wait approximately 2½ years before trial. As the result of the recent temporary crash programs, this has been reduced to 2 years. However, the backlog is once again increasing at a rate even faster than prior to the calendar clearance by 16 visiting judges.

With respect to the addition of two circuit judges for the U.S. Court of Appeals for the Second Circuit, it is well known that the court of appeals for New York, Connecticut, and Vermont is a court of tremendous responsibility covering types of litigation both unusual and difficult. The addition of two new circuit judges will do much to assist that court in rendering earlier decisions and prevent its distinguished members from becoming overworked. In addition, it is patently apparent that the nature of the appellate matters which reach the court of appeals require extended and mature consideration. These judges, above all, should have sufficient time, and a reasonable workload, to continue their distinguished service.

As stated herein earlier, the Brooklyn Bar Association desires to have the privilege of submitting whatever additional material it deems pertinent within the near future. On behalf of the bar assocation I heartily recommend and, indeed, plead for the passage of H.R. 6159 in order that the citizens of the eastern district of New York shall have the adequate protection of the Federal court as guaranteed by the Constitution.

U.S. COURT OF APPEALS,
New York, N.Y., February 2, 1960.

ROBERT A. MORSE, Esq.,
Attorney at Law,
Brooklyn Bar Association,
Brooklyn, N.Y.

DEAR MR. MORSE: You called me this morning to inform me that you are to be in Washington tomorrow, representing the Brooklyn Bar Association, to present, on behalf of your association, the well-known position of the bar here that the Federal courts in this area are grossly undermanned, a fact we judges know only too well.

Needless to say, we of the judiciary are appreciative of the awareness that the members of the bar have with respect to our courts, and particularly appreciative of the action taken by your bar association.

An opportunity is to be given us of the judiciary to make presentation of our needs in our accustomed way by personal appearances of designated judges. However, we are very grateful that a bar association, particularly one as well known and as keenly observant as your Brooklyn Bar Association, is, on its own initiative, also presenting a statement.

Thank you very much for informing me of your trip.

Believe me, with greatest respect,

Sincerely yours,

STERRY R. WATERMAN,
Judge, U.S. Court of Appeals for the Second Circuit.

U.S. COURT,
EASTERN DISTRICT OF NEW YORK,
Brooklyn, N.Y., February 2, 1960.

ROBERT A. MORSE, Esq.,
Brooklyn, N.Y.

DEAR MR. MORSE: I am informed that in your capacity as chairman of the committee on Federal legislation of the Brooklyn Bar Association, you have requested information, supporting the need for two additional judges in this court.

Inasmuch as I appeared before the House Judiciary Committee, headed by Hon. EMANUEL CELLER, some 3 years ago, I thought it appropriate that I write him directly. I enclose a copy of the letter, which you may use as you see fit.

Sincerely,

WALTER BRUCHTAUSEN,
Chief Judge.

U.S. COURT,
EASTERN DISTRICT OF NEW YORK,
Brooklyn, N.Y., February 2, 1960.

Hon. EMANUEL CELLER,
Judiciary Committee, House Office Building, Washington, D.C.

DEAR CONGRESSMAN CELLER: In recent weeks representatives of bar associations and other organizations have requested details of the caseload of this court and related information, principally for use in connection with the so-called omnibus judges bill, now under consideration by your Committee on the Judiciary. Annexed is a schedule of some of the statistics. While I do not underestimate their importance, I believe you should have before you all of the relevant facts.

I am conscious that the Congress expects the judges of this court to exert every effort to reduce the caseload. Early last year we embarked upon a carefully planned pre-trial and trial program, headed by Chief Judge William F. Smith, of New Jersey, with the assistance of 16 other visiting judges, each of whom participated, 3 weeks more or less, supplementing the services of the regular judges of this court. As a temporary solution of our problem, the undertaking was successful in that we disposed of some 1,600 cases. During the period about 1,100 new cases were filed with the result that we cut the backlog by about 500 cases. However, the prospect of further reducing the caseload and the time for bringing a case for trial is dim for several reasons. The number of cases filed in 1959 materially increased over the number filed in 1958. Another factor, not adequately reflected in the statistics is the protracted cases, both civil and criminal. One of our judges recently presided in a criminal action which consumed 7 weeks of trial. A number of other long cases await trial. During the past few months I have contacted judges in other districts, and requested them to help us out. Because of similar problems in their jurisdictions, I have met with no success.

While the adoption of modern procedures has been helpful, they are of minor value and not a substitute for judge power. The addition of a calendar commissioner to our supporting personnel has enabled us to so constitute our trial parts of the court as to avoid wastage of court time.

Yesterday Judge Byers retired from active service. While he plans to take some cases, there is an indication that he will not contribute the same amount of time as in the past. This situation aggrevates our problem. Within the past few years, several of the judges of this court retired. The time elapsed in replacing them has been an additional impediment in the dispatch of the business of the court.

The enlargement of the jurisdiction of Federal district courts has and will undoubtedly increase the court's business. For example, it is estimated that the recent amendments to the National Labor Relations Act will double the number of cases in that field.

As you know, there has been no increase in the number of judges in this court in 25 years.

I respectfully plead for approval of the bill, adding two judges to this court.

With kind regards.

Sincerely,

WALTER BRUCHAUSEN,
Chief Judge.

Schedule of statistics of pending civil actions—Docket and trial calendar comparison: Dec. 31, 1958, Dec. 31, 1959

	Dec. 31, 1958	Dec. 31, 1959
Causes on dockets, including those noticed for trial	2,319	1,816
Causes, noticed for trial	1,027	284
Causes filed, during year	1,141	1,269

U.S. DEPARTMENT OF JUSTICE,
U.S. ATTORNEY,
EASTERN DISTRICT OF NEW YORK,
Brooklyn, N.Y., February 2, 1960.

Re need for additional judges in the eastern district of New York.

ROBERT A. MORSE, Esq.,
Brooklyn, N.Y.

DEAR MR. MORSE: You have asked my opinion as to the need of this office for additional judges in this court. There is no question in my opinion but that this court needs at least two additional judges. There has been a steady increase in the volume of Government work in this district over the past 7 years. The court has been able to do its work only by bringing in visiting judges.

The bringing into this district of 17 different judges who sat here for a total of 100

judge-weeks last year in the so-called crash program was perhaps the most dramatic proof of the need for judges in this district, and proof of what can be accomplished if an adequate number of judges is available.

But even these judges, although they disposed of 914 civil cases, were not able to handle the long cases. The cases that looked as if they would take a long time for trial were largely deferred on the trial calendar so that a volume of dispositions could be achieved. The result is that there is now pending on the civil calendars of this court a disproportionately large number of cases which will take 2 weeks or more to try.

The Government has on the civil side approximately 60 cases where notes of issue and a statement of readiness has been filed. The Government is now ready for trial in all these cases. The lack of a judge available to try these cases, however, indicates that it will be well over a year before they can all be disposed of. As you know, the small number of judges available allows for only one judge each month to sit in nonjury and admiralty cases. This judge divides his term between admiralty and civil nonjury. The result is that any long case ties him up completely, and at best we can expect a judge available 1 week per month to try our civil nonjury cases.

Similarly, on the criminal side this office has been deferring the long criminal cases in order to dispose of the volume of current smaller cases which otherwise would have been held up, but even on the criminal side this office has been making use of additional judges over and above the one who is regularly assigned to the criminal part. During the months of October and November, Judge Rayfiel was tied up during the entire period with the trial of a single criminal case, *United States* v. *Gillilan, et al.* And during January 1960, Judge Abruzzo was tied up for almost a whole month with the trial of *United States* v. *Freeman*, an important narcotics case, with the result that the smaller cases have had to wait.

We have an additional nine criminal cases pending where we anticipate that the trial will take anywhere from 2 to 8 weeks, and these cases by and large are our most important cases from the point of view of the enforcement of the criminal law. The long cases have to be tried at some time, and during the calendar year 1959 while we had 41 trials as against 56 in the previous year, those 41 took longer to try than the entire 56 in the previous year, thus in the year 1959 we had 211 criminal trial days against 200 for more cases in the previous year.

I have requested the chief judge of the district court to assign additional judges for the trial of criminal cases during the spring of 1960, and to asign a judge to sit and try criminal cases during the summer in order that we may bring our docket of over 100 pending criminal cases more current. The number of criminal prosecutions started increased (over 10 percent) in 1955 to 466 as against 416 in 1958.

I enclose a copy of the annual report of this office for the fiscal year 1959 showing the volume increase in the work of the office.

Sincerely yours,

CORNELIUS W. WICKERSHAM,
U.S. Attorney.

Cases commenced in eastern district of New York

Fiscal year ending June 30	Civil, United States	Criminal	Total, United States	Private civil	Bankruptcy	Total, non-United States	Total cases
1952	490	252	742	677	731	1,408	2,150
1953	510	250	760	741	698	1,439	2,199
1954	496	371	867	684	819	1,503	2,370
1955	+655	427	1,082	729	805	1,534	2,616
1956	494	509	1,003	601	825	1,516	2,519
1957	519	500	1,019	788	822	1,610	2,629
1958	502	421	923	737	886	1,623	2,546
1959	653	425	1,078	601	832	1,433	2,511

Median interval from filing to disposition of civil cases in which trial held: 1952, 25.4 months; 1956, 41 months; 1958, 49.9 months.

Source: All statistics are taken from the Annual Report of the Director of the Administrative Office of the U.S Courts.

CONCLUSION

The most important development of the current year in judicial administration has been the crash program to dispose of civil cases in this district. Under the very able leadership of Judge William Smith, who headed a team that provided five additional judges to handle civil cases in this district during the months of May and June, and part of the month of April, great strides were taken in bringing the civil calendar in this district up to date. Although the number of additional trials was not great, the ability of the court to provide a prompt trial induced many parties to settle on the basis of their realistic and reasonable value, and in some cases even to dismiss suits. As it turned out, we could have used even more judges, as the number of cases in which the Government was ready for trial exceeded those which could be tried even with the five additional judges.

As the Government is a party to more than half of the cases on the civil nonjury calendar, it is vitally interested in the condition of the court calendar, and cooperated with the visiting judges and with the judges of this court in all attempts to bring the calendar into the current position.

Another innovation was the institution of a central jury pool with a jury and calendar clerk, and the handling of the civil calendar by a single judge. Though these innovations made possible a better handling of the civil calendar at a substantial saving to the Government in jury fees, there seems some question as to whether funds to continue it are available.

The institution of a calendar clerk who will keep in touch with the attorneys so that they may be advised in advance as to when they can expect their cases will be called for trial, is a necessary part of any modern court system, particularly in New York City. A large proportion of the cases, both civil and criminal, are handled by a few lawyers who have a busy practice in the many courts scattered throughout the metropolitan area. Such attorneys must schedule their time, and cannot afford to wait substantial periods of time in readiness to be called. A calendar clerk, with authority to advance cases which are actually ready for trial over cases ahead of them on the calendar which are not ready, can keep the calendar moving, and can make sure that there is a case actually ready for trial at all times. This also has been demonstrated in the recent crash program. These improvements should be continued.

During the past year, the number of criminal cases pending more than 2 years has been sharply reduced. The number of actual trials and the utilization of court days for criminal cases has increased to a new high for recent years. Despite this improvement in the court's criminal docket, there are pending more cases than can be tried by the regular criminal judge during the coming year. Additional judges from outside the district to try the pending criminal cases and those which can be expected to arise during the coming year, are a necessity. If such outside judges are not available, it will be necessary for the court to reassign some of the existing judges of the court from civil cases to the handling of criminal cases, which will have an unfortunate effect on the civil calendar, which at so much effort and expense has been brought up to a more current position by the crash program.

It would be erroneous to conclude this report without a word about the excellent work done by the assistant U.S. attorneys and the secretarial and clerical staff of this office, who deserve the praise of the Department for the fine results achieved by this office. Unfortunately for the Department, in the last half of the fiscal year, many experienced assistants resigned. If the work of the office continues to increase, and particularly if other experienced assistants resign, it will be necessary to increase the staff of the office.

Even with improved calendar procedure and handling of the docket, the existing number of six judges cannot be expected to handle the volume of cases that flow into this district. If any demonstration was needed of the need for additional judges in this district to dispose of the large and growing amount of litigation that exists in this community, the crash program and the effective work that the additional judges did provides it. Few realize that if the eastern district of New York were a separate State, it would be the eighth largest in the country. With but one judge to a million inhabitants, this district has far less Federal judges than other comparable districts. The Judicial Conference has recommended two more judges. This is the minimum needed.

Respectfully submitted.

CORNELIUS W. WICKERSHAM, Jr.,
U.S. Attorney, Eastern District of New York.

Fuera Trujillo

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 10, 1960

Mr. PORTER. Mr. Speaker, Dictator Trujillo has put himself into the position of being helped on his inevitable way out—and there are many and powerful people and groups willing to lend a hand. Moral indignation has been aroused by his latest atrocities and has been expressed recently by priests in his own country and now by the O.A.S. at the instigation of Venezuela, only recently emerged herself from the bloody dictatorship of Perez Jimenez.

Under a previous consent, I include herewith an editorial from the New York times of today, which truly concludes:

It seems safe to say that the hemispheric organization has driven Generalissimo Trujillo a few more steps toward the abyss in which all dictatorships end.

The editorial follows:

GENERAL TRUJILLO ON TRIAL

The Dominican Republic has been tried by its peers and condemned. In effect, this is

what happened on Monday when the Council of the Organization of American States met and yesterday when the 11-nation General Committee discussed the Dominican situation.

The initiative came from Venezuela, which had suffered 10 years of brutal and corrupt dictatorship under Pérez Jiménez and knows what tyranny means. The case presented by Venezuelan Ambassador Falcón-Briceño, which included a reading of the remarkable pastoral letter of the Roman Catholic bishops, was effective. In reality, not much of what is happening is known in detail, but what is known is damning.

The church leaders spoke of "a grave offense against God" and they prayed that none of the members of Generalissimo Trujillo's family "shall ever experience, during his lifetime, the sufferings that today afflict the hearts of so many Dominican fathers of families, of so many children, so many mothers, and so many spouses." Ambassador Falcón-Briceño accused the Dominican Government of "patent and flagrant violations of human rights," and on this all the hemispheric countries were agreed.

The O.A.S. is without powers to take sanctions in cases like this, but one should not underestimate the force of a moral condemnation. An investigation by the O.A.S. Peace Commission, which Secretary Herter suggested as a possibility, could produce results because the Dominican "benefactor" is sensitive to criticism. It seems safe to say that the hemispheric organization has driven Generalissimo Trujillo a few more steps toward the abyss in which all dictatorships end.

Kosciuszko: A Tribute

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. GALLAGHER. Mr. Speaker, every year we pay tribute to the life and works of Tadeusz Kosciuszko, the Polish nobleman and American revolutionary hero. It is fitting that we do so, for were it not for the services of men with such distinguished qualities in leadership as Kosciuszko, we would have been hard pressed in our war for independence.

The career of Kosciuszko can be instructive for Americans today. The ideas that motivated this great leader were twofold: Love of freedom and an appreciation for the role of power in winning and maintaining freedom once it has been won. In Kosciuszko one finds a classic example of the excellent combination of idealism and realism that assures the greatest political effectiveness.

Kosciuszko proclaimed his devotion to the abstract principle of liberty and democracy. He was inspired by the theories of Locke and Rousseau, theories that provided the ideological basis for the American and French revolutions. To this extent Kosciuszko was among the greatest of idealists.

But Kosciuszko's devotion to democracy was not a passive one, not at all an attitude of detached emotionalism. Kosciuszko wedded his idealism to reality. He had the inner compulsion to translate theory into practical action. This explains his enormous contribution to the American revolutionary effort.

Yet there is another aspect of Kosciuszko's activism and realism. It was his ability to see the unequivocally clear and unambiguous relationship between the need for power and strength if freedom is to be won and maintained. In brief, Kosciuszko would argue that a patriot may have an abstract notion of liberty, but to achieve this liberty he must fight, and to maintain his liberty, he must be strong.

We Americans could well apply Kosciuszko's concepts in our conduct of foreign relations today. It is well for a nation to proclaim to the world the virtues of democracy. It is also a heartwarming experience to feel the inner emotional upsurge that comes with an outward appeal to the highest idealistic instincts of man. But it would be disastrous were we as a people to fail to support our idealism with a hard calculated apraisal of the role of power and strength in international politics. We as a people must be strong. We must maintain our strength and power, today more than ever before as we face the Soviet challenge. We dare not commit ourselves to a life of luxury and repose, for here lay the seeds of national decline.

As we pay tribute to Kosciuszko, let us, therefore, rededicate ourselves to the principles of idealism which he proclaimed, but let us also rededicate ourselves to the realistic principle of strength and power and national resolve as Kosciuszko had done in his fight for American liberty and the freedom of his native Poland.

Clemson Tigers

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. DORN of South Carolina. Mr. Speaker, South Carolina is proud of Clemson College.

Clemson is in a beautiful setting at the foothills of the Blue Ridge, on the old estate of John C. Calhoun and his son-in-law, Thomas G. Clemson. It is my honor to represent Clemson in this Congress.

The story of football at Clemson is a fabulous one. It is a "rags to riches" story without parallel among the major grid powers of America. It is a story of drama, suspense, and success. It is a saga of champions. Its Horatio Alger aspects would inspire the youth of the United States. The General Assembly of South Carolina adopted the following concurrent resolution which is a tribute to Coach Frank Howard, his staff, and the fantastic Clemson Tigers—three times Atlantic Coast Conference champions in 4 years:

CONCURRENT RESOLUTION EXPRESSING THE APPRECIATION OF THE GENERAL ASSEMBLY ON BEHALF OF THE PEOPLE OF SOUTH CAROLINA TO CLEMSON COLLEGE FOR ITS DEFEAT OF TEXAS CHRISTIAN UNIVERSITY IN THE BLUEBONNET BOWL IN HOUSTON, TEX., ON DECEMBER 19, 1959, AND FOR ITS OUTSTANDING FOOTBALL RECORD OF PAST YEARS

Whereas the people of South Carolina learned of the defeat of trichampion Texas Christian University by the one-sided score of 23 to 7 in the Bluebonnet Bowl at Houston, Tex., on December 19, 1959, with great joy, as the Clemson team was considered by sportswriters as the underdog; and

Whereas the Clemson football team became Atlantic Coast Conference champions for the second consecutive year and for the third time in the past 4 years; and

Whereas this victory gave the Clemson team nine wins and two losses for the season which was the best record made by the team since 1950, when a record of nine victories and one tie was recorded; and

Whereas the game in Houston was witnessed by 55,000 spectators and several million viewers on television as the game was carried on a national network and listened to by other millions as the game was broadcast over radio by a private concern; and

Whereas the Clemson team has appeared in a total of seven bowl games, six of which have been in the past 12 years, and in all of which Clemson has been rated as the underdog, with the astounding record of having triumphed in four of the seven games; and

Whereas the victory over Texas Christian University was the 115th victory for veteran Coach Frank Howard, who has guided the Clemson team on such a victorious course of 20 years as head coach and in addition has served 9 years as line coach; and

Whereas six of the players on the 1959 Clemson team were selected on at least one all-conference team, and five made the all-State selection, and one member gained the great distinction of being named to several all-American teams; and

Whereas the glamour of the 1959 Clemson team has attracted many spectators and wherein the Tigers played before 4 sellout crowds during the season, with an average of 32,925 persons per game; and

Whereas one player led the Atlantic Coast Conference in scoring 70 points and was 10th in the Nation; 1 player was 1st in the conference and 7th in the Nation on kickoff returns; and the entire Clemson team was 26th in the Nation on total offense, 6th in the Nation on scoring, 11th on total defense, 6th on rushing defense, and 8th in the entire Nation on kickoff returns, and was ranked by both the AP and UPI 11th among all major teams in the country; and

Whereas the fine football teams of Clemson College by participating in 7 past season bowl games have brought much favorable publicity to the institution and to the great State of South Carolina; and

Whereas this outstanding record in a large measure resulted from scholarship aid through the Clemson athletic program through IPTAY whose thousands of members over a period of 26 years have provided educational opportunities for more than 900 student athletes; and

Whereas the Clemson athletic department has consistently enjoyed most cordial relationships with the press, radio, and television, and whose members have given generously of both time and space in recognizing these accomplishments; and

Whereas the general assembly believes that it is very fitting on behalf of all the people of South Carolina to express deep appreciation to the president of Clemson College, and particularly to Coach Frank Howard and his staff and to the entire team on its display of skill and good sportsmanship in establish-

ing this outstanding record of which the people are justly proud: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the general assembly on behalf of the people of South Carolina hereby expresses its deep appreciation to the president of Clemson College, to Coach Frank Howard and his staff, and to the entire team for the defeat of trichampion Texas Christian University in the Bluebonnet Bowl in Houston, Tex., on December 19, 1959, and for its outstanding record on the gridiron during the year 1959 and past years.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Fiftieth Anniversary of the Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 11, 1960

Mr. KUCHEL. Mr. President, on behalf of the able junior Senator from New York [Mr. KEATING], who is necessarily absent, I ask unanimous consent that a statement he has prepared relative to the 50th anniversary of the Boy Scouts of America be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

During this week the Boy Scouts of America are celebrating their 50th anniversary. It has been 50 years this week since the Boy Scouts of America were chartered by Congress. In that period several million young boys have received the spiritual and outdoor training of this splendid organization, to the benefit of themselves and the Nation. Today there are Boy Scouts in practically every country of the free world, who are dedicated to the principles of tolerance, good will, and friendliness.

The Scouts themselves are proud of their organization; of its happy, wholesome program of activities; and its contributions to the making of a finer America.

I was reminded of this when Eagle Scout Tom Richards of Tayhouse Troop 19 in Rochester, N.Y., visited me in my Senate office recently. He had been chosen as the Boy Scout representative from New York State to participate in a special ceremony at the White House. Eagle Scout Richards is a fine boy indeed, and representative of the millions of self-reliant young boys who have learned courtesy and the principles of good citizenship from those dedicated men who serve so selflessly as scoutmasters.

The Boy Scouts have lived up to their objective: "Onward for God and Country." In doing so, they have gained the gratitude of the Nation, and I tender the heartiest of congratulations to Boy Scouts everywhere on this significant anniversary.

America's Critical Challenge Evaluated by Hon. Carl Vinson, National Defense's Foremost Exponent

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. OLIVER. Mr. Speaker, it was my privilege last night to attend, along with yourself and other Members of Congress, the annual dinner of the Veterans of Foreign Wars, here in Washington.

These assemblies of veterans are always most pleasing and inspiring. But, this 1960 dinner was the most outstanding of any that I have attended because of the alert to the critical challenge to our physical survival which was sounded. Certainly, no group of American citizens is any more conscious of this urgent and emergent challenge than the veterans of the several armed conflicts in which America has been involved.

It was entirely appropriate and timely, therefore, that our able and distinguished colleague, Hon. CARL VINSON should be the principal speaker. There is no citizen of this Nation, in my opinion, who has had the close relationship with our defense problems, over these many years of our military emergencies, as has this great chairman of the House Armed Forces Committee. The people of America know him and continue to have implicit confidence in his ability, his integrity, his knowledge and his judgment regarding the overwhelming problems of adequate defense for this Nation not only in the emergencies of the past, but as well as in the greatest of all emergencies, this one of the present and the near future.

Therefore, his statement of last night commands the attention of all thinking men and women of America; and, in fact, of the entire free world. It is my opinion, Mr. Speaker, that any objective analysis of the principal points which he made as to our military deficiencies will support, in detail, the conclusion that we are, and will continue to be, unless we snap ourselves out of our current complacency, in a most vulnerable position of defense.

It is unfortunate that this running argument concerning our defense posture comes during a political year. It is also, unfortunate and even partakes of the vicious that those of us, who criticize constructively what we consider to be the deficiencies in our Military Establishment, are being labeled as partisan politicians, by those with whom we are in disagreement. Certainly, if we did not try to alert our people, to the inadequacies as we understand them to exist, we would be derelict in our responsibilities, and, in a sense, even un-American.

At this point, Mr. Speaker, I include in these remarks a letter of constructive criticism recently sent by me to Secretary of the Army Brucker, which speaks for itself:

JANUARY 30, 1960.

Hon. WILBER M. BRUCKER,
Secretary, Department of the Army,
Washington, D.C.

DEAR MR. SECRETARY: As a citizen, as the father of an officer in the Regular Army, and as a Member of Congress with official responsibilities, I am deeply disturbed because of what seems to me to be a dangerous downgrading of the Army, both through insufficient funding for modernized combat equipment, as well as through inadequate funding for the manpower which our worldwide commitments require, even for limited wars.

The recently published book, "The Uncertain Trumpet," written by Gen. Maxwell D. Taylor (Retired) persuades me, further, that the Army has been, and is being, critically crippled in its effectiveness to do the job upon which it may be, and probably will be, called upon to do.

Your public statements which indicate a posture of the Army's readiness to meet any challenge, requiring quick response do not reassure me. For example, in December, in an issue of the Christian Science Monitor, you were quoted to the effect that the STRAC units of the Army are equipped, trained, and ready to go, presumably to any spot in the world, when, as and if called upon. Yet, there is no information available to me which points toward immediate availability of air transport for the necessary lift to get there. Then again if such a demand should be made for emergent action by STRAC units during the May-August training period for Reserve and National Guard units, when STRAC personnel and equipment are committed to such training programs, dangerous delay in getting to the area of action, even if the airlift were available and ready to go, could result in failure of the mission.

It has, also, been called to my attention that vehicles for mobility are sadly lacking. Certainly, motor vehicles which have had over 100,000 miles of usage and which, because of budgetary limitations, are being patched up at a repair cost of $200 or more per vehicle, do not suggest combat readiness. No businessman would conduct his own business on this penny-wise, pound-foolish basis.

General Taylor calls for a modernized, relatively small, but well-protected balanced retaliatory force as his concept of a U.S. Army ready for limited wars or incidents in any area of the world.

In this connection, is there any present indication that the Army is to get, in the reasonably near future, the volume of procurement in planes, tanks, guns, rifles, and other combat equipment on a modernized basis which is so obviously and urgently required to do the kind of a combat job, envisioned by General Taylor and other dedicated, experienced, and able Army officers?

Certainly, the $137 millions of dollars of the $300 million appropriated for modernization of the Army in the 1960 budget, which I enthusiastically supported, and which is now, according to my understanding, impounded by the Bureau of the Budget does nothing for the reassurance of those of us who question the present combat readiness of an Army, composed of enlisted men and officers who personally and collectively are ready to go, but who are, in too many instances, inadequately equipped to do the combat job which will be expected of them.

I know that you will agree with me that any overstress of budgetary requirements at the expense of modernized arms and equipment to carry out the missions of the Army in this nuclear age, is ill-advised, to say the least, in the kind of a world in which we live today. You, apparently, do not agree that budgetary limitations have been overstressed and have become the prevailing guideline of our defense expenditures at the

expense of effective readiness so far as the Army is concerned.

If you can find the time to advise me if I am unfair in this evaluation of the present combat posture of the Army, I shall appreciate and value your contribution most highly. It will be especially encouraging for me to learn that these impounded appropriated funds will become available in the near future for a greater volume of modernized weapons and equipment for the Army.

Thanking you for your courtesies of the past and any pertinent information in order that I may reassure my constituents, I am,

Sincerely yours,

JAMES C. OLIVER,
Member of Congress.

Mr. Speaker, I am not a military expert, but I respect the judgment of those with whom I have discussed this issue of our military preparedness. It is my firm conviction that we are not prepared for any eventuality and that we are even losing ground because of our complacency and our obsession that dollars are more important than the threat to our physical survival.

I respect, as does every American citizen, the President of the United States, who is the commander in chief of our military forces. He has had a lifetime of military service and a most distinguished career. But, I do not agree with him that all is well and that we can leave these terribly hard decisions to his judgment, alone, regardless of our evaluation of conditions as we may individually, or collectively as a majority of the Congress, see them. Others in this great country of ours feel, similarly, as witness this comment of Chalmers M. Roberts, a respected and competent news analyst and columnist, in a recent issue of the Washington Post:

A BLEAK FORECAST OF STORMS AHEAD

(By Chalmers M. Roberts)

In the midst of the agony of France and the confusion of Cuba it is dangerous to take one's eyes off the main show. The East-West summit conference opens 16 weeks from Monday in Paris, assuming that De Gaulle will survive his great moment of testing.

Already there are signs, new signs, of the troubles ahead.

Whether or not Nikita Khrushchev intends to alter the game of peaceful coexistence he has been playing these past months is impossible to say. Whether or not he does will be important not only to international relations but also to the presidential campaign here at home.

The candidates on both sides are nervous, naturally enough, lest some Khrushchev move put one or another of them in a bad light for having been too receptive or too hostile to the Soviet peace offensive.

What has recently been occurring—in Washington, in Geneva, in Berlin, and in Moscow—at a mimimum demonstrate that Khrushchev is preparing for some hard bargaining. This much, of course, is not unexpected. No one in his right mind on the Western side could expect anything else.

In Washington the Russians have refused to settle the lend-lease account without deriving some form of dollar credits at the same time. In Geneva they have argued long and bargained hard on the nuclear test ban. In Berlin—in Communist East Berlin, that is—the Communist puppets of East Germany have begun a new pressure campaign against West Germany. In Moscow Khrushchev has been talking tougher publicly and rattling his missiles privately to American Ambassador Thompson.

But Khrushchev still talks of the "Spirit of Camp David." His recent speech to the Supreme Soviet condemned American efforts to negotiate from strength, as President Eisenhower put it Wednesday night, while making it clear he, Khrushchev, intends to do just that at the summit.

Berlin remains the focus of the East-West problem. The great question is whether Khrushchev will agree at the summit and later when he talks with the President this June in Moscow to let the present situation continue, whatever the formula, or whether he will force a change.

In the 14 months since Khrushchev first raised the Berlin issue nothing has altered the basic facts: West Berlin is still a thinly defended free world island in the Communist sea. Khrushchev has postponed his threat to sign a separate peace treaty with his East German puppets but the threat remains and he constantly repeats it.

Against this backdrop of troubles ahead the Eisenhower administration is living out its final months in a defensive fashion. Under attack both politically and nonpolitically for its military preparedness posture, the administration has bogged down in a semantic argument over what is a missile gap or a deterrent gap. All the Cabinet members save Secretary of State Herter are sent to the political rostrums to defend the record in one way or another.

At the State Department there is no sign of new thinking or of imaginative measures to cope with the coming diplomatic negotiations. The Berlin argument will begin where it left off at last summer's Geneva Conference of Foreign Ministers.

The Coolidge report on disarmament has disappointed many inside the administration. Some effort is being made, it appears, to pump some new short-term ideas into the arms control field beyond the limited and mostly long-term proposals by Coolidge and his staff. But even here there is as yet no indication of any success.

On every hand one hears the remark that the next President will face the flock of chickens come home to roost, in both military and diplomatic terms. Some of the candidates themselves are saying this out loud; the others all seem to acknowledge it implicitly.

A gloss is being applied by the President's trips, the recent one to three continents, the next one to South America, the following one to the Soviet Union and Japan. All indeed have a value. But they cannot cover up the underlying situation to which only the word "deteriorating" can be applied.

We can, Mr. Speaker, meet the challege of these times. But we cannot, and will not, do the job which so obviously must be done unless and until we evaluate basic military and economic needs in terms of those needs rather than in restrictive dollar terms which inhibit us on the basis that we cannot afford to take the steps necessary to meet these needs. Our approach necessarily must be that we cannot afford this continuing failure of ours to meet the challenging needs of this, the last half of the 20th century.

Mr. Speaker, leaders in the Soviet Kremlin are moving relentlessly, step by step, toward their objective. We must not think for one minute that their pressures will not increase. This is already clearly evidenced. We must act, and act fast, to meet these pressures.

The words of dedicated responsibility of CARL VINSON, whom Veterans of Foreign Wars have honored with the VFW Citizenship Gold Medal award and citation, have been of the utmost significance to the future survival of America.

We must heed them, Mr. Speaker, and act upon them now.

Tribute to Kosciuszko

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. RODINO. Mr. Speaker, on February 12 we celebrate not only the birth of one of our greatest Presidents but also the birthday of another hero, who, like Lincoln, dedicated his life to the principles of human dignity and freedom.

This man was Tadeusz Kosciuszko, hero of the American Revolution. He was one of a host of foreigners who helped our Founding Fathers in their fight for independence. Our country owes a great debt of gratitude to these gallant fighters, who zealously devoted themselves to the cause of liberty.

Tadeusz Kosciuszko was born into a poor family in Siechnowicze, Poland. He was a gifted and brilliant person, who succeeded in obtaining not only the best military education which Poland could then offer, but also obtained his degree from the famous Mezzieres military school in France, where he specialized in artillery and engineering.

Then in 1776, on hearing of the War of Independence, Kosciuszko borrowed money for passage and sailed for America. He offered his services to Washington and was subsequently commissioned a colonel in the Continental Army. His engineering abilities were recognized and one of his first tasks was to draw up the plans for the fortifications to be built on the Delaware River. He subsequently participated in many battles, and established a brilliant record for bravery, ability and courage. In recognition of his outstanding services Congress made him a brigadier general in 1783.

Having completed a brilliant contribution to the cause of liberty here in America, Kosciuszko then turned to the needs of his native land, which was in the throes of an incipient rebellion against the Russian occupation. General Kosciuszko immediately proceeded to Krakow, there to take up once again the battle for liberty. His attack on the Russians brought devastating reprisal, and the fight for Polish independence was lost as Kosciuszko's army was defeated. The general was sent to Russia as a prisoner.

Upon his release, in 1796, Kosciuszko returned to America. His great contribution had not been forgotten, and he was given numerous awards and gifts by a grateful Congress. An interesting sidelight to Kosciuszko's career is that he asked that these gifts be used to alleviate the lot of the Negro. Subsequently, in 1826, his legacy was used to set up a Negro school in Newark—the first school for Negroes in the United States.

We owe a great debt to General Kosciuszko not only for his valiant contribution to the War of Independence, but for his lifelong dedication to the cause of dignity and freedom. Freedom-loving peoples everywhere take inspiration from his example. His sacrifice moves all of us to rededicate our own lives to the end that one day people everywhere will be free, and no man required to suffer oppression or slavery.

Address by Deputy Secretary of Defense James H. Douglas at "Dinner With Ike" Banquet

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 11, 1960

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Hon. James H. Douglas, Deputy Secretary of Defense, at the "dinner with Ike" banquet in Wichita, Kans., on January 27, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DINNER WITH IKE ADDRESS BY THE HONORABLE JAMES H. DOUGLAS, DEPUTY SECRETARY OF DEFENSE, WICHITA, KANS., WEDNESDAY, JANUARY 27, 1960

I am greatly honored to join such a distinguished group of fellow Republicans for the "dinner with Ike." We are proud to salute our President and express anew our gratitude for his leadership in peace, as in the past we saluted his victorious leadership of our forces in war. And I know you must be proud to claim him as a Kansan.

I am happy to be in Wichita. Having served the Air Force for more than 10 years, including my service during the war, I take special pride in your aircraft industry and also in McConnell Air Force Base. My last visit here was to witness the roll-out of the first Boeing B–52 built in Wichita. Since that day the production of these advanced long-range bombers has contributed greatly to our military power, and they will play an important part in our strategic forces for years to come. Cessna and Beech are also important defense producers.

Kansas is strongly represented in the Congress by Senator SCHOEPPEL, Senator CARLSON, and your own Congressmen, ED REES, WINT SMITH, and BILL AVERY. They have given strong support to the President, and you may well be proud of them. In the Defense Department those of us who work with the Appropriations Committee miss Errett Scrivner as a senior member of that committee, but we're glad to have him in the Pentagon.

We live in a difficult and dangerous time—a time of revolutionary change. We cross oceans or continents in a few hours. Nuclear power is available to serve man or destroy him. With rocket vehicles we have begun the exploration of space.

Communism governs in Russia, Siberia, China, and parts of Eastern Europe. While the tide appears checked, communism still seeks and confidently expects to dominate the world. This it can never do so long as the free world remains united and resolute.

We Americans continue to enjoy the personal freedoms that our forefathers won. As a Nation we are prosperous beyond past experience. And when I say this I am well aware of serious agricultural and economic problems such as some of you have here at present. Western Europe has recovered, and our Far Eastern allies are growing stronger.

In fact the entire free world is far stronger today than most of us had genuine reason to expect 10 years ago, or even 5 years ago. When President Eisenhower was nominated in 1952, he stated our aim a determination "to build a sure foundation for prosperity for all here at home, and for a just and sure peace in the world." In building for sound prosperity, the President's faith in the dynamic power of a free economy has strengthened the faith of the rest of us. He eliminated many restrictive controls, and he fought, as he fights today, to maintain an honest dollar to avoid increasing the mortgage on the prospects of future generations. Today the prospect of a balanced budget for the current year, and of possible debt reduction of $4 billion in 1961 is good assurance for sound prosperity. One doesn't advocate a balanced budget only because it will be popular. A balanced budget involves more taxes than are comfortable, and less spending than some would like. But in fighting for a balanced budget, the President fights to protect the purchasing power of our earnings, and to avoid further increase in the cost of living. And, finally, our savings which stand for our capacity to renew and increase the national productive plant. We must remember spending and debt can be as real a threat to our liberties as being unprepared to meet aggression.

As to building for a just and sure peace, we have built and maintained military strength that is an effective power for peace. We have provided effective military and economic aid to our friends among the free world nations to the point that today their ground forces of some 5 million men, air forces of nearly 30,000 aircraft, and naval forces of 2,500 combat ships offer a major deterrent to any aggression against them, as well as us.

We have strongly supported the United Nations and the strengthening of international law to solve the disputes that are sources of tension and can produce conflict. The President has patiently encouraged negotiations looking to a reduction of armaments, but only with adequate safeguards. He has promoted a people-to-people program to break down the barriers of distance and custom and language, and to bring better international communication and understanding. He has undertaken a new diplomacy of travel and meetings with the chiefs of state, which was initiated by Vice President NIXON'S trip to South America and to the Soviet Union. President Eisenhower visited England, France, and Germany, and received Mr. Khrushchev in our national capital. More recently he visited 11 capitals in Europe, the Middle East, Asia, and North Africa. When he left on this great mission he stated our basic aim as "peace and friendship in freedom." And he said:

"* * * I hope to make this truth clear—that, on all this earth, not anywhere does our Nation seek territory, selfish gain, or unfair advantage for itself. I hope all can understand that, beyond her shores at home, America aspires only to promote human happiness, just achieved. * * *

"Actually, as our founding document proclaims, the core of our Nation is belief in a Creator who has endowed all men with inalienable rights, including life, liberty, and the pursuit of happiness. In that belief is our country's true hallmark. * * *

"So believing, we look on our Nation's great wealth as more than a hard-earned resource to be used only for our own material gain. We believe that it should also serve the common good, abroad as well as at home."

This was the meaning of the message he delivered to kings, premiers, presidents, and to millions of common people.

A few days ago I saw a color newsreel of the President's trip. I wish every American could see it, as it communicates much better than words an understanding of our President's effort, vitality, and confidence in this new crusade, and an appreciation of the tremendous welcome he received everywhere. This new diplomacy has not settled international problems, but it has surely strengthened the bonds of friendship in the free world. It has given millions of people confidence in the purposes of the American people. It has created a better atmosphere for exploring at the conference table every avenue, looking to a settlement of problems that threaten peace.

We are pleased that Mr. Khrushchev gives assurance of peaceful intentions, but the peace he favors is very different from our aim of peace and friendship in freedom.

We are pleased at his announcement of a reduction in Armed Forces, but he told his listeners that there would be no reduction in military power. Make no mistake that until agreements with adequate safeguards are reached, military power continues as our best assurance of peace, and in the event of war, our only assurance of survival.

Communism seeks to control the minds of men. It operates in every sphere of human effort—economic, political, psychological, and military. And the challenge of its competition leaves no room for complacency. We cannot afford to rely on our past accomplishments or our lead over the Soviets in material comforts and enjoyments—30 million homes, 50 million automobiles, and 50 million television sets. These are important—they testify to an enormous and versatile productivity—but they do not of themselves assure the victory of freedom, or even the survival of our American way.

Let us renew our dedication to the principles that have made our country great. We must understand that our material prosperity is basically the product of individual freedom and a free market; that individual freedom can be retained only under a government of law as opposed to one of men, and we must make clear to the world that our primary concern is freedom and dignity for the individual—for every man and woman. In the meantime, while the struggle continues, we must stay militarily strong.

Our strategy is one of deterrence. Today the combat readiness of our Army, Navy, Air Force, and Marines, together with the forces of our allies, should make clear that aggression against us or any ally cannot profit the aggressor. This deterrent power must stay strong.

To deter attack against us we must have long-range striking power that can survive surprise attack and perform its mission of retaliation. We look first to the manned bombers of the Strategic Air Command for this power, but long-range missiles are entering our inventory and emphasis has begun to shift from manned systems to missiles.

To prevent and contain local wars, we look particularly to our carrier task forces, to our Marines and Army forces already deployed, or to be moved by air; and to our tactical air forces. We have long since stopped thinking in terms of our national defense alone; we think rather in terms of the total defense capabilities of the free world. And so our strategy of deterrence places special importance on the integrity of our alliances and our continued strengthened of the forces of our allies.

The introduction of ballistic missiles has had an extraordinary impact on our strategy and all our planning. Today our long-range striking power and that of the Soviet Union

still depends on manned bomber aircraft. In our long-range bombers we are far stronger than the Soviet Union, but there is the ballistic missile to consider.

Our Strategic Air Command has received its first operational Atlas missiles at Vandenberg. We believe that the Soviet Union also has a small number of operational intercontinental ballistic missiles. I have read published statements to the effect that the Russians have many intercontinental ballistic missiles today. Our best information, and no subject is more intensely studied day after day, is that this is not so.

During the next 3 years, however, our present estimates are that the Soviets will produce more long-range missiles than the number of Atlas and Titans we plan to produce in that period. On the basis of all present indications, however, the advantage they might attain in numbers of ICBM's would fall far short of providing rational support for a decision to attack. This conclusion results from most careful study. It relies on our overall retaliatory power—manned bombers with air-to-surface missiles, on missile submarines, on other forces besides long-range missiles, on a high state of readiness, improved warning, and on vigilance in reacting to changes in the Soviet posture. It is basic to our defense policy.

In short, because of the versatility and strength of our overall retaliatory capability, the numerical advantage that the Soviet Union may attain in long-range missiles, which is likely to be greatest in 1962—will not produce a gap in our deterrent power.

Concern naturally exists as to the Soviet's more powerful rocket propulsion systems. This gives the Soviets an advantage, which will not soon be overcome, in space exploration, and in putting up large satellites. We need not be surprised if the Soviets carry out new spectacular projects ahead of us. We believe that the large size of the Russian rocket is explained by the fact that it was planned and undertaken before they had achieved a nuclear explosion, and when it appeared that military missiles would have to carry very large warheads. Our Atlas program was undertaken, and the missile designed, after the solution of the thermonuclear problem was assured and we could count on much lighter warheads. As to size Atlas and Titan meet our military requirements.

A strong factor in determining the number of missiles in our Atlas and Titan programs has been our confidence in the development of land-based and submarine-based solid-propellent missiles, which are smaller, easier to handle, and offer more advantage as to concealment and mobility. Atlas and Titan have an advantage in range and payload, but we look to solid propellents to provide our second generation of military missiles.

The Saturn rocket vehicle, with several times the thrust of Atlas, is now being developed by the National Space Agency for the exploration, scientific investigation, and peaceful uses of space. These activities are the responsibility of NASA. Saturn will be available for military use when needed. The Defense Department is not interested in space flight and exploration as ends in themselves, but it will use space when the defense mission can be better performed in space. I expect effective cooperation between NASA and the Defense Department—such cooperation as we have had and have today on such projects as the X–15, which made its fourth successful flight last week, and Dynasoar. These are advanced manned vehicles which will give us knowledge of the problems of flight from speeds of a mile a second to 3 miles a second.

The Defense Department is proud of the accomplishments in our missile programs. Atlas and our intermediate-range missiles, Thor and Jupiter, are effective weapons of extraordinary accuracy. The development of Atlas into a satisfactory production missile was accomplished in 5 years, much less time than was estimated to be necessary by the scientific group that first asserted its feasibility in 1954. The 5-year development period was certainly shorter than that required for the Soviet ICBM.

Thor missiles deployed to England last year created the first force of ballistic missiles among our allies, and Jupiter missiles are scheduled for Italy.

The first production for the solid-propellent Minuteman has been authorized. Two Polaris submarines with their complement of ballistic missiles should be in operation by the end of this year. Seven more are under construction and procurement of another 6 are in a planning stage for a total of 15. Progress in this system is good.

In his budget message to the Congress earlier this month the President stated:

"Strategy and tactics of the U.S. military forces are now undergoing one of the greatest transitions in history. The change of emphasis from conventional-type to missile-type warfare must be made with care, mindful that the one type of warfare cannot be safely neglected in favor of the other. Our military forces must be capable of contending successfully with any contingency which may be forced upon us, from limited emergencies to all-out nuclear general war."

The budget and the defense programs upon which it is based are aimed to provide such forces.

I wish I could discuss with you the effort in planning. In research, in training, in production and supply, that gives us ready forces today, and assures us of a defense posture of strength for tomorrow. And I wish you could see and know more of the people who are the heart of our armed services. But here in Wichita you have a good sample of service personnel and know first hand of their character and competence.

Several years ago we had serious difficulty in retaining our military personnel—in attracting them to military careers. We are doing the job much better today, but you can all help in making military careers more rewarding—and so strengthen our national defense. I suggest you can give our service people something beyond better pay, and housing, and the things that good service management can provide. You can give them—in the communities in which they serve—the satisfaction of knowing that they have the respect and gratitude of their fellow citizens—and that they are recognized as the shield of our national life, behind which we can all work for a lasting peace in freedom.

Grain Storage in Perspective

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, February 11, 1960

Mr. YOUNG of North Dakota. Mr. President, I am in receipt of a copy of a speech made by the very able executive secretary of the National Federation of Grain Cooperatives, Mr. Roy F. Hendrickson, at the annual meeting of the Farmers Grain Dealers Association at Des Moines, Iowa, recently.

Mr. Hendrickson deals in a very factual way, with a very difficult facet of our farm problem—that of Government grain storage costs. I am informed by the Government Printing Office that the speech will make 2⅔ pages of the CONGRESSIONAL RECORD at a cost of $216. I ask unanimous consent, however, that notwithstanding the cost it be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

GRAIN STORAGE IN PERSPECTIVE

(Remarks by Roy F. Hendrickson, executive secretary, National Federation of Grain Cooperatives, Washington, D.C., before the annual meeting of the Farmers Grain Dealers Association of Iowa, Des Moines, Iowa, January 27, 1960)

On January 12 and 14, a subcommittee of the Senate Committee on Agriculture and Forestry, headed by Senator SYMINGTON, Democrat, Missouri, conducted public hearings on grain storage costs. One professor and three elevator managers out of some 11,000 in the Nation testified.

Congress has clearly the right to investigate. Its investigations are often useful. This is especially so when they employ systematic presentation, display an earnest endeavor to present the whole picture fairly, and a sincere effort to give bias a holiday.

In this effort to supply perspective on the complex grain storage problem we are not concerned with the examination, or even the existence, of political motivations.

CCC STOCKS

At the present time, and for some years past, the Commodity Credit Corporation owns and has owned large quantities of grains, fibers, and other farm commodities acquired under price supports. The inventory figure changes every day.

The Government also owns many other things—for example, a strategic stockpile of metals, rubber, duck feathers, and other items of approximately the same magnitude of value. This occasions limited interest. It is not dealt with here. Few have shown the slightest interest in the cost of transporting and storing its contents. So far as we know, this information is not classified, but we may be in error.

The CCC stocks of grain consist mainly of wheat and corn. If war came tomorrow, they would rise in price and any surplus vanish in short order. These commodities are basic to the national food supply of cereals and livestock and livestock products.

These and other grains are perishable organisms. In years of study under powerful microscopes at the Peoria, Ill., regional laboratory of the U.S. Department of Agriculture, only one sterile kernel of wheat was found, none of corn, oats, barley, rye, or grain sorghum. Each kernel has a small host of microorganisms and each undergoes constant, subtle change, sometimes slow, sometimes rapid, which justifies the classification "perishable." Some warehousemen learn this the hard way.

A LONGSTANDING ISSUE

An issue of public policy has centered about grains for 30 years, which is not settled or in prospect of early settlement. It was a red-hot issue when I came to Washington in 1932; it is still an unsettled, lively issue. Other things change, but this issue goes on and on and on.

The level of price supports for these grains continues currently to be the central issue—the subject of periodic political debate, especially in election years. It is a matter of great importance to many farmers and their families. It is a matter, too, of importance to the public interested in a secure food supply. It is of importance to taxpayers as a matter of cost.

The two extreme views are: no supports versus support prices at a substantial level. There are many compromise proposals in between.

Another facet of the same controversy centers on whether the most desirable method to equate supply (for some years now in excess of market requirements) with demand is through unlimited production and free pricing or through production control and price supports. Again, there are numerous compromise variants.

Currently the forces at odds in this long-standing controversy are so arrayed that neither side can have its way fully. The result has become a chronic state of stalemate.

But while this stalemate continues, production goes on by farmers, featuring the dynamics of new technology, hard work, and the application of American farm genius. This is reflected in steadily increasing per capita farm productivity, the envy of the world. While most nations wrestle with food shortages, our problem is how to deal with abundance.

Despite markets expanded by domestic consumption reflecting a high level of employment and growing payrolls and exports assisted by Public Law 480 and other steps, grain continues to outrun effective market demand in this country even though there have been substantial reductions in support prices in recent years.

The result is that additional millions of bushels of these living organisms we call grain are each year set aside to be stored against the day they may be needed for some peace or war purpose not clearly specified at this time. No clean-cut rationale which might be regarded as a national stockpile policy exists in law.

It is not the function of those who assume responsibilities for storing and preserving such grain for the account of the Government to formulate a farm policy either for Congress or the executive branch. Proximity to grain at the marketplace or in a mill or warehouse does not confer the requisite wisdom. The fountainhead for such wisdom is doubtless hard to find.

But two things are self-evident:

1. Those who, in good faith and at great financial risk, contract to store grains for the Government now find themselves in the crossfire of the controversy between the contending camps over farm policy.

2. The terms and conditions of the contract to store for CCC and the rates paid do not constitute the farm problem. The solution of that problem calls for deeper digging.

The annual cost of storing these commodities is substantial and growing. Even one-half or one-third of the cost figure currently used is substantial. Protecting these grains from loss and deterioration is part of the current national policy as laid down by Congress, and they are being well protected, and for performing this service all agree there must be just compensation.

SOME BACKGROUND DATA

On May 15, 1918, according to the USDA Yearbook of 1921, grain storage capacity in the United States was 1,432,053,000 bushels. The estimated capacity then of country elevators was 1,034,351,000 bushels; of terminal elevators, 248,122,000 bushels; and of mills, 149,580,000 bushels.

The storage rate effective then under published tariffs, used as the basis of payment by the U.S. Grain Corporation, in the Kansas City area was one-thirtieth of a cent per day with 10 days' free time. This meant that if wheat was stored for a full year of 365 days, the charge was 11.83 cents per bushel. This was exclusive of handling charges.

Passing on to 1928–31, when the Farmers National Grain Corporation came into being as an institution created by the U.S. Government, storage capacity had changed only slightly from 1918. The rate in effect for the same area had advanced to one-twenty-fifth of a cent per day. With 10 days' free time, this meant a charge—if storage was for a full year of 365 days—of 14.72 cents per bushel.

In the 1930's, two severe droughts in the grain-producing areas created hardship, and there was widespread support for the idea of creating and maintaining an "ever-normal" granary. This was a period of severe depression in the grain warehousing industry, with much empty, unused space.

Under the present Uniform Grain Storage Agreement, in effect since 1956, Kansas City is in area III for wheat. The rate is forty-six-one thousandths per bushel per day, which figures—if the wheat is stored for a full year—at 16.79 cents.

The published public tariff for storage of grain there by others than the Government is one-twentieth of a cent per day, or 18.25 cents for 365 days.

Taking the rates of those three periods into account—1918, 1928–31, and 1956–59—if other things had advanced in price no more, we should not hear so much talk of inflation.

STORAGE BY COOPERATIVES

The first grain storage facility built by farmers as a cooperative, joint venture was constructed more than a century ago at Madison, Wis. Since that time, grain producers have repeatedly joined together in self-help grain marketing efforts known as cooperatives.

Grain and other farm producers have been encouraged to enter into self-help organizations by every Secretary of Agriculture since the Department was founded. Every Congress and every administration for many decades has endorsed and encouraged this form of enlightened private enterprise. Most States have passed laws to facilitate the organization of farm cooperatives, recognizing their unique character as incorporated partnerships of producers engaged in collective bargaining.

These cooperatives have these characteristics in common: (1) One vote per member. (2) A contract between the member and the cooperative, under which it agrees to remit any earnings above necessary expenses to the member in proportion to the business he does with or through the cooperative. (3) Policies and programs are determined by majority vote of the members who select the board of directors which, in turn, employs management.

These cooperatives have an important place in the marketing or grains and oilseeds. There are more than 2,700 local grain associations, small, medium, and large. These in turn have organized some 28 regional or federated marketing associations to supply marketing services at all of the terminal markets. Twenty-two of them have joined in the creation of an export corporation which is successful and growing in selling these commodities for use in other lands.

These cooperatives at all levels were organized in response to need—often acute need—for fair practices, for better service and adequate facilities, to assist in realizing the highest possible financial return for producers, and to give tone, vitality, and spirit to the competitive principle in price-making at the marketplace. They are private enterprise 100 percent. They have greatly contributed to efficient marketing by appreciably narrowing the margin or toll borne by producers and consumers in the marketing process, and are generally regarded by students of grain marketing to have made a constructive contribution. Their margins above expenses, known as savings distributed to producer patrons, have increased financial returns to farmers by many millions of dollars annually.

These cooperatives are reported by Daniel H. McVey, Chief of the Grain Branch, Farmer Cooperative Service, U.S.D.A., to own approximately 33 percent of the licensed grain storage in the United States of more than 4 billion bushels. About 80 percent of this capacity is at the country or primary marketing level; about 20 percent is at terminal or subterminal points.

These have expanded storage substantially in the last 14 years in response to the requests of the Government and of producers. The latter, more than 1,350,000 farmers owning and controlling their own self-help institutions, have repeatedly asked for safe, efficient storage space where their grain might be conditioned and stored so as to qualify for price supports. These farmers, usually by unanimous vote, have ordered expansion and chosen to supply the basic capital to finance or have authorized large borrowings. Then they have seen the facility filled with grain left there by CCC pursuant to its rights under the CCC contract, and have been forced to build more. Obviously, they are entitled to a return on this investment commensurate with the high risks involved when they assume the hazards and responsibilities of warehousemen, with account to be taken of the temporary or emergency character of the building enterprise.

Many have contracted heavy indebtedness, and substantial amounts of this remain outstanding at current high interest rates. Many of these structures face a future of uncertain need. Grain merchandising requirements for facilities under normal conditions will require only 25 percent of current storage space.

Other elements of the grain marketing and warehouse industry have equally, if not even more, aggressively, expanded facilities. In general, most operators, cooperative and otherwise, are fully agreed that the industry is very seriously overexpanded, with minor exceptions at a few locations. The day may well come when many giant grain warehouses will be known as white elephants of the prairie.

Most who are realistic sense that congressional farm policy may change in important respects at any time. That policy is often unpredictable. In general, they realize that a rational stockpiling policy, geared to meet any known contingency of war or peace, would counsel a degree of contraction and surely no expansion in the inventory at hand. Doubtless it would be unwise to return to the small average carryover preceding World War II, but there is no proven need for the present level of supply.

The function of warehousemen is not to reason why, but to condition grain, to store it, to ship it, and to transfer the grains and oilseeds as ordered by CCC. They have learned to have a high regard for the capacity of the USDA personnel administering the inventory management programs, and most contracting warehouses are credited by the leadership of this and preceding administrations with rendering good services promptly and honestly.

THE CURRENT CONTRACT

The terms and conditions of the uniform grain storage agreement in current use were established in 1956. Some of its essential features have been in effect for two decades.

Under this contract most grain and oilseeds are stored commingled—a method that contributes to economy in the use of facilities. If all grain should be stored identity-preserved, the number of bins required would be endless and much space wasted.

As grain is received by a warehouse under contract with CCC, the methods employed for identifying it vary as to whether it is a country or a terminal facility. The chief difference is that at terminal facilities, official grades and weights are available. After grain has been graded, pursuant to Federal grades, as to grade, class, and various grading factors, and its weight determined by licensed weighmasters, warehouse receipts are issued, much as deposit slips are issued by banks, on forms specified by CCC. The ownership of grain by CCC in public warehouses is in the form of these receipts, redeemable at any time. Possession of such

warehouse receipts supplies CCC with the right to call for the loading out of grain of the same grade, class, often with supplement quality certificates as in the case of wheat protein content. Grain put in store may be ordered loaded out in a week, a month—at any time—with only routine notice. Thus, the per diem storage rate is the significant one. Computing rates in terms of a year is like multiplying a single day's hotel room rate by 365 in the face of the fact that few hotels have every bed filled every night.

The warehouseman is fully bonded. The risk of deterioration in quality, shrinkage, and other substantial risks are assumed by the warehouseman, and he must be financially responsible. The liability of warehouses currently outstanding runs into billions of dollars because that is the value of the grain represented by the paper—warehouse receipts—CCC owns. No revenue for storage is finally earned and not subject to offset for losses until loaded out and the warehouse receipt canceled.

CCC'S OWN STORAGE

At present, CCC owns storage bin space of 985 million bushels, up from 543 million in December 1952. As of February 27, 1959, there was commercial storage space approved by CCC for its use of 3,546 million bushels. This figure has since passed 4 billion bushels, may soon reach 4.5 billion bushels.

In the case of its bins, CCC owns the grain outright and is heir to all the attendant risks. It buys and operates equipment and employs many people at the tasks of checking and doublechecking the condition of its inventory. No one really knows with absolute finality what it costs CCC to do this job for itself. But almost anyone with any business experience knows that no one can compete with the Government in any field with the expectation of winning, for the simple fact is the Government has more resources and need not rely upon normal profit and loss measurements.

Why wouldn't it be a good idea for CCC to store its entire inventory in bins, thus saving warehousemen from worry and risk?

The same question might be asked about other things the Government buys, such as planes, trucks, pencils, and caps for sailors.

The charter of the CCC enacted by Congress states that whenever practicable CCC shall utilize the usual and customary channels, facilities, and arrangements of trade and commerce. This has been properly interpreted to mean that Congress did not intend to transfer the function of grain storage to public ownership.

Under the Hoover administration, there was formed by the Government the Farmers National Grain Corporation, which owned and operated storage. Under Franklin D. Roosevelt, this organization was abolished and ownership of storage was placed in liquidation, and the commercial storage industry was employed to store and handle grain for the account of CCC. Some bins were purchased and used, but most were liquidated during World War II. Some became houses for war workers.

The matter of whether the Government should purchase bins was an issue in the 1948 presidential campaign. The result of that campaign was interpreted as a mandate to expand CCC bin ownership, if needed. However, during the administration of Charles F. Brannan as Secretary of Agriculture, inducements were offered to encourage expansion of commercial storage. These included some increases in storage and handling rates and offers of guaranteed occupancy. During the Korean war, accelerated depreciation of up to 40 percent was authorized on application to the Defense Transportation Coordinator. Such accelerated depreciation granted grain warehousemen was minor in volume compared with that granted many other business segments.

Actually, the need for an extremely large volume of commercial storage plus CCC bin storage was interrupted by the Korean war, which greatly reduced carryover stocks of grains. Worried deficit countries built up their stocks by purchases here. The grain-surplus carryovers on July 1, 1952, and even July 1, 1953, were not burdensome.

There were no allotments in effect, for example, for wheat planted in 1952 or 1953; and for the crop harvested in 1954 Congress, on the recommendation of the current administration in 1953, placed the national wheat allotment at 62 million acres, instead of the fixed statutory minimum of 55 million. The chief pileup of inventory has occurred since.

THE EVOLUTION OF HANDLING RATES

Earlier we have referred to storage rates during World War I and subsequently. The handling rates, the charges for unloading grain at a warehouse, and, on call, for loading it out into a boxcar, truck, barge, or other vessel, have remained unchanged since 1949. It is generally believed that the in-and-out handling charges for terminal elevators are not only profitless, but are actually carried on at a loss. New data supports this conclusion.

For all grains except flaxseed, which is 2 cents a bushel, the "in" charge for grain received by rail or water, usually referred to as the terminal rate, is 1½ cents a bushel. The loading-out charge is three-fourths of a cent a bushel, or 2¼ cents in all.

Table 24 of the USDA storage and handling cost summary, released on January 22, shows the average direct cost of in-and-out handling, excluding such an important factor as return on capital, to be 3.5 cents. This would indicate an average loss of 1¼ cents per bushel. Considering the great volume handled by more than 600 terminal warehouses, this indicates a substantial loss overall which must be absorbed from revenue from storage.

The average cost to country houses for in-and-out handling was reported to be 4.7 cents. This also means that for many this operation was at a loss before taking any return on capital into account.

It happens that there is variation in wheat country handling charges by areas. They are highest in the South and East, where volume is smaller and unit costs are presumably higher. For corn they are uniform nationally—3¾ cents in and three-fourths of a cent out, or a total of 4½ cents. This is somewhat below the national average cost of 4.7 cents reported in the USDA survey on January 22.

THE STORAGE RATES

The USDA storage cost survey, released January 22, shows, first, that there is a substantial range in costs. This is to be expected for a number of reasons. First, construction costs, including labor and materials, vary greatly from area to area. Secondly, many warehouse operators have long since built as much high-cost-per-bushel conventional elevator space as they feel is justified for grain merchandising needs in their markets for the next three decades.

This is because such facilities, with modern equipment, are capable of handling fast a large volume of grain daily, and storage is only incidental to their normal merchandising operations. Such houses are capable of conditioning and standardizing grains to meet market needs, and market needs are expanding at a far slower rate than storage needs.

There has come, therefore, increasingly into the picture to meet CCC's emergency—and perhaps very temporary—need less expensive but far less maneuverable facilities. Some of this is vertical storage, safe enough for a prudent warehouseman to operate if he uses it only for seasoned grain of good and proven storage deportment. Some of it is in the form of tanks that resemble balloons awaiting the signal to go aloft. Some consist of adaptation of other structures.

These types of emergency storage will have little or no place in the normal marketing process now or in the future. They are creatures destined to pass into other or no uses when the present inventory problem is dealt with resolutely by an attack on the problem instead of the symptoms.

The responsibility of the warehouseman storing grain for CCC account in these temporaries is virtually the same as in conventional storage. If he loads out grain below the specification shown on his warehouse receipt, he is assessed the difference between the market value of the grade of grain he took for deposit and what he loaded out. His shipments are subject to rejection by CCC if they fail to meet specific standards. He must absorb the costs of shrinkage. He must be prepared to buy free grain to replace grain as may be needed to offset quality and quantity losses.

One warehouseman, experimenting with new forms of low-cost storage, experienced a loss variously estimated at $15 million to $18 million. There have been other and substantial losses. By and large, warehousemen have been prudent, careful, and responsible. They have been credited repeatedly by this and prior administrations with protecting and preserving well and responsibly the values in grain entrusted to their care by CCC.

The fact that there is a substantial range in costs shown in the survey, that the average cost is below estimated revenue, was to be expected. It is far less significant than seems true at first glance. It is a large country and costs vary, management capacity varies, the extent of the surplus owned by CCC is not distributed with equal impact in all areas, and harvests vary.

The survey period, the most recent full fiscal year, was a year of large CCC inventory relative to available space. Thus, the warehouses surveyed showed average occupancy of 78.6 percent, 77.3 in the country and 83 for terminals. This was large, extraordinary, unusual, and abnormal by any standard except a few recent years. It is like comparing the occupancy of hotels at Chicago during a year when the World's Fair is there with ordinary years.

A warehouse that is 80 percent filled with revenue-producing grain in storage is one thing. A 50-percent occupancy figure is another. The costs will remain nearly constant. But in one case the revenue yields a profit; in the other it may well be below the break-even point. The break-even point will vary but usually takes effect well above 50-percent occupancy.

THE CCC STORAGE COST SURVEY

CCC on January 22 released the preliminary results of its grain storage cost survey. It covered 331 country and 101 terminal warehouses. It showed that direct operating costs, not including handling charges, shrinkage, return on capital invested, and other costs involved, to range from an average of 5 to 21 cents a bushel figured on an annual basis.

In his comment, Secretary Benson said:

"Average direct operating cost, excluding other expense items previously mentioned, was shown by the survey to be 10.1 cents a bushel for country warehouses, on an annual basis. For terminal warehouses, it was 8.6 cents a bushel. The overall average, for both types, was 9.5 cents a bushel direct operating cost to the warehouse for a year.

"Only half the space the commercial industry has available for storing grain for others falls within the groups of houses where the storage costs are at or below the averages. A check of the cost per bushel

groups (see second table at end) shows that the direct storage costs go up to about 13.5 cents a bushel for the groups that would have to be included to cover around 85 percent of the total commercial space which is available. In recent years, the Government, farmers, and others have needed a very high percentage of all space."

FARM STORAGE

CCC also employs programs under which farmers are encouraged to store grain owned by CCC under reseal programs. Farmers receive the same rates for storage as commercial warehouses in the area.

Many farmers so store, but many of them, after difficulty in maintaining the quality of stocks and incurring grade discounts on loadout, have chosen to discontinue this service.

CHANGES IN TERMS OF AGREEMENT

A report entitled "Storage Operations of CCC," being a report of hearings on March 24, 1959, by the Jones Subcommittee on Departmental Oversight and Consumer Relations of the House Committee on Agriculture, was published in 1959.

Starting on page 27, the changes in the terms of the contract since 1940 are outlined. The summary of rate changes begins on page 31.

Subsequently, this useful report compares various State rates with those posted by CCC. In general, this study shows that CCC rates are either the same or lower than tariffs charged other depositors of grain under published tariffs.

The changes in terms over the years indicate a strong increase in the assignment of financial responsibility to warehousemen.

When more responsibility is thus assigned, risks and costs are obviously increased. These changes would have justified substantial rate increases for the average warehouse except for one average offsetting factor—a high average rate of occupancy. Thus, CCC has had the benefit in its rates of large volume use.

The time will come, of course, when CCC inventories will be sharply reduced from current levels. No one known to me is capable of prophecy as to the timing or extent of such reduction. Accordingly, we do not know when average occupancy of the greatly expanded commercial storage space will fall below the average break-even point. It could be soon.

This points to a problem which will then arise. If and when there are only 1 to 2 billion bushels of grain and oilseeds to store for CCC and normal market needs, with more than 4 billion bushels of space available, a period of unbridled competition will begin which will bankrupt many warehousemen. It is not a pleasant prospect. It hovers as a specter in the shadows of every cupola crowning the grain warehouses of the land.

Let's Lift the Ceiling

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Grants Pass (Oreg.) Courier, February 3, 1960. Specifically the editorial points out why the ceiling on earning for persons eligible to receive social security should be lifted. I agree that this should be done.

The editorial follows:

LET'S LIFT THE CEILING

Men and women past 65 years can't get full benefits under social security as of now unless they earn no more than $1,200 a year. In other words, it is possible and legal to draw a social security check 12 months out of a year if other income doesn't exceed $1,200 for that time. That limitation doesn't apply to persons past 72 years.

Yet, it has been determined by persons adept at figuring out things that a worker can, at the maximum rate of pay over the specified period that builds his social security benefit base, contribute close to $6,000 in the course of a working life of 40 years. Then an additional $6,000 is added to that in accumulated interest. This belongs to the worker as a savings fund, a pension, and should be payable without any strings attached.

The railroader, the carpenter, the person in most any trade or professional walk of life builds up a pension or retirement fund that he or she draws after a given age, usually 65, without any compunctions and without any ifs and ands.

Legislation in this respect is pending in the Congress now, that is proposals that the Government remove restrictions from one's earnings and at the same time permit them to draw their saved-up pension. Social security isn't a dole. It's your hard-earned money and mine, money the Government borrowed, or rather dogmatically converted to some other fund while it was not being drawn on—in the early days of social security. It is even alleged the Government used some of this social security money for loans to foreign nations.

It is fair and just that social security fund contributors be permitted to draw it back to their own use as they see fit, not as the Government wishes to dole it, based on what extra money one makes.

Volatile Reverend Powell Is Capping Secular Career

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post, Sunday, February 7, 1960:

VOLATILE REVEREND POWELL IS CAPPING SECULAR CAREER

(When Representative GRAHAM A. BARDEN, Democrat, North Carolina, the other day announced his decision to retire from Congress at the end of his present term, congressional Democrats faced a real dilemma. An ultraconservative southerner, BARDEN is chairman of the House Education and Labor Committee. In line to succeed him is Representative ADAM CLAYTON POWELL, JR., Democrat, New York, a politically controversial Negro. For days, many southerners sought a way to bypass POWELL, but found themselves stymied by an institution dearer to the South than their opposition to POWELL—the congressional seniority system. A breach of the seniority system would threaten their own traditional route to committee chairmanships. Denying him the post on grounds of blacksliding from the Democratic Party in 1956 would lay them open to the same reprisal if they—or their States—clung to their habit of occasional defection. Many Democratic liberals were opposed to POWELL for reasons other than race. Boxed in by their own liberalism, they were unwilling to take a stand against him. Thus POWELL, in all probability, will become chairman of the House Education and Labor Committee when BARDEN steps down. Speaker RAYBURN has told him as much. Herewith is a study of the prospective chairman.)

(By Edward T. Folliard)

NEW YORK.—The tumultuous political career of Representative ADAM CLAYTON POWELL, JR., a Negro whose light skin and aquiline features lead many to mistake him for a white man, began in the pulpit of a Harlem church.

For 19 years now, he has carried on in the two roles of clergyman and politican, and has prospered in both.

His church is jammed when he preaches at 10 a.m. and at noon on Sundays. Next year, if things go right for him, he will reach a new peak in his political career, taking over the chairmanship of the important Committee on Education and Labor of the House of Representatives.

In the pulpit or on the political stump, POWELL has but one issue—Negro rights. When he first ran for a House seat in 1944, he said: "I will represent the Negro people first. I will represent after that all the other American people."

HERO OR LOUDMOUTH?

To his flock of 10,000 in the Abyssinian Baptist Church in Harlem, said to be the largest Negro congregation in the world, he is a hero, a glittering knight of the cloth engaged in a brave crusade for equality for America's 16 million Negroes.

Not all Negroes admire him, however. Earl Brown, a Negro member of New York's City Council, a writer for Life magazine and POWELL's primary opponent in 1958, has called POWELL an irresponsible loudmouth, a wild man of racist tendencies, and a do-nothing Member of Congress with the worst attendance record on Capitol Hill.

POWELL has a ready epithet for any Negro who criticizes him. He is likely to call the critic an Uncle Tom, meaning a hat-in-hand type of Negro who is obsequious toward the white man.

After being backed by the Democratic organization in New York (Tammany) for seven terms in the House, POWELL bolted his party in 1956 to support President Eisenhower for a second term. He said that the President had made "the greatest contribution to civil rights in the history of the United States"—words which he has pretty well eaten since then by accusing the Chief Executive of "seeming indifference" to civil rights problems.

In the spring of 1958, as the country was preparing for the midterm congressional elections, Carmine DeSapio and other Tammany leaders voted to read Representative POWELL out of the Democratic Party. They explained that there was only one reason for their action—POWELL's desertion of the party and his support of the Republican national ticket in 1956.

POWELL, however, insisted that this was not the true reason.

"I am being purged," he said, "because obviously I am a Negro, and a Negro should stay on the plantation."

A newsman pointed out that Tammany leader DeSapio had said he was being dumped solely because he ran out on his party to back General Eisenhower.

"DeSapio is a liar," POWELL snapped.

The Harlem preacher-politician said that DeSapio was "a Mississippi boss," and added:

"The Negroes left Mississippi to get away from white bosses, but they found them here in Harlem."

Tammany's leaders looked around for another Negro to oppose POWELL in the Democratic primary election of 1958 in the 16th (Harlem) Congressional District. A white candidate would have little chance in what has been called "the largest Negro ghetto in the world."

They finally tapped Harvard-educated Earl Brown, the city councilman, who had led a fight to end Jim Crowism in New York housing. Brown faced almost certain defeat, but he was determined to make a fight of it.

"In all his years in Congress," said Brown, "POWELL has accomplished nothing."

He said that POWELL'S attendance record was the worst in Congress.

"He has been absent half the time," Brown continued. "When the civil rights bill was passed last year (1957), POWELL didn't fight for it or vote for it. He was in Europe on a free trip at your expense."

POWELL outdid Brown in diatribes and in creating headlines. He referred to Tammany Leader DeSapio as "Massa Carmine." And he called both Brown and Hulan Jack, Negro president of Manhattan Borough, "Uncle Toms."

He said that Brown was "a handpicked Uncle Tom selected by the Tammany plantation bosses to work against his own people."

NAACP PROVOKED

At an outdoor meeting in Harlem, sponsored by the National Association for the Advancement of Colored People to celebrate the fourth anniversary of the Supreme Court's decision outlawing segregation in public schools, POWELL warned DeSapio and Jack that they had better avoid "walking up and down the streets of Harlem."

"We won't do what the Communists did to the NIXONS in South America," he added, "but we will make it mighty uncomfortable."

This was too much for the NAACP, which issued a statement saying:

"We deplore and dissociate ourselves from the banner of extreme racialism raised by Mr. POWELL in his May 17 address. If Negro citizens are to win permanent victory in the long run, we must be consistent. We cannot condone racism in others while using it ourselves."

Later on, POWELL explained that his remarks were simply "bantering."

Jack, a Catholic convert, said that POWELL was preaching racial and religious hatred and warned that this could only lead to disaster.

Something happened in the spring of 1958 that might have hurt an ordinary politician but hurt POWELL not at all. A Federal grand jury in New York indicted him on charges of filing a fraudulent income tax return for his wife, jazz pianist Hazel Scott, in 1951 and tax evasion in a joint return for 1952.

POWELL cried out that was being persecuted and likened the grand jury to a posse bent on some kind of lynching.

His admirers in Harlem, and especially the devoted members of his Abyssinian Baptist Church, agreed that this was so. The indictment had no more effect on POWELL'S popularity than had his 1945 divorce from his first wife, Isabel Washington Powell, after 12 years of marriage and his marriage that same year to Miss Scott.

The outcome of the Democratic primary election was, as expected, a lopsided victory for POWELL over Tammany's candidate, Brown. The vote: POWELL, 14,387; Brown, 4,925.

These figures take on a special interest when one considers the clergyman-politician's congregation of 10,000. This is the hard core of his political strength, a fact that is acknowledged by the Abyssinian Baptist Church itself. In a press release dated July 30, 1950, the church said:

"A special committee of church members has also been set up independent of the church to mobilize the church's vast membership financially and in terms of volunteer work to help Reverend POWELL in his current campaign for reelection to Congress."

The Abyssinian Baptist Church was started in 1808 with 12 members. It grew out of protests over discrimination practiced against Negroes in the First Baptist Church of New York. It was customary in those days for the balcony in some churches to be set aside for Negroes and the balcony came to be called the "slave loft."

The church was just 100 years old when it was taken over by the Reverend Adam Clayton Powell, father of the present pastor. The elder Powell came from a poor family of 17 children. He had great energy and ambition, however, and worked as a waiter to pay his way through Yale University.

It was the Reverend Powell, Sr., who moved the Abyssinian Baptist Church to its present site in Harlem and began building up the congregation. At the same time, he did well on the side as a real estate operator.

When the whites started leaving Harlem after the Negroes came flooding in, he began buying up white homes at bargain prices. The value of the houses he bought ultimately rose and provided a firm base for the Powell family fortune.

ADAM CLAYTON POWELL, JR., likes to boast about his background and tell of his grandfather, a branded slave.

"My folks were field Negroes for countless generations," he has said. "That's why I belong to the masses."

The fact is, he was pampered as a child and has never known want. Born in New Haven, Conn., November 29, 1908, he was 6 months old when his father moved to New York to take over the Abyssinian Baptist Church.

He got his bachelor of arts degree at Colgate University, where he passed as a white student until his father arrived on the campus to deliver a lecture. He won his master's degree at Columbia University and his doctor of divinity degree at Shaw University, a small Baptist-affiliated school at Raleigh, N.C. He also studied abroad.

Young POWELL entered the ministry on the night of Good Friday, 1929. He became an assistant pastor of the Abyssinian Baptist Church in 1931 and pastor in 1937.

He was relief director for Harlem in the early days of the depression. Later he joined with others in persuading store owners in Harlem to hire Negroes and in helping get Negroes jobs as bus drivers.

In 1941 he was elected to New York's City Council, the first Negro ever to be so honored. Then in 1944 he was elected to the House of Representatives, the first Negro in the East to be sent to Capitol Hill.

He is now the undisputed political champ of Harlem. His adoring followers almost certainly would reelect him to the House even if he should have the bad fortune to be convicted and imprisoned for income tax evasion.

"Adam is unbeatable," one of his admirers told the New York Post. "Why, he has 10,000 parishioners—and every one is a campaign worker before election time. Who can build a better machine?"

After his defeat of Brown in the 1958 Democratic primary, POWELL announced that he had ended his feud with Tammany Boss DeSapio and would work for the election of the Democratic State ticket, which meant that he would try to help Gov. Averell Harriman defeat his Republican opponent, Nelson A. Rockefeller.

This infuriated the Republican leaders of Harlem, who had given him the Republican nomination. Harold C. Burton, one of the GOP leaders, said: "This is a masterpiece in doublecrossing and doubletalking."

POWELL wasn't able to save Harriman from the Rockefeller blitz, but of course he won an eighth term for himself in the House.

It is because of this long seniority that he is now in line for the chairmanship of the Education and Labor Committee if Representative GRAHAM A. BARDEN, Democrat, of North Carolina, the present chairman makes good on his promise to retire at the end of the 86th Congress.

Representative POWELL is something of a Beau Brummel out of the pulpit, a man who enjoys good food and drink and likes to drive imported racing cars.

In the pulpit, he wears a Roman-type collar, a dark suit and, over this, flowing black robes. His parishioners refer to him as "Dr. Powell."

At last Sunday's 10 a.m. service in the Abyssinian Baptist church, he delayed his sermon until the congregation and the 50-voice choir had sung Let the Lower Lights Be Burning and Be Not Afraid, and until the two assistant pastors had preached. The church was packed to the walls.

The Reverend Oberia D. Dempsey asked for a blessing on the congregation and also a blessing on others—even "those who would destroy us." He then read from the Sermon on the Mount. Not a word about politics came from him.

The Reverend David N. Licorish, the other assistant, prayed that Congress would vote for racial equality and then mentioned Pastor POWELL'S 16-year battle for equality.

Taking over the pulpit himself, the Reverend Dr. POWELL prayed in a low voice. Then he moved onto a more worldly level.

He spoke in praise of President de Gaulle, of France, noting that in the Algerian crisis the Frenchman stood out boldly in a time of mediocrity. Gradually he eased into the affairs of another man—ADAM CLAYTON POWELL. That was his theme almost to the end.

He hammered away on two points: "It pays to take a stand" and "You don't have to compromise." He said he had been warned that, by some of his tactics, he was committing political suicide. He said he also had been warned that his congregation might drift away from him.

This evoked subdued merriment in the congregation, in which Representative POWELL joined. He said that some explained away the packed church Sunday after Sunday by saying that people came "out of curiosity." That might be so, he acknowledged; but it wasn't curiosity, he said, that piled up all that money on the collection plates every Sabbath. Then he announced that the collections had more than doubled.

It ended with Pastor POWELL extending an invitation to newcomers to move forward and enroll in his flock.

Representative POWELL is scheduled to go on trial on the income tax charges March 7, after many delays. He was indicted May 8, 1958, after charges had been made—and denied—that certain administration officials tried to protect him after he agreed to support President Eisenhower in 1956.

Two POWELL secretaries, Acy Lennon and Hattie Freeman Dodson, were convicted on income tax charges in 1956 and served prison terms.

If convicted under the three counts of the indictment, POWELL could draw prison sentences up to 5 years and fines up to $10,000 on each count. He has retained one of the best known criminal lawyers in the country, Edward Bennett Williams of Washington, who has served as counsel for the late Senator Joseph R. McCarthy (Republican, Wisconsin), Teamster President Jimmy Hoffa and Frank Costello, notorious underworld figure.

POWELL seems unable to maintain good relations with the White House, whether the

occupant be a Democrat or a Republican. Former President Truman barred him from the mansion after he referred to Mrs. Truman as "the last lady of the land"—this in connection with Mrs. Truman's attendance at a tea given by the Daughters of the American Revolution, who had denied use of their Constitution Hall to Hazel Scott, the second Mrs. Powell.

Just what President Eisenhower has against POWELL is something he is keeping to himself. But clearly he has turned on the Harlem Democrat in spite of the support he got from him in 1956. On September 18, 1957, while he was in Newport, R.I., on vacation, the President wired POWELL to say that he would meet later with him and other Negro leaders.

The Chief Executive did meet with four Negro leaders in June 1958, but POWELL was not among them. He had been indicted just a month before that.

Memorial for Four Chaplains Proposed for Mount Charleston

EXTENSION OF REMARKS
OF
HON. HOWARD W. CANNON
OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, February 11, 1960

Mr. CANNON. Mr. President, interested citizens in southern Nevada are at this moment attempting to raise funds to construct a memorial for the four chaplains who perished in the sinking of the transport U.S.S. *Dorchester*.

I am sure that Members of this Congress will be interested in learning of the progress of this project, and in reading of the efforts of Rev. John F. D. Carruthers, of Pasadena, who is assisting citizens of Las Vegas in preparing for the construction of this worthy memorial.

I ask unanimous consent to have the article describing these preliminary events printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Las Vegas Review-Journal, Dec. 27, 1959]

MEMORIAL TO FOUR CHAPLAINS PROPOSED FOR MOUNT CHARLESTON

(By Colin McKinlay)

The longstanding dream of a retired Navy chaplain to erect a memorial cathedral to the four Navy chaplains who perished in the sinking of the transport U.S.S. *Dorchester* may become a shrine on Mount Charleston.

Seventy-one-year-old Rev. John F. D. Carruthers of Pasadena, a member of the faculty of Claremont Men's College in Pomona, says he will return soon after the holidays to look over a prospective site on Cathedral rock on Mount Charleston.

Reverend Carruthers has been staying at the Hacienda Hotel where owner Warren Bayley has promised assistance in obtaining land if he decides that it is the fitting location for the cathedral.

A veteran of both world wars, Reverend Carruthers is now director of research and aeronautical history at the college. His longstanding dream has been to erect, at a cost of several million dollars, a permanent house of worship for all faiths to attend on pilgrimages, "to unite the world into religious unity."

"I think the people of the United States would like to pay tribute to the four chaplains," he said.

He said that the general outline of the architectural structures are already made, but their completion hinges on the selection of the site.

Although there would be no religious services at the cathedral, there would be four wings for prayer to symbolize each of the Navy chaplains who went down together with their ship. Two were protestant, one Jewish rabbi and the other was a Catholic priest. They had their arms around each other in prayer when the end came after an attack by the Japanese.

Reverend Carruthers said that the memorial would preserve this spirit of the chaplain corps and Christ's words, "Greater love hath no man than he lay down his life for his friends."

Each wing of the building would be consecrated by one of the faiths representing one of the four chaplains, he said. He said the proposed name is the "World Cathedral of the Four Chaplains."

When the national American Legion commander visits this area, Reverend Carruthers said he plans to enlist his aid in the project.

The four chaplains have also been memorialized on a commemorative U.S. postage stamp.

Wisconsin Man Brings the Hoe to Backward Somalia

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 11, 1960

Mr. WILEY. Mr. President, today the free world is engaged in an ideological and economic battle to prove the superiority of its systems over communism.

As we know, the battle—overt and covert—extends to a great many fronts.

Over the years, our Nation has dedicated a tremendous volume of its resources and manpower to providing a military deterrent to Communist expansion.

Economically, too, we have made a unique effort in history to shore up the economies of other nations to enable them to withstand the pressures of the international conspiracy.

Too little heard of, but perhaps one of our major exports to areas of the world searching for an ideology and a way of life to enable them to progress and live better in our age, is the dedicated American serving abroad in nonmilitary fields. A great many of these individuals are giving their time, energies, and talents, to bring a little of America into the hinterlands of the globe.

Today, I refer to one specific individual, Mr. Robert D. Judy—a native of Peshtigo, Wis., and formerly a county 4–H agent and assistant agricultural extension agent of Superior, Wis.

Mr. Judy, with 15 American technical experts is bringing new ideas in farming to the tribesmen of Somalia on the African Continent, under the International Cooperation Administration program of assistance for less-developed nations—more commonly known as the point 4 program.

Unfortunately, the agricultural methods in Somalia are still primitive. Under the ICA program, Mr. Judy and his associates are carrying on a heroic effort to bring some modernization to the agricultural techniques in that country to enable them to improve their economy.

Along with bringing technical assistance in agriculture, Mr. Judy and his associates are setting splendid examples of friendly Americans willing to get dirt on their hands, and dedicate time and energies to help these people improve their standards of living.

Recently, the Minneapolis Star carried a detailed article by Robert Hewett, entitled "Wisconsin Man Brings the Hoe to Backward Somalia."

The article outlines the splendid way in which Mr. Judy and the ICA program are bringing better living, and greater respect for the United States, to the natives of that country.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN MAN BRINGS THE HOE TO BACKWARD SOMALIS

(By Robert Hewett)

MOGADISCIO, SOMALIA.—A young county agent from Superior, Wis., is bringing new ideas in farming to Somali tribesmen.

One newfangled American implement causing quite a stir here is an ordinary long-handled garden hoe.

An even more daring innovation for tradition bound Somalis getting their first look at an American dirt farmer is the plow.

For centuries Somali tribesmen who settled down to farming (most are still camel-raising nomads) have literally scraped along with two simple tools: A crude hatchet to hack away scrub bushes and a mattock-like hoe with an 18-inch handle used to scratch up the soil to plant corn, peanuts, and sesame seeds.

The American trying to show Somalis how to get better crops without inefficient, back-breaking toil is Robert D. Judy, 35, who was county 4–H Club agent and assistant agricultural extension agent at Superior before coming here last December.

Judy is one of 16 American technical experts brought to Somalia under the International Cooperation Administration (ICA) program to help underdeveloped nations, commonly known as the point 4 program.

The onetime farm boy, son of Mr. and Mrs. Clinton Judy of Peshtigo, Wis., was graduated from the University of Wisconsin in 1953.

Point 4 men like Judy, who gets out and works with ordinary people, frequently do a more effective job at representing the United States abroad than do many conventional diplomats.

Somalia is a strange and interesting country, but not exactly the most comfortable spot for a foreigner to live and work. Slightly larger than Minnesota and Wisconsin combined, it is hot and arid, stretching along the east African shore of the Indian ocean not far north of the Equator.

Italy took over the barren region as a colony in 1889 during the European power scramble for Africa. During the 1920s and 1930's, Italian Somaliland had the reputation of being the spot to which Benito Mus-

solini banished political enemies he hated most.

Next year, Somalia's estimated 1,250,000 people, largely illiterate tribal nomads, get their independence under United Nations auspices.

Italian colonizers paid no attention to native agriculture other than to recruit, sometimes by force, workers for the Italian-owner banana plantations which still provide the bulk of Somalia's meager exports.

And that explains in part why the long-handled hoe, a simple plow—or a friendly American farmer who gets dirt on his hands—is something of a sensation in Somalia.

Judy, a brawny bachelor who looks younger than 35, lives in a little stone house presided over by a smiling Somali cook who already has learned to prepare Wisconsin-style fried chicken via the sign language.

The house is at Merca, a banana shipping port about 70 miles south of Mogadiscio. Judy was the first American in the area. But a few weeks ago another point 4 water resources technician and his wife were assigned to Merca.

We drove over bumpy dirt roads (they are impassable when it rains) to the nearby village of Coriole, a cluster of circular huts whose thatched roofs look like inverted ice cream cones. There we met some of the big, black-skinned Somalis with whom Judy has been making friends in recent months despite the language barrier.

Judy took the standard 2-month State Department cram course in Italian before coming to Somalia and each day adds a few Somali words to his vocabulary. Italian is the language of those Somalis who deal with foreigners. The Somali language is little-known by non-Somalis mainly because it has no written characters and dialects vary widely.

Organization of a point 4 program has been slow in Somalia where, in many respects, farming practices are more primitive than in the Arab states and India. Judy has spent much time so far in the necessary job of making friends with the more progressive Somali farmers, who usually till only about 2½ acres per man.

Judy's most receptive customer has been one who might be termed a capitalist by Somali standards. He is Mahmud Omar, a tall, dignified Somali who owns about 35 acres, hires some of his neighbors on a share-crop basis and is regarded as the smartest man in the village.

Mahmud Omar is a good example of the universal fact that some farmers simply are more enterprising than others. He readily saw the advantages of the long-handled hoe, for example, even though some of his neighbors preferred the old way of bending almost double to till the ground.

Like all Somalis he is probably suspicious of this strange foreigner in a land where foreigners usually have meant trouble (but he is too polite to say so).

This fall part of his land will be tilled with a new 8-inch steel plow and some will be planted with hybrid seed corn brought from America.

Experience in other countries has shown that once farmers see better results with their own eyes, they also try the new idea.

Although Mahmud Omar has never heard of America's farm price-support program, it seems the idea is not confined to the Midwest. He pointed to a hole in the ground, carefully lined with corn husks, where he is burying part of this season's corn.

"The corn price in Mogadiscio is not very good right now," Mahmud explained in a mixture of Italian and Somali. "I'm going to hold this for a better price. What we Somalis really need is for the Government to fix a good price and buy all our corn."

Judy's main job on his 2-year assignment in Somalia is to help train 41 Somali youths as the nucleus for an agricultural extension service patterned somewhat on the American model to give advice on new techniques to farmers.

"But, in a country like this, first things come first," he added as he pulled a garden hoe and shovel from the back of his jeep station wagon. "It's going to be a very slow process."

This fall, about 40 inexpensive, lightweight steel plows are going to be distributed to the Somali extension agents to show their farmers what can be done about getting a better crop.

"The average corn yield this year on plots cultivated with hoes is about 12 to 14 bushels an acre," Judy said. "We used a demonstration plow, and deeper cultivation alone resulted in an increase of 80 percent in the crop. When Somali farmers learn this they are going to find that plowing is an economic proposition—but first we have to teach them to use oxen and camels to pull the plows."

Use of light tractors is something for the future as far as the average farmer is concerned. Some of the big Italian plantation owners rent tractors (all prewar models) for plowing to a few of the more prosperous Somalis but they are unknown in most farming areas.

Another big problem in Somalia, as in most underdeveloped countries, is establishment of cooperatives to provide credit for seed and equipment purchases as well as marketing. Some co-ops were tried in the last few years but failed because of poor supervision.

Credit to ordinary farmers is now provided mainly by Arab lenders who get as much as 300 percent interest—payable in crops—during each growing season.

Defying Commonsense

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. MICHEL. Mr. Speaker, there is no question in my mind that the most pressing of domestic problems after stemming the tide of inflation is the vexing problem of our mountainous farm surpluses. Yesterday, for example, there were three editorials in the Washington papers on the subject, and I should like to have them reprinted in the RECORD at this point.

The first, entitled "Defying Commonsense," appeared in the Washington Daily News; the second, entitled "Action on Farm Surplus Needed," by David Lawrence; and the third, entitled "Much More Than Vexing," an editorial appearing in yesterday's Evening Star.

[From the Washington Daily News, Feb. 10, 1960]

DEFYING COMMONSENSE

Surplus crops are the farm problem. The price-support program built this overabundance. It continues as a strong financial incentive to produce more and more. This, says President Eisenhower, is a situation which "defies commonsense." That's stating it mildly.

In his special message to Congress yesterday, the President indicated his general preferences on reform, but expressed a willingness to go along with anything within reason which Congress may suggest. Solemn regard for the Nation's welfare should prompt a comparable cooperative spirit among the lawmakers.

The wheat surplus properly was emphasized in the message. Wheat provides only 6 percent of the farm income. Yet the Government has $3.5 billion tied up in wheat—30 percent of the total currently invested in farm price support operations. And, if the present system is continued, that will only be the downpayment.

Basically, President Eisenhower would start solving the problem by gradual withdrawal of subsidy incentives to overproduce. He would free the farmer of arbitrary controls by eliminating both acreage allotments and marketing quotas for wheat. Price supports would be continued but would be a percentage of recent average market prices, rather than a higher figure based on parity.

The effect of this system, long urged by Secretary of Agriculture Benson, would be to stop the marginal production of wheat at a guaranteed profit. At the same time, it would insure the efficient producer against disaster.

As further aids to retreat from overproduction, the President would:

Gradually expand the conservative reserve program up to 50 million acres. This would more than double the amount of land now withheld from production by this program. In his budget message, the President asked for 9 million additional acres in fiscal 1961, bringing the total to 37 million acres. Expanding population will require the use of this land years hence. Meanwhile its cultivation swamps the market.

He would be willing to consider payments in kind for reduction of surplus crop acreage. This is an interesting idea, advanced by farm groups. A wheat farmer, for instance, would stop growing wheat, temporarily, and draw the amount of his usual crop from Government shortage. Properly managed, this scheme could reduce Government cash outlays, reduce surplus supplies and cut storage costs.

The President's recent trip strengthened his belief in the food for peace program which uses surplus crops to feed hungry people abroad. He wants greater emphasis on research to find new uses for farm products, also more attention to the rural development program, finding new sources of income in depressed agricultural areas.

In none of this is there any quick cure for deep ills accumulating from generations of politically inspired tinkering with the fundametnal laws of supply and demand. Reform will take a long time and objective consideration is admittedly difficult in a Presidential election year. But, somewhere short of disaster for American agriculture, a start must be made. The President's suggestions are constructive to that end.

ACTION ON FARM SURPLUS NEEDED—DANGER TO NATION OF COSTLY PROBLEM CALLED SPUR TO SOLUTION BY CONGRESS

(By David Lawrence)

President Eisenhower has put up to Congress the task of closing perhaps the biggest gap. He says:

"The Government sustains a net cost of more than $1,000 a minute—$1.5 million every day—the year around, to stabilize wheat prices and income."

The President reveals that Federal funds tied up in wheat approximate $3.5 billion, and makes this further point:

"Although this means that well over 30 percent of the total funds invested in inventories and loans of the Commodity Credit Corporation goes for wheat, this crop provides only 6 percent of the cash receipts from sales of farm products.

It wouldn't be so disturbing if the financial support given the farm program was getting somewhere. But it isn't. Produc-

tion, instead of being curtailed, is being stimulated. Here's how Mr. Eisenhower, in his latest message to Congress, explains what's happening:

"Day by day this program further distorts wheat markets and supplies. Its only future is ever higher cost. Inexorably it generates ever larger surpluses which must be expensively stored. Ultimately, if our Government does not act quickly and constructively, the danger is very real that this entire program will collapse under the pressure of public indignation, and thousands of our farming people will be hurt."

What can be done about it? This is a political year. The so-called farm vote is supposed to be drawing away from the Republicans largely because the administration has refused to go in for higher and higher subsidies. So the President has put the dilemma squarely before Congress. He has, in effect, challenged the politicians in both parties. He says:

"Whatever the legislative approach, whether toward greater freedom or more regimentation, it must be sensible and economically sound and not a political poultice. And it must be enacted promptly. I will approve any constructive solution that the Congress wishes to develop."

The President then discusses several basic principles and various alternative plans, and promises to approve any one of them or a combination of constructive proposals. He doesn't abandon the idea of farm subsidies and, indeed, urges expansion of the present conservation reserve program up to 60 million acres. The Secretary of Agriculture would be authorized to make payments in kind for reduction of acreage devoted to crops in surplus and for retirement of such acreage from cultivation. The main condition imposed is that measures must be provided to keep total production below total consumption while this program is in operation. He says that, lacking such safeguards, a payment-in-kind procedure "would overload the free market and thereby depress prices."

Mr. Eisenhower has not heretofore offered such a flexibility of approach. He declares that, if Congress wishes to propose a plan of its own as an alternative, he will approve it so long as the plan is constructive. He insists that "the important thing for farmers, and for all other Americans, is for us to act sensibly and to act swiftly."

This means that Congress will be on the spot. It cannot dodge the issue. It will have to offer a legislative plan to remedy the present situation. This will tempt some influential members of Congress to write the kind of bill that will bring a presidential veto. But it is unlikely that such a measure would command a two-thirds vote to override a veto. For Congress is very much divided on the farm question.

The Republicans will make good use of the President's latest message to Congress. They will point out that he has placed directly upon Congress the major responsibility for originating farm legislation. If no suitable legislation is offered, the Democrats—since they are in control of both Houses of Congress—will have to accept the blame. At least, that's the theory. Conversely, if the Democrats come up with a measure that the President can sign, it helps the Republicans to take the issue to a large extent out of the 1960 presidential campaign.

Apart from politics, the next administration, irrespective of whether it is Democratic or Republican, will have to come to grips with the same agricultural problem. Hence, a start might as well be made now as a year hence to close the gap between the low net income of many farmers and the excessive production of certain farm products which, the President says pointedly, has been "largely due to economic distortions induced by years of Federal interference."

[From the Evening Star, Feb. 10, 1960]

MUCH MORE THAN VEXING

President Eisenhower erred on the side of understatement when he said that the farm situation is our "most vexing domestic problem." It is much more than that. It is a problem which has assumed nightmarish proportions, and which is threatening our agricultural economy.

Even so, it does not necessarily follow that anything will be done this year to ease the problem. The effect of Mr. Eisenhower's latest message is to toss a very "hot potato" to the Democratic Congress. As the President put it, "the American people have every right to expect the Congress to move promptly to solve situations of this kind." In this election year, however, it is most unlikely that the Congress will move promptly. For one thing, the problem is not susceptible of any quick solution. For another, the Democrats this year may very well prefer a farm issue to a solution of the farm problem.

Still, as one looks at the mounting agricultural surpluses, especially wheat, the day of reckoning obviously cannot be postponed indefinitely. The wheat program alone is costing the Government—and this means Mr. and Mrs. Taxpayer—$1½ million every day of the year. Furthermore, the mounting surpluses, under the existing program, are defeating the avowed purpose of the program itself—to aid the farmers. The President, we think, was fully justified in saying that it "defies commonsense to continue to encourage, at the cost of many millions of tax dollars, the building of ever-larger excess supplies of products that, as they accumulate, depress farm prices and endanger the future of our farmers."

Undoubtedly, as Mr. Eisenhower says, this defies commonsense. But commonsense is bound to have rough sledding in any year in which the Presidency, the Vice Presidency, one-third of the Senate, and all of the House seats are at stake. At best, we doubt that anything that is politically courageous and constructive will be done about the farm problem before 1961.

Proposed Lifting of 4¼-Percent Interest Rate Ceiling

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, February 11, 1960

Mr. CHURCH. Mr. President, I have received a letter from Mr. John Schoonover, chairman of the board of the Idaho First National Bank, which sheds a great deal of light on the controversy over the President's request that Congress lift the 4¼-percent ceiling on the interest rate for long-term Treasury obligations. I know John Schoonover well, and I have the utmost confidence in the soundness of his views. He qualifies as an expert on matters of fiscal policy.

Mr. Schoonover is opposed to lifting the ceiling. He says that it seems to him appropriate that, when long-term money is sought, bonds should be put out in a market that wants long-term investments. Since there is not now that kind of a market, he feels that 4 years and 9 months are a long enough term for borrowing at the present high rates. He suggests that the Treasury should at least make some attempt to manage its affairs so as to borrow money as cheaply as possible, just as a private concern would do.

Mr. President, I have never known of a private business that intentionally took on long-term obligations at a time of record-high interest rates. During such a period, private business naturally endeavors to do its financing on a short-term basis, so that it will not be burdened by the high interest for a 20- or 30-year period. If this makes sense for private business, it seems to me it should also make sense for the Government.

I ask that the Schoonover letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE IDAHO FIRST NATIONAL BANK,
Boise, Idaho, January 20, 1960.

The Honorable FRANK CHURCH,
The U.S. Senate,
Washington, D.C.

DEAR FRANK: You have undoubtedly heard a great deal about the administration's desire to have Congress remove the 4¼ percent interest rate ceiling on Treasury obligations with a maturity of 5 years or longer. I should like to have you know my views, which you may be surprised to learn are in opposition to such a move.

I think the interest rate limitation is a good one from almost every standpoint, and the arguments that the Treasury uses seem to be a bit weak. Whether a borrower is the Government or some private enterprise, it seems to me to be appropriate that when long-term money is sought, bonds should be put out in a market that wants long-term investments.

The Board of Governors of the Federal Reserve System at the present time, in order to counter inflation, is pursuing—through its open market operations—a restrictive monetary policy. That is, whenever money seems to be easing a bit, they sell Treasury bills into the market, withdrawing Federal Reserve currency from general reserves in order to make payment of the bills which are purchased.

A couple of years ago they were doing the opposite in order to give a boost to the economy when a recession seemed to be under way. That would have been a good time for the Treasury to have borrowed long-term money. In fact, in May of 1958 a long-term bond of the Treasury, bearing 3½ percent and due February 15, 1990, was selling at 106. That same bond today is selling at around 85 per 100.

Some existing Government bonds presently outstanding are selling on a basis of over 6 percent yield to the investor, when consideration is given to the capital gains feature; and as a consequence I doubt whether any material amount of long-term Governments could be sold by the Treasury even if they were permitted to pay 5 percent or thereabouts.

They have the privilege now of paying whatever rate they need to pay for money under 5 years, and it would seem that 4 years and 9 months would be long enough period for borrowing at the present high rates. It seems that the Treasury should at least make some attempt to manage its affairs and borrow money as cheaply as possible, just as a private concern would do.

There is a limitation on the rates of interest which can be paid by many counties, cities, and municipalities generally, and I think these limitations are good. They serve to cause various municipalities to hesitate about borrowing when rates are abnormally high. That same psychology ought to apply

in connection with borrowings of the U.S. Government.

You do not need to feel that being opposed to the removal of the ceiling is entirely a political argument, because many folks who are students of finance and who are conservative in nature feel that the present limitations should be maintained.

With best wishes, I remain,

Yours sincerely,

JOHN A. SCHOONOVER,
Chairman.

Tax Ruling for Small Business Investment Companies: An Aid to Small Business

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. ROOSEVELT. Mr. Speaker, yesterday a press release, issued by the Small Business Administration, carried news of import to small business in this country.

It stated that the Treasury Department has approved a proposed rule that properly licensed small business investment companies "will not be subject to the 27½ percent tax on accumulated earnings up to $100,000 and 38½ percent above $100,000 if they engage in providing funds to small businesses and meet all other provisions of the Small Business Investment Act of 1958."

In other words, this will encourage expansion of the investment company program, the advantage of which will accrue to small business enterprise. For this ruling will mean that an investment company—in order to take advantage of this tax ruling—must actively engage in the business of providing funds to small business concerns, either through the purchase of convertible debenture bonds or through the disbursement of long-term loans.

Mr. Speaker, with the thought in mind that perhaps this information is not, as yet, widely known in the small-business community and because I think it merits the widest possible distribution and leadership, I wish to insert at this point the full text of the SBA release of February 10, 1960:

The Small Business Administration hailed as salutary today the Treasury Department approval of a proposed rule that small business investment companies licensed by the agency will not be subject to the 27½ percent tax on accumulated earnings up to $100,000 and 38½ percent above $100,000 if they engage in providing funds to small businesses and meet all other provisions of the Small Business Investment Act of 1958.

Approval of the exception to the tax imposition was published January 28 in the Federal Register, following earlier publication last September 2, 1959, of the proposed rule.

Duncan H. Read, SBA Deputy Administrator for its Investment Division, said the Treasury's approval of the proposed rule would have "a salutary effect" on the expansion of the investment company program.

The rule adopted by the Treasury Department said that a small business investment company would still be considered a "mere holding or investment company" within the meaning of section 533(b) of the Internal Revenue Code, but the "presumption of existence of the purpose to avoid income tax" resulting from its being a "mere holding or investment company" will be considered overcome if the SBIC:

1. Complies with all the provisions of the Small Business Investment Act of 1958 and the regulations thereunder; and

2. Actively engages in the business of providing funds to small business concerns through the purchase of convertible debenture bonds of such concerns or through the disbursement of long-term loans to such concerns under sections 304 and 305 of the Small Business Investment Act.

Violation of or failure to comply with the provisions of the Small Business Investment Act or failure to invest its funds actively in small business concerns would reintroduce the "presumption" by the Treasury of "the purpose to avoid income tax" and result in imposition of the accumulated earnings levy.

Small business investment companies are already exempt from the personal holding company surtax of 75 percent on undistributed earnings up to $2,000 and 85 percent above $2,000.

In addition, SBIC's and their individual stockholders are allowed an ordinary loss deduction, rather than a capital loss in the event of loss in the sale of convertible debentures of small businesses or of the stock of small business obtained by conversion, or in the event of worthlessness of either the debentures or the stock.

SBIC's are given also a 100-percent deduction on dividends they may get from the stock in small business which they may hold.

Internal Revenue Bureau regulations covering provisions of the above-mentioned statutory allowances were published in the Federal Register simultaneously with the accumulated earnings announcement.

Recommendations Concerning the Soil Bank Program

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 11, 1960

Mr. YOUNG of North Dakota. Mr. President, I am happy to report that two of the major farm organizations of North Dakota, the Farm Bureau and the Farmers Union, have in one county of my State, Richland County, gotten together and have made some very good recommendations concerning the soil bank program.

I ask unanimous consent that a resolution adopted at a joint meeting of the boards of directors of the Richland County Farm Bureau and the Richland County Farmers Union held in Wahpeton, N. Dak., January 27, be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

At a joint meeting of the Boards of Directors of the Richland County Farm Bureau and the Richland County Farmers Union held in Wahpeton on January 27, 1960—the following resolution was formulated, and, on motion by Herb Goerger, Farm Bureau chairman, and seconded by Darrel Miller, Farmers Union chairman, was unanimously passed.

Be it resolved, That Congress appropriate funds sufficient to put the following program into operation to accommodate all applicants who can qualify:

1. That rental payments should be made in accordance with the past 10-year production average for each individual farm and not on a bid basis. The payments should reflect a wider differential between high- and low-productive land.

2. That the soil bank be open to farm operators only and payments divided between owner and tenant on the same basis as the crop-share terms.

3. That a maximum and minimum percentage of a farm unit be allowed in a soil-bank contract of from 10 to 40 percent with a $5,000 limitation per operator.

4. That a 3- to 5-year contract be allowed, and, if continued, no acreage could be banked a second time under one long-term contract until the whole farm had been covered by such a contract rotation.

5. That all weeds and pests be more strictly controlled on soil-bank land.

MARVIN J. HUCKLE,
Farmers Union Acting Secretary.

University of Florida Medical Center

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. MATTHEWS. Mr. Speaker, I am very proud of the great Florida Medical Center which is located on the campus of the University of Florida in Gainesville, Fla., which is in my congressional district. I am very pleased to note that this great medical center is not only known throughout Florida, but has already achieved a national reputation. As evidence of this fact, I am pleased to enclose an article by Dr. Howard A. Rusk, which appeared in the New York Times, Sunday, February 7, 1960:

FLORIDA MEDICAL CENTER—TWO NEW UNITS IN GAINESVILLE COMPLEX PUT IT IN VANGUARD OF U.S. SERVICES

(By Howard A. Rusk, M.D.)

A few years ago on the northern edge of the great Florida Citrus Belt, which starts a few miles south of the University of Florida in Gainesville, a young farmer fell from a ladder while working in his groves. Although the fall was not from a great height, he landed on some of his agricultural equipment in such a way that his back was broken and he was paralyzed.

Fortunately, through the Florida Division of Vocational Rehabilitation, the young man was sent to a rehabilitation center outside the State for treatment and returned later to become a successful insurance man, working from his wheelchair.

Today it is no longer necessary for severely disabled Floridians to be sent out of the State for rehabilitation. Their needs can now be met through the new rehabilitation services of the teaching hospital and clinics of the J. Hillis Miller Health Center, at the University of Florida. Five hundred persons from 12 States attended the formal ceremonies held here this weekend to announce

the new rehabilitation services and the new college of health-related services.

ONE OF BEST IN UNITED STATES

These two new units are the latest in one of the most modern and best planned university health centers in the Nation. The center is named for the late president of the university.

Already in operation are the colleges of medicine, nursing, pharmacy and health-related services and a teaching hospital and clinics. Ground-breaking ceremonies for a new $1,680,000 pharmacy-research building were held last November.

Florida's new health center did not just happen. Aided by grants from the State, Federal Government, and the commonwealth fund, the university brought experts and consultants in all aspects of health education, research and services to the campus in the 8-year planning period.

MEDICINE SCHOOL THE FIRST

As a result, the health center is unique in many ways. Major among these is its educational philosophy, which is based on the concept that members of the health team who are trained together in the same environment will be better prepared to work together.

Professional isolationism is broken down because students in the colleges of medicine, nursing, pharmacy and health-related services utilize the same educational and clinical facilities.

The first units to be activated in the health center were the colleges of medicine and nursing, which admitted their first students in the fall of 1956. First dividends on this investment will come this June with the graduation of 40 new physicians and 25 new nurses.

The second major development came with the opening of the magnificent 400-bed teaching hospital and clinic in the fall of 1958.

Many of our older hospitals, obsolete architecturally and disorganized functionally, are reminiscent of the clutter of a country general store. In sharp contrast, this hospital has the efficiency of a modern department store. However, it has more of the atmosphere of a home than an institution. This feeling is carried out in the most minute detail, from the noninstitutional furniture to the soft pastel colors.

A particularly remarkable feature of the center is an ambulant wing, which functions as a hotel. Here are housed the patients receiving diagnostic and therapeutic services who do not need such costly items as nursing and bedside food services.

Patients live in comfortable surroundings at a cheaper cost, eat in the cafeteria and may even have a family member with them. They are free to come and go as they wish within the limits dictated by their physical condition.

For these patients recreational group therapy as well as visiting with other patients and staff are excellent antidotes for anxiety. This ambulant unit has proved to be especially valuable for psychiatric patients.

THERAPISTS TRAINED

The new College of Health-Related Services currently includes a graduate program in rehabilitation counseling, which has been conducted by the university since 1956, and three new undergraduate programs in medical technology, physical therapy, and occupational therapy. The latter are particularly important new resources for Florida and all the Southeast.

Prior to their establishment there were no programs for training physical therapists in Mississippi, Alabama, Tennessee, Georgia, South Carolina, and no training programs for occupational therapists in these States plus North Carolina. This has resulted in fewer physical therapists and occupational therapists for the population in the Southeast than in any other section of the country.

Tribute to Women's Role in American Life

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 11, 1960

Mr. WILEY. Mr. President, we recognize that, as our country expands and progresses, the role of women becomes increasingly important in the economy, as well as in all other phases of our way of life.

Today, there are about 23 million women in the labor force of the Nation. By 1970, it is expected there will be about 30 million—accounting for one out of every three workers in our labor battalions.

Once confined to the home, women today—because of farreaching changes in our social and economic systems, as well as new educational and vocational opportunities—are participating more actively in practically all aspects of American life. These include office work, manufacturing, professions, arts, agriculture, and many other fields. In this rapidly advancing technological age, the sciences, too, are offering new opportunities of careers for women.

However, the American woman still splendidly performs her fundamental role as wife, mother, and homemaker, as well as constructively contributes to community, civic, religious, and other programs.

Today, I would like particularly to pay tribute to the outstanding accomplishments of Mrs. Julia B. Dolan of Milwaukee, Wis.

Over the years, she has been a wife, homemaker, and, as well, a lawyer and a leader in providing legal aid to the indigent.

The State Bar of Wisconsin Committee on Legal Aid recently sponsored a testimonial breakfast in recognition of her splendid contributions in the legal field, particularly in connection with her work with the Legal Aid Society of Milwaukee—a community chest supported agency, which, since 1914, has furnished free legal counsel to persons who cannot afford to pay counsel fees.

Symbolical of the splendid contributions which a member of the once so-called—but erroneously, I believe—weaker sex is making in the professional, as well as a great many other fields, I ask unanimous consent to have an article on her work from the Milwaukee Journal, by Ellen Gibson, reviewing her contributions to this field, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HER LEGAL AID TO INDIGENT IS BASIS FOR A TESTIMONIAL

(By Ellen Gibson)

Julia B. Dolan hopes that one of her granddaughters will take up what Mrs. Dolan regards as a wonderful profession for women—the law.

There is some encouragement for her fond dream in the fact that Louise, the oldest of three granddaughters, is at 4 parroting bits of "Nana's" mealtime conversations about the Legal Aid Society of Milwaukee.

Since 1914, this community chest-supported agency has furnished free legal counsel to persons who cannot pay an attorney's fees. For the last 20 years, the society's direction has been in the small but capable hands of Mrs. Dolan.

The State Bar of Wisconsin Committee on Legal Aid is sponsoring a testimonial breakfast in tribute to her devoted duty at 8:30 a.m., February 19, at the Schroeder Hotel. Invitations are going out from Walter Graunke, Wausau, committee chairman, to some 450 lawyers, judges, and other friends. Judge F. Ryan Duffy of the Federal circuit court of appeals in Chicago will speak.

FAMILY TO BE PRESENT

In the audience will be Mrs. Dolan's husband, John J., an attorney who is now a vice president of the Milwaukee Gas Light Co., and their three sons, John, 30, of Hartland, an advertising man; Thomas, 27, now teaching the history of philosophy at Edgewood Academy, Madison, while working on a doctorate at the University of Wisconsin, and Philip, 25, in the marketing division of a manufacturing firm.

The Dolans decided ruefully several years ago that their boys must have heard too much law talk to favor it as a profession for themselves.

Mrs. Dolan completed work on her law degree after her marriage to a fellow Marquette University law student. For 12 years she was in part-time private practice. She specialized in probate and domestic relations, fields which she believes are particularly suited to women attorneys.

LOGICAL CHOICE FOR POST

One of her major problems was asking clients for money when they had so many other troubles. So in 1939 when the strictly nonprofit legal aid society needed a new director, she was a logical choice. She had already become widely known in civic and welfare circles.

They tell the story that she asked a low salary so that she would not feel guilty if she stayed home when one of the boys had measles.

Mrs. Dolan is not the usual mental image of the woman lawyer. She is just 5 feet tall in high heels and enjoys pretty clothes and jewelry. She has short black hair and hazel eyes and an air of friendly efficiency. The big old-fashioned Dolan home at 2522 East Newberry Boulevard is the scene of many festive parties and family gatherings.

WOMAN'S TOUCH APPARENT

Her office is on the sixth floor of the YWCA, 610 North Jackson Street, has its complement of legal texts and workaday tools but the walls are a soft gray blue and there are textured drapes at the windows, abstract hangings over a davenport, a vine in a brass planter, and handsome barometer and clock that were Christmas gifts from her husband, and pictures of the four grandchildren set in novel paperweights.

There she was interviewed last week.

Legal aid, she pointed out, provides the community with a unique service.

"In our free enterprise United States," she said, "there is no setup in the law for representing indigent people in most court actions. Only in felony cases does the

court appoint an attorney for an indigent defendant. In any person's life, there may be a time when he needs the protection of the law. It can be a catastrophe if he does not have legal representation."

BASIC TO MOVEMENT

It is basic to the legal aid movement that "equality before the law is the cornerstone of the American concept of democracy" and that "poverty must not be allowed to stand in the way of equal justice for any citizen."

Many Milwaukee clients of the Legal Aid Society have been frightened by eviction notices or are involved in landlord-tenant disputes. Others are in marital difficulty. Wives may need help to obtain support orders. Small claims cases are frequent, and often can be settled with a letter.

Mrs. Dolan supervises a staff which includes another full-time attorney, a part-time attorney handling courtwork and two office secretaries. She has developed a program of training 20 Marquette University law students each semester. With the Milwaukee Bar Association, she organized a bar reference panel, to which clients who can pay but don't know an attorney may be directed. With the help of the Junior Bar Association, the society organized a voluntary defender program to give free counsel in the district court.

VOLUNTEER PROGRAM

The newest of her ventures is a volunteer program for the Lawyer's Wives of Milwaukee. About 35 of them are now appearing at the office for regular half days. They answer telephones, register clients, file papers, and soothe waiting children in a playroom which they fixed up in a corner of an office.

Mrs. Dolan has been an active member of such groups as the Zonta Club, Business and Professional Women's Club, Women's Court and Civic Conference and Community Welfare Council. She helped found the Milwaukee County Women Lawyers' Association. For 3 years, she served on the executive board of the National Legal Aid Association. The Quota Club in 1955 named her the Milwaukee "Career Woman of the Year."

CASELOAD SOARS

In her 20 years with the society, Mrs. Dolan has seen the caseload climb from 2,000 a year to 5,500 and the budget grow from an annual $5,500 to $31,634.

A tireless "salesman" for legal aid service, Mrs. Dolan looks upon each new extension of program as an opportunity to enlist more public support. That is the way she is trying to regard the testimonial breakfast ahead. She returned from a recent Caribbean vacation to find the plans afoot. She protested.

"It's already in the hopper," her good friends and admirers told her, "and there is nothing you can do about it."

Tadeusz Kosciuszko—1746–1817

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. FLOOD. Mr. Speaker, Poland has been a great reservoir of soldiers of freedom. And whenever her brave and courageous sons have found it impossible to serve the cause of their unhappy and unfortunate kinsmen, they have had no difficulty in findings fields of activity where they have rendered immense services for the cause of human freedom. Gen. Tadeusz Kosciuszko, who served in our War of Independence from 1776 to the end of that war, was one of those gallant fighters whose deeds on battlefields and his ingenious methods of devising our defenses and fortifications, have endeared him to all Americans.

Tadeusz Kosciuszko was a rare character in his days. He showed remarkable aptitude as a student of the military art and was offered the best military education in his native Poland. But for this energetic, ambitious, and idealistic youth of fighting spirit, that was not sufficient. He went to France and there at the famous Mezieres Military School specialized in artillery and engineering. Thus he was thoroughly prepared for the tasks he undertook while in the service of the Continental Army. For his distinguished services Congress made him a brigadier general in 1783, and with that proud rank he returned to Poland hoping to serve his country's cause. Unfortunately that was not to be; after more than 20 years' struggle, he died in exile in Switzerland at the age of 71. Today in paying homage to his blessed memory we once more acknowledge our gratitude to this brave and patriotic son of Poland.

Boy Scouts of America

EXTENSION OF REMARKS
OF
HON. J. EDWARD ROUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. ROUSH. Mr. Speaker, this week over 5 million members of the Boy Scouts of America will celebrate their 50th anniversary. The Boy Scouts were first incorporated in the District of Columbia on February 8, 1910. On this occasion I wish to pay tribute to this organization and its members for the outstanding contribution they have made to our country and people.

The Scout, through his training and adherence to the Scout oath and law, represents the qualities of our American youth. Scouting has played a major role in the activities of our country in every kind of emergency. During both World Wars, they responded to the call of duty with the obedience of a well trained soldier. In World War I they raised nearly one half billion dollars in Liberty Loans and distributed over 30 million pieces of Government literature. During World War II, in the year 1942 alone, the Scouts collected 250 million pounds of wastepaper, over 73 million pounds of rubber, over 293 pounds of scrap metal and nearly 10 million pounds of tin cans. There are so many accomplishments the Scouts made during these two wars it is impossible to list them all in these brief remarks.

Disasters during peacetime found the Scouts responding to the urgent pleas of help. In 1925 they rendered service in the Illinois tornado, California earthquake, and the fire at Shreveport, La.; 1927 found the Scouts assisting in the Mississippi floods, St. Louis tornado, and the New England floods. They collected 1,812,284 items of clothing, foodstuff, household furnishings, and supplies for the needy and distressed in the year 1934.

Today, reviewing the past 50 years of the Scout movement, I hope the next 50 years will be as fruitful and rewarding. The Scouts in their devotion to God and country, will continue to lead our youth in the building of spiritual values, high moral character, and strong bodies. In these days of danger of communistic oppression and atheistic ideology, we should heed the words of our late President Roosevelt in a speech to the Boy Scouts on February 8, 1941:

> The Boy Scouts of today are approaching manhood at a grave hour in the world's history. Recent events have threatened the security of freemen everywhere, and the democratic way of life is being challenged in many parts of the world. The United States must be strong if our free way of life is to be maintained, and for our national policy we, as a nation, have adopted the motto of the Boy Scout organization—"Be Prepared."

During these days of uncertainty, I feel that we as a nation should heed these words and again use the motto "Be Prepared."

Birthday Anniversary of Two Great Men

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. DULSKI. Mr. Speaker, tomorrow, February 12, is the anniversary of the birth of two great men who have played important roles in the history of our Nation—Abraham Lincoln and Gen. Thaddeus Kosciusko. Although they lived in different periods, they shared the same respect for man's dignity and they both loved liberty.

Every school boy and girl in America learns about the great champion of freedom, Abraham Lincoln, and how he has inspired men of good will everywhere.

General Kosciusko is the hero of two continents. He fought for freedom in our American Revolution and then returned to Poland where he led a revolt to bring freedom to his own people. He was the first foreign patriot who did not hesitate to cross the ocean to fight for the principles in which he firmly believed. He was a great military leader and his engineering genius contributed a great deal to the American cause.

Kosciusko dedicated his life to the universal struggle for freedom, and his courage, bravery, and sacrifice should be an inspiration to us all. This struggle continues, never ceasing, and while Poland is oppressed today under communism the love of liberty has not diminished. As long as the spirit of Thaddeus Kosciusko lives in the hearts of the

Polish people, their outlook for the sacred cause is bright.

We all join together in paying tribute to the memory of these two great men.

Necessary Business Expenses

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two editorials entitled "Necessary Business Expenses" which appeared in the New Orleans States-Item in the issue of Wednesday, February 3, 1960; and "Petition for Fair Play" which appeared in the Wall Street Journal on Monday, February 1, 1960:

[From the New Orleans States-Item, Feb. 3, 1960]

NECESSARY BUSINESS EXPENSES

Timely and fair is a bill by Representative HALE BOGGS asking classification as legitimate expenses those sums spent by industry to speak its mind on Federal legislation.

Until now, the Internal Revenue Service has held that bills run up by a business or anyone else in attempting to influence legislation through the medium of free expression of opinion are not proper expenses.

And the advertiser who has bought space or time to set forth his views on a measure before Congress has had to pay taxes on the money so spent.

Representative BOGGS, however, proposes in House Resolution 7123 that all such expenses be deductible.

As things now stand, he believes, a penalty is being placed on the utilization of freedom of speech in communicating opinion to the Nation's citizens and lawmakers.

He is on sound ground when he says that any business which feels a particular measure is deleterious to its interest must be allowed to say so without being penalized income taxwise.

Such expressions of opinion should be interpreted as legitimate, deductible expenses.

If the cost of being heard in the interest of self-preservation isn't a necessary business expense, then what is?

[From the Wall Street Journal, Feb. 1, 1960]

PETITION FOR FAIR PLAY

If you look at Representative HALE BOGGS' bill one way, we suppose it could be called a proposal to help Washington lobbyists. Why, one might be inclined to ask, should the law be changed to permit an individual who wants Uncle Sam to ease up on his taxes, or pass a measure that will help his business, to deduct the costs of his attempts to influence legislation from his income?

The argument sounds reasonable enough. But if you'll take the trouble to look at the other side of the proposal of the Louisiana Congressman, his bill takes on a far different appearance.

The problem lies, first of all, in the inequities of the tax laws that result in a privilege to some and a penalty to others. In this case, the constitutional right of petition granted all the people is affected.

Here's how it works: A great many tax-exempt organizations and a lot of pressure groups are permitted—and rightly so—to engage in lobbying efforts to influence legislation without losing their tax-exempt status. And Government agencies, which of course pay no taxes, are among the biggest lobbyists in the Nation's Capital.

But, says Representative BOGGS, present Internal Revenue Service regulations prevent like deductions by individual people. "Even the expenses of a businessman's appearance at a public hearing before a congressional committee considering legislation affecting his business may be disallowed."

Mr. BOGGS' petition for fair play is based on the pretty sound idea that the right of any and all citizens to petition for good laws, or to oppose bad laws, as they see those laws, should not be diluted by punitive taxation.

Hence his bill to allow expenses legally incurred in attempts to influence legislation to be as tax deductible as expenses of foundations, tax-exempt lobbies, and Government agencies.

And when you get right down to it, the way the regulation works now it means that if a bill is before Congress and John Smith wants to have his say in opposition to some pretty powerful tax-exempt interests, John Smith has to pay taxes on what he says.

Mr. Powell Supported

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

MR. POWELL SUPPORTED—QUALIFICATIONS FOR HEADING HOUSE COMMITTEE REVIEWED

To the EDITOR OF THE NEW YORK TIMES:

One must always agree—on the basis of its unmatched stature—that the New York Times is a most responsible pillar of journalism. At the same time one must also recognize the fallibility even of the Times.

It appears to me that in support of the opposition to Congressman ADAM CLAYTON POWELL'S appointment as chairman of the House Committee on Education and Labor the Times is employing a specious argument. This argument stands on a three-legged stool: He is a racist; he has a poor record as a legislator; and his absenteeism.

In the first place, what is a racist? Is he a citizen fighting to extend democracy to his own race, or one who would deny those rights? A "racist" is one who believes in racial superiority and not racial equality. If the Times' reasoning on this point should be carried to a logical conclusion, no southerner and few northerners could qualify as a committee chairman.

WILL OF MAJORITY

In our democracy the real test for the chairman of a congressional committee is whether or not he is willing to allow the will of the majority to rule. In his very first press conference on this subject, Congressman POWELL made it clear that, as chairman, he would bring all legislation to a committee vote. Congressman POWELL said that Congressman PHIL LANDRUM of Georgia and CARL ELLIOTT of Alabama would be retained as subcommittee chairmen.

The argument that Mr. POWELL should not be appointed because he is a "poor legislator," is both irrelevant and misleading. In the 16 years in Congress Mr. POWELL has done exactly as his constituents in Harlem have wanted him to do: continue to introduce all forms of civil rights legislation whether the Congress passed it or not. It would be far more accurate to say of Mr. POWELL that a good legislator has been operating in a poor Congress.

Thirdly, the charge of "absenteeism" against Congressman POWELL is an old canard which really does him a grave injustice. The workload carried by Mr. POWELL, despite many serious illnesses, would stagger the most hearty individual. For 30 years he has been minister of the Abyssinian Baptist Church. In Congress he is the Representative for practically the whole of the Negro population of the United States. His daily mail easily outnumbers that of any other Congressman, by at least 3 to 1. He reads, and answers, every single letter.

ATTENDANCE AT MEETING

Congressman POWELL is in his second term as chairman of the 17-man House subcommittee on mines and mining. He has attended every meeting and has brought along such fine knowledge and ability to this highly technical committee as to win public commendation from the full committee chairman and those members who serve under him.

I submit that the Times would have been wise to examine the members of Mr. POWELL'S present committee before reaching such a hasty and premature conclusion; the same would be true of Speaker SAM RAYBURN, who by public pronouncement has supported Mr. POWELL'S appointment.

In the light of the foregoing evaluation one can only hope that the Times will give further editorial consideration to Mr. POWELL'S appointment. For if for any reason, including Mr. BARDEN'S decision under pressure to run again, Congressman POWELL is denied the chairmanship, the whole world will look upon democracy as a bitter palliative for its oppressive sickness.

JOHN YOUNG III.

A Letter From Bishop Sherman L. Greene to the Editor of the New York Times

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. POWELL. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 1, 1960.

The EDITOR,
The New York Times,
New York, N.Y.

SIR: As a southerner, familiar with the great need for fairer regional representation on committee chairmanships in the Congress, I am somewhat dismayed at the editorial position of the New York Times as it voices opposition to Representative ADAM CLAYTON POWELL as possible head of the important House Committee on Education and Labor.

In direct rebuttal to your reference to Mr. POWELL'S record as "miserable," I respectfully call your attention to the splendid record our "champion of civil rights" has been making during his tenure as subchairman of the Committee on Mines and Mining. It is a matter of record that Mr. POWELL has been publicly applauded by his colleagues in the 86th Congress for his industry, attention to work and "attendance at all of the meetings." (CONGRESSIONAL RECORD, June 12, 1959.)

Your reference to Mr. POWELL as a racist was most ingracious, in fact it was inept. If the gentleman from New York has been

forced to emphasize his resentment over the denial of basic citizenship rights to Negroes, it should be to his credit that he has thus made himself a Congressman at Large, the voice of the Negro people themselves.

When contrasted with the segregationist, fascist, and most un-American character of some of Mr. POWELL's colleagues in this same Congress, he stands out in bold belief as a patriot. There is nothing racist about POWELL's demands for Negro equality. Either he simply echos the determination of Negroes for full freedom now.

The New York Times must continue to criticize editorially and your right to do so is the very essence of democracy. Seizing this moment to attract the system of seniority however, is almost certain to be misunderstood, for POWELL is a hero from Bandung to Birmingham. Then too, is it not the judgment of the voters of Mr. POWELL's district that keeps him in the Congress? Let us help, not hinder those who work for a better America.

Bishop SHERMAN L. GREENE,
Senior Bishop and Chairman of the General Board of the African Methodist Episcopal Church.

Retirement of Prominent Bank Executive of Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story that was featured in the Plain Speaker of Hazleton on Tuesday, January 19, 1960, announcing the retirement of Mr. Alvan Markle, Jr., as vice president of the Northeastern Pennsylvania National Bank & Trust Co. of Hazleton. Mr. Markle has had a most outstanding career in the business life of the city of Hazleton, and is a member of a distinguished family which pioneered the development of that city, the second largest in my district. Though Mr. Markle has retired from an active role in banking, I am certain he will continue to make impressive contributions to the progress of his native city which will redound to the benefit of the entire community which I have the privilege and honor of representing.

ALVAN MARKLE, JR., TO RETIRE FROM BANK POST—FORMER HEAD OF MARKLE BANK TO CONTINUE SERVICE WITH CAN-DO

Alvan Markle, Jr., one of the region's most prominent bank executives and member of a family which pioneered the development of the Hazleton area, retired as vice president of the Northeastern Pennsylvania National Bank & Trust Co. of this city.

He will continue to serve as a member of the board of directors and will maintain offices in the bank at 8 West Broad Street.

He will also continue to serve as a director, executive committee member and chairman of the finance committee of CAN-DO.

Markle has served as an officer of the banking institution—one of the oldest in the city—since 1916, when he became a vice president of the Markle Banking & Trust Co. He was elected president in 1929.

In 1958, when the Markle Bank merged with the First National Bank of Scranton and the Wilkes-Barre Deposit & Savings Bank to become Northeastern National, Markle became a vice president and director of the new bank.

WILL CONTINUE CAN-DO ROLE

The retiring bank official told the Plain Speaker that he hopes to continue to serve on the CAN-DO board "as long as they want me."

Markle, born in Hazleton on July 28, 1889, is the son of Alvan Markle and Mary Dryfoos Markle. He received his early schooling in the Hazleton public schools, Fay School at Southborough, Mass., and the Hill School, Pottstown.

Later he entered Sheffield Scientific School, Yale University, graduating in 1913 with the degree of bachelor of philosophy. While at school and college he was active in athletics and at Yale was a member of the senior student council.

After graduating from college, he entered the services of Guaranty Trust Co., New York City, where he remained a year and a half; this experience, together with another year's apprenticeship at the Markle Bank, gave him a fundamental knowledge in banking and trust work as he assumed the vice presidency of the Markle Bank in 1916.

EXTENSIVE COAL INTERESTS

The production of anthracite coal interested Markle as it did his father and grandfather before him. He became a director of Jeddo-Highland Coal Co., Hazle Brook Coal Co., Markle Corp., Fuel Service Co., General Coal Co., Rockhill Coal Co., Raven Run Coal Co., Madeira Coal Sales Co., Jeddo Supply Co., and Jeddo Tunnel Co.

He was also interested in transportation and manufacturing and became a director in Wilkes-Barre and Hazleton Railroad Co., Lehigh Traction Co., Hazleton Auto-Bus Co., North Branch Bus Co., Hazleton Manufacturing Co., and Artcraft Hosiery Co., later Sanson Hosiery Mills, Inc.

A director of the Altamount Hotel Co., he was instrumental in starting Pennmar Shares, Inc., an investment holding company, in 1930, and became its first president as well as director.

Turning his attention to the development of new industries in recent years, he was elected a director of Greater Hazleton Community-Area New Development Organization, Inc. (CAN-DO), and has served as its first and only finance committee chairman.

HEADED LIBERTY BOND DRIVE

When World War I started, Markle was local chairman of the first Liberty loan drive, but left that job to others when he went to Fort Niagara on August 25, 1917, to enlist in the Officers Reserve Training Corps.

He received a commission as second lieutenant in the U.S. Signal Corps on September 12, 1917.

Later the aviation section of the U.S. Army was formed and he was promoted June 15, 1918, to first lieutenant in the air service. At the time of the armistice he had been recommended for a captaincy.

During World War II and up until 1949, he served as war bond chairman in lower Luzerne County.

On January 20, 1917, he married Gladys Jones, daughter of Thomas D. Jones, coal operator. Four children were born to them: Maj. Alvan Markle, Lt. Thomas Vaughn Markle, Dr. George Bushar Markle IV, and Marian Markle Pool.

Mrs. Markle died May 20, 1945, and on February 21, 1948, he married Ruth Thomas Gillett at the Fifth Avenue Presbyterian Church in New York City. Ruth T. Gillett Markle died August 10, 1952. On February 21, 1955, he married Rebecca Miller Conderman, of Bryn Mawr.

CLUB MEMBERSHIPS

Markle is a member of the following clubs: Union Club, Yale Club, St. Anthony Club, and Pennsylvania Society, all of New York City; the Racquet Club, Midday Club, and Gulph Mills Golf Club of Philadelphia; and the Fishers Island Country Club and Porcupine Club of Nassau.

In Hazleton, he is a member of the Craftsman's Club, American Legion Post No. 76, and is a past president of the Valley Country Club.

He has been a member of the board of trustees of the Hill School, Pottstown, since 1934, and was president of the board during the years 1951 and 1952. He is a 32-degree Mason.

Residing at Sugarloaf, he finds his recreation in golf, tennis, books, photography, and landscape painting. In past years he devoted much of his time to community chest work and chamber of commerce activities.

Real Life in Fiction Form

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following review of "The Benefactor," by Maria Flores, which appears in the Saturday Review of February 13, 1960. "The Benefactor" is in real life Dominican Republic dictator Trujillo. The Spanish professor, Dr. Tomas Alfaro, was in real life famed Basque Scholar Dr. Jesus de Galindez. The young American pilot, Johnny Daly, was in real life a former resident of the congressional district I represent, a young man named Gerry Murphy. Author Flores has written in fictionalized form a real-life story which ought not to have happened but did.

BOOK IN THE NEWS

Maria Flores is the pseudonym of an Anglo-Argentinian who emigrated to this country in the forties and later wrote "The Woman With the Whip," a study of Eva Perón. In her new novel, "The Benefactor" (Doubleday, $3.95), she tells another tale of Latin American dictatorship. A Spanish professor named Dr. Tomás Alfaro finishes one of his evening lectures at Columbia University, waves goodbye to several students who have dropped him off at the Columbus Circle subway stop, and is never seen again—except by his captors. He is shanghaied onto a waiting airplane, strapped to a stretcher, and passed off as an invalid to the naive young American pilot who flies him to an unnamed island in the Caribbean ruled by "The Benefactor."

Readers may find that the plot of this fast-paced, exciting novel has a familiar ring. It was just a little more than 3 years ago that a Spanish professor named Dr. Jesús de Galíndez finished one of his evening lectures at Columbia University, waved goodby to several students who had dropped him off at the Columbus Circle subway stop, and was never seen again—except by his captors. Based on later evidence reported in the press, it was widely believed that Dr. Galíndez was shanghaied onto a waiting airplane, strapped to a stretcher, and passed off as an invalid to Gerald Lester Murphy, the young American pilot who flew him to the Dominican

Republic, a misnamed Caribbean dictatorship ruled by Rafael Leonidas Trujillo de Molina. After the flight, young Murphy became quite affluent, but his luxury living was brief, and the price of his idyll in the sun was high. On December 3, 1956, he was murdered in the Dominican Republic.

In Miss Flores's novel a young American pilot named Johnny Daly is murdered on the unnamed Caribbean island of The Benefactor, and it is largely through his experiences after flying Dr. Alfaro in from New York that the story is told. Daly was merely doing a job, and he felt that the political intrigues of these foreign-speaking folks was their own business. Dr. Alfaro, the captive whom Johnny flew to his death, was killed because he had constantly attacked and exposed the tactics and dictatorial rule of The Benefactor (just as Dr. Galindez had devoted his speaking and writing to outspoken criticism of the Dominican dictator). Johnny Daly was killed because he knew too much—or perhaps, in a larger sense, because he understood too little. He knew too much about the kidnapping of the invalid he flew to the island of The Benefactor, but he understood too little about The Benefactor's ruthless power.

This story of intrigue and tragedy is told by Miss Flores through the eyes of a hired killer, of Dr. Alfaro himself, of the young American pilot who is doomed and doesn't know it, and, finally, of the island girl who is hired to gain Johnny Daly's intimate confidence and disobeys orders by falling in love with him. Behind the private loves and losses of all these people—and, indeed, of all the inhabitants of the sun-baked, fear-stiffled island—looms the figure of The Benefactor, who, like fate itself, is cruel, ruthless, unsparing, and unseen.

In a sense, The Benefactor is the major character in this novel, and yet it is appropriate that the author never lets us hear his voice or see his face. His presence pervades the action, like the presence of death, and weighs more heavily throughout each page as the characters move in the paths that are charted by the whim of his vengeance.

Unlike many novels that bear resemblance to certain factual situations, "The Benefactor is a tightly written, well-wrought narrative that is absorbing for its own sake. The shadows of the real-life tragedy that it suggests merely adds a nightmare dimension to its already harrowing quality.

—DAN WAKEFIELD.

Tadeusz Kosciuszko, 1746–1817

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. MULTER. Mr. Speaker, great men dedicated to great causes sometimes find themselves hopelessly frenzied and sadly frustrated. Often circumstances and the course of events interpose insuperable difficulties, and thus prevent such men from serving the cause to which they are dedicated. The life of Tadeusz Kosciuszko, of Poland, illustrates this point quite clearly.

This brave son of Poland was dedicated to the cause of his unfortunate kinsmen. By the time he grew up and was ready to serve that cause, he learned that, because of political conditions, his services were of no avail to his beloved country. Fortunately for our great Republic, he devoted himself to serving an equally good cause in fighting for our independence. What was Poland's loss, turned out to be America's gain, and tomorrow, February 12, on the 214th anniversary of his birth we honor the memory of this great soldier of freedom for the signal, invaluable services he rendered to this country as a courageous soldier and as a resourceful planner of our defenses in our War of Independence.

Inflation and Irredeemable Currency Go Hand in Hand

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by H. J. Stuhlmiller:

INFLATION AND IRREDEEMABLE CURRENCY GO HAND IN HAND

(By H. J. Stuhlmiller)

Regarding the tangibles—the things that we make and can see or touch—much progress has been made.

But regarding the intangibles—morals, politics, government, and monetary economics in particular—our progress has lagged; at times it has been retrogressive. The reason is our neglect of history and our failure to profit by lessons of the past.

Consequently civilization has advanced and declined. Nations rose, then fell from power. Because their rulers debased their currencies, many governments have fallen.

Since the time that paper money and bank checks came into general use, currency is debased by causing it first to become irredeemable. Commonly that is known as going off the gold standard. Causing currency to become irredeemable means that government ceases to respect its obligation to redeem its paper money promises with coins of the metal it has designated as standard. Governments have rarely taken this step unless forced to do so by reason of near insolvency—usually the aftermath of wars.

Without one single exception, history shows that while currency is not redeemable, all money loses value, evidenced by a price level that sooner or later starts to rise; slowly at first, then gaining momentum in its later stages. Only while currencies remain irredeemable is it necessary to fight inflation. That our U.S. dollar is irredeemable is the direct and underlying reason that our Nation is having its continual fight with inflation.

ITS START

It was started in 1933. Our Nation was emerging from the depression. Even in 1932 there were signs of recovery. But prices seemed too sluggish; in his impatience to drive them up, our President decided to inflate. So we were taken off the gold standard. Then, by means of inflating the money supply—deficit spending—until prices had reached some desirable level, inflation was to stop and we were promised "a dollar that will not change in debt-paying and purchasing power within the next generation."

True to history, inflation was not stopped for the reason that a redeemable currency has not been restored.

THE INFLATION OF 1862–75

Much may be learned by reviewing that period of the preceding century when Americans had to fight inflation. The costs of carrying on the War of the Rebellion were so great that both the Northern and Southern States had to resort to the issuance of irredeemable currency to pay their bills.

According to the records, "Those who advocated their issue (the irredeemable greenbacks) justified themselves on the ground of necessity. No one who spoke in favor of the measure favored it upon principle, or hesitated to express his apprehensions that evil consequences might result from it. But the Government was in peril, the emergency was pressing, necessity seemed to sanction a departure from sound principles of finance, if not from the letter of the Constitution, and an irredeemable currency became the lawful money of the country."

True to history, prices went up and up.

During this Civil War inflation, in his letter to the national banks, December 20, 1863, Comptroller of the Currency Hugh McCulloch stated: "Although the loyal States appear superficially to be in a prosperous condition, such is not the fact * * * while cities are crowded and the country is to the same extent depleted, the Nation, whatever may be the external indications, is not prospering."

And in his report dated November 25, 1864, he commented: "Governments should not be bankers. None has existed which could be safely trusted with the privilege of permanently issuing its own notes as money. * * * When money is plenty, and fortunes are being rapidly acquired the country is always in a feverish and unhealthy state. This is especially true at the present time. The enormous expenditures of the Government and the great advances in prices since the commencement of the war have made many persons suddenly rich, and upon fortunes suddenly acquired have followed reckless expenditures, extravagance, waste. Speculation is taking the place of sober and persevering industry and thousands are deluded with the notion that the wealth of the Nation is being increased by the increase of its indebtedness."

Mr. McCulloch later became Secretary of the Treasury (1865–69), and in his annual report of 1868, he stated, in effect, "Why should not an irredeemable Government currency be regarded as evidence of bad management of the national finances, if not of national bankruptcy? The U.S. notes, although declared by law to be lawful money, are nevertheless a dishonored and disreputable currency. The people are compelled to take as money what is not money."

In 1869 President Grant stated, "The national honor must be protected by paying every dollar of Government indebtedness in gold unless otherwise stipulated in the contract." Fighting inflation during those turbulent years was the problem then as it is with us today.

A reconstruction boom followed the termination of the Civil War. Railroads were expanding tremendously and millions of bonds and other railroad securities were sold to the banks and to the public.

Rising prices, inevitable while a currency is irredeemable, brought overtrading, speculation, and easy riches for some. This speculative boom terminated in the panic of 1873 when the railroads began to default on their bond interest.

Storms of protest came whenever the issue arose of restoring a redeemable currency. Finally a number of Congressmen determined that the people should be relieved of the ills of an irredeemable currency. Under the courageous leadership of Senator John Sherman whose slogan was "The Way To Resume Is To Resume" and with the support of President U. S. Grant, the battle was finally won. The act of January 14, 1875, for resumption of specie payments was

passed, to become effective as of January 2, 1879, when the banks were again to pay gold coins to those who preferred gold to the paper greenbacks.

Thus ended our Nation's great inflation of the 19th century and inflation never again was to rear its ugly head until 1933.

Following resumption was recorded one of the most rapid growth periods in U.S. history, according to studies made by the National Bureau of Economic Research. During that 25-year period production almost tripled while prices slowly declined. So it was under a redeemable currency that our Nation again went forward to attain world leadership.

WHERE WE STAND TODAY

In spite of declining prices of farm products the cost of living creeps up and up and is at an all-time high. The dollar that was to retain its purchasing power has now sunk to the lowest point in history.

Investment in U.S. savings bonds is now regarded less attractive and the volume of bonds being cashed exceeds new bonds being issued.

Our total money supply—currency outstanding plus bank deposits—has been inflated to the extent that it has now reached $262 billion. Compare this with the 1940 total of $84 billion.

The statement so frequently made that the Federal Government has at its disposal only those funds that are raised by revenues and taxation is false. So long as our U.S. paper money is not redeemable our Government can always pay its own citizens with paper. Thus it can continue to create additional paper money and new bank deposits against which it can draw its checks. Since 1940 alone, our Federal Government has created more than $100 billion of new, unearned bank deposit money that it has spent. This is in addition to the money spent which our Government obtained from tax revenues and borrowing from the people. As this new money is added to the money already in circulation, prices go up and the purchasing power of all money goes down.

Our Nation has lost more than $3¼ billion of our gold to foreign interests since January 1, 1958. This reduces our gold stock to $19.582 billion, according to the most recent report. This is less than the amount we held 20 years ago.

That our money supply has more than tripled since 1940 deludes people with the notion that our Nation's wealth is likewise increased, when in fact, this indicates the distance we have traveled down the road of monetary inflation.

Payments made to the public by the Federal Government alone for the past fiscal year exceeded $94 billion. In 1940, the total money supply in existence in the United States was only $84 billion.

HISTORY OF OTHER NATIONS

The history of other nations throughout the world is full of similar examples. Irredeemable currency and inflation go hand in hand. Without exception, on every occasion where governments have been overthrown and the people ruined by inflation, that government was using an irredeemable currency—off the gold standard.

Our Nation did not lead the world down this inflationary road. The other nations led us. England stood out longer than any of the other European nations but finally succumbed in 1931. Then we followed 2 years later.

WARNINGS

By means of newspaper articles and printed pamphlets the public is being warned of the dangers of inflation, urging us to write letters to our Congressmen demanding that they practice economy and avoid deficits. Our Congressmen have been receiving thousands of such letters.

Then we have the so-called "built-in stabilizers" administered by officials chosen for their outstanding ability. And inflation moves merrily along.

It is true that our U.S. Treasury is required to redeem in gold its paper dollars which are held by foreign governments and their citizens. This accounts, at least in part, for the higher interest rates and tighter money now prevailing in the United States of America. By means of converting into gold the proceeds of their U.S. and other securities sold on the American markets, foreigners can protect themselves from dollar devaluation, and so, to a limited extent they can discipline our Federal Government. This right that U.S. citizens formerly held was taken from them when our dollar became irredeemable.

Three major organizations of reputable economists are urging our Congressmen to restore a redeemable currency—the gold standard. Aside from them, it is probable that few of the letters received by Congressmen advocate this vital measure. This writer has talked with a number of younger college graduates who did not know that we were off the gold standard. All of this indicates a sad neglect of the study of history.

It is time for the American people, and their political leaders as well, to wake up. The lessons of history are clear if we are only willing to study and to comprehend.

Slavs Here Before the "Mayflower"

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. John C. Sciranka, American-Slovak journalist and editor, of Passaic, N.J., which appeared in the December 1959 issue of the Dobry Pastier—Good Shepherd—official organ of the Slovak Catholic Federation of America:

SLAVS HERE BEFORE THE "MAYFLOWER"

(By John C. Sciranka)

On December 19 it will be 80 years that the first group of Slovaks arrived in Passaic, N.J., brought here from the famous Castle Garden, then the immigration depot by Mr. Waterhouse. The first seven arrivals were from three different Slovak counties. Andrew Pastor, Jan Socha, Jan Kostosin, and George Slivka came from the Saris County; Jan Pochlod and Jan Salasovic from Zemplin, and Edward Geiger from Spis County. Six months later Stephen Cherepy and Frank Drombly arrived from Saris.

I have already reviewed their history on previous occasions. However, they were not the first Slovaks or Slavs in America, for the first Slav immigrants came to America from Poland before the *Mayflower*. Also the famous Dalmatians, who are Croats, accompanied Christopher Columbus on his voyage to the New World.

It is most significant that a year before the *Mayflower* dropped anchor off the New England coast, carrying English immigrants who were to establish a Puritan theocracy in the northern wilderness, Polish and Slovak immigrants were fighting for democratic rights in the young Virginia colony.

Arriving in 1607 to aid Capt. John Smith in building Jamestown, Va., the first permanent English settlement in the New World, the Poles were employed by British capital to manufacture glass beads for trading with the Indians and as workers in other crafts.

But in 1619 when the House of Burgesses met in Jamestown, for the first time the Poles and their Slav brothers, despite their vital contributions to the maintenance of the colony, were denied the rights to vote. Rebellion against this injustice quickly took organized form and the peace of the small settlement was threatened by a stoppage of work unless equal rights for all were restored. They won their demands and the court book of the Virginia Co. of London, attests. Under the date of July 31, 1619, the record book of the English financial backers of the Jamestown colony declared:

"Upon some dispute of the Polonians resident in Virginia it was now agreed that they shall be enfranchised and made as free as any inhabitants there whatsoever. And because of their skill in making pitch and tar and soap ashes shall not die with them, it is agreed that some young men shall be put unto them to learn their skill and knowledge therein—for the benefit of the country thereafter."

Fifty years after the Jamestown experiment, Peter Stuyvesant, Governor of New Amsterdam, now New York, held out allurements to groups of Slavs. Augustine Herman, first Czech (Bohemian) in America was on his board of advisers. He later established Bohemian Manor in Maryland and made a map of the State. In 1659 groups of Poles arrived and settled near Fort Orange, now New York, where their skill as tillers of soil soon became evident.

During the same period of the Dutch occupation, Dr. Alexander Kuriusz, a Pole whose name has become known to history as Curtius, is credited with having established the first school of secondary education in America, which subsequently became an academy at which pioneers of more than one racial strain received their early education.

In the volumes of "Passaic and Its Environs" by the late Passaic historian, William W. Scott, Rev. Henry Loskiel, a Moravian missionary, was baptizing Indians in 1676 in the vicinity of Passaic. Moravians are closely alined with the Slovaks from the time of the Great Moravian Empire, which had Slovak rulers like Pribina, Rastislav, Mojmir, Svätopluk, etc. Polish nobleman Zaborskie, who was an early settler in New Amsterdam, later moved to New Jersey where he acquired large tracts of land in Bergen County, along Passaic River. The family is known as Zabriskie. Poles settled in Delaware as early as 1650, according to old records. And Pennsylvania archives show them to have taken root with its founder, William Penn. And of course, the Slovaks were always close neighbors of the Poles.

On this the 80th anniversary of the arrival of the first Slovak group to Passaic, we pay tribute to the early pioneers and hope that the present and future generations will carry on the good work in their footsteps for greater America and freedom of Slovakia.

New Jersey's Inventory of Historic Sites and Buildings Heralds a National Trend

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, we are reminded by the distinguished historian and author, Eleanore Nolan Shuman, that although the his-

tory of New Jersey is significant and closely intertwined with the history of our country there has long existed a feeling among informed and responsible citizens that some of the New Jersey story is still unknown and some of its important historic sites and structures have been overlooked.

This explains, at least in part, the disappearance of a number of New Jersey's historic structures and sites in recent years. This tragedy is part of a larger movement and, according to a recent estimate by the Reader's Digest, one-fourth of the historical buildings in existence in this country in 1941 have been destroyed. Many of these buildings have been destroyed to make way for federally assisted highways and housing projects.

In a recent editorial, the Trentonian, a leading New Jersey newspaper, declared:

> To many people who are appreciative of New Jersey's deeply rooted historical associations, progress is an enemy ever on the prowl. * * * The airplane, the superhighway, and the housing development all must be served, but it isn't always necessary to serve them by sacrificing those things which are or should be sacred to Americans.

Many kinds of criteria are considered by local, State, and Federal officials in reaching their decisions as to where the new federally assisted projects should be located but criteria as to the national, regional, or local historical and architectural significance of the buildings and sites which may be in their path are almost never taken into account.

It is my considered opinion that Federal officials must shoulder a large share of the blame for this disregard of the precious and irreplaceable heritage which is being uprooted and destroyed by such careless spending of Federal moneys. I have said before and I will say again, that never before have powerful Federal officials shown so little interest in, or knowledge of, the importance of the great heritage which is ours in the buildings and sites which constitute an irreplaceable link with our past.

The urgency of this situation requires the enactment by the Congress at an early date of several bills which have been introduced in this Congress by Senators HUBERT H. HUMPHREY, and JOSEPH S. CLARK and in the House by the gentleman from New Jersey [Mr. WIDNALL] and myself. Several of our colleagues have joined with us in sponsoring this legislation and we have been receiving rapidly growing support from many citizens and organizations throughout the country who are deeply disturbed over the disappearance of so much of our visible history.

It is not, however, solely and entirely a matter of unresponsive and misguided Federal officials. State and local officials can do a very great deal to remedy the situation, as can private citizens through organizations devoted to the preservation of the visible remains of our past.

Local business groups can also perform a vital role in the matter of historic preservation. Among the most heartening examples of local business interest in historic preservation that I know of is that shown by the Greater Trenton Council in the preservation and restoration of downtown Trenton, N.J., and the support of local Philadelphia businessmen for the extremely successful movement to restore downtown Philadelphia and create there the great Independence National Historical Park.

In Trenton, N.J., too, the Greater Trenton Chamber of Commerce is planning a national campaign to call on American students to take part in a nationwide essay contest on "Why I Would Like To Visit Historic Trenton." To the winner will go an all-expense-paid trip to Trenton, N.J., for two for a gala week of sightseeing, entertainment, and prizes.

Certainly one of the most heartening and significant steps in many years in New Jersey was taken recently when Commissioner Salvatore A. Bontempo, of the department of conservation and economic development, launched a study of New Jersey's historic sites and buildings. Every New Jersey site and building of historic importance will now be inventoried in a county-by-county survey in preparation for the 1964 celebration of New Jersey's 300th birthday. Some 2,000 to 3,000 cultural and historic sites will be listed and described by the survey. Already officials in a number of other States have shown deep interest in this survey.

Coordinating the survey, which is expected to be completed by September 1960, is Dr. William H. Cole, professor emeritus of Rutgers University. Another distinguished New Jerseyan who will participate in the survey is Dr. Herbert B. Butcher, president of the Trenton Historical Society, who will head the nine-member Mercer County inventory committee. Other members of the committee from Mercer County are the Reverend F. Elwood Perkins, Trenton district superintendent, Methodist Church; Howard L. Hughes, former Trenton Library head; Samuel Mountford, architect; Mrs. Eleanor Nolan Shuman, Robert B. Immordino, Halbert E. Phillips, Walter W. Ziegler, and Lewis B. Traver, members of the Trenton Historical Society.

Dr. Richard P. McCormick, professor of history at Rutgers University, is chairman of the evaluation committee. Other members are Mrs. Kathryn Greywacz, director of the New Jersey State Museum; Dr. Roger H. McDonough, New Jersey State librarian; Robert N. Lunny, New Jersey Historical Society director; John Cunningham, author; Alfred Bussell, State architect; and Mrs. Olga C. Atkins, New Jersey State supervisor of historic sites.

New Jersey's commissioner of conservation and economic development, Salvatore A. Bontempo, is to be congratulated for his foresight and good judgment in launching this important study, and, indeed, for his great good fortune in securing the services of such an outstanding group of citizens to undertake this, an arduous and exacting task. New Jersey's initiative and example in launching a statewide historic survey heralds a national trend.

Before concluding my remarks, I would like to point out that Dr. Mason W. Gross, president of Rutgers University, New Jersey's State university, at the annual meeting last fall of the Constitutional Convention Association of New Jersey, urged the establishment of an educational and cultural commission to advise New Jersey in its quest for significant educational and cultural goals. If New Jersey's commissioner of conservation and economic development can establish such a high-level body to survey the State's historical resources, New Jersey's commissioner of education, Dr. Frederick M. Raubinger, undoubtedly has the authority to create an agency along the lines suggested by Dr. Mason W. Gross. It is a certainty that New Jersey's civic and cultural and business leaders would support such a further step which would make it possible for New Jersey to rival New York State in cultural pursuits. These pursuits have brought New York immense prestige and great wealth, I might add.

I include as part of my remarks articles from the Trentonian, and the Trenton Times-Advertiser, two of New Jersey's greatest newspapers, as well as my bill, H.R. 6680, to assist in the task of historic preservation at the Federal, State, county, and municipal levels of government.

[From the Trenton (N.J.) Trentonian, Jan. 25, 1960]

SEARCH FOR HISTORIC SITES IS UNDERWAY

(By Eleanore Nolan Shuman)

Although the history of New Jersey is fascinating and closely connected with that of our Nation, there has long been a feeling among responsible citizens that perhaps some of its story is still unknown and perhaps many of its historic sites and structures have been overlooked. Some people have asked, "Have we preserved the right historical and cultural sites? Are we doing right by the ones we own? Are there other sites more important than the ones we already have?"

The need for answers to these questions led Salvatore A. Bontempo, commissioner of the department of conservation and economic development, to direct the historic sites division of his department to investigate. As a basis, it was decided to use the volume of reliable information, "Historic American Building Survey." Here is listed in great detail 1,301 New Jersey buildings of historical and cultural value. The information was collected between 1937 and 1939 by the survey group in cooperation with the National Park Service, the American Institute of Architects and the Library of Congress.

In order to supplement the list of buildings with a list of sites, the historic sites division found it necessary to form a State citizens advisory committee. Headed by Dr. Richard P. McCormick, Rutgers University history professor and university historian, the committee is composed of such people as Mrs. Olga Atkins, supervisor of historic sites; Mrs. Kathryn Greywacz, director of the State museum; Dr. Roger H. McDonough, State librarian; Robert N. Lunny, director of the New Jersey Historical Society; Alfred Bussell, architect of the State bureau of construction; John Cunningham of the Newark News and author of books on New Jersey; Dr. William H. Cole, retired head of the Rutgers Bureau of Research, and this writer.

The challenging job of discovering and cataloging the additional New Jersey historical information which now faces Dr. Cole is a new kind of research, but one that appeals to his interest of long standing in antiques and things historical. One of his recent

achievements was the preservation of centuries-old Mettler's Woods, near East Millstone.

In turning his organizational and administrative talents to this statewide survey, he said, "The committee and I believe that only a small percentage of the State's historical and cultural assets has been discovered and listed in previous surveys. All efforts will be directed to supervision and coordination of research groups who have undertaken to aid in the survey and inventory. Groups set up in the State's 21 counties have been charged with using all the resources at their command in listing important places."

On January 16, Dr. Cole conducted a regional briefing meeting for the representatives of the central counties of the State at the old barracks. The Mercer County delegation was headed by Dr. Herbert B. Butcher, president of the Trenton Historical Society, and included Howard L. Hughes, Robert B. Immordino, Halbert S. Phillips, Lewis B. Traver, Rev. F. Elwood Perkins, Samuel Montford, Walter W. Zeigler and myself. Instructions were given for the field survey of Mercer County (with the exception of Princeton, which will be done independently.)

Upon the completion of the surveys by counties, the plans call for an evaluation and check by Dr. McCormick's committee. A copy of the final preliminary list of the State's historic and cultural places will be deposited in the State archives.

Steps will then be taken to convince the legislature to provide funds to continue and preserve the selected sites. Sites or structures of statewide significance will be determined and plans made for their preservation or perhaps historical or other civic groups will undertake to maintain some of them.

If the State committee deems some of the sites to be of national significance, they will be referred to the National Parks Service, the American Institute of Architects or other interested groups for possible operation or preservation.

"The program," Dr. Cole explained, "has many cultural and social aspects. It will also be of aid in planning. When we find these places of historical or cultural significance, we can attempt to save them. Each committee is well qualified, but it must have all possible cooperation if the survey is to be complete and satisfactory. The members will, I am sure, welcome suggestions from State residents as to any sites which may have special significance in the history and development of our State and Nation."

[From the Trenton Sunday Times-Advertiser, Jan. 17, 1960]

INVENTORY OF HISTORIC SITES IN NEW JERSEY TO BE MADE

Every New Jersey site of historic importance will be inventoried in a county-by-county survey in preparation for the 1964 celebration of the State's 300th birthday.

Some 2,000 to 3,000 cultural and historic sites will be listed and described in the undertaking sponsored by the historic sites division, State conservation and economic development department.

Six hundred sites will be recommended for preservation by a six-member New Jersey Committee for Historic Sites Evaluation.

Coordinating the survey, which should be completed by next September, is Dr. William H. Cole, Rutgers professor emeritus.

Dr. Herbert B. Butcher of 15 Whittier Avenue, president of the Trenton Historical Society, will head the nine-member Mercer County Inventory Committee. Other Mercer members: The Reverend F. Elwood Perkins, Trenton district superintendent, Methodist Church; Howard L. Hughes, former Trenton Library head; Samuel Mountford, architect; Mrs. Eleanor N. Shuman, writer on local history; and Robert B. Immardino, Halbert E. Phillips, Walter W. Ziegler, and Lewis B. Traver, members of the local historical society.

Dr. Richard P. McCormick, Rutgers history professor, is chairman of the evaluation committee. Other members are Mrs. Kathryn Greywacz, State museum director; Dr. Roger H. McDonough, State librarian; Robert N. Lunny, New Jersey Historical Society director; John Cunningham, author; Alfred Busselle, State architect; and Mrs. Olga C. Atkins, State supervisor of historic sites.

"This survey will enable us to put our historic house in order," said Dr. McCormick yesterday during a meeting of the central Jersey committee at the Old Barracks. Forty-two persons attended.

Sites will be categorized by period (from prehistoric to 1900), style (Jacobean, Georgian, Dutch, etc.), physical condition, and notable features.

Earlier meetings organized north Jersey and south Jersey county committees.

[From the Trenton (N.J) Trentonian, Jan. 25, 1960]

PROGRESS WITH SENSE

To many people who are appreciative of New Jersey's deeply rooted historical associations, progress is an enemy ever on the prowl. At times, beauty and tradition must give way to progress, as was the case when it became necessary to build a reservoir at Round Valley in Hunterdon County.

More recently, a beauteous portion of Morris County was threatened by progress in the form of an airport for jet airplanes. Fortunately, the uprising against this intrusion seems to have won out.

And even more recently, it was discovered that Green Sergeant's covered bridge in Hunterdon County, the last remaining covered bridge in New Jersey, finally had given way to the weight of the years and traffic and was no longer fit for service. The obvious answer in a progress-minded age was to raze it and make way for a modern structure. Lovers of history and sentiment seemed to have prevailed, however, and it appears that the bridge will remain intact, although it will be moved to a different location.

The airplane, the superhighway, and the housing development all must be served, but it isn't always necessary to serve them by sacrificing those things which are or should be sacred to Americans.

[From the Trenton (N.J.) Trentonian, Dec. 25, 1959]

CHAMBER OF COMMERCE PLANNING VISIT-HISTORIC-TRENTON CONTEST

Can you imagine high school students throughout the country suddenly doing research on Trenton?

The publicity committee of the Greater Trenton Chamber of Commerce thinks that's exactly what's going to happen in the next month or so.

The committee is going to call on America's student to take part in a national essay contest on "Why I Would Like to Visit Historic Trenton."

To the winner will go an all expense paid trip here for two for a gala week of sightseeing, entertainment and prizes.

William J. Garry, chairman of the project, hopes to have the visit coincide with next year's Easter vacation period.

In explaining the committee's objectives, Garry, a WBUD executive, declared, "Today's students are tomorrow's businessmen and tourists. The more out-of-town people know about Trenton the more likely they are to locate here, do business here, or visit here."

He went on to say that the contest ties in perfectly with the committee's goal of promoting Trenton regionally and nationally. "Within the next few months we should have thousands of students—and their parents—talking about Trenton," he declared.

First step is to establish the contest rules. Conferences with local English teachers will determine the maximum length of the essay as well as techniques for incorporating the contest into the curriculum. This phase will be handled by Miss Katharine M. Weber of WTTM.

H.R. 6680

A bill to amend the Historic Sites Act of August 21, 1935, to provide a method for preserving sites, areas, buildings, objects, and antiquities of national, regional, or local historical significance which are threatened with destruction by federally financed programs, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the Act entitled "An Act to provide for the preservation of historic American sites, buildings, objects, and antiquities of national significance, and for other purposes", approved August 21, 1935 (16 U.S.C. 461), is amended to read as follows:

"That it is hereby declared that it is a national policy to preserve for public use historic sites, areas (including sections of cities), buildings, objects, and antiquities of national, regional, or local significance for the inspiration and benefit of the people of the United States."

SEC. 2. Section 2 of such Act (16 U.S.C. 462) is amended by redesignating paragraph (k) as paragraph (m) and by adding after paragraph (j) the following new paragraphs:

"(k) Carry out (insofar as practicable and appropriate) the same duties and functions with respect to historic areas (including sections of cities) as those which are specified in the preceding paragraphs of this section with respect to historic sites, buildings, and objects.

"(l) Protect and preserve, in the manner provided in section 8 and through the performance of such other functions of the type described in this section as the Secretary may deem appropriate, historic sites, areas (including sections of cities), buildings, and objects of national, regional, or local significance."

"(m) As used in this section the term 'objects', and 'antiquities' include objects and antiquities of art."

SEC. 3. Such Act is further amended by adding at the end thereof the following new section:

"SEC. 8. (a) Whenever the Secretary receives a petition from any State or political subdivision thereof, or from the American Institute of Architects, the National Trust for Historic Preservation, the Commission of Fine Arts, the National Wildlife Federation, the American Council of Learned Societies, the American Association for State and Local History, the Natural Resources Council, the Wildlife Management Institute, the National Parks Association, the American Institute of Planners, the American Automobile Association, the Society of Architectural Historians, the American Planning and Civic Association, the General Federation of Women's Clubs, the Garden Club of America, the American Society of Landscape Architects, the Urban Land Institute, the American Federation of Arts, the National Academy of Design, the National Council on Arts and Government, the National Art Education Association, the National Council of the Arts in Education, the College Art Association of America, the Artists Equity Association, the American Association of Museums, the Joint Committee on the National Capital, the National Capital Arts Council, or any other organization recognized by the Secretary for purposes of this section as being concerned with historic preservation, alleging that a Federal project or program or a State or local project or program financed in whole or in part with Federal funds will seriously damage or destroy a historical site, area (including a sec-

tion of a city), building, or object of national, regional, or local significance, or upon his own motion, the Secretary shall conduct an investigation, which shall include (but not be limited to) holding public hearings or affording the opportunity for such hearings, for the purpose of determining whether or not such site, area, building, or object is of national, regional, or local historical significance.

"(b) Whenever the Secretary determines under subsection (a) that a site, area, building, or object is of national, regional, or local historical significance, he shall forthwith determine whether or not the proposed project or program will seriously damage or destroy it.

"(c) Whenever the Secretary determines under this section that a site, area, building, or object of national, regional, or local historical significance will be seriously damaged or destroyed by a Federal project or program (actual or proposed) or by a State or local project or program which is or will be financed in whole or in part with Federal funds, he shall submit such determination to the head of the Federal department, agency, or instrumentality under the jurisdiction of which the project or program is to be carried out; and after the receipt of such determination the head of such department, agency, or instrumentality shall not commence or further proceed with such project or program, or expend or approve the expenditure of any Federal funds (or further Federal funds) for such project or program, unless and until such project or program has been modified and the plans, specifications, and contracts thereunder amended so as to provide to the satisfaction of the Secretary for the preservation of the historic site, area, building, or object involved. Such modification or amendment may be made notwithstanding any provision of law limiting the right of a department, agency, or instrumentality to modify a project or program or amend plans, specifications, or contracts, but shall otherwise be subject to all the provisions of the law under which the project or program is being or will be carried out."

SEC. 4. The Secretary of the Interior, in consultation with the organizations named in subsection (a) of section 8 (as added by this Act) of the Act of August 21, 1935, and other organizations recognized by the Secretary as being concerned with historic preservation, shall make a continuing study of the tax advantages, technical and financial assistance, and other incentives which could be provided (by legislation and otherwise) to promote and encourage the restoration and preservation of sites, areas, buildings, objects, and antiquities (including objects and antiquities of art), in the United States of national, regional, or local historical significance by the Federal Government, and by States, political subdivisions, private organizations, and individuals, giving appropriate consideration to the methods which have been used to encourage such restoration and preservation in other countries and in areas of the United States where intensive programs for historic preservation have been successfully carried out.

Abraham Lincoln and Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 10, 1960

Mr. BRADEMAS. Mr. Speaker, on February 12 we commemorate not only the 151st anniversary of the birth of Abraham Lincoln, but we also mark the 214th anniversary of the birth of Thaddeus Kosciusko, the great Polish statesman, military engineer, patriot of two continents.

I should like to indicate in what ways these two leaders have much in common, but before making such a comparison, let me speak briefly of the life of Kosciusko.

His birthright was Polish. The natural splendors of the New World were unseen by his young eyes and the democratic culture of the American Colonies was alien to his noble background. Yet from halfway around the world he came to share his own vision of liberty and justice with the Founding Fathers of our country. A true son of Poland, he gave of himself, wholly and freely, to the cause of the American Revolution, distinguishing himself both in combat and in the erection of military fortifications. A grateful Congress bestowed upon him the rank of brigadier general, and the appreciative people of his adopted land offered him honors and citizenship. But the success of the American Revolution had intensified his fervent desire to see his own homeland free and he returned to Poland.

In his native country he was to know few successes in his mission to see Poland throw off foreign domination. Once, for but a moment, he sat at the head of a free Poland and instituted the guarantees of constitutional government for which he had worked with such dedication. Although Poland's freedom was then to be shortlived, Kosciusko had ignited the spark of liberty in the hearts of his fellow countrymen. Never again, though their nation was to be conquered by forces from the East and the West, was that flame to be snuffed out.

SPIRIT OF KOSCIUSKO ALIVE TODAY IN POLAND

Mr. Speaker, the spirit of Kosciusko is alive today in Poland. It is as enduring as the spirit of Washington and Lincoln which is so much a part of the American people that it can never be separated from us. This common spirit, in Poland and in America, will live forever and it will, in time, triumph over all tyranny.

It is natural that most Americans think of February 12 primarily as the birthday of Abraham Lincoln. Yet there are more similarities than their date of birth between Kosciusko and Lincoln. Both were men of peace, yet compelled to employ the tools of war. Both dedicated most of their lives to the unity of their respective nations, yet their example has had great impact among peoples all over the world. Both were vigorous participants in the events of their own day, yet they will have an enduring influence upon the histories of their respective countries.

Mr. Speaker, it is fitting that on the anniversary of the birth of Lincoln and Kosciusko, the citizens of Poland and the United States, now so sorely tried by despotism, should rededicate themselves to their heritage of freedom. This spirit of freedom, so integrally a part of the traditions of both Poland and America, is a bond between our peoples that can never be broken.

The Right Reverend Edward J. Higgins

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. HOLTZMAN. Mr. Speaker, it gives me a great deal of pleasure to include in the RECORD an article which appeared in the January 21 issue of the Long Island Star-Journal on the Right Reverend Edward J. Higgins, of Astoria, Long Island, N.Y., who was the founder of the Catholic War Veterans 25 years ago.

Monsignor Higgins has served his church, his country and his community with distinction and dedication for many many years, and I am delighted to have this opportunity to add my sincere congratulations to him and to the members of the Catholic War Veterans on their silver jubilee.

The article follows:

TWENTY-FIVE YEARS LATER—CWV FOUNDER'S WORDS ECHOED

It is fitting tribute that the words spoken more than two decades ago by the Right Reverend Edward J. Higgins, of Astoria, are being echoed this week during the 4-day convention of the Catholic War Veterans at Immaculate Conception Church.

For one thing, Monsignor Higgins founded the organization. For another, the convention, which celebrates the 25th anniversary of the Catholic War Veterans, is being held in his home parish.

Warning against the spread of totalitarianism, Monsignor Higgins said 21 years back that "It is better to have biscuits than bullets." But he cautioned that when the time came to fight for liberties the people of his church "would not be afraid to die."

Similar words and warnings are being repeated in the auditorium of the Astoria parish where the veterans are convened for the annual—and this year, special—occasion.

Founded by Monsignor Higgins in 1935, the Catholic War Veterans was formed "to bring together a body of veterans to help fight the spread of communism in the United States."

A chaplain in the Army during World War I, he served at Camp Upton and at the General Hospital in Dansville. After viewing the important roles played by other veterans groups, he received permission from Archbishop Molloy to found the Catholic War Veterans in May of 1935 and just 1 month later visited Rome to obtain an apostolic blessing for the new organization from Pope Pius XI.

Astoria Post No. 1 was formed and became the forerunner of some 2,000 units throughout the Nation including 33 in Queens which Monsignor Higgins developed. Some 70,000 veterans are members.

Through the years, Monsignor Higgins has worked in a dual capacity with the Catholic War Veterans and as pastor of Immaculate Conception. He organized a rebuilding program in the Astoria parish and in 1951 a new $1,500,000 towered church topped by a 10-foot-high lighted cross was erected.

It was dedicated as a national shrine for the Catholic War Veterans.

One of the first honors given to the Catholic War Veterans founder was the medal of St. Sebastian, patron saint of the veteran's organization, in 1936. St. Sebastian was a captain in the Imperial Bodyguard of the Roman Army who was ordered put to death when he embraced Christianity. Though

his body was riddled with arrows, he was healed by St. Irene, but later clubbed to death by Roman soldiers.

A stained-glass window in the Catholic War Veterans Memorial Chapel at Immaculate Conception was erected to Sebastian, known as the Saint of Soldiers.

Pastor of Immaculate Conception since 1933, Monsignor Higgins was ordained in 1914 after studying in St. John's Seminary. He had graduated from St. John's College 4 years earlier and to this day he keeps several pictures of his football days there in his room at the church rectory at 21–47 29th Street.

He was a curate at several Brooklyn parishes, assistant pastor at Our Lady of Sorrows in Corona, and pastor of St. Peter's Church in Brooklyn before coming to Immaculate Conception.

Born in the old sixth ward of Brooklyn on July 7, 1890, he is known to his boyhood friends as Edward Joseph.

Affirmative Action Always Best

SPEECH
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 2, 1960

Mr. FASCELL. Mr. Speaker, in these critical times, it is imperative that the United States—the acknowledged leader of the free world—stand firm in its agreements and treaties with other nations and insist that other nations have the same respect for us.

We are all very much aware that it is one of the techniques of the principal opponent of our system to use every means at his disposal to test the mettle of the U.S. conviction wherever and whenever he can. It is victory for him to see this great Nation take a step backward from policy when pressure is applied. For such an action can be exploited as at least an implied admission that the policy was wrong in the first place. But, more importantly, it can be exploited as evidence that this country is willing to pursue a course of conciliation and appeasement—a course which history has revealed most dramatically to be sacrificial of national integrity and fatal to prestige.

I like to think of international relations in terms of human relations. Fundamentally, the same things move nations in their relations with each other as move human beings in the conduct of their lives. The basis for effective human relations is respect. If any of us is willing to live without the respect of our contemporaries, his effectiveness is nil. And if any nation, however powerful, makes a habit of retreating from policy under duress, its position in international affairs is precarious, mainly because it cannot maintain the respect of its fellow nations.

Now, this is not to say that I am opposed to change. The United States should continually reevaluate its agreements and treaties in the light of changing times; and through the Executive and the Congress agree to change in policy necessary for the continuance of just and honorable international relations and for the best interest of the Nation.

I am saying that there is and should be change; but our treaty policies should not be altered solely as the result of Executive interpretation.

A strong case in point is before us today. Our able and distinguished colleague, the gentleman from Alabama [Mr. SELDEN], has placed before this body a resolution directly concerned with pressures on the United States to adjust its traditional treaty posture with regard to the Republic of Panama and the Panama Canal Zone.

It would be repetitious for me to go into the background of this issue; you have heard it many times. But the hard fact is that the United States is under pressure to abandon previous policy with regard to the treaties with Panama and allow the display of certain symbols of Panamanian sovereignty in the Canal Zone, where the United States is sovereign.

Now, where does this pressure originate?

The United States now has pending before it the formal request of the Panamanian Government that our policy in this regard be changed. This, I call proper; and I do not quarrel with it.

But, we cannot ignore the fact that forces nor interested in the nationalistic aims of Panama have seized the issue to exploit it and attempt to publicly place the United States in a position of reacting under duress. This tactic, I do quarrel with.

There have been indications that the President and the Secretary of State are giving serious consideration to yielding to the pressures without regard to the constitutional treaty making and amending process.

Let me make one thing perfectly clear; I am not arguing the merits of the validity of the properly presented demands of the Panamanian Government. I am taking issue with the idea that we should change policy in Panama by interpretation, rather than by the affirmative course of exploring the full implications of the problem and instituting any action needed within the framework of the Constitution.

That is why I support the resolution of the gentleman from Alabama [Mr. SELDEN]—which, I might add, was given thorough and exhaustive study by the Committee on Foreign Affairs and the Subcommittee on Inter-American Affairs, of which Mr. SELDEN and I are members, Mr. SELDEN being chairman of the subcommittee.

All Mr. SELDEN's resolution says is that we, the Members of this Congress, believe that any change in policy regarding Panama should be promulgated affirmatively—by treaty or amendment—and not by interpretation, which would leave some doubt as to whether we are reacting to pressure or to the existence of just reason.

The people of the United States and the people of Panama have been friends for many years, and we all want that friendship to endure. We also appreciate their strong nationalism. But, we cannot allow these considerations to move us to depart from long-established policy without full regard for all the implications of such a departure, and without submitting the issue to constitutional process.

The respect we have earned is too valuable to be jeopardized by doing otherwise. I hope all my colleagues, on both sides of the aisle, will join in support of this resolution, which merely is a way of saying, "Let us do things right."

Pollution Remains Critical Problem in Many Areas of State and Nation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Appleton, Wis., Post-Crescent of October 3, 1959:

HIGH FISH KILL—POLLUTION REMAINS CRITICAL PROBLEM IN MANY AREAS OF STATE AND NATION

(By Ben Lewis)

WAUSAU.—A putrifying smell arose from the drainage ditch and hung heavy in the air. It was paradise to an army of flies. But it was sickening to man.

A thick scum, deposited by a flow of milky liquid, lined the ditch bottom. Quack grass and small plants along the sides turned brownish black, as if burned to death by the water's toxicity.

The ditch ended a quarter mile down the road where its contents drained into a small stream. On one side of the road the creek was clean, clear, harmless. On the other it was contaminated and dangerous.

DEATH TO FISH

It had been transformed into a carrier of death to fishes. And when toxicity runs its course, deposits become fertilizer, causing dense growths of aquatic vegetation and algae.

This is pollution—a problem not only in Wisconsin but throughout the United States.

Hundreds of thousands of Wisconsin fish die annually because of it. Productive waters become sterile. Rivers are choked with vegetation and sludge.

Corrective measures have and are being taken. But progress is too slow. Too many people ignore the law. Cheese factories, papermills, cesspools continue to drain wastes into public waters.

When is it going to stop?

Let's go back to our little tributary stream. What's contaminating it? And why is such a small brook, far from major waters, so important?

TOXIC MIXTURE

Source of pollution, in this case, is a cheese factory. After milk is brought in, containers are washed. And the combination of milk and water is then drained into the ditch.

This mixture is toxic enough. But even worse is whey drained from a tank and channeled into the ditch.

Although these wastes are odoriferous and deposit a scumlike substance those aren't the main causes for alarm. It's the dropping of the water's oxygen content to a dangerously low point that is of chief concern.

Tiny tributary streams in themselves are not too important. If they contain any fish they are minnows. But each empties into a

large body of water. And many are chief contributors to flowages.

Enough damage is caused during warm months of the year. But the problem becomes critical when flowages ice over.

NEED OXYGEN

Fish require oxygen. Polluted streams supply little of that. So a flowage fed by these creeks is destined to a severe winter fish kill.

Such has been the case with the Big Eau Pleine flowage in Marathon County. At one time this was a most productive body of water. It could be again if pollution would stop.

Are industrialists taking steps to avoid pollution? Many are * * * and at great expense and effort to themselves. They realize the importance of clean water.

Too many others, however, knowingly and willingly continue practices which result in pollution. They may be apprehended from time to time, but the usual fine of $25 doesn't make much of an impression.

Stronger action must be taken if we are to stop the polluting of our waters.

The Elkhart Truth and the La Porte Herald-Argus Oppose Eisenhower's Plan To Raise Gas Tax Again

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA

Wednesday, February 10, 1960

Mr. BRADEMAS. Mr. Speaker, among the several newspapers published in the congressional district I have the honor to represent, the Third of Indiana, there are two which consistently produce some of the most intelligent editorials that I believe are to be found in the United States. These newspapers are the La Porte Herald-Argus and the Elkhart Truth.

Two good examples of the thoughtful editorials to be found in these newspapers are the following on the subject of President Eisenhower's proposal this year for another increase in the Federal gasoline tax.

I strongly favor building more highways but, along with many other citizens of Indiana, I want to see more evidence than the administrations of former Gov. George Craig and our present Governor, Harold Handley, have given that Hoosier taxpayers are actually getting adequate highways for their gas tax money.

The editorials follow:

[From the La Porte Herald-Argus, Feb. 1, 1960]

GAS TAX PROPOSAL

If there is anything certain in politics, the probability that Congress will not grant President Eisenhower's request for a half cent increase in the present Federal gasoline tax is a safe assumption. Congress is in no mood to raise any tax so far reaching in effect and already at a height, now 4 cents a gallon, which helps spur the current, steady movement of purchase of small cars in this country.

With the Federal gasoline tax at 4 cents and with State gasoline tax averages a bit more than 6 cents, the consumer is paying about 10 cents fuel tax now. He also pays registration fees, driver license fees, excise taxes on cars, tires, and parts. And in many States, as in Indiana, he pays a personal property tax on his vehicle.

To frame the issue another way, John Q. Driver in paying approximately 10 cents a gallon in Federal and State taxes is just about equaling in taxes the selling price of regular grade gasoline at refineries in the midcontinent and the gulf coast.

Granted the Nation is now enveloped in a fierce struggle against a transportation octopus which clogs our arteries of travel, imperils our lives and adds immeasurably to society's complexity of problems and that to win a measure of triumph in the struggle calls for vast and continuing expenditures, still the issue is very real whether the pressures of gasoline taxes are not approaching the point where they tend to price gasoline out of the market.

As one reaction, the consumer is turning to small cars which consume less fuel as one way of beating the already high tax. Fuel economy has become a major factor in today's car buying. This year, the automobile industry figures, sales of small cars, both domestic and foreign, will be between 25 and 30 percent of the total sales.

Highway construction and the financing of our whole complicated vehicular transportation system to make it safer and more convenient demand constantly more money but excessive taxation on fuel, hitting heavily the little fellow, the rank and file of car owners in the Nation, threatens now to become increasingly ineffective as a fund-raising method.

There are no present signs the total income from gasoline taxes is to decline, as there is the growing number of vehicles and drivers to consider, but the present scale of gasoline taxes, State and Federal, probably represents a maximum precariously close to excessive. Before long it might begin to defeat its own purpose. Congress apparently senses, and rightly, that no increase is desired by the people.

[From the Elkhart Truth, Jan. 30, 1960]

FEDERAL GAS HIKE? WHY?

President Eisenhower has asked for an increase in the Federal gas tax from 4 to 4.5 cents per gallon.

Congress should look that one over skeptically.

The new Federal road construction program should proceed reasonably fast. But we have an idea the program could be speeded up by finding ways to save on tax funds now being appropriated.

For instance:

Congressmen on the subcommittee that has been investigating this interstate highway program have begun to make "clucking sounds" about what's been found.

These findings won't be made public until hearings open in mid-February.

But from the tone of the clucks, investigators have been finding plenty to worry about.

Representative WALTER S. BARING, Democrat, of Nevada, says the Department of Justice has informed him that highway violations have, to its knowledge, occurred in Arkansas, Georgia, Illinois, Missouri, Tennessee, and Texas.

Criminal prosecutions are pending in these States which involve allegations of fraud and conspiracy.

It has been pointed out that witnesses took the fifth amendment more than 200 times in Senate hearings on land-grabbing on only a few projects in one State.

BARING has complained about "elaborate geometric interchange designs and expensive superstructure planning."

Naturally Democrats in Congress will stress criticism of this kind in an attempt to make political capital.

But the present woes of our highway program can't be blamed all on the GOP administration in Washington by any means.

One big problem has been chaos resulting from the Federal Highway Act passed by Congress in 1958, which suspended provision for pay-as-you-go financing and which raised authorizations for highway aid far beyond the revenue capacity of the highway trust fund.

Crash programs which ignore the basic need to give the motorist taxpayer his money's worth are hardly the answer.

It may be that the research project on highway paving materials, now nearing completion in Illinois, will point the way to greater efficiency and saving.

Should the proposed gas tax boost be added to the average State gas tax, it would bring to 33 cents the combined taxes paid out of every dollar spent for gasoline.

The motorist is soaked heavily now.

Let's not soak him again if we can possibly avoid it.

Realism and Recognition

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 11, 1960

Mr. PORTER. Mr. Speaker, Canada defers recognition of and full relationships with Red China only because of the constant pressure exerted by our State Department.

The Globe and Mail, of Toronto, which perhaps ranks as Canada's most influential newspaper, carries great weight with the Diefenbaker government. This Globe and Mail editorial indicated that it will not be long before Canada abandons the unrealistic China policy to which she now reluctantly pretends to adhere because of our insistent demand.

Under a previous consent, I include the editorial which appeared in the Globe and Mail on Monday, February 8, 1960:

REALISM AND RECOGNITION

The Canadian Government has been given further evidence that a great many Canadians are uneasy about this country's relationship—or rather, lack of relationship—with China. At the annual meeting last week of the National Progressive Conservative Student Federation, there was an intensive debate on the subject, in which External Affairs Minister Green and his Parliamentary Secretary, Mr. Wallace Nesbitt, were grilled for more than an hour.

The heart of the discussion was whether Canada should or should not grant diplomatic recognition to China; a resolution calling for such recognition was defeated after Mr. Green said—as he has said on previous occasions—that if Ottawa established diplomatic relations with Peiping, it would be dealing "a grevious blow to countries which are standing up to the Communists in Asia." On the other side of the argument, one student delegate denounced the Nationalist regime on Formosa as of a sort that would make us blush.

This, at the moment, is the essential point—more essential than establishing diplomatic relations with Peking. On the mainland there is a real Chinese Government which Canada refuses to recognize; on Formosa there is a so-called Chinese Government—a Chinese Government without a China—which Canada does recognize, or, at any rate, whose legitimacy Canada accepts in the United Nations and elsewhere.

If we are ever to have dealings with Peking, as sooner or later we must, we will first have to end our dealings with Taipei. This we must do, not because the Formosa regime of Generalissimo Chiang Kai-shek is corrupt or oppressive—Canada recognizes quite a number of corrupt and oppressive regimes—but because it in nowise represents China.

Let us suppose that a minute proportion of the Canadian population had established themselves on one of our offshore islands. Let us suppose that they called themselves Canada, and denied the legitimacy of the Canadian Government in Ottawa—in fact, boasted of their intention to overthrow it. Let us further suppose that the Peking Government recognized this island as Canada, these squatters on it as the authentic Canadian Government. Would we not, as a first condition of improved relations between Ottawa and Peking, require Peking to stop insulting us in this manner, to give up this ridiculous make-believe?

It is just such a make-believe that Canada is maintaining in regard to Formosa today. And not only does it preclude any improvement of relationships between this country and China; it also sullies Canada's relationship with other nations, among them Canada's allies in Europe. These nations assume (are they not precisely correct?) that Canada goes along with the Formosa foolishness in order to placate the United States, which is the chief protector and benefactor of Generalissimo Chiang. These nations are thus given room for doubt as to the independence of Canada's foreign policy. They could be reassured; Canada's position with them and with the world would be strengthened if on this issue she parted company with the United States.

The realities of China, of living and dealing with China, will have to be faced at some future point. Even Washington is beginning to admit this; last month State Secretary Herter took the first small step when he said that in any East-West disarmament agreement Chinese participation was "inevitable."

But before Washington or Ottawa or London can be realistic about China they must stop being unrealistic about Formosa. They must disencumber themselves, fully and finally, of this "Nationalist China" which represents no nation on earth, of this "free China" whose 10 million unwilling subjects enjoy no more freedom than the 670 million people who live in the real China under the real Chinese Government.

Your Old Passport May Have New Look

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 3, 1960

Mr. CANFIELD. Mr. Speaker, Frances Knight, Director of the Passport Office, Department of State, is a remarkable girl and she is doing a terrific job in her assignment.

Susan Powers, contributing writer for the Washington Evening Star, in last night's issue of this Capital paper, described the revolution accomplished by Miss Knight in the Passport Office which has inspired encomiums from Congressmen and passport patrons throughout the land. The article by Miss Powers follows:

YOUR OLD PASSPORT MAY HAVE NEW LOOK
(By Susan Powers)

Foreign immigration officers may be in for a surprise before many more tourist seasons roll around, thanks to a Washington woman.

She is Frances Knight, Director of the Passport Office of the Department of State, and it's her job to provide proper identification for protection of U.S. citizens traveling abroad.

To this end she is currently spearheading a campaign that will result in a new look, plus greater efficiency in the international identification document.

In her first interview on the subject of changes, Miss Knight had this to say: With 733,000 passports issued last year—20,000 of them alone to commercial travelers—something must be done about the passport.

The something that she proposes starts with replacing the old green cloth cover, and the change continues right on through the document's size, descriptive data, and visa pages.

The primary change is the cover because the first impression with documents, as often with people, is the most lasting.

"An American citizen abroad is a representative of the United States. Presenting a soiled passport is like presenting a soiled business card," she says.

The present cloth cover is inefficient; it frays with wear and tends to separate from its backing in hot, humid weather, she adds.

PLASTIC COVERS

The new cover probably will be made of plastic, and tests are now being conducted to determine that material's durability and appearance after temperature changes and excessive use. Another consideration in the final choice of cover material will be its flexibility. To avoid replacement cost, the new pasport must be capable of use in the machines now operating.

As for passport size, Miss Knight would reduce the present measurement of 3¾ by 6⅛ inches to a more compact 3½ by 5½ inches. Again, this would be more practical.

More women travel than men, and a smaller passport will fit more easily into a woman's purse, she feels. It will help the men, too, says Miss Knight, especially in preventing loss. (It's true, 57 percent of the passports lost last year were lost by men.) The present size passport is designed to fit into a man's inner coat pocket. When he takes off his coat, he often says an unwitting goodby to his passport.

The interior of the document would be renovated, too, if Miss Knight's recommendations go through. She would place the picture and descriptive data pages side by side, insuring an easier means of rapid identification.

With a total of 5 years' validity to the present passport, Miss Knight also feels the need of a special issue of the document, upping the current 20 pages to a possible count of 50. This, also, would be for the benefit of those commercial travelers who at present carry awkward, and easy to lose, extension pages attached to their passports.

There's a chance that the old "greenback" green color may be changed, too. Blue, maroon, and grey, as well as green, all look good in the proposed plastic coverings. Perhaps, suggests Miss Knight with a twinkle in her eyes, a public opinion poll among American women could determine the most popular color—or maybe the final choice could be a fluorescent shade, to aid the traveler in finding that mislaid document he had "just a minute ago."

HER RECORD

If all the proposed changes—shape, size, cover, color, and format—sound a bit ambitious for a one-woman project, take a look at what the Passport Director has already done in her less than 5 years on the job.

Annual output of passports has increased in number over 200,000 since 1955, yet they are now being produced more rapidly, at the rate of 10 per minute. This is due in large part to the change from a vertical to horizontal position of the descriptive data page.

It used to take several weeks for processing. Current time from reception of application to issuance of passport is 3 days.

Nonsmiling black and white pictures have been replaced by a more natural picture, in color, contributing to more pleasant travel and more accurate identification. All these changes have been brought about under the direction of Miss Knight.

Having accomplished this much, Miss Knight is set to complete her renovation of the U.S. passport. And, she candidly admits, the biggest obstacles in her way are men.

"Men buck change. They shy away from it—it makes them feel insecure."

"My difficulty," she says, "is in proving to the male officials concerned that my recommendations will be a practical improvement on an official document; they're not just a woman's whim to make the passport more glamorous."

It may take a while for these changes to receive the official stamp of approval, Miss Knight admits. "Perhaps I won't have an answer to all the problems concerned this year. But," she adds, quickly and firmly, "there will be an answer."

From her past record, you can bet your vaccination certificate against 42 pesetas that there will be, too.

If Lincoln Were Here Now

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. DORN of South Carolina. Mr. Speaker, the Honorable Roy M. Harrop, of Omaha, Nebr., wrote the following article. It is very timely and appropriate.

Mr. Harrop is national chairman, National Commercial Travelers Economic Security Foundation, Inc.

The article follows:

IF LINCOLN WERE HERE NOW

On February 12 Americans will celebrate the 151st birthday of Abraham Lincoln, the great emancipator, and one of America's greatest statesmen, constitutional lawyer and champion of solvency of the United States of America. In the crisis of 1863 Honest Abe saved this Republic when the Nation, after 3 years of the War Between the States, public credit was on the verge of ruin and a bleeding, bankrupt nation was restored to solvency when he authorized Congress to issue full legal tender currency, good for all debts public and private, free from interest and taxation.

We are again at the crossroads of destiny with a debt burden in the colossal volume approximately a thousand billion dollars, which includes the national debt, State municipal and private debts. Our national debt, caused by deficit spending, has now reached $290 billion, all of which is borrowed credit, and foisted upon us by international bankers under the privately owned Federal Reserve bank system which must be paid through taxation by the people of the United States.

We cannot forget the millions of men of all nations who laid down their lives in World War I, II, and the Korean war, who,

not realizing they were the pawns of the scheme of international bankers to gain control of the world through the control of money and credit monopoly which produced a debt-credit slavery system, under a one-world government scheme (the United Nations) did not realize they might spend the remainder of their lives in a foreign prison, and some are still serving a sentence in Chinese Communist prisons.

If Lincoln were here today, his conception of a world court would be far removed from an alien supergovernment. He would recognize no international flag, nor the consent to reduction of the U.S. Government as a mendicant to peaceful coexistence with international communism. He would never submit to a program of surrendered rights and policies (but would hold fast to the Constitution of the United States) who by summit agreements would transfer the right to declare war from the Congress to the United Nations, or the submission of the Monroe Doctrine, or our immigration policy, foreign giveaways, our control of the Panama Canal and our foreign possessions, or any other question vital to our rights, liberties and the pursuit of happiness, to an alien court in contravention of our destiny under our Constitution.

Lincoln once said: "I appeal to you to constantly bear in mind that not with politicians, not with presidents, not with office-seekers, but with you, is the question, Shall the Union and shall the liberties of this country be preserved to the latest generation?"

Our problems today are equally grave and perplexing. Having reached the forks of the road, which way shall we Americans go? Standing between civilization and chaos, destiny is hidden here; there is no halfway ground. We must choose between the Communist scheme of peaceful coexistence under the United Nations world government, which would make slaves of the U.S. citizens, or adhere to our U.S. Constitution that we may survive and live, and as Abraham Lincoln said that "government of the people, for the people and by the people may not perish from the earth."

Ninety Miles to Communism

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. LEVERING. Mr. Speaker, I salute Mr. Ken Woodman, the alert and well-informed editor of the Mansfield News Journal of Mansfield, Ohio, for his editorial of February 7, 1960, entitled "Ninety Miles to Communism" which I believe reflects clearly the concern of many people in my congressional district with reference to our Government's policy of extreme patience toward the Castro regime in Cuba.

Under leave to extend my remarks in the RECORD, I include for the consideration of my colleagues, particularly those serving on the Foreign Affairs Committee, this hard hitting, no holds barred editorial which I believe typifies the thinking of every red blooded American who revolts at anything resembling appeasement:

NINETY MILES TO COMMUNISM

Ninety miles from the mainland of the United States a dictatorship has been established by murder, false propaganda, and public thievery. Holding positions of power are men known to have close connections with the Communist Party and Soviet Russia.

The people of the United States are being required to financially support this dictatorship by paying 2 cents extra on each pound of sugar they buy.

Speaking so all the world can hear, the President of the United States says this Nation will invoke no economic sanctions and take no military steps to disturb the Castro dictatorship of Cuba.

This is also saying, in effect, that the American people will continue to be taxed at their grocery stores for the financial support of the Castro regime.

Apparently it is morally all right for the Communists to infiltrate Cuba.

Apparently it is morally all right for the Communists to have a stooge at the head of the Cuban military which has supplanted the courts and conducts drumhead trials for Cuban citizens who can expect on justice under law, but only the merciless whim of a dictator.

Apparently it is all right for the Communist-infiltrated government to seize farms and businesses without payment to the owners on the pretext of benefiting the people, when the move is clearly one to try to keep the dictatorship solvent.

But apparently it is morally wrong for the United States to make any move whatsoever to prevent the establishment of a pro-Communist dictatorship on its doorstep.

Apparently it is morally wrong for the United States to act to protect the property of its citizens on an island closer than Hawaii or Alaska.

Apparently it is morally wrong to stop looting the pockets of American housewives on grounds that it might upset an outspoken foe of the United States who harangues for hours against us.

This is not only nonsense, it is dangerous.

Our State Department has noted with great satisfaction that since the President announced the U.S. will continue to finance the Cuban dictatorship through our sugar price and quota system. Castro's attacks on the United States have ameliorated.

Isn't that marvelous.

Castro isn't going to bark quite so loud at the hand that feeds him. All he is going to do is turn his country over lock, stock, and barrel to the sworn enemies of the American way of life.

We prate of liberty and justice and the good life for all the downtrodden nations of the world, yet almost within sight of our seacoast we let an unshaven fanatic and his Communist henchmen abolish all justice, trample on personal liberty, and establish a political system designed to provide a good life only for the Communist hierarchy.

To the world our prattle must sound meaningless indeed.

They see us as a great nation so cowed by our own doctrine of noninterference that we actually support a dictatorship which crushes the very ideals we say we stand for.

It seems that nonintervention is only for us.

The Communist may intervene in Cuba. We may not.

And this is true only because we make it true. The United States is stronger than the Communists. They could not intervene in Cuba if we did not permit it.

Have our notions of morality, our concepts of justice become so twisted that we must, by inaction and financial blood donating, foster the very evils we seek to combat?

Have we, crying justice, become the unjust?

Have we, babbling morality, become the immoral?

We had better find out before we reap the whirlwinds of the whole world's disrespect.

Establishment of a Federal Commission Urged To Implement Public Law 86-90

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mr. FLOOD. Mr. Speaker, under leave to etxend my remarks in the RECORD, I include the following letter of transmittal from Mr. Spas T. Raikin, secretary general, American Friends of the Anti-Bolshevik Bloc of Nations, Inc., with headquarters in New York City, with which he forwards a copy of a resolution adopted at the annual convention of his organization held in New York City on December 20, 1959:

AMERICAN FRIENDS OF THE
ANTI-BOLSHEVIK BLOC OF NATIONS, INC.,
New York, N.Y., February 2, 1960.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

SIR: It is my privilege to bring to your attention the resolution of the annual convention of our association, held in New York on December 20, 1959, and to request your support for our views by joining with other U.S. Senators and Congressmen and work for the implementation of our demand that a Federal commission be constituted to carry out to the fullest the intent of Public Law 86-90.

We will appreciate it if you could advise us of your actions on this matter.

Most respectfully yours,

SPAS T. RAIKIN,
Secretary General.

Whereas the United States is engaged in a struggle for survival with the forces of Russian Communist imperialism—an unorthodox war which has been provoked by and is now fully supported by the Russian Government;

Whereas the unorothodox war provoked by the Russian Government is directed at all the free nations of the world, with the United States as the primary target of this war;

Whereas this unorothodox Russian warfare has resulted in the violent overthrow of many free and independent governments and the Russian occupation of these formerly independent nations, among which are: Albania, Bulgaria, Cossackia, Byelorussia, Croatia, Armenia, Georgia, Hungary, Latvia, Lithuania, Estonia, Czechia, Slovakia, Poland, Turkestan, Serbia, Idel-Ural, Ukraine, East Germany, China, North Korea, North Vietnam, and Rumania;

Whereas the Russian nation alone among all the nations of the U.S.S.R. has failed to know by firsthand experience the blessings of freedom and individual liberty in the result of which most of the Russian people became an easy prey to the Communist regime;

Whereas the peoples of the non-Russian nations in the U.S.S.R., who comprise the large majority of peoples of the U.S.S.R., are overwhelmingly opposed to communism and Russian imperialism and desiring the restoration of their national independence thus constitute a powerful force against any efforts of Moscow to win their war against the United States and other free nations;

Whereas the overwhelming majority of the people of the Russian captive nations outside the U.S.S.R. have made common cause with the non-Russian nations in the U.S.S.R.

and all seek the overthrow of the modern-day Russian Empire;

Whereas the Department of State has failed to recognize or to support the aspirations of the peoples of the non-Russian nations in the U.S.S.R. while at the same time weakening our support to the other captive nations, and by this failure has weakened the chances for a just peace in a time of increasing prospects for war;

Whereas the leadership and the Members of the 86th Congress have given public recognition to the aspirations and the yearnings of all the peoples of the captive non-Russian nations of the modern-day Russian Empire for liberty, freedom and national independence through the passage of Public Law 86-90, signed by the President of the United States, by which Captive Nations Week resolution is to be nationally observed each year;

Whereas this enlightened action by Congress is a potentially powerful weapon for peace and merits the unceasing support by the American people: Therefore be it

Resolved, That the 2d session of the 86th Congress be urged to maintain the initiative for a just and lasting peace by taking steps to make certain that the intent of Public Law 86-90 is fully exploited during 1960 and for each succeeding year until peace is won; and be it further

Resolved, That the 86th Congress be urged to create a Federal commission with the necessary authority to implement to the fullest the intent of Public Law 86-90.

Inadequate Protection from Radiation Will Create Workmen's Compensation Crisis

EXTENSION OF REMARKS
OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 14, 1960

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following speech by Mr. Leo Goodman, atomic energy advisor of the United Automobile Workers, delivered to the Conference of Southern Association of Workmen's Compensation Administrators in Lexington, Ky., on August 21, 1959.

This revealing speech calls attention to British action as well as concern over workmen compensation problems raised by the new radioactive age.

The text of Mr. Goodman's remarks follows:

INADEQUATE PROTECTION FROM RADIATION WILL CREATE WORKMEN'S COMPENSATION CRISIS

(Statement of Leo Goodman, atomic energy adviser, UAW, to Conference of Southern Association of Workmen's Compensation Administrators, Lexington, Ky., August 21, 1959.)

The South is fortunately blessed with the resources which changed nuclear science from a theoretical and laboratory activity into a decisive military weapon, and more recently a tool of great potential benefit to mankind. I am sure that Oak Ridge is the name known throughout the world. In the past the association of that name was solely with the mushroom cloud produced by the explosion of the atom bomb. Today Oak Ridge is even more well known as the source of thousands of radioactive isotopes which are used throughout the world. I think a brief review of the atomic energy industry is in order if we are to comprehend the full scope of the problem which we face.

THE SIZE OF THE ATOMIC ENERGY INDUSTRY

There are two major divisions of what is increasingly known as the atomic energy industry. First, the largest is the Federal Government's activities under the Atomic Energy Commission and the various branches of the Department of Defense. Since the establishment of the Manhattan Engineering District with its initial allocation of $6,000 in 1941, there has been appropriated a total of over $22 billion to be expended under the atomic energy program. Of this amount over $7.5 billion represents investment in plant and equipment. The number of employees direct and indirect, approximates 150,000. In the private sector, according to testimony presented to the Congress this year, 14 firms represent 85 percent of all activity, and some 5,000 organizations are currently engaged in the use of nuclear science either through the establishment of a laboratory or facility, or through the use of radioactive isotopes produced in a Government-owned installation. I estimate that there are over 1 million employees in the 5,000 industrial plants, mills, and institutions which are using radioactive isotopes in industrial processes today.

I would like to approach the problems we face with certain basic assumptions. These are not my own assumptions but rather those which I have garnered from others who have spoken on this same topic of workmen's compensation laws in relation to radiation injuries.

Assumption No. 1 is, "We should proceed on the hypothesis that a harmless dose of radiation does not exist."

A second assumption which I believe will have universal acceptance is that, "It is fair to say that the sources of radiation will increase many fold during the next 10 years and that nuclear powerplants will increase in number, size and capacity of output."

Many outstanding organizations such as the National Academy of Sciences, and the United Nations Scientific Committee on the Effects of Atomic Radiation, have reported extensively on the influence of ionizing radiation on human beings. These reports make clear that serious health problems are being created if undue radiation exposure occurs. Every organization which has studied this problem, of course, recommends that the highest social standards in plants extracting and producing fissionable materials, producing atomic energy and using its products should be taken both in the interests of the workers employed and for the public at large. Some who would prefer to maintain the status quo, that is the status quo prior to the establishment of Oak Ridge, will tell you that there is no serious problem, that we have always lived with radiation, and that the dial on your wristwatch, or your television set, or the shoe x-ray machine, will produce as serious a problem as the development of the atomic energy industry. Those who believe these stories will face a sad awakening in the future. Possibly one way to illustrate the difference in the radiation problem today from that of the past would be to analyze the amount of radiation realized from the reactor accident which occurred in Canada in November of 1952. The amount of radioactivity released in that one accident exceeded by 1,200 times the amount of radiation released by all radium which had been refined in the world up to that date.

Another reactor accident at Windscale, England, produced more radiation than the bomb which was dropped on Hiroshima, Japan.

Not all radiation accidents have happened in other countries. Some of you may be familiar with the Kellogg case which occurred in Houston, Tex. If you are not familiar with it, there is some detail regarding this story in an article in Look magazine for September 3, 1957. But even more significant is the accident which occurred in Darby, Conn. Some detail of this accident can be found in an article printed in American Weekly for February 24, 1957. In that case an electrician took a capsule of cobalt 60, which was hanging in the midst of a construction job, put it in his pocket, and subsequently in the glove compartment of his automobile, and then traveled around the community for 3½ days before the geiger counter at the plant gate revealed the location of the missing capsule of cobalt 60. The workers who accompanied him on his daily ride to and from the job are suing in the Federal courts, but the more serious aspect of this case is the exposure of possibly hundreds who were in the vicinity of the man carrying an uncovered capsule of cobalt 60, or his automobile which is known to have been on the parking lot of the grocery store near his home.

Now the problem we face here today is—what do we do about the injury which occurs through the widespread use of this new science. We of organized labor would oppose any effort to abandon the use of this new science. But we do not believe that the chance victim of exposure should be required to pay the costs which result from the negligence or inevitable acident which produce radiation exposure both to the worker on his job and any person exposed by chance.

Cases are now in the courts all over the United States, whether it be Houston, Tex.; Hartford, Conn.; or New York City. The only case which I am aware of which has been processed through the Supreme Court in the Anglo Saxon world is *Thoonen v. Commonwealth of Australia*. This case has been through the supreme court of that country, and an award of £40,000 ($112,000) has been sustained. That case was surprisingly similar to the case in Darby, Conn., where an electrical worker picked up a capsule of cobalt 60 and put it in his pants pocket. He sued for criminal negligence. Most of the testimony in the trial court was medical evidence relating to the character of the injury. It may be that when the court cases here in the United States reach final decision, that serious attention will be given to finding a solution to the problem.

I recommend that you check into the action taken by Parliament in London these past few weeks. There Parliament, after extensive debate, adopted the nuclear installations (Licensing and Insurance Act, 1959). In behalf of the Crown the act was described on the floor of the House of Lords where it was introduced by Minister of the Crown, Paymaster-General Maudling, who said:

"I come next to the question of liability. I take, first, the licensees, namely, the nationalized industries or the private enterprises which own the installations. There will be placed on them an absolute liability toward everyone, including their employees, who may in any way be hurt or damaged by the emission of radioactive substances from their installations, and this absolute liability will replace or subsume their common law liability, which is now limited to cases of negligence. The only qualification of this absolute liability is the natural qualification where contributory negligence can be established. If so, that can be pleaded in mitigation of damage.

"The absolute liability will apply to everything that happens on the site of the nuclear installation and anything that emerges from it whether by reason of the operation of the reactor or the discharge of waste, and it will also apply to any hurt or damage caused in the course of the transport of irradiated fuel elements.

"We therefore feel that the bill, as drafted, will place upon the people concerned an absolute liability for hurt or damage in all cases where, conceivably, hurt or damage can be caused by radioactive substances.

"The other extension which the bill provides is in the period of claim, which is extended to 30 years in the case of both damage to an individual and damage to property. That contrasts with the periods of 3 and 6 years respectively which, as I mentioned earlier, are the rule under existing law. The reason for this extension is the fact that hurt or damage caused by radiation can take a very long time indeed to become apparent. I think that it is now agreed by all concerned that the limitations in this case should be very much longer than the normal rule. * * *

"So the second stage of the bill—after the first stage, which provided for the licensing and the safety regulations—is to provide that, should anyone be hurt or damaged despite the safety precautions he or she shall be absolutely entitled to compensation. * * *

"The liability of the owners of the installations is absolute to their employees just as it is to the general public. Therefore, the employees could not possibly be more clearly and completely covered. * * *

"As I said at the beginning, the existing law is either inadequate or uncertain to cover the whole of this problem. Therefore, we have tried to provide, first, for maximum safety in construction, operation, and maintenance of these installations; secondly, to clarify the laws as to liability and impose an absolute liability in respect of all the people who enter or operate reactors; and thirdly, to insure that people who are hurt or damaged can be confident that they will receive the compensation to which they will be entitled."

This provides absolute liability for 30 years and the presumption is that anyone within the affected area of an accident shall have been affected and, therefore, come within the protective terms of the act. This act does not meet all of the problems which this new science imposes, but it goes a long way toward protecting the individual from the serious harm which can come to him because society at large has determined to use this new science. I do not know the mechanism which we will adopt in this country. Extensive hearings have been held before the Joint Committee on Atomic Energy in the Federal Congress. No significant bill has been introduced as a result thereof. Though hundreds of suggestions were made there was little area of agreement and practically no consensus of opinion. As a result, no action was taken, nor is any likely until this new industry suffers a major accident. The course of wisdom in our opinion would be to prevent that first major accident, to protect the developing industry by maintaining the highest possible safety standards. It is not practical to expect the Atomic Energy Commission to fully police itself.

Not all of industry will spend the money necessary for high safety standards unless an adequate system of inspection and regulation is maintained. There is little likelihood of the necessary regulation and inspection while the industry is being promoted into existence. In the absence of these necessary improvements all we can do is to hold meetings such as these, consult with each other, and urge our respective points of view. I close by urging serious consideration of the principles enacted into statute by our overseas cousins in London, England.

St. Louis Postal Employees Protest Newly Devised Speedup

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 11, 1960

Mrs. SULLIVAN. Mr. Speaker, ever since I have been in Congress I have received correspondence from individual employees of the postal service complaining from time to time about various rules or practices in the Department, or about supervisors, and so on, and sometimes these complaints have been found to be justified and sometimes they have been merely personal complaints or so-called gripes of one sort or another. I make this observation so as to avoid any misunderstanding over the material I am now inserting in the CONGRESSIONAL RECORD by unanimous consent, for the letters which follow are not in the pattern of the "gripes" I referred to above. I include them in the RECORD because they are from men I know to be responsible and conscientious.

Most of the postal workers whom I have come to know over the years are dedicated to the service and are proud of their work. We long ago came to recognize the postal employees as among the most conscientious and loyal and hard-working of all of our citizens. But, in recent years, I am sorry to say, many postal workers have been disillusioned about the service by the attitude they have discovered on the part of the top officials of the Department here in Washington—an attitude which seems to hold that most postal workers are drones and incompetents.

In recent days I have received a number of communications from postal employees in St. Louis describing a new procedure in effect in the post office in St. Louis, on orders from Washington, apparently as a test preliminary to the use of the same procedures in all post offices. Under it, clerks are required to keep tabs on the number of letters they process per minute each hour of the day, and a substantial group of employees has been assigned to the task of double-checking these performance reports. Apparently work norms are then set which, according to information I have received, are based on the output of the fastest, most experienced clerks.

NEED FOR CONGRESSIONAL INVESTIGATION OF NEW RULES

I am impressed with the correspondence I am receiving which describes the nervousness which, I am told, is becoming something of an occupational disease among postal clerks in St. Louis. If so, it is a deplorable thing.

I received one letter which was different, however; this was from a career employee of 24 years who claimed that the new procedure was justified because some employees have been constant offenders who took advantage of coffee breaks and so on and who avoided being disciplined by having the union intercede for them. But I am struck by the fact that this is the only letter I have received along this line whereas I have received many from employees who find the new procedure definitely unfair.

Mr. Speaker, I urge that the Committee on Post Office and Civil Service look into the incidents and situations described in the letters I am placing in the RECORD. If the new work rules are fair and equitable, then we should have that made clear. If, on the other hand, they represent the kind of unfair speed-up responsible leaders of the postal employees in St. Louis claim—and I have always found these officials of the postal organizations to be as dedicated to the good reputation of the service as any Post Office Department top executive in Washington—then I think these practices should be eliminated. In either event a full investigation is justified.

The correspondence referred to above is as follows:

[Local No. 8, 1906–59, 53 Years of Service—St. Louis Post Office Clerks' Union of the National Federation of Post Office Clerks—Affiliated With American Federation of Labor, Congress of Industrial Organization, St. Louis, Mo., Labor Council, Missouri State Labor Council—Post Office Box 241, St. Louis 3, Mo.]

FEBRUARY 1, 1960.

Hon. Mrs. LENOR K. SULLIVAN,
House Office Building,
Washington, D.C.

DEAR MRS. SULLIVAN: There is enclosed herewith a copy of a motion which was adopted by the January 1960 meeting of Local No. 8, N.F.P.O.C.

The distribution guides system referred to in the motion was installed in the St. Louis post office along with 66 other large post offices throughout the country beginning January 18, 1960, and in our opinion is nothing more nor less than a speed up system, the use of which should not be tolerated in the postal service.

There has recently been introduced in the Congress H.R. 10029 by Representative RHODES and H.R. 10033 by Representative WEIR which would prohibit the use of such systems in the postal service and it is our hope that you will give these measures your wholehearted support.

During the past several years there has been a substantial increase in the number of supervisory personnel and other higher paid employees of the post office and it has been our observation that the major function of these people has been to invent and operate systems which have for their purpose an increase in production by rank and file employees.

It is our belief that the use of these systems such as the W.P.S., B.M.T., E.P.O.M.'s, distribution guides, etc., by which the Department subjects the rank and file employees to pressure and harassment have not always accomplished what we feel should be the major objective of the postal service and that is the speedy and expeditious delivery of the mails.

We are not opposed to the efficient operation of the post office, in fact we have always subscribed to the belief that the post office is entitled to at fair days work for a fair days pay, but we believe that efficiency of opera-

tion should be based on the objective of securing speedy delivery of the mails rather than as an excuse to hire more higher salaried help to harass the rank and file employees for the purpose of securing more and better statistics.

In this office we have seen a substantial number of clerks transferred from their duties as distributors to that of compiling statistics and the major function of most of our line supervisors seems to be to keep records of the work production standards program. The distribution guides system has further diverted more clerks from their duties as distributors to that of checkers and a whole crew has been assigned to compute the production percentages from the form 2311's.

Anything which you can do to help secure a realinement of the objectives in the postal service from the worship of the fetish of production and the compilation of statistics to the expeditious delivery of the mails will in our opinion be an improvement which will benefit both the postal employees and the mailing public.

Thanking you for your consideration, I am,

Respectfully,

JOHN W. MACE,
President.

ST. LOUIS, MO., *January 28, 1960.*

Mrs. LEONOR K. SULLIVAN,
Congresswoman from Missouri,
House Office Building, Washington, D.C.

Hon. Mrs. SULLIVAN: No doubt by this time, you have been informed or have heard about the situation just brought into existence in the St. Louis post office, which is that of an efficiency method much to the regret of all the clerks upon whom this program has been enforced and as well upon the supervisors, many of whom are in the same opinion of us clerks, that it is not good for all concerned.

With these thoughts in mind, therefore, I write to you asking your assistance in endeavoring insofar as possible to eliminate this terrible situation. Although this program as yet does not affect all clerks, as I understand in the course of time it will, and furthermore it is to be installed in 66 other offices. Now I will endeavor to briefly explain or describe it to you. To begin with, this plan was mandated by the Department in Washington and, of course, our own Postmaster Bakewell can do nothing more than to follow orders. When the clerk comes on duty (he or she), a report card is handed out by the supervisor. On this card the clerk, in the course of the 8-hour routine, and for substitutes it is longer, every move during that period must be recorded. Even so much if a clerk must take a necessary break from his task for personal reasons or to secure refreshments from the vending machine, that time must be noted on the back of his report card. Each task has its own particular number as far as mail throwing and every tray of mail is tagged by the supervisor and his assistants (other clerks appointed for this duty). The clerk must retain these slips in possession until relieved from that task for another duty and such slips are checked by the supervisor before release and noted on his card. Certain standards have been set up by the Department for each clerk to reach in order to attain good efficiency—the figure for each tray is 0.25. And every clerk since the system went into effect is doing his or her best to throw as many trays of mail as it is possible to gain more tags. Of course, this will eventually gain for that clerk a good mark. But the sad consequences of the situation are, that many a good clerk is becoming nervous and excited, held in a tensity, like being shackled to a case while throwing mail, fearing to speak to the clerk aside him or her, and placing the clerks in a state of exhaustion while throwing mail with eyes of supervision watching and checking. The slips are tallied against the time a clerk was at the case and by reason of figures set up as standard, the rate of efficiency is given the clerk on this report card the following day. Also, if you can still follow me, a clerk cannot touch a tray of mail, unless the supervisor places a slip on it. Often the supervisor is not on hand or performing some other important task and the clerk must wait for the slip, thereby causing a delay in the separating of the mail and often missing a dispatch.

It seems to me, personally, that this method is also a manner in which unionism can be broken down. It is a sad affair, Mrs. SULLIVAN, for in our office it seems that all clerks, members or not, look toward our organization for progress and relief from strain and other deals as it were enforced upon them by the powers that be. Many a good clerk due to this strain and stress is becoming quite nervous and as a result not making the efficiency standards which the Department desires. Many of them oldtimers, good and faithful servants for many, many years in the postal service, then to be inflicted upon by this sort of situation. It is absolutely ridiculous. I am sure you will agree. If supervision canont determine who is a good clerk and who is not just by mere personal judgment, then surely it cannot be determined by placing figures on paper. Such principles must be determined by careful checking and observations of an individual's actions before judgment can be issued as to good or bad. As you will no doubt agree with me, there is strength in body and by such we can fight as a body to secure the benefits and rights due us. But when we are shackled and chained as it were to a mail case and when the pressure of mandatory action is strained upon us, then it is when we fight for our rights as public service employees to the bitter end. We have the duty to give the public prompt mail service, but we cannot under the pressure just inflicted upon us.

So, Mrs. SULLIVAN, in behalf of all the clerks in the St. Louis office, I ask in all kindness will you endeavor to have this efficiency program abolished insofar as it is possible. I am sure you would not like to work under such mandatory action as we are now being forced to do. For further detail on this method of antilabor tactics, I would suggest you contact our national officers in the Federation Building and I am quite sure they will cooperate with you to this extent, in the event you have not as yet been informed. Please excuse this lengthy letter, but I have endeavored to brief you on the situation. Don't know if I done a good task or not. At any rate, Mrs. SULLIVAN, I know you will cooperate in our efforts, and I await your response with interest.

Sincerely,

JOSEPH P. CELLA,
Financial Secretary, Local No. 8, National Federation of Post Office Clerks.

ST. LOUIS, MO.,
January 25, 1960.

Hon. KEN HECHLER,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: It was with considerable interest that I read your statement relative to peepholes in the post offices. Having spent better than 37 years in the St. Louis Post Office and visiting many others I can appreciate your statements. While it is true, as Mr. Harding states, they are designed primarily for watching employees suspected of stealing or tampering with the mails, I have heard employees state they had been warned by supervisors that they should discontinue certain practices as inspectors might be watching. The mere thought of having someone spying on you strikes terror to the hearts of many people and something should be done to correct it. We appreciate your efforts.

There are, however, several gimmicks in the larger post offices which, if anything are of much more fearsome nature. I refer to the work performance standards program and the recently installed distribution guides system both of which have been installed within the last 7 years. These projects have been held as whips over the heads of postmasters, supervisors, and clerks and have helped to drive many good employees from the postal service.

The work performance standards program is supposed to provide "an equitable basis for sound measurement of group performance." This is an expensive affair requiring much paperwork and takes productive employees fram mail-handling jobs for its administration. It has encouraged supervisors to select first teams, work bulky mails in preference to first come first served, and use various other practices to establish good records. Further, it has caused much dissatisfaction and ill-feeling among supervisors and supervisors as well as supervisors and clerks. I understand that this project was sold to the Post Office Department by the firm which supplied us with our present Director of the Budget.

The latest and most terrifying of all, however, is the distribution guides system which made its appearance in the St. Louis Post Office on January 18. I am enclosing one of the letters sent to each of the employees concerned and which supposedly thoroughly explains the program and to leave the impression that it is a harmless operation which is sought by many employees. To date I have been unable to locate any distributor who has wanted such a program.

Methods Handbook, series M-19, titled "Distribution Guides System," supplied by the Post Office Department, among other things contains the following:

"If, after the above procedure has been observed, a determination is made that a distributor has not attained a satisfactory level of performance, the matter will be referred to the installation head, for further evaluation by him and members of his staff under the provisions of part 715, Postal Manual. It should be noted in this connection that the distribution guides system is not established for the purpose of determining the need for disciplinary action. With respect to the individual employee, it is a program of assistance and guidance.

"The chief accountant will be responsible for maintaining form 2312, Accounting Period Record of Individual Daily Performance, and preparing a list each accounting period of individuals whose performance is less than 100 percent; this is to be submitted concurrently to the installation head and General Superintendent of Mails.

"Form 2311, Individual Daily Record of Performance. (Prepare original only.) Returned to employee for disposition.

"Form 2312, Accounting Period Record of Individual Daily Performance. (Retained for 1 year in office of chief accountant.)

"Form 2313, Summary of Individual Performance. (Prepare original and two copies.) Retain for 3 years copy for PM and Regional Operations Director.)"

You can see from the above, all is not sweetness and light. Employees were not informed that a record of their performance was to be kept on file for a year. They were not informed that a group report was to be sent to the regional office and kept there for 3 years. They were not informed that if they did not attain a satisfactory level of performance that his or her record would be referred to the postmaster who in turn will be guided by chapter 715 of the Postal Manual and that part 715.52 in turn reads as follows: "When the supervisor evaluates performance as being unsatisfactory, and the employee does not improve following appropriate discussions, counseling, or reassignment, appropriate action will be initiated for separation of the employee from the service.

(See part 717. Separations.)". In other words, despite all promises, they are forever in danger of disciplinary action or removal so long as this project remains in operation.

Mr. Congressman, let me take you on a trip through the St. Louis Post Office as a day in the life of a clerk. Picture, if you will, you arrive at the employee's entrance a few minutes before reporting time where you must show your badge in order to get into the building. You then proceed to the locker room which is lined with inspectors galleries. For a few minutes you may stop in the cafeteria or swing room and then proceed to the time clock on the workroom floor. At the timecard rack you pick up your timecard and assignment card, ring your timecard, and travel to the outgoing letter section. As you approach the division you are greeted by a sign approximately 2 feet high and 3 feet long, which states in large letters:

"Distribution guides, work center 3, outgoing letter section, minimum production rate 2,340 per hour, 39 per minute."

When you report to your supervisor he takes your timecard and your assignment card. In return he heads you your individual daily record of performance and assigns you to a case which is also numbered. You remain at this case until your supervisor moves you. You place your name, your timecard number, your title, the date and time you enter the unit on this card, commonly known as form 2311.

You then pick up the slip which indicates (in hundredths of an hour) the minimum time in which you are expected to distribute the mail on the ledge in front of you. These slips are retained by you until such time as taken up by your supervisor. When you have finished with the ledge of mail before you, you are given additional mail similarly tagged. When you have completed the assignment, you enter your nondistribution time and the time you are leaving the unit on your 2311, your supervisor gives you credit for the slips or tags you have accumulated and checks you out.

You then pick up your assignment card and move to the next assignment, which more than likely is the secondary division. Here again is an overhead sign of the same proportions to greet you. It says:

"Distribution guides, work center 4-24, outgoing letter section, minimum production rate, 2,280 per hour, 38 per minute."
